their regatta days, and their races have not been as suc-
cessful as usual. It is a noticeable fact that small yachts,
say between twenty and thirty-five feet in length, are in-
creasing rapidly in numbers, and the racing between such,
in these waters at least, has been unusually spirited.

CONDITION OF THE CENTRAL PARK
MENAGERIE.

DURING the past two years the menagerie at Central
Park has witnessed varied fortunes, but seems not
to have degenerated, although subjected to the thousand
drawbacks attendant upon having it under the control of a
political body. It is doubtful whether any zoological gar-
den or menagerie can ever be made to flourish under the
care—to use a polite word—of the Park Commissioners, as
such. What has been done since 1873 we are told in the
report for 1874 and 1875 of the Superintendent, Mr. Wm.
A. Conklin, to whose intelligent supervision the people
are indebted for the preservation and improvement of our
menagerie. Some facts extracted from this report will be
of interest. The number of animals reported as living in
the menagerie has steadily increased, at the close of 1875
amounting to 626, and improvements in their accommoda-
tions have caused a marked decrease in mortality among
them. Indeed, we are told that the only death of import-
ance was that of a camel, which had been in the collection
since 1868. The skins and skeletons of dead animals are
given to the American Museum of Natural History, to
some medical college, or are exchanged for living speci-
mens with taxidermists. Their public usefulness, there-
fore, does not cease with death. The value of the animals
on exhibition at the close of 1874 was \$41,422, and at the
close of 1875 was \$50,989; only one-third of which was
the property of the Department. Animals offered for ex-
hibition, of which there are not duplicates in the menage-
rie, are kept free of expense; for all others the owners are
required to furnish food. Among the principal exhibitors
—frequently donors—were and are P. T. Barnum, Messrs.
Smith & Nathans, Messrs. Chas. Reiche & Bro., and Mr.
Louis Ruhe. The late Maj.-Gen. Custer gave largely, and
the menagerie is indebted to many officers of the Navy,
captains of sea-going steamers, and various private per-
sons, among others our good friend Mr. Eugene G. Black-
ford. A library is also being formed in connection with
the menagerie. The expense of maintaining the collection
(about \$18,000 in 1875) is an insignificant item in the esti-
mates of the Park Commission in view of the great inter-
est taken in the animals, and the important aid thus afford-
ed to special students and to general education. We are
told that increasing numbers visit the menagerie, and that
schools, accompanied by their teachers, frequently avail
themselves of the advantages offered to study the living

specimens. It is to be hoped that the Commissioners of
Parks will not cripple the usefulness of this necessary
branch of youthful education, unless the "Fathers" are
fearful lest the children shall acquire habits of observation
which might prove troublesome when directed toward
politics in New York. The annual cost of keeping some
of the larger animals has been as follows:—Lion, \$125;
grizzly bear, \$150; camel, \$150; elephant, \$250; tiger,
\$125; black bear, \$120, and other animals in proportion.
The yearly consumption of meat is about 60,000 pounds,
of hay about 80,000 pounds, and of bread about 25,000
pounds, besides a vast additional quantity of miscellaneous
food.

Mr. Conklin deserves great praise for persevering in his
work, and bringing about such continued improvement
and success. His suggestion that a certain amount of
money be appropriated annually for the purchase of ani-
mals is a good one; but a menagerie at Central Park will
never attain the fulfillment of what is possible in this city
until it is owned by a stock company, and established
upon a different basis than is possible with the present ar-
rangement. The plan reported in our columns some weeks
ago of forming a Zoological Garden Association, the gar-
dens to be situated at Central Park, will, we earnestly
hope, be carried into effect during the coming season.

FOREST AND STREAM GEOGRAPHY.—Although this paper
is not far advanced in its fourth year, it is quite safe to
say that its pages contain more general information rela-
tive to the geography and natural history of the newly
settled and wilderness districts of North America, than is
embraced within any other single volume or publication.
In this assertion we speak advisedly, not ignoring the very
thorough and invaluable explorations of the United States
and Canadian Governments in the Far West. Considered
relatively to the whole continent, the sections thus exam-
ined are small, while our investigations include the entire
area south of the Arctic belt. Not only have the salient
points of the older States been repeatedly and thoroughly
described in these columns, but also those of Texas, Florida,
Arkansas, Kansas, Colorado, Nebraska, Oregon, Upper and
Lower California, Arizona, New Mexico, Nevada, Mont-
ana, Washington and Indian Territories, British Columbia,
Labrador, Newfoundland, and all the British Provinces.
The information thus far given as regards these regions is
in no respect meagre. It covers the prairies of the west,
the southwest, and the far west. It includes the moun-
tain ranges of the whole country—the Laurentian chain,
the White and Green Mountains, the Adirondacks, the Al-
leghenies and Blue Ridge, the Unaka and Clinch range, the
Sierra and the Rocky Mountains. It embraces the ever-
glades of Florida, the interior great lakes, the Dismal
Swamp of Virginia, and the prominent points along the
entire coast from Labrador to Mexico. In a valuable series
of papers it covers the zoology and ichthyic fauna of the
entire Northwest, and the writers on these various sections
and topics are among the most intelligent of our frontier
officers, and of the Canadian and United States Boundary
Commissions and Government surveys. We are surprised,
when we refer to our files, to perceive the immense extent
of territory that has been so covered from authentic sources
of information, and the masterly manner in which it has
been done; and we are led to write these lines, not in any
spirit of vanity that is unpardonable, but because of such
surprise, as well as to direct attention to the work which
we are doing, and to impress upon our readers the value of
the instruction so imparted. Undoubtedly, one can learn
more of the geography of the continent that will serve him
practically, by reading these articles which we publish,
than by studying text books and school geographies. The
reason is, that his mind becomes fixed by incidents in
which he sympathizes or is interested, and if he will only
take his map and find out the localities treated of, he will
be apt to remember what he learns forever after.

From the beginning we have made these sketches of
travel a feature of this journal, just as Harper's Maga-
zine has done for many years; and notwithstanding all
that has been written, the source of supply seems unfailing.
America is so large that the fund of information is not
likely to run dry, nor are our contributors likely to wipe
their pens in sadness because nothing remains unwritten.

OUR DUCK PICTURE this week is a capital illustration of
the eagerness with which game is pursued in any locality
accessible to the metropolis. Whether it is the frantic
pursuit of a single duck on the water, or the pot hunter
creeping up to a robin or "highholder" on land, the city
furnishes the "sportsmen" and extermination follows.
There is, however, we are pleased to note, a growing re-
spect for the laws, the result no doubt of their wider dis-
semination through the sporting papers. There is no ex-
cuse now for city sportsmen, or, for that matter, any others,
remaining in ignorance of close seasons, and if their num-
bers are so great as to result in the early killing of all game
within a certain radius, it is at least satisfactory to know
that it is done at the legal time. As for our illustration, it
is irresistibly comic; the more you look at it the funnier it
seems—the eagerness, the appliances, the decoys and the
whisky jugs, are all true to life, and in the midst the little
duck, the target of a hundred guns, tips up, and with his
webbed feet in most significant position disappears, and is
seen no more. We print this by permission of the Scrib-
ner publishers.

GEN. NEWTON'S GREAT SUCCESS.—Who ever heard of
such "blasted luck?"

THE CENTENNIAL CLASS.—On the brink of the new college year, it may be worth while to review the facts that were made public in the reports of commencement time, in regard to what every graduate of the present Centennial summer has been pleased to term "the great and glorious class of '76." At Harvard it numbered 135; at Yale, 174 (including 54 graduates of the scientific course); at Brown, 47, or six more than any previous class; at Dartmouth, 80, including 11 scientific; at Williams, 37; at Bowdoin, 43; at Amherst, 68; at Trinity, 13; at Wesleyan, 33, including four women; at Holy Cross, 19; at Tufts, 11; at Bates, 24; at Massachusetts Agricultural, 24; and at Vermont, Middlebury, Colby, Norwich, Maine Agricultural, Boston College and Boston University, the class probably averaged about a dozen. All New England, therefore, sent out a class of about 800 from its twenty colleges, the two oldest of them graduating more than 300 of the number. Columbia, the oldest of the New York colleges, had a class of 66, including 18 in engineering, and 13 in science; Union had 40, including 13 in engineering and 10 in science; Hamilton, 18; Madison, 11; Hobart, 8; New York University, 24, including 8 in engineering and 10 in science; New York College, 44, including 19 in science; Rochester, 39, including 5 in science; Syracuse, 10; Manhattan, 13; St. John's, of Fordham, 21; a total of 294 New York graduates, exclusive of those sent forth by Cornell, Alfred and St. Lawrence universities, and St. Francis Xavier and St. Stephen's colleges, whose record would probably swell the number beyond 400. Of the 158 graduates of New Jersey, Princeton supplied 118, Rutgers, 29, and Seton Hall, 11. Lafayette College, in Pennsylvania, sent out 70 men, a larger number than ever before; Michigan University's class of '76 numbered 76, including a dozen women; and Wisconsin University graduated 42. The average age of the graduates at Yale was 22 years 1 month; at Amherst, 22 years 5 months; at Lafayette, 22 years 10 months; at Williams, 22 years 11 months; at Dartmouth, 23 years 2 months, and at Michigan, 23 years 8 months. For the last ten years, the graduating age at the latter institution has varied but a few months from that of the present class, but at Dartmouth, the presence of a man who had reached his semi-centennial birthday—"the oldest undergraduate on record"—doubtless added appreciably to the general average. Candidates for the "three learned professions" of law, theology and medicine, respectively, were recorded as follows: Yale, 45 (including 5 from the scientific course), 15 and 21; Dartmouth, 32, 0 and 3; Williams, 11, 8 and 3; Lafayette, 16, 14 and 4; Michigan, 22, 2 and 5. Journalism had four candidates from Yale and two from Dartmouth. As to politics at Yale, 55 favored the Republicans, and 29 the Opposition; at Williams, the figures were 30 to 8, and at Amherst, 35 to 25; while, as between free trade and protection, the preferences were 95 to 21, and at Williams, 26 to 5. The annual expenditure of the '76 man at Yale was said to be \$1,075, and at Dartmouth, \$487—the extremes being in the one case \$9,300 and \$1,280, and in the other, \$4,000 and \$1,200, for the four year's course; but it should be remembered that no great trust can be placed in the accuracy of undergraduates' statistics concerning personal expenditures. At Yale there were 78 church members, out of a class of 120, and at Amherst 54, out of a class of 68, the denominations being represented in the two colleges as follows: Congregationalists, 36 and 32; Episcopalians, 19 and 3; Presbyterians, 12 and 10; Baptists, 2 and 2; Methodists, 2 and 1. The Jews, Catholics, Quakers, Universalists and other sects, also had several representatives at Yale. Forty-three of the Yalensians were sons of college graduates, of whom 17 were graduates of Yale; 26 were sons of professional men, of whom 18 were lawyers; 35 were sons of merchants; 15 were sons of manufacturers, and 10 were sons of farmers. Senators Blaine and Dawes, once rival candidates for the Speakership of the House of Representatives, each had a son in the Yale class of '76.

THE HUNTER'S CAMP IN HARPER'S WEEKLY.—We have received from Theo. R. Davis, whose wide reputation as an artist is daily growing wider, a proof of a beautiful drawing and engraving to occupy a full page of the forthcoming number of *Harper's Weekly*, illustrating the "Hunter's Camp" at the Centennial Exhibition Grounds. It is the best of the sketches yet made of this picturesque spot, which one could scarcely imagine was located at the pivot-point of the whole world's busy industries. Here we find the purling brook expanding into the quiet lake beyond where the canoes float; the brake of ferns and rank weeds on its margin; the lazy smoke drifting upward from the slow-burning fire; the rude log, with its backwoods "outfit," and the lounging hunters themselves, not to omit the bear, and behind and over all the dense woods, into whose dark recesses the imagination sends its inquiring thoughts, where one's footsteps would fain be lead. The talented artist must accept our gratitude for his faithful representation, while the compliment bestowed upon us by the publishers will be recognized by others as well as ourselves.

—A very important duty of the poultry breeder is to see that his chickens are free from vermin. Sprinkle sulphur continually over the chickens, roosts and houses, the latter two occasionally washed with kerosene.

—We acknowledge the kind invitation of Mr. Orville Wilcox, of Good Ground, L. I., to visit him in the duck shooting season, and hope it will be possible for us to do so.

—The island of Penikese, with the buildings on it, has reverted to Mr. John Anderson, who presented it to the late Prof. Agassiz for a summer school of natural history.

THE MUSHROOM AND ITS CULTIVATION.

THE poets have a disparaging way of speaking of fungi generally. Holmes sings in the following strain:—

"There's a thing that grows by the fainting flower,
And springs in the shade of the lady's bower;
The lily shrinks and the rose turns pale,
When they feel its breath in the summer gale;
And the tulip curls its leaves in pride,
And the blue-eyed violet starts aside;
But the lily may flaunt and the tulip stare,
For what does the honest toadstool care."

Honesty in neither men nor fungus could compensate for so villanously bad a breath that companions and associates are indiscriminately repelled. Such is one corollary from Holmes's verse. Shelly appears unable to regard the mushroom or any of its genus as other than the child of decay and corruption.

"And agarics and fungi with mildew and mould
Started like mist from the wet ground cold,
Pale, fleshy, as if the decaying dead
With the spirit of growth had been animated."

The mushroom does not, however, lack its laudatory poet, although he writes in the language of prose. Badham says of fungi that they "are beautiful as the fairest flowers, and more useful than most fruits." He recommends mushroom hunting to the young naturalist, not only for the beauty of the objects he is sure to come upon, but because it brings the wanderer out of beaten tracks into many lovely views. He presents himself to us as a man with the soul of an artist and a poet writing upon mushrooms. Before closing his volume he treats us to the following rhapsody: "It is a pleasant remembrance to have plucked the crimson amanita that ministered to a Cæsar's decease in the very neighborhood of the Palatine Hill; to have collected mushrooms amidst the meadows of Horace's farm, where, he tells us, they grew best, and to have watched along the moist pastures of the cremara, a stand of the stately *Agaricus procereus* nodding upon their stalks, or standing on the heights above Soviento just as the setting sun flashed upon the waters of the bay ere they engulfed him, and left us to his sister and the evening star; to have come upon that wonderful *Polyporus tuberaster*, whose matrix is the hard stone from which it derives strength and luxuriance, as if from a soft and genial soil." Such is the poetry of science, and enough has been said to show that in speaking of the lowly mushroom we are touching upon a theme which is not only fraught with interest, but may be productive of enthusiasm.

The mushroom or agaric is a genus of fungi, of which there are many species, differing widely in their qualities and appearance. Some are dangerously poisonous, but the greater number are edible and highly nutritive. The name itself is French—*mousseron*—and belongs particularly to an excellent species, the *Agaricus prunulus*. By a curious transformation of names this species, though highly valued on the continent of Europe, is deemed noxious in England, where it is robbed of its name for the designation of an entire genus, and is itself referred to the category of toadstools. The fact may also be taken as indicative of the general ignorance prevailing in regard to the mushroom. Another may here be adduced. In England the *Agaricus campestris*, or common mushroom is the one most generally esteemed. Many collectors class all others together as poisonous. It is also, with the exception of the truffle and morel, almost the only one allowed to be sold in Paris. At Rome the same mushroom is one of the few excluded from the market, by reason of its similarity to some of the poisonous members of the family, especially to the white variety of *Agaricus phalloides*. In this country little attention is paid to the subject, and comparatively little is in consequence generally known regarding it. It is possible that a prejudice exists against the genus from the noxious qualities of some of the species, and that on account of the latter the whole are included in a sweeping condemnation. To meet this it may be stated that the esculent varieties preponderate to a great extent over the noxious. It would be a very easy matter for anyone living in a district where mushrooms abound to make himself acquainted with two or three of the more plentiful edible species. If in such a case all others, even including a few of the less plentiful but esculent varieties, should be discarded as dangerous, the waste would be less reprehensible than that occasioned by placing all under a common ban. There are several reasons why the cultivation of the mushroom should be encouraged. It is, in the first place, a very valuable member of the vegetable kingdom, by its possession of qualities which are nowhere else found in similar combination. In the second place it is economical in a double sense. In the third place it may be made highly remunerative.

With reference to the first of these the mushroom makes a nearer approach than any other vegetable to rendering the nutritive components of flesh meat; taste and smell alike point to a high azotization. Dr. Marcet leads us to the same conclusion by the aid of chemistry. Instead of giving out oxygen and absorbing carbonic acid, like other vegetables, the mushroom, like animals, absorbs oxygen and exhales carbonic acid, hydrogen, or azotic gas, according to the species under examination. When chemically analyzed they yield sugar, gum, resin, fungi, acid, a variety of salts, albumen, adipocire and azmazome. The acid is peculiar to themselves, but all the others are components of animal structures. "The common basis or solid structure of the plant itself after the extraction of all the above substances, is a white, flabby substance, insipid in taste,

but highly nutritious. Nitric acid poured upon it disengages azotic gas, and several new substances result—a bitter principle, a reddish, reninoid matter, hydrocyanic and oxalic acids, and two remarkable fatty substances, whereof one resembles tallow the other wax." If such results of scientific inquiry be taken in connection with the expression of M. Roques, when he calls the mushroom "the manna of the poor," it will be seen that in neglecting the mushroom a rich source of human nourishment is overlooked. When flesh meat is unattainable the mushroom is an invaluable substitute, by possessing, as we have seen, the most estimable qualities of animal food. We thus dispose of one half of the economical question. The other touches upon the supply of esculent fungi, and the extent to which they may be developed. Foreign usages in this respect are more than usually interesting.

There are said to be between 30 and 40 species of fungus in England which are fit for human food. Of these the only one possessing any value in popular esteem is the common mushroom, or *Ag. campestris*. All the rest are either neglected or destroyed. On the European continent, and especially in Italy, France and Germany, the mushroom is much more highly valued. A great part of the population depends almost exclusively upon it for the food of many months. Some preserve it, and thus make it a supporter of existence throughout the year. At Rome what will appear to many a very singular usage, prevails. The traffic in mushrooms in the market of that city is so large that an officer is appointed to act as inspector. This means is resorted to for excluding any of the poisonous varieties. The inspector's duties are clearly defined by law, and the fact is referred to in the meantime chiefly as indicating the importance of the trade. They are in season for about six weeks in the fall and three weeks in the spring, and about \$20,000 is, on an estimate, yearly realized from the traffic. It would be interesting to calculate the annual returns throughout the whole of Italy, and much more interesting to speculate upon the dimensions to which such a trade might be brought in a city like New York. What has been said refers to the mushroom only in the fresh state. It is also useful for making ketchup, one of the most delicately flavored and useful of sauces. In this form also the mushroom has a considerable commercial value. Berkeley, an English writer, mentions an instance in which a single ketchup merchant had, in consequence of an unusually large crop of mushrooms, no less than 800 gallons on hand, the produce of mushrooms gathered within a radius of three or four miles. These were probably collected by the poor country people, as in the case of those sold in the market place at Rome, and the economical value of the mushroom may now, in view of what has been said, be fully estimated. We have seen that the ingredients entering into its composition qualify it for taking the place of flesh on the table. We have also seen that the poor of Europe derive from it a present subsistence and a revenue for future support. We have still further seen that either in its fresh or preserved state, or as ketchup, it has a considerable value as an article of regular commerce.

There would, therefore, appear to be some object in giving more attention to the subject than it has heretofore received. We have already alluded to the delicate flavor of the mushroom, it remains for us to meet the objection of indigestibility. The mushroom should always be eaten with a liberal allowance of bread. It may be broadly asserted that it was never found indigestible unless when eaten alone, or in imprudent quantities. No general rule can be given by which the good can be distinguished from the poisonous. Neither odor nor color can in every case be trusted. One authority lays down as a partial rule the avoidance of milky fungi, and those having an acid or biting smell or flavor. The safest usage is to avoid experiments, to depend only upon absolute knowledge, and let the palate be further favored as the knowledge extends.* With the limits at our disposal it would be simply impossible to give a detailed description of the numerous species. To do so would involve a treatise upon the whole tribe of fungi.

The common mushroom may be selected as the most generally known. It is found in both north and south temperate zones. Its white, button-like head may often be discovered peeping above the sod of the orchard or pasture land on the morning after a summer or autumn shower. It is best suited for the table while in this state, before the pileus expands or the veil attaching it to the stem is broken. The pileus is convex in shape, and as the mushroom becomes older it gradually expands until it becomes almost flat. The skin is milky white until age tinges it with brown or yellow. It has a soft, velvety smoothness, which is occasionally broken by the partial peeling or cracking of the upper laminae of skin. Under this are the gills, which are pink or brown or black, according to the age of the mushroom. The stem hardly requires description. Almost every person who has been fortunate enough to live in the country in the fall must have seen the objects we have attempted to describe dotting the pastures with white and gleaming heads, or lying on the ground, unable to bear longer the load of ketchup with which their gills are charged. Such is the mushroom growing wild. Between it as it crops up unexpectedly in the meadow, and in its cultivated state there is little choice. Some assert that it is less wholesome when culti-

*Dr. Badham goes into ecstasies over the delicately flavored nourishment supplied by the mushroom, and urges its general use. Berkeley, he, as Berkeley tells us, once suffered violently from simply tasting some of the spores of one of the milky agarics he had collected.

vated; others prefer it in that condition, and we do not venture to decide between them.

We turn next to the conditions of growth and method of raising. Moisture, heat and electricity all have their effect upon the mushroom, the last mentioned being only in some cases absolutely necessary. It is not required by the common mushroom which, under the proper conditions of moisture and temperature alone, can be raised all the year round. The following passage from a work on gardening is quoted by M. Roques, and containing as it does a perfect method of obtaining a supply of mushrooms, has the advantages of both lucidity and brevity: "Having observed that all those dunghills which abounded chiefly in sheep or cow droppings began shortly to turn mouldy on their surface, and to leave mushrooms, I collected a quantity of this manure which, as soon as it began to turn white, I strewed lightly over some melon beds and some spring crops of vegetables, and obtained in either case and as often as I repeated the experiment a ready supply of excellent mushrooms, which came up from a month to six weeks after the dung had been so disposed of; but as an equable temperature is in all cases desirable to render the result certain, where this cannot be secured under the protection of glass, the next best plan is to scatter a portion of the above manures mixed with a little earth in a cave or cellar, to which some tan is an excellent addition." Granted the necessary temperature the mushroom may, therefore, be raised either in the garden or in houses, sheds, or cellars. Sometimes in the former case the beds are raised in ridges, and are composed of earth and horse manure. In the latter, boxes may be filled with alternate layers of the same materials, with a top covering of mould.

Mr. J. Payne Lowe, of New York, who has devoted a great deal of attention to the raising of mushrooms, supplies us with valuable information. He advances one advantage possessed by the cultivated mushroom over the wild, that it is never poisonous, provided that no foreign matter has been left in the manure used for bedding. He states two indispensables for their successful cultivation—a dry cellar or other place where a temperature of about 80° Fahrenheit can be steadily maintained, and be is of well trampled horse, mule and ass manure. The latter should be well cleaned, heaped up, and watered and turned until it has cooled down to about 88° Fahrenheit. After the spores is put in the bed is again watered and covered thinly with soil. The mushrooms will appear in from six to ten weeks. When the mushrooms are spotted the bed is too damp; when they are very small the heat is too great. Sometimes the production of mushrooms is left to chance. The spores may exist among the manure; sometimes, also, earth from a pasture where mushrooms grow plentifully is used in making the beds.

The cultivation of the mushroom has never been extensively followed here. They are imported as preserves and in ketchup, but although a magnificent field lies open for native enterprise, it is almost entirely unoccupied. They are raised to a limited extent on Long Island and in N. Jersey, and are bought at restaurants and by dealers at from seventy-five cents to one dollar a quart. Some Frenchmen started their culture on a larger scale several years ago, but on the first misfortune the capitalist withdrew from the enterprise. All that is required is a place such as has been described above where the required temperature and humidity can be obtained, and when it has been secured there appears to be no reason why the pursuit may not be made as remunerative here as it is abroad.

REVERIES OF A SMOKER.—We believe it was Dr. Johnson who said, "He who smokes thinks like a philosopher." It may be; we have not always been quite sure of success in our own experiment, but it is a noticeable thing that almost all scientific men, writers, and reputed philosophers smoke; and it occurs to us that what Dr. Johnson really meant was, He who thinks like a philosopher, smokes. Meanwhile we shall continue our experiment, confident that "all things come to him who waits." Some things come without one's waiting for them or expecting them, like that package of Vanity Fair from Mr. Kimball, of Rochester, whose deep insight into human nature starts him far towards the goal of a philosophic mind—universal benevolence. His memory shall not, like his fragrant present, "end in smoke."

—We wish to draw the attention of our inland readers to the fact that, in consequence of the long-continued depression of business, and the necessity of realizing on stock, good English guns (breech and muzzle-loaders) can now be selected in this city at prices below the cost of manufacture. Further, that a practical sportsman and expert in guns, entirely at leisure, and whom we can thoroughly indorse, will, for a few weeks only, act as purchasing agent for such persons as may wish to avail themselves of his services. Any communication or inquiry may be addressed to us at this office.

THE QUAIL SEASON.—The close season for quail expires in this State on Monday next the 1st October, nearly a month too soon, as the birds in many places are scarcely half grown. We shall have a repetition of last year's experience, when little half-fledged birds were sent to market, so small and puny that the dealers could not offer them for sale. Birds, however, promise to be more abundant than for years past. The same report reaches us from every direction, that not for years have so many quail been seen.

Game Bag and Gun.

GAME NOW IN SEASON.

Moose, *Alces macchis*. Black-bellied plover or ox-eye, *Squatarola helvetica*.
Caribou, *Tarandus rangifer*. Ring plover, *Egialitis semipalmatus*.
Elk or wapiti, *Cervus canadensis*. Red or Virginia deer, *C. virginianus*.
Squirrels, red, black and gray. Stilt, or long-shanks, *Himantopus agricolis*.
Hares, brown and gray. Woodcock, *Philohela minor*.
Reed or rice-bird, *Dolichonyx oryzivorus*. Red-breasted snipe or dowitcher, *Macrorhamphus griseus*.
Wild turkey, *Meleagris gallopavo*. Red-backed sandpiper, or ox-bird, *Tringa americana*.
Pinnated grouse or prairie chicken, *Cupido cupido*. Gr. at marbled godwit, or marlin, *Limosa fedoa*.
Ruffed grouse or pheasant, *Bonasa umbellus*. Willet, *Totanus semipalmatus*.
Quail or partridge, *Oryzopsis virginianus*. Tattler, *Totanus melanoleucus*.
Yellow-shanks, *Totanus flavipes*.

"Bay-birds" generally, including various species of plover, sand-pipers, snipe, curlews, oyster-catchers, surf-birds, phalaropes, avocets, etc., coming under the group *Limicola* or Shore Birds.

MAINE—Hallowell, Sept. 17th.—Shooting has not been so good lately; my score since September 10th is 26 woodcock and 5 partridges. The early rains last spring killed many young grouse, and so far they have not been so scarce for a long time. JOHN LORD.

MASSACHUSETTS—New Bedford, Sept. 23d.—Since the rains of a week ago partridge (grouse) shooting has been good. Large flocks of quail are seen that will afford good sport as soon as the season opens (October 15th). Woodcock, none; bay and marsh birds scarce. CONCHA.

Charlton, Sept. 24th.—Ruffed grouse quite plenty, but leaves too thick for shooting. Woodcock just coming, and bid fair to be quite abundant. Quail more plenty than for a number of years, but scarce at that. C. T.

NEW YORK—Adirondacks, Number Four, Sept. 17th.—The season here has been very dry, no rain having fallen for two months of any account. The Beaver river is now a mere brook, not having been as low for 20 years. Bear are unusually plenty all over the shores of the river. There have been a good many deer shot here this summer, and the river shore is all tracked up with them. The Fenton House has been full all summer, and we have had some very jolly nights with charades, music, etc. We have had several hard frosts, and the foliage begins to look beautiful. A fire is a necessity, especially at night, and soon the landscape will be white with the falling snow. The trout fishing has been rather poor this summer, owing to the lowness of the ponds and streams; still, parties can get all they want to eat. No set line fishing has been allowed, the guides having agreed to frown it down, and I think if they would take the matter in hand they could stop most of the fishing and shooting out of season. F. BOLLES, JR.

Auburn, Sept. 24th.—The woodcock, partridge and duck shooting never was better in this locality. The fall flight of woodcock increases the bags every day. Partridges never were so plenty for years. By the return of birds from the north snipe shooting is improving. Large flocks of golden plover were seen all last week passing over. The farmers report some in the wheat fields, and a few bags have been made. H. G. F.

Rochester, Sept. 21st.—Woodcock shooting in this vicinity has been as good as for several seasons past. Sportsmen appear to favor the extension of the close season to September 1st. Ruffed grouse are found in fair numbers but not sufficiently numerous to warrant anyone coming here from abroad. There are no more than the sportsmen here want themselves; a few more wouldn't be amiss. I have seen several strings of black and gray squirrels, that were shot within ten miles of town. C. B.

Hornellsville, Sept. 25th.—From some cause or other grouse are very scarce here just now. In places that were swarming with chicks last summer, not one is to be found now. JOHN.

PENNSYLVANIA—Quail shooting does not commence before the 15th of October, and continues to the 15th of December. Ruffed grouse shooting begins October 1st, and runs one month longer, to the 15th of January. Wild ducks and summer-ducks, the latter also called wood-ducks, can be shot from October 1st to January 1st. Rabbit shooting begins October 15th and ends December 15th. Heavy penalties attend the violation of the law, and persons will be on the watch for the fines.

—Deer hunting will commence on the 2d of October, on the territory of the Blooming Grove Park Association. Members are advised to bring their own dogs for ruffed grouse shooting. Rifles and ammunition for target practice will be found at the club house. Excursion tickets to Lackawaxen can be obtained at the Erie Railway office, No. 401 Broadway.

Pittsburgh, Sept. 22d.—Game is plenty this year. The ruffed grouse and quail will give fine sport in about three weeks, although the pot hunters are after the birds every day. R. G.

NEW JERSEY—Tenafly, Sept. 26th.—Everything in the shooting line has been very dull of late. Woodcock have been very scarce, and hard to find on account of the dry weather. We are looking forward to the fall flight of the birds, with everything ready to give them a warm reception. We have had an abundance of squirrel shooting this fall, and, by the bye, what causes the grubs found in them? I have seen several this fall with a large white grub under the skin, something the same as in horned cat. When cold weather sets in they get rid of them. The quail shooting promises to be about the same as usual, although the birds are very small. I caught one alive on the 19th inst. that was too small to fly. The birds are the same in New York State, and will afford poor sport on the first of next month. It was the same last year. The birds were not one-third grown, and could not fly more than a few feet. Ruffed grouse have increased wonderfully this year, and to a few knowing ones will give some fine sport. Wood duck have just made their appearance—three to one gun one day last week. A large, full grown fish hawk (*Pandion haliaetus*) was killed near the village one day last week. They sometimes pay us a visit during a northeast storm. It is a fine specimen, and will be mounted along with other trophies. I have not seen any English snipe as yet. It has been so dry on the usual feeding grounds that

they are overrun with grass, and this will prevent the birds from staying with us. The rail shooting on the Hackensack river has been quite poor—from 13 to 35 birds to a boat. It will probably be better after a cold storm.

RED WING.
VIRGINIA—Blacksburg, September 18th.—Bull-bats—*Chordeiles virginianus*—the best of the minor game of this country for sport or table, have been very abundant and in superb condition here for two weeks past. I have killed several hundred. On one occasion took out 28 cartridges and brought in 23 birds, besides two which fell out of bounds and were recovered by boys; killed 17 in succession. Reed birds also numerous. The bats are quite as fat and better game than the reed birds: Wild pigeons arriving. E.

Norfolk, Sept. 23d.—We had a good many plover in the fields near town on Monday, but they have left. During the hard storm of Sunday there was one field two miles from here that was filled with willet, curlew, and yellow-shanks, but on Monday they had left. W. H. S.

WISCONSIN—Janesville, Sept. 18th.—Chicken shooting has been very poor with us this season. Coveys were badly broken by the heavy July rains, and birds are scarce and wild. It requires 6's to stop 'em. Late rains have flooded all our marshes, and we are, therefore, certain to have the finest of snipe shooting. Stragglers are already dropping in, and as we have a number of large marshes within an hour's drive, our prospect is good. Early duck shooting at Koshkonong has been slim. Plenty of birds, but no regular flight. Northern ducks are not coming in as yet. Mallards are very plentiful, but are feeding on the prairies, and the abundance of water makes it unnecessary for them to resort to the lake, consequently comparatively few are killed. A. M. VALENTINE.

TEXAS—Galveston, September 16th.—Galveston is alive with bay-birds. As a resort for winter sportsmen from the ice-bound States, not a city in the land affords better sport. A beach drive of 30 miles as level as Broadway; cars and boats at command for any point and a guide, can be obtained at a reasonable price. Sportsmen, pay us a visit, and you will be satisfied. B. R. B.

CALIFORNIA—San Francisco, Sept. 15th.—Game is more abundant in this State than it has been for some years past. I have just returned from a ten days' trip in Mendocino county. My bag consisted of 10 deer, 11 grouse, 53 pigeons, 65 lowland and 21 mountain quail. Fished but little, but caught trout enough for camp use, with but little trouble. E. LUTHELL DUDLEY.

PIGEON MATCHES.

MATCH FOR THE CHAMPIONSHIP BADGE.—Captain Bogardus having very generously "put up" the championship badge won by him in 1871 and since defended against all comers, it was shot for in a sweepstakes match at Deerfoot Park, Long Island, on Wednesday of last week. Four gentlemen appeared to contend against the captain, but it was of no avail, the badge remains with its former and rightful possessor. The contestants were, besides the holder, Messrs. Greene Smith, of Peterboro, N. Y.; J. A. Nichols, Syracuse, N. Y.; J. E. Hudson of the same place, and C. F. Wheale, of Cleveland, Ohio. The conditions of the match were that each contestant should shoot at 30 single birds at 21 yards rise, and 12 double at 18 yards, all wild birds, and \$100 entrance fee, half of which went to the second man. The scores were as follows:—

Name.	Single.	Double.	Total.
Capt. A. H. Bogardus	30	22	52
C. F. Wheale	29	22	51
J. E. Hudson	30	13	43
J. A. Nichols	28	18	46
Greene Smith	26	17	43

NEW JERSEY.—One of the most important contests at trap shooting, to us, was recently decided at Hopewell, N. J., between the following named gentlemen, viz.: Mr. John Nichol and Mr. John E. Sidman, of New York, vs. Mr. R. A. Drake, of Hopewell, and Mr. James Morgan, of Brooklyn. Its importance to us was in the fact that the shoot was for a terrapin supper, with "chicken fixins," for the four competitors, and ourself as umpire. The shooting was at 19 tame pigeons each, 21 yards rise, 80 yards bounds, 1½ ounces shot. Score as follows:—

Name.	Killed.	Name.	Killed.
Mr. Nichol	14	Mr. Drake	8
Mr. Sidman	8	Mr. Morgan	16
Total	22	Total	24

It may not be amiss to state that during the shooting an intermission of an hour was taken to examine into the merits of a chicken pie, and that the short score of two of the shooters may be attributed to too much pie.

—There will be a Pigeon Shooting Tournament at Louisville, Ky., on the 10th, 11th and 12th insts., open to the world. The purses aggregate \$3,000 in cash, and are divided into six class matches, all at single rises. Further particulars can be obtained by addressing Z. T. Thomson, Frankfort, Ky.

A NEW GUN.—As there is considerable inquiry at the present time for a combined rifle and shot gun, we would suggest to such of our city readers as are interested to call on Messrs. Eaton, Holberton & Co., No. 102 Nassau street, and examine such a gun, now on exhibition there, the work of Messrs. Nichols & Lefever, of Syracuse.

RIFLE BARREL FOR SHOT GUNS.

ST. JOSEPH, Mich., September 11th.

EDITOR FOREST AND STREAM:—

I wish to call out responses from the practical sportsmen among your readers who have used No. 14 or 16 gauge breech loaders. My shooting is principally ducks, pigeons, and squirrels, at long range, and I have been using a heavy No. 12-gauge breech-loader, shooting heavy charges from metal shells for ducks. I find the weight of ammunition for a day's shooting together with the weight of my gun is too much of a load. I am well satisfied with the shooting of my 12-gauge, but I want to know if as good penetration and pattern, although covering smaller surface can be obtained from a 16-gauge gun. I have found that a steel tube rifled and fitted into the left barrel of a shot gun makes it a very convenient and effective weapon for deer or bear shooting. This tube if well fitted can be inserted or removed in a few minutes. I use a 44 calibre, 75-grain shell with a very long bullet cast swayed on the principle of the hollow express bullet, so that upon striking an animal it flattens out and the force of the charge is expended in tearing a large wound. For bear shooting I charge these bullets with an explosive compound. JOHN H. LEE.

THE BEST TARGETS MADE IN THE IRISH-AMERICAN RETURN MATCH.

Rifle.

THE IRISH-AMERICAN MATCH.

ONCE more the Irish riflemen have met our men in friendly contest, and once more has victory been with us. That this culmination was not generally anticipated was apparent from the pool selling, for your pool buyer is a man of culminations, and the position of the Irishmen at the head of the betting was the result of the careful analyzing of the individual scores of the competitors. Indeed, "on paper," it looked like a good thing for them. The wonderful shooting of Milner last week and also in the Long Range Match of Wednesday, and the scores of Johnson, Dias, and others, made it evident that, if they were not really a better team than that selected to shoot against them, the least weak spot in the latter would make defeat for them almost certain. Strange enough this weak spot was developed in the unaccountable shooting of Col. Farwell at the 1,000 yard range. Had it not been for the strong lead of 32 points taken by the Americans at the first two ranges, they would have been beaten. A string of seven misses in 15 shots was a heavy load to carry, and yet they did carry it and won by 11 points. At 800 yards the Americans were 15 points ahead, at 900 they had gained 17 points more. At the 1,000 yard's range the shooting by the Irish team was beautiful. String of string of bullseyes were scored and at the conclusion they had beaten the Americans at this range 21 points. The score of Mr. Dias promised to be the sensational one at this range, as at his fourteenth shot he had scored 13 bullseyes and an inner, but his last shot unfortunately was a miss. Gen. Dakin shot superbly, heading both teams with the highest score. Mr. Allen shot with the steadiness of a veteran, and although he was somewhat weak at 900 yards, his score of 72 out of a possible 75 at 1,000, was the top score at this range of the match. Mr. Milner made an unfortunatemiss at 1,000 yards which hurt his score, but notwithstanding, he headed his team. The crowd at the close of the match was large, and as at one time just before the finish, the Americans were but four points ahead, the excitement was very great. The railroad facilities were very good. It would be an excellent plan for the N. R. A. to erect a grand stand at the rear of the thousand yard firing point. A corner of it could be devoted to the use of the reporters, who now have no facilities at Creedmoor, excepting in the case of those who have unusual facial development; those without it are no better off than the general public.

The scores in the match were as follows:—

SCORES OF THE AMERICAN TEAM.

Americans over Irish, 11 points.

—We would call attention to the advertisement, in another column, of the Sharps Rifle Company. This arm is too generally and favorably known to require any commendation from us; it speaks for itself.

NATIONAL RIFLE ASSOCIATION.

Wednesday of last week was the third day of the regular Fall Meeting. Three important matches were shot. The first was the Inter-State Match, open to teams of 12 men from each State or Territory, chosen from the uniformed militia; ten rounds each at 200 and 500 yards. As was the case last year, Connecticut was the only State besides New York represented. But the totals were completely turned on this occasion. Last year Connecticut withdrew before the competition of the contest; this time her team won a handsome victory, beating the New York team at each range. The scores were as follows:—

CONNECTICUT STATE TEAM.

Name.	200 Yards.	500 Yards.	Total.
Corporal G. G. Le Barnes	35	44	79
Henry Jones	38	40	78
John N. Lane	25	39	74
E. A. Folsom	35	38	73
S. V. Kennedy	40	30	70
J. B. Mix	35	34	69
D. R. Craig	38	29	67
Theodore Rust	36	30	66
James T. Jovey	38	27	65
Captain J. E. Stetson	41	24	65
George Dickenson	37	25	62
F. L. Waples	35	26	61
Team totals	443	386	829

NEW YORK STATE TEAM.

Name.	300 Yards.	500 Yards.	Total.
Sergt C. H. Barton, 48th regt.	36	43	79
Sergt. J. S. Barton, 48th regt.	36	39	75
A. B. Vanhousen, 12th regt.	36	39	75
Lieut. J. L. Price, 7th regt.	39	36	75
D. H. Stafford, 49th regt.	35	38	73
M. Rawley, 49th regt.	37	33	70
J. McCartin, 49th regt.	33	34	67
Sergt. A. Steele, 71st regt.	38	26	64
E. H. Van Guilder, 49th regt.	34	29	63
S. B. Candan, 47th regt.	35	26	61
W. H. Davar, 8th regt.	39	19	58
T. R. Murphy, 8th regt.	36	20	56
Team totals	434	382	816

The second event was the Championship Match, commenced on the first day but not completed. This was an all comers match, shot at 200, 600, and 1,000 yards, 10 shots at each range. There were ten prizes in all, including three medals. Mr. E. H. Sandford, a popular and skillful rifleman won the first prize; Mr. Rae, of the Scotch team, the second, and Mr. Milner, of the Irish team, the third. The scores were as follows:—

Name.	200 Yards.	600 Yards.	1,000 Yards.	Total.
E. H. Sandford (American)	42	47	44	133
Peter Rae (Scotch team)	42	41	46	129
J. K. Milner (Irish team)	37	49	43	129
Lieut. Geo. Fenton (Irish team)	42	42	44	128
H. S. Jewell (American)	39	47	41	127
H. Fulton (American team)	33	46	48	127
C. E. Blydenburgh (American team)	30	49	47	126
C. E. Overbaugh (American)	42	42	42	126
Gen. T. S. Dakin (American team)	39	47	40	126

The other totals (out of a possible 150) were C. E. Rider, 125; R. C. Coleman, 124; H. S. W. Evans (English), 124; I. L. Allen (American team), 124; M. Boyd (Scotch team), 123; G. W. Davison, 123; J. J. Slade (Australian team), 123; William Hayes, 122; L. M. Ballard, 121; G. W. Yale, 118; T. H. Gray, 118; R. S. Gray, 118; A. Ward (Irish team), 118; R. S. Greenhill (Irish team), 117; S. J. Scott, 116; A. Anderson, 116; Thos. Lamb, Jr., 115.

The last event of the day was the Long-Range Match, also open to all comers, and shot at 800 and 1,000 yards, 10 shots each range. Here Mr. J. K. Milner, of the Irish team, displayed some magnificent shooting, scoring a possible 50 at 1,000 yards, and won a well deserved victory. Mr. Sandford was also in excellent form again, being but one point behind the winner. Mr. Slade, of the Australian team, also shot extremely well, making a clean score at 800 yards.

There were 15 prizes in all, the winners and their scores being as follows:—

Name.	800 Yards.	1,000 Yards.	Total.
J. K. Milner	58	40	98
E. H. Sandford	48	49	97
S. Lamb, Jr.	49	45	94
C. E. Blydenburgh	49	45	94
L. Geiger	47	45	92
I. L. Allen	49	43	92
Orange Judd	46	45	91
J. J. Slade	50	41	91
Name.	800 Yards.	1,000 Yards.	Total.
W. R. Joynt	43	47	90
A. Ward	45	45	90
M. Boyd	45	45	90
Henry Dias	43	46	89
Maj. G. Y. Yale	44	45	89
H. Thynne	46	43	89
S. G. Perry	46	43	89

The individual prize of a gold medal, given by the Adjutant General of the State to the member of the National Guard making the highest score in the Gatling, State and Army and Navy Journal matches, was won by W. H. Dewar, of the Eighth regiment, on a record of 98 out of a possible 120 points. The same man also takes Steward's aggregate prize on a score of 111 points.

The Meeting of the National Rifle Association was brought to a conclusion on Friday last by the contest for the Wimbledon Cup. This is the magnificent cup presented to the American team last year by the British National Rifle Association to be competed for annually by American riflemen under such conditions as might be named by our own N. R. A. These were fixed at 20 shots by each competitor at 1,000 yards with any rifle under the rules. The winner was Mr. Isaac L. Allen of the American team, who appears to be the coming marksman, if he is not already at the head of the list. The cup is valued at \$500. The following are the leading scores out of a possible 150 points, there being 37 entries in all:—

Name.	Total.	Name.	Total.
I. L. Allen	139	E. H. Sandford	116
A. V. Canfield, Jr.	135	E. H. Madison	116
Thomas Lamb, Jr.	130	L. Weber	115
D. Smyth	130	E. C. Overbaugh	111
W. B. Farwell	129	William Hayes	110
C. E. Blydenburgh	128	G. L. Morse	107
H. S. Jewell	124	G. W. Davison	107
G. W. Yale	123	L. M. Ballard	106
L. Geiger	118	A. Anderson	106
C. C. Coleman	117		

CREEDMOOR.—Saturday was regular match day at Creedmoor, but the only competition open was that for the *Turf, Field and Farm* badge. As the weather was threatening and the day generally dismal, in addition to the surfeit of rifle shooting during the previous weeks, the number of contestants was small. The match was shot at 200 yards off-hand, ten shots each. The following are the scores:—

Name.	Total.	Name.	Total.
W. H. Cochrane	43	H. Fisher	34
D. McQuillan	42	L. Cass	33
D. F. Davids	47	J. L. Farley	33
D. C. Pinney	40	D. Cameron	33
F. C. Milner	39	J. A. Gee	32
J. W. Todd	39	J. W. Hale	30
George Waterman	38	C. E. Truslow	26
T. W. Linton	37	M. M. Maltby	24
S. Sargent	37	W. H. Clark	14
W. B. Farwell	35		

GLEN DRAKE.—The members of the American Rifle Association shot a match on their grounds at Pelhamville on the 16th inst. The following scores were made at 500 yards, 5 scoring shots:—

Name.	Total.	Name.	Total.
David F. Davids	33	Geo. Ferguson	22
Geo. Jones	21	D. Felt	20
J. W. Todd	18		

The De Peyster Badge will be shot for Oct. 19th.

RIFLE NOTES.—The distribution of prizes won during the late meeting of the National Rifle Association took place at the State Arsenal on Friday evening. The visiting riflemen were present. Maj. Leech made one of his usual felicitous speeches. The Washington Grey Cavalry, Capt. L. T. Baker commanding, has issued a challenge to the Yates Dragons, of Syracuse, to shoot a carbine match either at Creedmoor or Syracuse during next month. The preliminaries have not yet been decided upon. The members of the foreign rifle teams, accompanied by Messrs. Fulton, Bodine, Rathbone, and Blydenburgh, of the American team, visited Philadelphia on Saturday, and were presented to President Grant and the Centennial authorities. They are now in Washington, and matches were arranged for to-day and Saturday, with visits to Mount Vernon and other places of interest in the interim. The Irish citizens were arranging for a special prize for the member of the Irish team making the highest score. The Saratoga Rifle Club give a tournament on October 10th and 11th. There will be three events, open to all comers, a mid-range for teams of four, a match at 200 yards, 10 shots, and one at 600 yards. Address entries to Jerome Pitney, President. The annual match of the St. John County Rifle Association commenced at Drury range, near St. John, N. B., on the 22d inst. Lieut. Earle won the St. John Corporation silver challenge cup. The shooting was much ahead of former competitions.

The Kennel.

St. Louis Bench Show.

The St. Louis Bench Show for Pointers and Setters will be held at St. Louis, Mo., October 4th, 5th and 6th, at the time of the great Agricultural and Mechanical Fair, and on the grounds of the St. Louis Fair Association. Entries close September 28th. For premium list, rules and entry blanks address

SPRATT'S

Patent Meat Fibrine Dog Cakes.

They contain meat and that anti-scorbutic fruit, the date (the only substitute for fresh vegetables), and the exclusive use of which in the manufacture of dog food is secured to us by patent; they will keep dogs in perfect condition without other food, and obviate worms. Every cake is stamped "Spratt's Patent." Be sure to observe this. For sale by F. O. de LUZE, 18 South William St., N. Y., in cases of 1 cwt. Aug10 3m.

LISTEN!

The Sportsman's Bell tells the position of the dog, causes the birds to fly closer. Rapidly coming into use in early woodcock shooting, cocking and general shooting, where the cover is thick. Sold by dealers in guns and sporting goods. Samples sent by mail postpaid, 50 cents. BEVIN BROS. MANUFACTURING CO., East Hampton, Conn. Ju6 3m

TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMPANY

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROT-ING PARKS and RAC- COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, a old the difficulties and dangers of reshipment, while the excellent cars run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of
The Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to KANE, RENOVIA, BRD-FORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for Trout Fishing, Wing-shooting, and Still Hunting.

Also, to
TUCKERTON, BEECH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

D. M. BOYD, JR., Gen'l Pass. Agent.
FRANK THOMPSON, Gen'l Manager. feb17 1t

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over two thousand miles of road, radiating from Chicago. Like the fingers in a man's hand, its lines reach in all directions, and cover about all the country north, northwest, and west of Chicago. With one branch it reaches Racine, Kenosha, Milwaukee, and the country north thereof; with another line it pushes through Janesville, Watertown, Oshkosh, Fond du Lac, Green Bay, Escanaba, to Nagaunee and Marquette; with another line it passes through Madison, Elroy, and for St. Paul and Minneapolis; branching westward from Elroy, it runs to and through Winona, Owatonna, St. Peter, Mankato, New Ulm, and stops not until Lake Kameska, Dakota, is reached; another line starts from Chicago and runs through Elgin and Rockford to Freeport, and, via the Illinois Central, reaches Warren, Galena and Dubuque, and the country beyond. Still another line runs almost due westward, and passes through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar Rapids, Marshalltown, Grand Junction, to Council Bluffs and Omaha. This last named is the "GRAND TRANS-CONTINENTAL ROUTE," and the pioneer overland line for Nebraska, Colorado, Utah, Idaho, Montana, Nevada, California, and the Pacific Coast. It runs through the Garden of Illinois and Iowa, and is the safest, shortest, and best route to Omaha, Lincoln, and other points in Nebraska, and for Cheyenne, Denver, Salt Lake City, Virginia City, Carson, Sacramento, San Francisco, and all other points west of the Missouri River.

TO SPORTSMEN:

THIS LINE PRESENTS PECULIAR ADVANTAGES—FOR PRAIRIE CHICKEN, DUCK, GEESE, AND BRANT SHOOTING. THE IOWA LINE TO-DAY OFFERS MORE FAVORABLE POINTS

than any other road in the country, while for Deer and Bear Hunting, and for Brook Trout, Lake Salmon, Pike, Pickerel, and Bass Fishing a hundred points on the Northern and Northwestern lines of this company will be found unsurpassed by any in the West.

MARVIN HUGHITT, W. H. STENNETT,
Gen. Supt., Chicago. Gen. Pass. Agt., Chicago, apl6

JUST OUT!

ADIRONDACK GUIDE.

NEW EDITION, WITH MAPS.

BY E. R. WALLACE.

Gives all possible information relative to Routes, Hotels, Resorts, Outfits, Guides, Distances, &c., with amended railway schedules, &c.

The only Complete Guide to the North Woods.

The instructions embrace everything that can be desired. Taking it all in all it is the most complete book that has been published on the Adirondacks, not excepting even my own—Hon. J. T. Headley.

I regard your "Descriptive Guide" and the "Appendix" as a most useful—nay indispensable, manual for tourists to that wonderful Wilderness. A tour in that region is eminently a practical matter, and for that reason I regard your "Guide" as an important, useful, and timely publication.—Benson J. Lossing.

It is the only thing of the kind that has yet been published—the very thing that has been so long wanted and waited for.—Alfred B. Street, Author of "Woods and Waters."

Send by mail on receipt of price, \$2.

McBride Flies,

The Standard Flies for American Waters.

These flies are imitations of American insects, or combination of colors, that an experience of forty years has proved most successful. Parties supplied with casting lines and artificial flies for Pennsylvania trout streams, Adirondacks, the Maine Woods, Lake Superior, Thousand Islands, Canadian, and other waters. Anglers not acquainted with the nomenclature of these flies, by mentioning the locality where they intend fishing, will have the varieties best suited to those waters sent to them. Flies copied from any natural insect or pattern desired. SARA J. McBRIDE, (Successor to John McBride) Mumford, Monroe county, N. Y.

THE

"Boston Shooting Suit."

(NAME COPYRIGHTED).

MANUFACTURED ONLY BY

G. W. SIMMONS & SON,
Boston, Mass.

SOLD everywhere in the U. S. by all first-class dealers in

SPORTSMEN'S GOODS.

EACH GARMENT DISTINCTLY MARKED

"BOSTON SHOOTING SUIT,"

made by

G. W. Simmons & Son.

This new design of WATERPROOF SHOOTING SUIT, made from extra quality duck, has acquired quick celebrity. Advertised for the first time in April last in the FOREST AND STREAM, in five months it has attained such popularity as to be called for from all parts of the country, and even from England.

"Shipping clothing to England strikes us very much like sending 'Coals to Newcastle,' but the merits of the 'BOSTON SHOOTING SUITS' have been heard of in the Old Country, and that land of sportsmen has sent an order to Messrs. Simmons & Son, which will doubtless be followed by many others. Our Editor in-Chief, who knows something about a sportsman's requirements, is using this same equipment in the Adirondacks."—Boston Paper.

The design embraces the best points of the English and French Suits, combined with the necessary requirements for American service. Particular attention has been paid to color.

Each suit is thoroughly water-proofed by a new patent process. The seams and pocket corners being securely fastened, and nothing neglected to render the suit perfect in every respect.

The price has been fixed at \$13, to include Hat or Double Visored Cap, Detachable Haverlock, Coat, Vest, and Pantaloon.

One hundred suits will be kept ready in stock, so that we can furnish to order any size required, at a moment's notice.

In the Golden Rule (Rev. W. H. H. Murray's paper) the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof suit, specially adapted for sportsmen, designed and made up by Simmons & Son, of Boston, and to which we call the attention of all brethren of the out-door and shore-shooting fraternity, because it meets the demand of personal comfort and convenience beyond anything of home manufacture seen by us before. As a sportsman, we give it our unqualified endorsement, as combining the best points of the English suit, and in addition skillfully adapted to the necessities of the American service. It is a most admirable and satisfactory contrivance in color, style, water-proof quality and capacity. The coat is a marvel in this latter respect."

Persons ordering from a distance need send only the following to be sure of a perfect fit:—Brest Measure, Waist Measure, Inside Seam Coat Sleeve, Inside Seam Pantaloon; Mention Height and Weight.

The Hazard Powder Co., MANUFACTURERS OF Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 3½ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short gun.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 lb., and 6½ lbs. and cans of 5 lbs. FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER
GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarsest sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6½ lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.g., FF.g., FFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs., and 6½ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less resistance than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS

LAFLIN & RAND POWDER Co.,

CHALLENGE.

The undersigned is prepared to prove all the superior qualities he claims for his powder.

Safety, Cleanliness, Strength, Little Recoil, Little Smoke, Small Report, Less Heating of the Barrel in Rapid Firing, and its Regularity in Shooting.

He challenges all rifle-men to shoot against him with black powder, 200 rounds, without wiping; 100 rounds off-hand, at 200, 500 and 1,000 yards respectively, and 100 rounds in any position at same distances; the 200 rounds equally divided at the three ranges; sighting shots extra.

Will shoot for money if desired.

The powder is also well adapted for shot guns. Inquire for the "Dittmar Powder" of your dealer

Paper and Metallic Shells

FOR

Breech Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells. Not sold at retail by the manufacturers. dec23 17

New Paper Shell Conical Base. WILLIAMS' PATENT.

Manufactured by the ST. LOUIS PATENT SHELL MFG CO., office 209 North Fourth street. The advantages claimed for these shells are: Cheapness, a saving of 25 per cent. in the use of powder, less recoil. These shells are equal to the best English, and 3½ drachms of powder will do the work of 5 drachms in any other shells. The sizes made are No. 10, 2½ inches; No. 12, 2¼ inches. Longer shells made to order at extra cost. Ask your gunmakers for them and use no other. Shells are not mailable. Sample 100 will be sent by express on receipt of \$1.30 for 10s or \$1.15 for 12s. aug24 17

Sportsmen of the Olden Time.

For Forest and Stream.

"No sport to the chase can compare,
So manly the pleasure it yields.
How sweet, how refreshing that air,
Inhaled in the woods, and the fields

As we rush on the trail, new scenes appear,
New landscapes encounter the eye.
No Handel's sweet music more pleases the ear
Than that of the hounds in full cry."

IT is singular, that fox hunting has not become a national pastime. In Great Britain it is the sport *par excellence* of the gentlemen, and no establishment is complete without the kennel. Any one who has ever been on a fox hunt

will never forget the vivid pleasure and intense excitement of the chase; it has all dash of the steeple race without its great danger; besides it is an essentially social sport, and tends more than anything else to bring people together in close amity. It is the most manly exercise in the world. All the poets have embellished the subject with the charm of their genius. "Virgil makes his young Ascanius a sportsman as soon as he is able to sit his horse."

Horace, in disgust of a womanly youth recommends in his epistle to Sollius the chase, not only as a noble exercise, but as contributing to health and peace of mind. His *Carmen Seculare* was written in honor of manly sports. Ovid, Pliny, Tacitus, and all the classic authors, write in its favor. Somerville's poem, "The Chase," will live to the end of time

The fox is the most sagacious animal that breathes; he has more sharpness, shrewdness and cunning than any other brute. A gentleman told me that one night he heard a fearful racket in his hen house, and going in, he found a fox, who appeared to be dead. He kicked the body, and threw the carcass among the dog, who snarled and fought over it. All this time the fox remained lifeless, and convinced him that it was only a dead body, and so he let it lie, but found the next morning that it had been playing 'possum, and had had the nerve to suffer and endure all this torture for its life. Another sportsman said that he had seen a fox counterfeit death so naturally, that a lighted paper passed across his nose and eyes failed to move a muscle. How long the fox will run, or his exact speed, are questions not easily answered. A red fox was once

1776.

HUNTER'S CAMP.

1876.

Erected by FOREST AND STREAM Publishing Company, of New York, in Lansdowne Ravine, Centennial Exhibition Grounds, Philadelphia.

Notwithstanding that we printed a large extra edition of our paper of June 29th, containing the sketch of the "Hunter's Camp" at the Centennial Exhibition Grounds, every copy has been sold. Requests for pictures of the same as souvenir's continue so pressing that we are constrained to republish the same, which we trust our subscribers will pardon, as they will doubtless appreciate our position. The Hunter's Camp is constantly thronged, and forms a very attractive feature of the show. Between the engravings already published by *Harper's Weekly*, *Frank Leslie's*, this paper, and others, the public ought to be abundantly supplied with the same.

unearthed by Lord Fairfax and run with different relays of hounds fifty miles and then got away. At Marsham, in England, it is related that a fox was unkenelled at 8 o'clock in the morning and was pushed hard until 3 in the evening, and he coursed in that time 60 miles, breaking down all the horses. Old fox hunters have told me that a pack of hounds of fine strain have been known to run a mile in 60 seconds. Capt. Dan McCarty's pet fox once ran 40 miles in four hours, completely using up the hounds and the horses.

There are two kinds of foxes, the gray and the red, the former is a native of America—not so with the other. Col. T. B. Thorpe, a brilliant writer on these subjects, says:—

"The red fox is supposed to have been imported from England to the eastern shore of Maryland, and to have emigrated to Virginia on the ice in the severe winter of 1779, at which time the Chesapeake Bay was frozen over. In 1789 the first red fox that we have any record of was killed in Maryland. In that year there had been a few red foxes turned loose on Long Island. The red fox drives the gray fox before him. In writing the history of the red and gray fox, it would seem that they vary in strength and sagacity in different sections. In Florida the gray fox is almost worthless for the chase.

In this country it costs but little to keep a pack of hounds; the price of course, varies, but it is certain that the price is strangely at variance with the horse. Hounds have always been undervalued. A good hunter frequently sells for 1,000 guineas, while a pack of hounds, on which everything depends, goes for a hundred, yet Shakespeare himself appeared to know the value of a good hound, for in his introduction to the "Taming of the Shrew," the noblemen returning from hunting thus speaks of his hounds with pride to his huntsman:—

"Huntsman I charge thee tender well my hounds.
Saw'st thou not boy; how Silver made it good;
At the hedge corner at the coldest fault.
I would not lose the dog for twenty pounds."

It was nearly a half century after the first epoch of which I have written, and of the gallant cavaliers who followed the Fairfax hunts, but few survived; they lay buried where they had fallen on scores of bloody fields. Others battle-worn and bullet-scarred, lived to see the infant Republic they had founded making rapid progress towards wealth and power. As the country changed and immigration flowed steadily, the gentry insensibly adapted themselves to the new order of things. Many of the old customs in vogue before the Revolution were entirely done away with. The law of primogeniture was abrogated and the splendid estates passed into other hands. The poor people now began to assert their sovereignty, and the old, but still proud and haughty form of Aristocracy, was reeling under the vigorous blows of young Democracy, who gained strength each moment. I will hurry on to the subject of the chase.

There met one morning in January, 1815, the largest "Meet" ever held in Virginia. Two hundred guests were present, many of them being ladies, who were invited to Cedar Grove. Great preparation had been made for the reception of the many guests, for not only was there to be a grand ball, but also the annual "fox hunt," was to be held. Noted sportsmen from the whole State had been invited, and were expected to come with their packs of hounds. The scene of the meet was at Cedar Grove, five miles from the former site of Belvoir, and situated on the Potomac. The mansion was partly of brick, and partly of wood, a wide, roomy edifice of two stories, covering a large space of ground. It had a sort of court-yard fronting the river with romantic serpentine walks, all trellised, where the Virginia creeper and the honeysuckle contended for mastery; at intervals a rustic bench was placed and it is no wonder that every enamoured swain in the neighborhood was anxious to carry his Dulcinea to visit the hospitable house of Capt. McCarty, for if his suit failed with those romantic surroundings, his chance was hopeless indeed. Cedar Grove took its name from an avenue of stately cedar trees that bounded the park on two sides. The mansion was large and commodious, the walls were of paneled wood with small windows seated in deep embrasures and the mantel was high, embellished with heavy mouldings that extended up to the cornice of the room. In one corner stood a small triangular cupboard and opposite to it a clock equally tall, with a full moon peering above the dial plate; then the leather-bottomed chairs which sprawled their handy legs like a high Dutch sailor squaring the yard; huge tables with stately china; an uncarpeted floor glittering with dim, but spotless, lustre in token of careful house-keeping. Around the walls in grotesque frames, were hanging time-worn portraits showing aristocratic high-bred features through thickets of curls.

The festival of the season lasted several days, and there was one dazzling, mingling of light, diamonds, laughter, flowers, swaying forms and bright eyes, that flashed and sparkled like a scene in the Opera. But at last, much to the regret of some, but to the unfeigned joy of the hunting portion of the party, the company left, and those who came for the sake of the sport remained behind. There were assembled here, the boldest riders, and noted sportsmen of the country. On the morning of the "meet," there were some 50 gentlemen on the ground, all well mounted and dressed in beautiful hunting costumes. I will begin a sketch of the noted characters by that of the host, Capt. Dan McCarty, who has left a name and reputation as a devoted lover of field sports. He was a splendid looking man in the prime of life, the handsomest of his time, with the figure of a Roman athlete, and the face of a sculptured Grecian god; eyes brown, or hazel, that could look very tender, or equally fierce; a man whom the men swore by and the women raved over. But the fast life he was living had told on him; his face was marked by lines that told of reckless passions and reckless purpose. Generous, fearless, and utterly uncaring, such was Dan McCarty, the boldest rider and best shot of the country round. The way he won his wife was a real romance, though unlike most romances, it did not turn out as the novels always do. He was running a fox, and pressing him hard, Reynard actually took refuge in a mansion house, whose door stood invitingly open. The Captain was never known to hold back when the hounds led, and rushed for the door, when he was suddenly confronted by a beautiful girl, a youthful as Hebe, "a young budding maiden, fair, fresh, and sweet," with her pet fox in her arms that he had been chasing, and the gallant Captain got his fox—and won a wife. This lady was endowed with as much spirit as was ever Bonny Kate, but McCarty was no Petruchio to tame his shrew, and like other wise men he knocked under. He

used to remark in after years, that, "he had in that chase caught more vixens than one." He was by inheritance a "hard goer," as the Irish call a dashing hunter, being the great grand-son of Daniel McCarty, President of the House of Burgesses in 1715, who bore the hereditary name of the ancient lords of Desmond, and, according to Leland, caused the proverbial saying of "Go to hell or Connaught." This gentleman was the original of Thackeray's "Harry Esmond." All of his descendants followed in his footsteps. Capt. Dan McCarty, with a buccaneering wife and a host of friends, coolly determined to follow the chase and the punch bowl until he was, in sporting parlance, "run to ground." We may be sure that no finer julep was ever made than that with which McCarty regaled his guests in his ancestral beaker—a "welcome cup," or silver flagon holding nearly a gallon. This cup had three black wooden handles attached; the cup bearer holding by one and the guest by the other two, they drank alternately. The captain was always attended by his majordomo, Uncle London, a stately old negro prouder than his master, with the exaggerated manners of the times. Uncle London was always attired in his dark green livery with bright silver buttons. The master and slave were devotedly attached to each other, and after the captain's death old London pined away and died of a broken heart. Capt. McCarty died a few years after the meet, in the prime of life, over head and ears in debt, his immense estate having been spent in his splendid entertainments. His brother, a grave and sedate member of Congress, became his heir, and the echoes of blowing horns, light laughter, and the stirring tally ho! has never since been waited over that classic ground.

One of the most famous characters of the assembled company was Parson Weams, a man of much talent, but queer in his notions and eccentric in his actions. The parson loved two things better than preaching—hunting the fox and playing the fiddle—not a Chesterfieldian accomplishment certainly, but one the reverend Doctor of Divinity excelled in, and nothing pleased the bloods of the day better than to get his Worship in a kindly humor by the aid of a bottle of old port, and put his instrument in his hands. He could play like Paganini, and used to bring every negro on the plantation around the house to hear him. Parson Weams was rising above the middle age, with a red, puffy face, twinkling eyes, and a stout, portly form. His coat was snuff-colored without embroidery; no frill of lace peeped from his bosom; his nether limbs were covered by thick woolen wear, and a pair of stout Wellington boots completed the dress. The parson was a welcome guest everywhere. His favorite tunes are rarely heard now: "The Cruiskin Lawn" and that beautiful old Celtic ballad, "Far Beyond the Mountains." In a livelier strain he would play the Scotch reel, "Sally in the Garden," "Carlin, is your Daughter Ready?" and other moreaux which could often be heard then in the long bouts that frequented "Washington's Retch."

Sitting on a roan mare of great bone and muscle was Miles Selden, from Westover on the James River. He was an exceedingly handsome man. I have seen his portrait taken in his prime, and it is the most perfect countenance I ever beheld; full of character and decision, one of those mobile countenances that are haughty, stern, or tender as the occasion rises. The Seldens of those times were a proud, clannish set, prejudiced, high-strung and honorable, with a reckless dash and impulsiveness that never counted the cost when their pride or their honor was concerned. There, too, mounted on the finest of horses, was Ned Ambler, Phil Southall, Capt. Territt, Nat Hunter, John Fairfax and William Payne. Among this group was a celebrated fox hunter by the name of Buck Carter, from Tidewater section, who fed, bred and run as staunch breeds of hounds as any in the Old Dominion. On the produce of a small plantation he brought up frugally and creditably twelve sons and six daughters, a stable of good hunters, and a kennel of true strain fox hounds. His dress was a long drab hunting coat, a belt, and a fur cap on his head. He was a jovial fellow, and could tell an anecdote with wonderful effect and power, and like "poor Yorick" would keep the table in a roar, so that his company was much sought after. His whole hunting establishment, though small, was kept in excellent order. He was always up in the hunting season at 4 in the morning, mounted on one of his perfectly groomed horses, and at 5 he would be on the field with his trained hounds. He rode with judgment, and was the best hand in the world to encourage the dogs, or assist them when at fault.

After the fatigues of the day, whence he generally brought in a couple of brushes, he would entertain his guests with the best the house afforded, and cement his welcome with good old "October home-brewed and peach and honey" of his own raising, and his standing toast was always "Horses and hounds."

The most brilliant figure in the group was Pitt Chichester, Esquire, of Mount Wellington, in Fairfax county. He was the best known man in the State, with many staunch friends and many bitter enemies. He was a stylish fellow, with a face of as much brilliancy and delicacy as a woman—handsome, thoroughbred, nonchalant, with a latent recklessness showing under the impressive calm of habit. He had soft, sleepy, blue eyes, and an oval face on which neither beard or mustache was allowed to grow; the figure was slight, but active and muscular. In fact, the *tout ensemble* was that of a complete man of the world. He had spent several years in Europe, was a *roué* of a couple of London seasons, a *tapageur* of doubtful Paris salons, and familiar with every vice. Any one would take him at first sight for an effeminate dandy, of too lazy and luxurious temperament to exert himself except under the pressure of "needs must when the devil drives," but first impressions are not infallible, and Pitt was an exception to the general rule. He was a strange anomaly, a singular contradiction of good and bad qualities not often seen in any one man; generous as a prince at one time, at others as miserly as any Shylock; kind-hearted and bad-tempered, sympathetic and selfish, tender and cruel, staunch and false; he was everything by turns, and nothing long. He moved in full pace with his uncurbed impulses. The single thing he was constant in was sporting. He was a great ladies' man, and there wasn't a belle in the county that Pitt hadn't taken a shy at, and his handsome face, dashing manner, and Fra Diavolo style made him everywhere successful. He was very fond of playing practical jokes, and some of them were unpardonable. He once abstracted Parson Weam's bandana, wrapped in it a pack of cards, and slyly slipped it back into his pocket. Imagine his Reverence's confusion when, in the midst of an impassioned discourse, he pulled out his handkerchief to wipe

his heated brow, and the cards spread like a stream over the pulpit, and fell like autumn leaves over the chancel. He used to perform the most foolish and desperate feats out of mere bravado. Once when returning from a party he leaped the Cedar run creek on his pet horse, jumping from one high bank to another when a misstep or a stumble would have been certain death. The next morning his friends found the distance to be 27 feet.

Frolics of all kinds delighted him. He once took four horses out of a wagon, and mounting one he persuaded his friends to back the others, and away they went on a scrub race, the loser to pay a dozen of Lisbon port. By a preconcerted plan Pitt placed the wagon on a ground where there was a descent, with orders to cry whoa! at a given signal when he passed by. The wagoner, heavily bribed, did so, and the horses, remembering the well-known tones, and being, besides, half-blown, stopped suddenly as if they were shot, and away went the rider high over their horses' heads. Of course Pitt won the wine and had the laugh on his side, two things in the world he would rather have than anything else.

On the occasion of the "meet" he blazed like a jewel among his more soberly-dressed companions. His costume was got up by himself in Paris, and surpassed anything ever seen in the Old Dominion. His hunting coat was of sky-blue, beautifully embroidered with silver threads, and adorned with gold buttons. He wore corduroy breeches of spotless white, which were met by a pair of Peel's patent-leathers, on the heels of which were spurs of solid silver, with a diamond set in each rivet head. His saddle was of embossed Russian leather, with holsters at the pieces. Had any one else made this apparent display he would have been laughed at, but all knew that beneath this dandified foppishness there was a daring soul. His entry the day before at Cedar Grove had created a great sensation. He appeared in a chariot phaeton, which was a splendor in itself. It was of purple and gold, with his coat of arms on each panel. The hubs were of solid silver, and the inside was elaborately finished. This vehicle was drawn by four black horses, ridden by two servants in livery. On the box was the coachman, holding the reins of these dainty thoroughbreds, whilst the footmen swung behind. Two outriders, one before and one behind the chariot, completed this dashing turnout. Such was Pitt Chichester—a man you would like to have with you when riding with the hounds, or at a dinner at Cash's tavern, or as a second for a duel at Johnnes's cross-roads; but not a man with whom you would like to have a horse trade or trust your sweetheart with. Pitt was not married, as I remarked before. At this time, like Count Ferdinand, he would give the fair sex all he had except his name. He was of course well mounted on an English barb, which he had brought from England with him.

There was a very elegantly gotten up gentleman on the ground named Champ Conway. He was comparatively a young man, and enormously wealthy. His costume consisted of a hunting coat of deep red, with mother-of-pearl buttons, white buckskin pants, and immaculate top-boots, that were polished until they shone like a mirror. Mr. Conway was very tall, with a lithe and sinewy figure, and his age was about 30. He had been educated in Germany, and was noted for being the best fencer of his day. He had been the principal in several affairs of honor, one of which was ended in a very curious manner, and in a way that probably no duel before or since was ever terminated. He had received a challenge from Maj. Randolph, of Fauquier, for some real or fancied injury or affront, and of course accepted it, and chose the favorite small-sword as his weapon. The place of meeting was a sweet piece of ground for such work; just such a spot as Sir Lucius O'Twigger would delight in for such a purpose—being an open glade in a forest. Attended by the seconds and a surgeon, the parties met early one morning, and after courteously saluting each other fell back while their friends settled the preliminaries. These were soon finished, and placing the rapiers in the hands of the principals they were ordered to set to. Both were accomplished swordsmen, and it must have been a fine sight to see those two gladiators stripped to the waist and in their bare feet, contending point to point, breast to breast, in that silent forest glade. From the first Conway acted on the defensive, and slowly backed under the Major's fierce onset. The keen rapiers gleamed and flashed as they cut through the morning air in the vicious lunge or guarded parry. The seconds soon perceived that Conway was winding his antagonist, who was already breathing hard, and they saw, too, that as soon as he was out of breath Conway would pink him in any spot he chose. The end was near. A furious rush of Randolph's caused the wily swordsman to retreat, parrying at the same time the lunges of his foe; but as he was pressed back he felt a stinging sensation on his ankle, and glancing down saw a copperhead snake, coiled and in the act of sinking his fangs into him for the second time. With a cry of horror he threw down his sword and leaped sideways. The situation was understood at a glance. In a twinkling the surgeon had him on the grass, cutting away the flesh from the punctured spot, and dosing him with whisky, and none worked over him more heartily than the man who a moment before faced him in mortal combat. This prompt treatment saved his life, and, beyond a swelling of the limb, no harm resulted. It was found out afterward that the serpent had a nest near the spot, which accounted for its unusual boldness. Mr. Conway never fought another duel after that.

There was Tatterson, a French dancing master, who taught the young Virginians how to trip the fantastic toe. He was very popular among the planters, was always brim-full of good nature, vivacity and merriment, and his odd ways and broken English were a source of great amusement to his friends. The Frenchman liked the hunt, but was one of those unlucky riders who always fall at the first ditch. Tatterson was a noble who left his country when Napoleon was crowned Emperor. He had been mixed up in some conspiracy, and Fouché ordered him to leave France forever, but on the restoration of the Bourbons he returned home and resumed his title. There were many other gentlemen present whose names are as household words to the people, but want of space forbids me to dilate. They were all good and true men, who loved the chase better than any other pastime in the world, and they all followed the hounds as long as they could sit on the saddle. The "meet" was ended by a farewell dinner, and as Capt. McCarty was the greatest epicure among even those fast-goers, and fast-livers, there doubtless was a feast such as Lucullus dreamed of but never saw. And the hospitable master of Cedar Grove was never happier than when

Natural History.

THE FISHES OF SCANDINAVIA AND OUR NORTHWEST COMPARED.

it due to the absence of aeration in that water. The mere rush of a fish instantaneously to and back from the surface through water of a temperature three or four degrees warmer than that in which he is lying would seem to be a very slight exposure to warmth, and quite insufficient to suppress appetite in an animal always voracious, and generally feeding the more ferociously as his stomach is more full; for anglers know that many fish, and trout among them, are most active in taking bait or fly or spoon when their stomachs are gorged with food. But the ascent of a trout into partially aerated water may be uncomfortable to his breathing apparatus. However, I will leave the question open, for I can't pretend to answer it.

Still less can I explain why, one evening last week, after a long repose, the trout in Profile lake suddenly took a notion to rise. I had been casting for an hour without success, and I really wanted some trout for the delectation of some friends who had arrived at the Profile House. A heavy shower had gone over, but no rain had fallen on the lake, although the shower had been heavy a few rods below it. The clouds were flying eastward high up above the mountain tops, and about 7 o'clock the sunset light burst from under them in that deep purple that is characteristic of these mountain regions. For ten minutes the hills were hills of paradise, resplendent with all glory. Then the light vanished suddenly, and all was cold and gray, and instantly the wind changed, and up the valley, right over the foot of the lake, came a majestic form—a white ghost—shaking his awful head and tossing it upward, and then he spread his robes of white all over the mountain side, where but a moment ago the purple of the sunset had been flaming. The change was almost instantaneous. I had looked up at the glory of the light, turned westward a moment, and when I looked back that white form was rushing up the valley, filling it from mountain side to mountain side, and immediately the hills and forests disappeared and all was white and ghostly. The mist was not fifty feet above my head, but it did not touch the water. I looked for a few moments at the scene—startling and actually sublime, as cliff after cliff and crag after crag melted into the embrace of the white cloud—and then renewed my casting. To my astonishment, the fish were now rising. I took a dozen in succession—fine fish for Profile lake, one of them a plump pound—and by that time it was dark. What started the fish up for that single half-hour?

TENNESSEE.—A correspondent writing from Nashville, under date of September 20th, gives the following account of what has been done towards stocking the rivers of that State:—

"Eighty thousand shad were recently deposited in the Holston river, at Knoxville, by J. D. McNaughton, one of the agents of the United States Fish Commission at Havre de Grace, Maryland. B. S. McCrory, Jr., put sixty thousand in the Estenaula, at Athens, and a like number found a home in the broad Tennessee, at Chattanooga. Other deposits will be made in these rivers every year until they are sufficiently stocked. The streams in the immediate vicinity of Nashville are admirably adapted for hatching purposes, both as to location and transportation. They were carefully examined and cordially recommended for that purpose by several fish commissioners a year or two ago, but no definite action has ever been taken respecting the matter. Judge John C. Ferriss has at his beautiful country seat, several miles distant from this city, a large pond, containing many handsome specimens of the finny tribe. He takes a great deal of interest in it, and if his example was imitated by others it would be better for Tennessee."

FERN.

—The experiment of stocking Echo lake, near the Profile house, in the White mountains, with black bass, has proved a success, and these game fish will soon be established there. Formerly this was a fine trout water, but some fool put pickerel into it, which destroyed the trout; and now, we understand, the bass are at work on the pickerel, and will soon exterminate the predacious Ishmaelites. Thus fish, like fleas, have other fish to bite 'em, and so go on, *ad infinitum*.

—A gentleman who has just returned from Port Jervis informs us that a man at that place is catching black bass from three to four inches long by the bushel in an eel weir and feeding them to his hogs. Here is a case which the State Fish Commissioners might investigate with profit.

FOUR MILLION SALMON EGGS.—*Philadelphia, Sept. 26th.*—Prof. Baird, United States Fish Commissioner, at the Centennial, to-day received a telegram from Sacramento, Cal., dated on Monday, as follows:—"A refrigerator car, containing 4,000,000 salmon eggs, left by the passenger train for the East to-day, consigned to Prof. Baird, United States Fish Commissioner, and in charge of Mr. Livingston. They are made up into packages, addressed to such State fish commissioners as have applied for them, and will be delivered to the express companies as the car passes the station nearest their destination. The first delivery will be to Utah, and the last, about a week later, to the Centennial Exhibition. About 2,000,000 more are destined for California, and 1,000,000 for Australia, New Zealand, and the Sandwich Islands."

LAWRENCE FISHWAY.—The new fishway at Lawrence has been completed, and the water was let in yesterday in presence of the Fish Commissioners of Massachusetts and New Hampshire. It requires seven minutes for the water to pass from the entrance gate to the outlet. The cost is said to be about \$5,000.—*Manchester (N. H.) Mirror, September 30th.*

—Mr. W. Holberton a few days ago went with a friend up into Sullivan county, N. Y., where they had tip-top sport, killing a satisfactory number of ruffed grouse.

AMMUNITION FOR THE TURKS.—The steamer John Bramhall, Capt. Newington, is in New Haven harbor taking a load of 800 tons of ammunition from Winchester's factory for the Turkish Government.

—Nature has at last supplied an antidote to the grasshopper plague in the Northwest. The Minnesota papers announce that a little red bug is surely destroying all the eggs laid by the grasshopper this season, thus insuring exemption from the ravages of the destroyer next year.

THERE is a remarkable likeness between the flora and fauna of the Scandinavian peninsula and those of the northern portion of the United States, which probably influenced the large immigration from Norway to Wisconsin and Minnesota. In the writings of Lloyd, Barnard and others, we find lists of the fishes of Scandinavia, most of which, or analogous species, occur in the northwestern States or the waters of Maine. Of the Salmonidae Norway has many species. The true salmon (*S. salar*) abounds in her rivers, and has been taken of 60 pounds weight. The grey trout, similar to our lake trout (*S. conifinis*) grows to 30 pounds; the salmon trout to 20 pounds weight. The silver salmon of the Norwegian lakes apparently resembles our Schoodic salmon (*S. Gloveri*) of Maine, and is said to be a very game fish, and equal to the true salmon on the table. It is taken from 3 pounds to 12 pounds. The yellow river trout of Europe (*S. fario*) is abundant in Norway, and grows to the weight of 12 pounds. This species is represented in America by *S. fontinalis*, said by those who have had the opportunity of comparing the two species, to be the better and more active fish. The charr, found in Norwegian lakes, seems to resemble our *S. fontinalis* in brilliancy of color, gameness, and excellency of flesh. The grayling of Europe (*Thymallus vulgaris*) is in Norway, as in England, a local fish, found only in certain streams. This is also the case with our grayling (*T. tricolor*), which seems to be confined to northern Michigan.

Many valuable species of white fishes (*Coregoni*) are found in Norway, as also the allied families of carps, suckers and Cyprinidae, or shiners. The perch (*P. fluviatilis*) and the pike-perch (*Lucioperca*) seem to be identical with our own yellow perch and glass-eyed pike. The European pike (*Esox lucius*) grows in Norway to great size, even to 50 pounds weight, and is thought by some naturalists to be identical with our northern pike (*Esox boreas*, Agassiz), being of much the same color—green, with rows of lighter spots. The smelt (*Osmerus*), which in America is confined chiefly to salt water, only running up the rivers to spawn, in Norway is said to live equally well in fresh water lakes. The turbot (*Lota*), which is analogous to our eelpout, is an abundant and much-prized fish in Norway; with us it is only eaten by Scandinavians. They have a representative of our catfishes in the *Silurus*, an enormous brute, growing in their lakes to the weight of 300 pounds, and sometimes suspected of devouring little boys, like his cousins in the Mississippi. None of our fresh water basses occur in Europe, though attempts have been made to introduce the black bass into England. Yarrell mentions a salt water bass which is taken with hook and line on the coast of England.

Among other plates of Norwegian fishing tackle, Lloyd gives a cut of a "drag," which is evidently the origin of our spoon. It consists of a spoon bowl of polished metal, through the upper part of which a stout, straight wire is inserted, and on which the spoon revolves. The hook is fastened to the lower end of the spoon, and is partially concealed by two rows of white or red cloth. I have seen it asserted in a recent book on angling that the spoon was invented in "York State," and an English writer declares that an English butler having accidentally dropped a silver spoon in the lake near by his master's house, saw a huge pike swallow it, and taking the hint constructed the apparatus which has become so common. But I think that neither to John nor Jonathan is the credit of this invention due, but to Olson, for as long ago as 1845 I saw the Norwegians on Lake Michigan using the identical weapon figured in Lloyd's book. Having seen nothing of the kind before, I procured it from them and used it successfully in trolling for Mackinaw trout, as well as pike and black bass, and although the imitations and modifications of the instrument have been very numerous, I have not found any of them more successful than the original pattern.

S. C. C.

CENTENNIAL LITERATURE.—The Exhibition gives rise to a vast amount of literature in the way of descriptive circulars, catalogues, advertisements, and fancifully printed cards. Many of these brochures are of hundreds of pages and handsomely bound, while not a few contain information of permanent value. As usual, scientific and learned persons have seized upon the occasion to publish essays at public or exhibitors' expense on various subjects. The third edition of the Catalogue of the Birds of Kansas, by Prof. F. H. Snow, the several publications appropos of the Smithsonian exhibit, and some pamphlets issued by the Army Hospital are examples. This Hospital, showing the work and facilities of the Medical Department of the United States Army, is under the charge of Dr. Yarrow, who was for many years connected with Wheeler's Territorial Surveys, and, like everything about the War Department is splendidly managed. Besides the explanatory descriptions and catalogues, this institution has printed a discussion of "Typho malarial Fever as a special type of Fever," and two pamphlets describing selected specimens on exhibition, by Dr. J. J. Woodward; while Dr. George A. Otis, Curator of the Army Medical Museum, has prepared a "Check-list of Preparations and Objects in the Section of Human Anatomy" in that museum, which fills 135 pages of matter valuable to every surgeon. The opportunities for properly publishing the results of scientific study are scarce enough, and it is to be hoped that much of this sort of "Centennial literature" may be accumulated.

A SECOND "BIRDS OF NEW ENGLAND."—Mr. H. D. Minot, a young gentleman of Brookline, Mass., is carrying through the press at Salem a book to be called "Birds of

New England," embracing chiefly his own observations, supplemented by whatever other matter he cares to include. Mr. Samuel's well-known work was so far short of what it might have been that Mr. Minot has a comparatively unoccupied field. But we reserve further notice until the appearance of the volume, which, we understand, may be expected at an early date.

—S. E. Cassino, Salem, Mass., is publishing a new Naturalist's Directory, and solicits the addresses of naturalists, with a mention of their specialty, to be sent to him immediately.

—The Nuttall Ornithological Club have been scattered during the summer, but will resume their meetings this week, and we hope to keep posted as to their doings. The same is true of the Cambridge Entomological Club.

ALBINO SQUIRREL.—We were greatly interested last week in examining a pure white grey squirrel in the possession of Mr. Ruthven Deane of Cambridge, Mass., whose collection is exceptionally rich in specimens of albinism. This animal was a present from Jas. Booth of Drummondville, Niagara Falls, and is mounted most excellently.

ONTARIO ENTOMOLOGICAL SOCIETY.—This society held its annual meeting at Brantford, Ont., on Sept. 20th, Mr. W. Saunders, the President, in the chair. The President read his annual address, in the course of which he referred to the collections of insects shown at the Centennial. The Canadian collection especially was commended, and the opinion was expressed that it was far superior to any collection shown in Philadelphia. A vote of thanks was given to the President for his address, and it was agreed to publish it in the *Canadian Entomologist*. The officers for the coming year were then elected as follows. President, W. Saunders, London; Vice President, R. C. J. S. Bethune, M. A., Port Hope; Secretary and Treasurer, J. H. Meacham, London; Council, J. M. Denton and E. Baynes Reed, London; J. Pettit Grimsby, Wm. Cooper, Montreal, and R. V. Rogers, Kingston.

—The black swans at Central Park have brought out 3 cygnets, which are supposed to be the first black swans ever bred in this country.

—In his address before the anthropological section of the American Science Association, at Buffalo, Prof. Mason said:—"The motives that should actuate us to zealous co-operation are that, while natural objects remain and may be observed unchanged centuries hence, all human phenomena are evanescent; that to know the truth about our own history and destiny as a race is of the utmost importance, 'for you are of more value than many sparrows,' and finally that all educational, political, philanthropic, and missionary efforts, at home and among the degraded tribes of humanity, in order to be successful, must be directed by an intelligent knowledge of the material with which we have to deal."

—Prof. Marsh, of Yale College, is paying Dr. Field, of Franklin county, Mass., \$100 a year for the right of quarrying slabs of stone showing foot prints of birds. A basketful of specimens, worth \$200, was recently taken out. The specimens are well washed, and then coated with shellac.

A STRANGE FISH.—A blue shark nearly five feet long was on exhibition at Brackett & Duffey's fish market yesterday morning. It was taken by some men who were cod-fishing about 20 miles off the harbor. This fish is much smaller and less dangerous than any other species of shark. The upper parts are of a blue color, the color suffusing the whole body except the belly which is white. It is most common in the Mediterranean and the warmer parts of the Atlantic, though it is not unfrequently found on the coasts of Devon and Cornwall, in England, especially during the pilchard fishery season, when they often make great havoc among the nets and lines of the fishermen which their sharp teeth enable them to bite with ease.—*Halifax (N. S.) Reporter.*

VOICES OF ANIMALS.—An interesting work which lately appeared at Freiburg, by Prof. Landois, on the "Voices of Animals," affords additional evidence of the universality of vocal sounds among the lower forms of animals, including the mollusca. The author considers it as beyond all question that ants possess a vocal speech, inappreciable by human ears, by which they are enabled to exercise those higher mental faculties to which they owe the development of the advanced social organization which they exhibit in their communities. Prof. Landois's work is illustrated by numerous microscopical and other drawings of his own, and forms an interesting addition to our natural history literature.

—An oyster 13 inches long and 17 inches through was recently taken from the bed at Green Bay, on the Massachusetts coast.

MOCKING-BIRD FOOD.

WASHINGTON, D. C., Sept. 29th.

EDITOR FOREST AND STREAM:—

In your last issue "J. S. N." of London, Ont., wants a recipe for mocking-bird food. I will give him and others who have mocking-birds a formula for making it. I have used it for a long time, and find it better than that you get at the stores, cheaper also: Ground or bruised hemp seed, 16 ounces; ground or bruised rice, 4 ounces; dust of butter cracker, 8 ounces; flax seed meal, 2 ounces; mix and put in a pan with two ounces of lard and cook until it has a brown color, stirring with a spoon to keep it from sticking or getting in lumps. This is good for any soft billed bird. One or two tablespoonfuls with grated carrot is enough for one bird a day.

GEO. WOOLDRIDGE.

ARRIVALS AT CENTRAL PARK MENAGERIE SEPT. 23 TO 30.—On chachma baboon (*Cynocephalus porcutus*); one black leopard (*Felis pardus* var. *melas*); one brown coal-mundi (*Nasua narica*), presented by Dr. A. Brandis, New York City; two axis deer (*Axis maculata*); one by Dr. A. Brandis, New York City; one capybara (*Hydrochoerus*); one harpy eagle (*Thrasaetus harpyia*), presented by Capt. Samuel L. Clapp of the Steamship Acapulco; two rheas (*Rhea americana*); one cassowary (*Casuarus galeatus*); three black swans (*Cygnus atratus*), bred in the menagerie. W. A. CONKLIN, Director.

The Kennel.

THE CENTENNIAL BENCH SHOW.

We are informed that the list which we publish herewith is only a portion of the prizes awarded at Philadelphia, but that it is all that will be given to the public until the general distribution is made. We can now conceive no cause for complaint against the judges as everybody appears to have received a prize. To be sure, as a competition the show may be called a farce, and ill-natured people will say that in trying to please everybody they have pleased nobody. Centennial medals and diplomas will now be as thick as blackberries and it will be a wretchedly poor kennel that will not include one "first prize winner." The information comes to us entirely unclassified, and, in most cases, without the name of the dog. We have endeavored to supply this when practicable, but the catalogue was so incomplete that it is impossible to do it thoroughly. Mr. Whitman's Ranger, we observe, was judged and classed as a native Irish setter, instead of imported:—

ENGLISH SETTERS, NATIVE AND IMPORTED.—V. J. Shipman, State Centre, Iowa, native dog puppy Dom Pedro; Thomas Aldrich, Providence, native bitch pup Smut; James Ayres, Allamuck, N. J., native bitch pup Dell; E. P. Hewitt, Providence, native dog puppy Mick; W. W. Collett, Philadelphia, imported dog Echo; James Ayres, Allamuck, N. J., native dog Glen; Frank Kelly, Philadelphia, dog Biz; George C. Settle, Philadelphia, native dog Bismarck II.; E. F. Merrillott, New York, native bitch puppies Grace and Pearl; C. S. Westcott, Philadelphia, five native puppies; G. H. Sannote, Tuckerton, N. J., native dog puppies; V. J. Shipman, State Centre, Iowa, native dog puppy; Samuel Bar, Philadelphia, native bitch Nellie; Joseph A. Porter, Philadelphia, native setter dog Duke; Ward H. Bent, Philadelphia, native dog Don; J. B. Settle, Philadelphia, native dog Fido; Charles H. Raymond, Morris Plains, N. J., native dog Roderick Dhu; Charles P. Tasker, Philadelphia, native dog Heck II.; A. P. Baldwin, Newark, native dog Fred; Wm. H. Nugent, Philadelphia, native dog John; T. F. Taylor, Coll's Neck, N. J., native bitch Fanny; E. F. Merrillott, New York, native bitch Pet; Jacob Pentz, Newark, native bitch Becky; Joseph A. Porter, Camden, N. J., native bitch Bella; G. W. Taddell, Philadelphia, native dog Buster; J. B. McNeal, Baltimore, native dog Beauty; Charles P. Tasker, Philadelphia, imported bitch Fairy II.; C. S. Westcott, Philadelphia, imported Pedigree; V. J. Shipman, State Centre, Iowa, native bitch pup Snow; Joseph McKinney, Philadelphia, native dog pup Bismarck; Samuel D. Berger, Camden, N. J., native bitch March; A. P. Baldwin, Newark, native bitch Nellie; Justus Von Leugerke, New York, native dog Dash; Daniel Elmer, Bridgeport, N. J., native dog Dan; Thomas Cumming, Stamford, Conn., native dog Rola; Henry Schreiber, Philadelphia, native dog Grouse; Samuel Scranton, Providence, native dog Jim; William Meikle, Indiana County, Pa., imported dog; G. T. Jones, West Philadelphia, native dog; R. E. McClanahan, Port Deposit, Md., imported dog Snipe; Louis C. McClan, Philadelphia, native bitch Judy; Dudley Olcott, Albany, native dog Guy Manning; Jesse R. Star, Camden, native bitch Fanny; Nesbitt Turnbull, Baltimore, native bitch Boss; Conrad Schreiber, Philadelphia, native bitch Nora; George C. Morris, Philadelphia, native dog Rock; George C. Colburn, New York, native dog Sank; L. H. Smith, Strathroy, Ontario, imported dogs Leicester, Llewellyn and Paris.

GORDON SETTERS.—W. M. Tileston, New York, imported bitch Lou; H. N. Munn, New York, imported dog Duke; Samuel D. Berger, Camden, native dogs Dash and Duke; S. Fleet Speir, Brooklyn, native dog Dick; Samuel D. Berger, Camden, puppies; S. Fleet Speir, M. D., Brooklyn, puppies; James R. Tilley, Locust Valley, Long Island, puppies; T. F. Taylor, Coll's Neck, N. J., puppies; Lawrence Curtis, Boston, puppies; S. Fleet Speir, Brooklyn, puppies; H. N. Munn, New York, native dogs Dinks and Scot; L. Cassard, Esq., Baltimore, native dog Ben; Edward Howe, Esq., Princeton, N. J., native dogs Fritz and Max; W. A. and A. F. Mullin, Esq., Mount Holly Springs, Pa., dog Dream; Richard Torpin, Jr., Philadelphia, bitches; Dr. A. Russell Strachan, New York, dog Count; W. J. Bickerton, Brooklyn, dog Pride of the Frontier; Samuel D. Berger, Camden, dog Duke; A. S. Souther, Trenton, bitch Bess; Joseph E. Fisher, Brooklyn, bitch Borer Phillips; James R. Tilley, Locust Valley, Long Island, dog Kacari; J. Howard Hand, West Granby, Conn., dog Dasu II.

IRISH SETTERS.—J. C. Cooper, Limerick, Ireland, imported dog York; Walter Humphrey, Newark, native bitch Belle; Jacob Pentz, Newark, native bitch Belle; Joseph E. Fisher, Brooklyn, native bitch Belle; Everett Smith, Portland, native bitch Cora; Jacob Pentz, Newark, native dog Jake Stubbs; J. C. Cooper, Cooper Hill, Limerick, Ireland, imported dog and bitch Buck and Floss; J. C. Miller, Blackrock, Dublin, Ireland, imported bitch Aileen; Robert S. Greenhill, Dublin, imported dog; Henry Metcalf, Philadelphia, dog Jim; Wade H. Marshall, Philadelphia, pup Don; Walter H. Bryant, Philadelphia, imported bitch Jessie; H. W. Gause, Wilmington, Del., bitch Keeple; Thomas Aucock, Providence, R. I., bitch Juno; Charles P. Tasker, Philadelphia, dogs Ruby and Bruce; John S. Davis, Philadelphia, native dog; Walter Humphreys, Newark, dog Jack; J. E. Devlin, New York, imported bitch; Charles E. Swalu, Philadelphia, native puppies; John E. Devlin, New York, native puppies; Joseph E. Fisher, Brooklyn, native bitches and puppies; A. A. Clay, Philadelphia, native puppies; Richard T. Miller, Camden, native bitches; M. Von Culin, Delaware City, native dog Rufus II.; Jacob Pentz, Newark, dog Mick and bitch Kathleen; M. Von Culin, Del. City, bitch Fire Fly; Nicholas Satus, Brooklyn, native dog puppies Dick and Dash; J. H. Whitman, Chicago, native dog Ranger; Max Wenzel, Hoboken, imported dog Jack.

POINTERS.—Edward Hawes, Newark, bitch Nell; Joseph Turner, Baltimore, dog over 50 pounds; Dr. A. Russell Strachan, New York, dogs, over 50 pounds; James T. Martin, Philadelphia, puppies under 1 year; E. M. Gillespie, Columbus, bitch Belle; Jas. Wardburton, New Britain; dog Mack; Joseph T. Bailey, Philadelphia, dog Rock; F. A. Tremaine, Philadelphia, dog Rover; Edmund Orgill, New York, dog Flake; Wm. Effingham, Philadelphia, dogs; Geo. A. Strong, West Meriden, Conn., dog Pete; Herman C. Berg, Rocky Hill, N. J., dog Tell; James S. Baer, Baltimore, dog Captain; J. H. Fiske, New York, dog Mack; Wm. Seward Webb, M. D., New York, bitch Whisky; Edmund Orgill, New York, bitch Lilly; Fisher Howe, New York, dog puppy Rex; George Grant, New York, dog puppy Pat; Wm. Seward Webb, New York, bitch puppies; Thos. F. Pading, Lancaster, Pa., dog Nig; Thos. Dunbar, Philadelphia, dog Dash; James H. Laws, Philadelphia, dog Nell; Edmund Orgill, New York, dog and bitch puppies; W. H. Mann, Haddonfield, N. J., dog puppy Prince; Wm. M. Tileston, New York, dog puppy Phil, Jr.; Wm. Seward Webb, New York, bitch puppies; Edward K. Worrell, Philadelphia, bitch Ellie; Max Linnick, Philadelphia, dog Dan; Edward A. Hawes, Newark, bitch under 50 pounds over 2 years, and dog over 50 pounds.

SPANIELS AND RETRIEVERS.—A. Belmont Purdy, New York, cocker spaniel dog and bitch over one and under two years; Henry Smith, Paterson, spaniel dog over two years; Samuel Scranton, Providence, spaniel bitch over two years; T. M. Aldrich, Providence spaniels other than pure Irish bitches over two years; W. H. Nugent, Philadelphia, spaniel bitches over two years; J. W. Leigh, Branchtown, Pa., spaniels other than pure Irish dogs over two years; John P. K. Poik, Wilmington, cocker spaniel dog over one and under two years; J. H. Whitman, Chicago, spaniels over one and under two years, and Irish water spaniel dogs over two years; O. D. Foulkes, Chesapeake, Chy, Md., Chesapeake Bay dogs; M. Von Culin, Delaware City, Chesapeake Bay dogs; G. H. Anderson, New York, springer dogs over two years; J. H. Whitman, Chicago, water spaniel bitch.

FOX HOUNDS, BEAGLES, HARRIERS AND DACHSHUNDS.—Henry O'Donnell, Philadelphia, beagle bitch Rannie; and dog Ranger; J. M. Powell, Philadelphia, dach-hund dog Duke; Richard Hartley, Philadelphia, harrier Blorrough; J. Sauer, West Chester, Pa., six fox hound puppies; Frank D. Buttolph, Morristown, N. J., fox hound bitch; Franklin Clayton, Marshallton, Pa., fox hound bitch Sawley; J. J. Hughes, Gull Mills, Pa., fox hound bitch Daisy; Kathryn and Tranter, Fort Richmond, N. Y., fox hound bitch Gipsey; Jonathan Yarkes, Leopard, Chester county, Pa., fox hound bitches; Chas. W. Jackson, Philadelphia, greyhound puppies Duke and Fannie; Andrew Aloright, Newark, greyhound imported dog Charlie; August Simon, Philadelphia, greyhound Sam; P. Kelley, Brooklyn, greyhound dog Spring; F. C. Foulkard, Philadelphia, greyhound bitch Pet; L. Milng, Philadelphia, greyhound bitch Belle; Mrs. J. J. Allen, Philadelphia, Italian greyhound Noboy; Wm. Abreus, Baltimore, harrier bitch Belle; Thomas David, Philadelphia, beagle puppy Rashi; John E. Diehl, Beverly, N. J., beagle puppy Belle and imported bitch; Frederick Underhill, Newark, pair of beas.

MISCELLANEOUS.—William Sanderson, Philadelphia, Skye terrier. William Mellor, Shoemakerstown, Pa., Skye terrier. Francis Schreiber, Philadelphia, Skye terrier, Harry. Thomas Byrne, Philadelphia, black and tan bitch. Richard Berryman, Philadelphia, black and tan bitch. Joseph Handon, Philadelphia, black and tan terrier, Jim. Otto Forrester, Chicago, black and tan terriers.

C. H. Roney, Philadelphia, black and tan terrier. C. Walton, N. Y. York city, fox terrier bitch. Wm. M. Tileston, New York city, fox terrier Dom Pedro. C. Walton, New York city, fox terrier dog Sport. W. P. Mange, Philadelphia, bull terrier bitch. Thos. F. Bell, Camden, N. J., bull terrier dog. Abel Barraciough, Philadelphia, bull terrier dog Sam. Jos. Bisle, Philadelphia, bull terrier dogs Nelson, Jr. and Nelson. Geo. Hunter, Philadelphia, bull bitch Kate. Thos. Biddle, Philadelphia, bull bitch Patch. Geo. Hunter, Philadelphia, bull pup Spider. Thos. Biddle, Philadelphia, bull dogs Bob and Dandee. C. C. Hoideman, West Philadelphia, Dalmatian dog. Oberkirch and Hammer, Philadelphia, Siberian or Ulm dog. E. K. Harrison, Philadelphia, Dalmatian bitch Vic. T. J. Woodcock, Chicago, Dalmatian bitch. Samuel Kennedy, Kaighn's Point, N. J., Dalmatian dog. J. Lintz, West Windfield, N. Y., Siberian or Ulm bitch. P. R. Scherr, Philadelphia, true Newfoundland bitch. E. Bd. E. Picot, Branchtown, Philadelphia, true Newfoundland bitch. T. C. Stellwagon, Philadelphia, true Newfoundland bitch Dido. Miss Burt, Philadelphia, Great Labradorian Newfoundland Scot. Hamilton Egbert, Bryn Mawr, Great Labradorian Newfoundland Leo. S. G. Baker, Wilmington, Del., Great Labradorian Newfoundland Colonel. Thos. C. Stellwagon, Philadelphia, Newfoundland, Neptune, imported from Nova Scotia. Edward B. E. Picot, Branchtown, Philadelphia, imported Newfoundland Leo. Thos. H. Dudley, St. Bernard, one year old. Thos. H. Dudley, Camden, N. J., Mastiff bitch Juno one year old. Thos. H. Dudley, Camden, N. J., dog Danger, Mastiff and St. Bernard crossed. I. Leutz, West Windfield, N. Y., Siberian dog Darling. Philip Hohe, Philadelphia, Siberian or Ulm, Flora. Major Aburger, Philadelphia, poodle dog Tom (one year old). Thomas N. Dudley, Camden, N. J., sheep dog Ken (over two years). W. Meikle, Indiana Co., Pa., sheep dog Jim, in puppy class, nine months old. W. Meikle, Indiana Co., Pa., sheep dog Watty (over one year and under two). F. C. Yarnoll, Overbrook, Pa., sheep bitch Ring (over two years old). George Aitken, Chester Co., Pa., sheep bitch Shepherdess (under 12 months). George Aitken, Chester Co., Pa., sheep bitch Home Nellie, Skye and hairless. G. C. Rodgers, West Philadelphia, Mexican cross Tip. W. Crozier, North P. int, L. I., sheep dog Sport. James Berry, West Philadelphia, sheep dog Snep. H. Hill, West Philadelphia, sheep dog Neptune. Julius Holstein, Allentown, Pa., Siberian and Mastiff cross Rover. Mrs. Ella G. Hall, New York city, French Barbet Fid. Major Leech, Irish Rifle Team, Ireland, Irish terrier Paddy. Thomas Manly, Zoological Gardens, West Philadelphia, Chinese Edible dog Piero. Robert Murray, Philadelphia, Newfoundland and St. Bernard cross Nero. J. C. Bailey, Philadelphia, pug dog Scot and bitch Vic. H. W. Sharpless, pug bitch Popsy and dog Sambo. P. S. Miller, Philadelphia, Mexican hairless dog Sport and bitch Nellie. Thomas Cudde, Philadelphia, Sheffield terrier bitch Dazzle and dog Gen.

Mrs. Jennie Gates, Philadelphia, Maltese terrier Mite. J. W. Aldridge, Philadelphia, toy Cuan lap bitch Fucose. John Morgan, Philadelphia, poodle dog Jim. Alex. Glass, Philadelphia, poodle dog Geo. Washington. Miss Anna J. Ball, Philadelphia, Pomeranian dog Snow Ball. E. D. Whitney, Philadelphia, Pomeranian dog Rex. F. McFadden, Philadelphia, Pomeranian dog Barney. Mrs. Mary J. Francis, Philadelphia, toy terrier bitch Gipsey. Thomas Hadfield, Philadelphia, toy terrier bitch Nell. John Spauler, Philadelphia, toy terrier dog Jesse. G. W. Patterson, Philadelphia, toy terrier dog Reddy. James McGuire, Trenton, N. J., otter terrier Bill. James Hanton, Philadelphia, broken haired terrier Loafer. A. Barraciough, Philadelphia, Scotch terrier bitch Ruody. J. A. Chambers, Philadelphia, Scotch terrier bitches Wasp and Nellie with four puppies. C. Lafferty, Philadelphia, Scotch terrier dog Duke. T. H. Dudley, Camden, N. J., Scotch terrier dog Rags. J. A. Chambers, Philadelphia, Scotch terrier dog Charley. Thos. H. Dudley, Camden, N. J., Scotch terrier bitch Imp. James Smith, Philadelphia, Scotch terrier bitch Lilly. A. C. Harrison, Philadelphia, Scotch terrier bitch Queenie. G. W. Smith, Philadelphia, Scotch terrier dog Tip. H. Bradshaw, Trenton, N. J., Scotch terrier dog Harry. Francis B. Pye, Trenton, N. J., Scotch terrier dogs Harry and Laddie. L. D. Wezlar, Philadelphia, Scotch terrier dog Skye. W. W. Harrison, Philadelphia, Scotch terrier dog Fly. E. Neman, Philadelphia, Siberian or Ulm dog Sedan. Philip Hohe, Philadelphia, Siberian or Ulm dog Nero.

—Mr. Chas. F. Bancroft, of Baltimore, writes us that he has had the misfortune to lose by the distemper, his pair of young red Irish setters, Guy and Bess, imported from the kennel of Mr. John M. Niall, Killaloe, Ireland. Mr. Niall, learning of his loss, has kindly offered to let Mr. Bancroft have on very reasonable terms (in consideration of his loss) his grand young red Irish bitch Lilly, 14 months old, over the distemper, and nicely trained. She will visit Maj. Richardson's champion dog Dick before being shipped. She is by Capt. Leigh's Flash, out of his Luna; Luna by Marvel out of Brosna; and Marvel by Plunket out of Min, etc.

THE MEMPHIS FIELD TRIALS.—We would call attention to the fact that the entries for the various stakes to be run for at the Memphis Field Trials on November 13th and 14th close on the 1st proximo. The purses are valuable, birds are abundant, and, in addition to the money prizes, the reputation of the winning dogs will be greatly enhanced. The judges are Messrs. J. H. Whitman, of Chicago; Edmund Orgill, of New York, and Col. James Gordon ("Pious Jeemes"), of Mississippi.

—Mr. Fred. W. Jones, of Brooklyn, has received from Mr. S. J. Bestor, of Hartford, Conn., one of his fine cocker spaniel gyps, sired by imported Snip, out of Mr. Bestor's imported Juliette. She is finely marked, liver and white, and altogether, for her age, as promising a pup as could be wished.

FLEAS! FLEAS!—Steadman's infallible flea powder, advertised by Messrs. Holberton & Beemer, in another column, is sure death to these insects. We have tried it with unfeigned success.

A DOG WHO WAS ASHAMED OF HIMSELF.—A retriever dog, whose owner was working in the garden of the Bath Institution, lately killed a favorite cat, a frequenter of the same grounds. Having committed this unprovoked murder, the dog deliberately took the cat in his mouth, carried it some distance, dug a deep hole behind some bushes, and after depositing the cat therein, carefully replaced the earth, and had he not been observed there would have been no evidence of the crime. It is a pity to spoil this story, but retrievers are in the habit of burying their food to "season" it, and this act may have been merely habitual. —London *Fancier's Gazette*.

How many natural instincts with which our dumb animals are endowed are attributed to reasoning faculties, in comparison with which mere worldly wisdom and common sense are "nowhere?"

MUZZLING DOGS.—The Parisian authorities, believing that the muzzling of dogs, especially during hot weather, is one of the surest means of inducing hydrophobia, have abandoned the practice.

REMARKABLE CASE OF HEREDITY.—A correspondent of the London *Field* sends the following remarkable case of inherited ulcer in a dog:—

"A fine old black and tan setter of mine, for two or three years before his death, suffered from an apparently incurable ulcer upon the cartilage of his nose, externally. It did not interfere with his power of smell, but gradually got worse, a short time before his death appearing to affect the nasal bones, bleeding at times profusely, and discharging fetid pus. I tried all the remedies I could think of, and at last supposed it to be one of those diseases of old age which cannot be dealt with when vitality is becoming sluggish. To replace him, I kept a brace of bitch pups, of which he was the father, out of a healthy bitch. One of them is turning out in all respects as clever as her sire; but, though only 18 months old, the same ulcer on the nose has appeared upon her, but not upon her sister, who by no means so strongly resembles the old dog. She has, however, thrown to a sound healthy dog a litter of fine whelps; but, strange to say, on the best of them there seem symptoms of the same ulcer. It would appear therefore as though this disease were hereditary. It is not in any way contagious, none of my other dogs being in any way affected. Can any of your readers give me any information as to its nature or probable cure? In all other respects the dogs are in perfect health.—Q. C.

ONE HOUR AND A HALF IN THE STRATHROY KENNELS.

OWEN SOUND, Sept. 25th.

EDITOR FOREST AND STREAM:—

Having been away for a short time of holidays in the middle of September trying to find a little shooting, I returned, after the first week, from Point Pele on Lake Erie, almost disgusted with myself for having gone so early, and so wasted a full week which could have been well spent later in the fall, at the same place, amongst the ducks and woodcock, which are there in great numbers next month. Making the best of it, I came to London and spent another week in a very pleasant way among my sporting friends of that place, going out every day and getting a few cock, and some ruffed grouse. Finding my time almost up, I had yet one great desire to satisfy before I left for home, viz: to go and see the far famed Strathroy kennels of blue blood setters, owned by Mr. L. H. Smith. Accordingly I got my friend Mr. Blake, United States Consul at London, to accompany me, to Strathroy, distant from London some 25 miles. Reaching Strathroy, Mr. Smith took us to his place, a short distance from the town, and first showed us the fine cups won by Paris, Leicester, Dart, and others of his kennel. The Centennial prizes won by Paris and Petrel, had not arrived yet. From there we were shown to the kennels. The first sight greeting us, was the beautiful litter of pups by Dan (Mr. Llewellyn's) out of Petrel; there are eight, all of which are disposed of. Next was a kennel containing five very fine pups between three and four months old, two being by Paris out of Ruth, the remainder, I think, by Leicester, out of Dart. Next we had the pleasure of seeing that perfection of dog flesh, Petrel, lately imported by Mr. Smith from the kennel of Mr. Llewellyn, Petrel being the first prize bitch at the last Birmingham show. Petrel is a perfect beauty, a pure Laverack, and Mr. Smith may well be proud of her. Among the others, we saw that fine old bitch Dart, also very handsome, and several more just as fine and beautiful. When Mr. Smith at last locks the door leading into the kennel containing the bitches, unlocks the next door and calls out "Paris," the visitor will stand amazed (providing he knows what a dog is; if he doesn't, let him stay at home), he will feel inclined to say "I have never seen a true setter in my life until now." It is useless my describing Paris. Most true American sportsmen have either seen him at Memphis, Chicago, or Detroit, or have heard of him through the columns of FOREST AND STREAM, devoted to the kennel. All I can say to those who have not seen or heard of him, is, go and see him, it is worth your while. We saw as well, the famous Leicester, the sire of Paris, Llewellyn, also a dog of fine qualities, and several others, after which we had a run to get the train, and decided it was the best afternoon we had spent for many a long day, and it will repay the lover of good dogs well to go 50 miles to see that kennel. I might write and describe the dogs I saw, giving points and particulars all day, but I am afraid I have taken up too much space as it is, by giving this mere outline of my visit, but so much was I taken by what I saw, and the beautiful training Mr. Smith had given his dogs that I can't refrain from telling to brother sportsmen, what a delightful hour and a half I spent in the Strathroy kennels, F. G. SIMPSON.

TO RUN AT MEMPHIS.

HILLSDALE Michigan, Sept. 23.

EDITOR FOREST AND STREAM:—

As I hear that certain parties are circulating the report that my dogs will not be run at Memphis, I wish to state emphatically that I shall run Rob Roy, Rufas and Queen Mab, myself, and that Geo. Campbell will run Fried for me. I hope this announcement will put an end to the statements that emanate either from ignorance or a malicious desire to misrepresent me. ARNOLD BURGESS.

At Philadelphia Sept. 20th Mr. Louis C. McClay's setter bitch Judy whelped ten puppies, two dogs and eight gyps, by Twaddell's Dan. Most of them marked like their sire.

THE DORY HERO.—The Cape Ann *Advertiser* says that Capt. Johnsen, the daring sailor who recently made the voyage across the Atlantic in a dory, is now at Liverpool, where the adventurer and his little craft are the lions of the day. The exhibition fee is sixpence, and the room is thronged day and evening by those who wish to see. Johnsen is now in good health, having fully recovered from the fatigues of the voyage. He stated that he would not attempt the feat again and pass through what he did on that trip across the Atlantic for a million of dollars.

WILLIAM TELL IN HORNELLSVILLE.—J. Otis Fellows, the popular one-armed gun and locksmith, shot some dozen apples in succession across the street from his shop, and then, to make the thing more binding, his brother Burley held up a five cent nickel between his thumb and finger, and this, too, was picked out by a ball from the unerring rifle of Mr. Fellows. Persons who think there is no science in this have only to hold up some small object and let some one else shoot at it a few times.—*Valley Times*.

—The American Arms Company, of Boston, Mass., are now manufacturing the celebrated "Fox" breech-loading shot gun. The action of this gun is quite different from any other in use. The barrels, when ready for loading, instead of tipping up slide to the right, obviating any strain on the hinge, and presenting no openings in which sand or other foreign substances can find lodgment. They are made from \$55 upwards.

Game Bag and Gun.

GAME NOW IN SEASON.

Moose, *Alces americanus*. Caribou, *Tarandus rangifer*. Elk or wapiti, *Cervus canadensis*. Red or Virginia deer, *C. virginianus*. Squirrels, red, black and gray. Hares, brown and gray. Wild turkey, *Meleagris gallopavo*. Pinnated grouse or prairie chicken, *Cupido cupido*. Ruffed grouse or pheasant, *Bonasa umbellus*. Quail or partridge, *Ortyx virginiana*. Black-bellied plover or ox-eye, *Squatarola helvetica*. Ring plover, *Egialitis semipalmatus*. Stilt, or long-shanks, *Himantopus mexicanus*. Woodcock, *Philohela minor*. Red-breasted snipe or dowitcher, *Macrorhamphus griseus*. Red-backed sandpiper, or ox-bird, *Tringa americana*. Great marbled godwit, or marlin, *Limosa fedoa*. Yellow-shanks, *Totanus flavipes*.

"Bay-birds" generally, including various species of plover, sand-pipers, snipe, curlews, oyster-catchers, surf-birds, phalaropes, avocets, etc., coming under the group *Limicola* or Shore Birds.

QUAIL.—The quail season opened in this State on Monday last, but too near the time of our going to press for us to receive reports from distant localities. Long Island, however, has been heard from, and as a rule the birds have been found but little more than half grown. Gentlemen shooting in Suffolk county, inform us that they flushed bevies in which the birds were so small that they had not the heart to shoot them. The early indications of an abundance of birds appear to be pretty well carried out, although it is remarkable how rapidly the numbers decrease as the First approaches.

—The duck season may be said to have commenced on Monday, along the coast, at least. Our reports from Maine and Massachusetts show how they are gradually making their way south. Good bags have already been made at Cohasset and other points on the Massachusetts shore, and they are probably by this time at Peconic, Shinnecock and other bays at the east end of Long Island. Good Ground will probably soon be heard from. In the Great South Bay some good sport has been had at coots off Bellport, but no ducks of any consequence have arrived. The first shooting will be the best, as the baymen are now all engaged in oystering; when that work is stopped and all commence duck shooting the birds disappear very rapidly.

—Some of the best duck shooting on our coast is reached by the steamers of the Old Dominion Line. See advertisement.

THE BAKER THREE-BARRELLED GUN.—Mr. Chas. Greer, of Mamaroneck, this State, wishes to wager FIVE HUNDRED DOLLARS with our correspondent, H., that he cannot repeat, with his Baker gun, the targets as reported in our issue of September 21st. For our own part, we can see nothing so remarkable in the targets, considering that they were made with No. 8 shot.

—The shooting season is now at its height in England, although the "hunting men" proper, those who ride to hounds, are looking for a frost. All the country houses are filling, and from Berwick to Penzance the report of guns is heard through the land. Everyone has to pay £1 a year for a gun license, and the annual revenue thus produced amounts to many thousands a year.

DEER SHOOTING IN THE ADIRONDACKS.—Several inquiries having been made of us within a few days by sportsmen, as to the chance of their getting a deer by making a trip to the Adirondacks, and several persons of our acquaintance having already gone there, the following information from a correspondent will be received with much satisfaction:—

"Of deer, the abundance surprises me. Ten years ago I spent five weeks in November and December in these woods, and careful observation during the present summer, aided by a 30 years' experience with their habits, convinces me that their numbers have doubled since that time, all reports to the contrary notwithstanding. The guides judge of their numbers by their presence in the ponds, but this is wholly fallacious. Large tracts of this forest have been burned over in the last fifteen years. Warned by the fatality attending this resort to the lakes, the deer have in a measure forsaken them, and hence chosen to remain in the second-growth timber which has sprung up in the burnt districts, and which afford good feeding grounds and unequalled cover. It is a peculiarly difficult country for 'hounding,' as it is extremely uncertain, in which of the innumerable lakelets that dot this wilderness, the deer will take water; and dependence is chiefly placed upon shooting him on the runways, which is necessarily a very uncertain chance. Any lover of buck shooting, the best of all our field sports, can find it here to his heart's content. From October 25th to December 15th is the best season. Then they are in splendid condition and the hunter has the satisfaction of placing his cunning against their's, not being able to steal up to them "like a thief in the night" and shoot them down; half of them does, with their udders full of milk, leaving their innocent fawns to starve if very young.

MASSACHUSETTS—Cohasset, Sept. 25th.—We have had a cold rough week on the shore; sea too heavy most of the time, but some good bags of ducks have been shot—16 to one boat the best so far this year. Two brant, the first of the season, shot on the 23d. A few plover and tattlers going along daily, but very wild. No teal or mallards this week. S. K., Jr.

Salem, Sept. 26th.—Sporting notes are meagre for the past week. Marsh birds are scantily represented, and though the weather has been good, the birds have not. I have to report 3 winters and 2 plover up Danvers river last Monday by a friend; 5 black ducks at one shot (all there were) at Coy's pond, Windham neck, last Sunday (I didn't do it). There have been some birds shot in several places, but no good bags. Some coots in the bay just before the last storm. Advices from Ipswich and Rowley give birds as unusually scarce, young loons being a dollar a head at Boar Head, and when served *a la* Hampton (a "Granite House" style and preferred to chickens but not by me; give me chicken, and I'll shoot you a loon.) Smelts are getting more plenty, but not thick. Rail at Newburyport are said to be

getting scarce. Ground in good order for English snipe and prospects good for quail.

OCTOBER 2d.—No birds at any of the usual places the past week, and some of our best gunners have given up in disgust. Some rabbits at Ipswich, I am told. A few coot shot at Linkus island.

CHARLTON, Sept. 28th.—I saw the largest flock of quail to-day that I ever saw. Should think there were 50 of them and all of good size. Hope to find them again when the law is off. Winters are too severe here for quail, and it is very seldom that we have them for more than one season, before they are winter-killed. I am in hope we shall have them this fall, but if not here I shall find them somewhere else. C. T.

[When a boy in Hampshire county, Mass., among the Green Mountains, thirty years ago, or more, quail were quite numerous, and the winters, we are convinced, were much more severe than now.—Ed.]

COHASSET, Oct. 2.—Ducks flying well the past week. A friend and myself shot 30 on the 27th; next day shot 13 plover; plenty of them and winter yellow-legs. Partridges very scarce about here this year. Several flocks of brant went over yesterday morning. G. K., Jr.

NEW YORK—Hornellsville, Oct. 2d.—Ruffed grouse very scarce. Squirrels, black and gray, plenty. A few flocks of pigeons have been seen. JOHN.

Hornellsville, Oct. 1st.—There was every indication last spring and summer of having plenty of ruffed grouse. Since the season has opened, however, there is complaint of not finding many. My opinion, as well as that of others, is that they are widely scattered in search of grapes, berries, etc. Plenty of black and gray squirrels about and in the adjoining townships. Reports from different directions hereabouts would give promise of more abundant bags of quail this season than for several years past.

DEPOSIT, Sept. 30.—Ruffed grouse very plenty. Woodcock coming in. Gray and black squirrels plenty, with a sprinkling of wild pigeons on the grain fields. But little shooting is done here. F. STURDEVANT.

SYRACUSE, Oct. 1st.—Quite a number of ducks have appeared near Onondaga lake, and snipe and plover shooting is quite good. SENECA.

MARYLAND—Muirkirk, Oct. 1st.—Partridges (quail) are more plentiful with us than for many seasons back, although I am sorry to say that they are being shot before the close season expires by men who call themselves sportsmen. We shall put some of them through if we can get evidence enough to convict. C.

ILLINOIS—Middle Grove, Sept. 28th.—I have been sporting here for 15 days, and have killed 146 pigeons, 27 large fox squirrels, three crows ("egg suckers"), two hawks ("chicken stealers"), and one large horned goose owl ("hen-roost robbers"). The pigeons came from the northwest about September 5th, and are now going southeast for Maryland, Virginia, etc. Grouse and quail are rather scarce here, yet fair shooting. Ducks and geese have not yet come south, but will on the first cold day. Then hurrah for the Illinois river, below Peoria, where music is expected from many pieces. MAJ. H. W. MERRILL.

INDIANA—Indianapolis, Sept. 23d.—I seldom see any reports from our locality; although many keen sportsmen and not a few crack shots reside here. The season having been favorable quail will be more abundant than for years. The boys are all ready, waiting patiently for a week from Monday for a start. The southern and western portions of our State affords fine shooting, and the many beautiful lakes of the north are well stocked with fine fish. Why does not some one write us up? W. E. U.

KENTUCKY—Louisville, Sept. 26th.—The reports from all over our State are very favorable for this season's sport; in fact, better than for years. Woodcock have been scarce and but few killed. ON WATCH.

VIRGINIA—Leesburg, Sept. 30.—A few bull-bats are killed here in the evening. T. W.

MISSOURI—Jefferson City, Sept. 29th.—Shooting in this vicinity good for quail. There is also quite a number of wild turkeys within from one to three miles of the city, but no squirrels and only a very few pigeons have made their appearance. The first flight of wild geese and ducks yesterday. Very good deer hunting on the Osage river within 8 to 12 miles of the city. H. C. M.

MISSISSIPPI—Corinth, Sept. 28th.—Weather too warm to take the field, although quail and turkey are reported quite plenty. Some gentlemen went from here on the 15th to make a deer and turkey hunt. They made a start on a deer, and spent the most of the day after him, but failed to get a shot, after a long chase. They found no turkeys, and returned without hoof or claw. When the weather gets cooler and the leaves off the bushes and the frost kills the grass and weeds, I will commence on "bob-white." My dogs are looking finely, perfectly healthy and in good form. I had just sealed this letter when Duncan came in with a fine gobbler, in token of which find inclosed some of his mid-wing coverts. He will weigh about 17 or 18 pounds. First blood for John, the best turkey hunter in North America. GUYON.

TEXAS—Galveston, Sept. 27th.—Game commences to arrive in fair quantities. Plover left about two weeks ago for a still warmer climate, though you may meet yet with some stragglers, which, however, are poor as snakes. Teal ducks are putting in an appearance, and a party of young sportsmen bagged last Sunday about ten pairs at Smith's point, about 15 miles from here, on the bay. This, and the mouth of Trinity river, are considered the best localities for duck shooting in this vicinity. Such shooting as we have during the winter at the places mentioned would do your heart good. Smith's point, more particularly, is a great place for canvas-backs, there being a chain of lakes that abound with wild celery. Our snipe grounds are splendid, and I do not think that any afford more sport, with less fatigue, the same not being a treacherous swamp, as in Louisiana and the Teche country, but mostly the wild prairie, with a little water on it, so that you may walk and ride with at least some degree of comfort. W.

CANADA—Gravenhurst, Sept. 25th.—I was out on the 1st and the 15th of this month after ruffed grouse, and succeeded in bagging 8 on the former day and 6 on the latter. There is no trouble in making a good bag, providing you have a good dog along with you—that is, one that will tree the birds and then bark. It is almost impossible to shoot

them on the wing in Muskoka at this season of the year, as the swamps which they frequent now are so thick with leaves and brush. Deer are now in season, and are quite plentiful. Judge Lount, of Bracebridge, is now out on his annual hunt. He got two last Friday, his first day out, and missed a fine large buck on Saturday (through his not sticking to his post on the runway), but which he thinks he will get to-day.

PIGEON MATCHES.

—There will be a pigeon tournament at Dayton, Ohio, on Wednesday and Thursday, October 11th and 12th. Over \$2,000 will be given in purses, and Messrs. J. F. South and C. F. Wheale will shoot a 100-bird match for \$500. Capt. Bogardus will also be present.

—The gold badge for the championship of the United States for pigeon shooting, was contested for at Deerfoot Park, New York, Wednesday, Sept. 27th. The badge was in the possession of Capt. A. H. Bogardus, he having won it at Fleetwood Park in May, 1871, and a second time at Joliet, Ill., in March, 1874. This time Bogardus had for his opponents Greene Smith of New York, J. E. Hudson of Syracuse, C. F. Wheale of Cleveland, Ohio, and J. A. Nichols of Syracuse, and the contest was so close that Bogardus won by only one bird, although he scored 52 out of 54. Wheale was second, with a score of 51. Each contestant shot at 30 birds singly and at 12 pairs. The pigeons were wild ones, and with few exceptions were not strung on the wing. The rise was 21 yards in the single and 18 in the double shooting.

LONG ISLAND CLUB.—This club held its regular monthly contest for the cup on Friday last at the club grounds near Jamaica. There were 20 contestants, the conditions being seven birds each, 25 yards boundary. Dr. Atkins and Mr. Gildersleeve tied, each killing all their birds. In shooting off, however, the Doctor killed two to his opponent's one. The other scores of those who shot out were—Yates 6, Thomas 6, Wynn 6, Blankley 6, Willard 5, Reding 5, Walton 5, Hartshorn 5, Broadway 4, Martin 4, Miller 4, Race 1.

—The first annual fall shooting match of the First German New York Hunting Club took place on Wednesday, September 27th, at Staten Island, Sea View Race Course, with the following result:—

Name.	Total.	Name.	Total.
G. Kall.	8	John Fleischman.	4
L. Malsch.	7	P. Hemmer.	5
T. Rubsam.	6	F. G. Sheller.	3
H. Berlat.	5	H. Zahn.	6
T. Kunz.	5	Wm. Schwind.	4
Chas. Nagel.	4	L. Schuter.	4
A. Kaltenbach.	4		

WHAT SPORTSMEN NEED.

BELLEFONTAINE, Ohio.

EDITOR FOREST AND STREAM:—

We need a well made paper shell with a Berden primer, same as metallic shells. There should be in the top of the shell close to the primer a small slot like there is in Hart's metallic shell, so that the cap can be easily removed. The advantage of this is more appreciated in the field when there happens to be a mis-fire, for instead of having to carry around with us half a dozen loaded shells that we cannot use, the shells could be recapped immediately by having a small pointed instrument which could easily be attached to any one of the pocket recappers.

JOHN J. PALMER.

Rifle.

CREEDMOOR.—The event at Creedmoor on Saturday was the fourth competition for the Marksman's badge, presented by Mr. H. C. Poppenhausen of the Long Island Railroad Company. The weather was so wretched that the number of competitors was very small. This is an all-comer's match, five shots each at 200 and 500 yards, State medal rifle. The following are the scores:—

Name.	200 Yards.	500 Yards.	Total.
A. B. Van Heusen.	20	21	41
E. De Forest.	21	20	41
George Waterman.	19	21	40
T. W. Linton.	19	21	40
Col. G. D. Scott.	17	21	38
Capt. J. L. Price.	18	20	38
H. H. Meday.	19	19	38
Capt. C. F. Robbins.	18	19	37
W. L. Candee.	19	18	37
J. F. Bulman.	18	18	36
Lieut. J. A. Gee.	19	16	35
W. H. Cochrane, Jr.	19	15	34
S. T. Hubbard, Jr.	16	17	33
W. S. Thompson.	15	17	32
G. F. Merchant.	17	15	32
H. Funke, Jr.	17	15	32
J. L. Killinger.	20	12	32
E. W. Price.	20	11	31
Dr. J. L. Farley.	14	16	30
Homer Fisher.	18	12	30
G. E. Reed.	15	13	28
C. H. Eagle.	19	18	27
J. W. Hale.	14	11	25
L. Cass.	20	0	20

The sixth competition for the *Spirit of the Times* medal will take place at Creedmoor next Saturday at 3 p. m.

The Take Moor Rifle Guard, an association composed of the markers and other employees of the range, will hold their annual prize meeting at Creedmoor on Monday the 16th inst. Prizes have been offered by many of the commissioned officers of the National Guard, and an interesting time is anticipated. The distance covered will be 200 yards; position, standing; weapons, military rifles. In the evening the prizes will be distributed, after which a dinner will be served to the competitors and their ladies, and a ball will terminate the festivities.

THE TEAMS AT WASHINGTON.—The shooting by members of the Irish, Scotch, Australian and American rifle teams, at Washington, was concluded on Saturday by a competition at 1000 yards, a day each having been devoted to the 800 and 900-yard ranges. The shooting was in no respect a match, but more of an exhibition of individual skill, each shooting independently of the other. The Scotch and Irish residents of the District, however, having prepared prizes to be given to the riflemen of their respective nationalities making the best score, the General Committee prepared a similar one for competition among the Australians. The individual superiority of the visitors was very apparent throughout the shooting. The firing point was unchanged throughout, the targets being moved back to the required distance. The following table, arranged according to nationalities, gives a synopsis of the

shooting. On the first day but 10 rounds were fired; on the others 15:—

Name.	IRISH TEAM.			Total.
	800 Yds. 10 Rounds.	900 Yds. 15 Rounds.	1000 Yds. 15 Rounds.

Mr. Fenton was awarded the very handsome medal presented by the Irish citizens of the District of Columbia, Mr. Rea the Scotch medal, and Mr. Lynch the medal for the best score made by a member of the Australian team.

THE INTER-STATE MATCH.—The entries for the Inter-State rifle match to take place October 12th under the auspices of the Crescent City Rifle Club, closed on the 28th ult. The following clubs will participate: Rhode Island Amateur Rifle Club of Providence; Amateur Rifle Club of Rochester, N. Y.; Dearbon Rifle Club of Chicago; Burlington Rifle Club of Burlington, Vt.; Connecticut Rifle Association of North Manchester, Conn.; Ogdensburg Rifle Club of Ogdensburg, N. Y.; Leather Stocking Rifle Association of Goshen, N. Y.; Milwaukee Rifle Club of Milwaukee, Wis.; Worcester Sportsmen's Club of Worcester, Mass.; Amateur Rifle Club of New York city. Possible additional entries: Massachusetts Rifle Association of Boston; Saratoga Rifle Club of Saratoga. The match is to be shot on the ranges of the various clubs simultaneously.

RIFLE NOTES.—Tiffany & Co. have just finished thirty-six gold badges, one of which will be presented to each member of the foreign rifle teams....The Northwestern Rifle Association, of Chicago, is again attempting to arrange a rifle match between teams to be selected as representing the West and East, to be contested at 800, 900, and 1,000 yards distance....The riflemen at Halifax, N. S., had their regular competition on the 27th ult....The Syracuse Standard "goes for" the N. R. A. in the matter of orthography. On the water cooler won at Creedmoor by the Sixth Division the word prize is spelled prize, and on the Yates Dragoon prize the word separate is spelled separate....Northfield, Minn., is organizing a rifle club....Saratoga Rifle Club tournament, October 10th and 11th.

National Pastimes.

NEW YORK ATHLETIC CLUB.—The seventh fall games of the New York Athletic Club took place on the Mott Haven grounds on Saturday. The entries were unusually numerous, but owing to the bad weather the attendance was small. The various events were decided as follows:—

One Hundred Yards Running.—First, H. C. Sapatas; time, 10½ seconds.

One Mile Run.—First, Harold Laube, Toronto; time, 4 minutes 51 seconds.

Hurdle Race, 120 Yards.—First, Geo. Hitchcock, New York; time, 19 seconds.

One-Mile Walk.—First, D. M. Stone, N. Y. A. C.; time, 7 minutes 31 seconds.

Four Hundred and Forty Yards Running.—First, E. Merritt, N. Y. A. C.; time, 54½ seconds.

Three-Mile Walk.—First, D. M. Stone, N. Y. A. C.; time, 25 minutes 12 seconds.

Seven-Mile Walk.—First, Charles Connor, N. Y. A. C.; time, 58 minutes 32½ seconds.

Running High Jump.—First, H. E. Ficken, New York; 5 feet 5 in.

Running Broad Jump.—First, Isaiah Frazer, Yonkers; 7 feet 4 in.

Putting the Shot.—First, H. Buermeyer, N. Y. A. C.; 35 feet 4 in.

—A new turf paper called "Le Cheval de Guerre," the "Warhorse," has made its appearance in France. We have the second number. The publication office is in Paris.

BILLIARDS BY THE HOUR.—The system of charging by the hour instead of by the game, for billiards, has of late been somewhat discussed among room keepers, and our opinion in the premises has more than once been asked. We think with one of our billiard writers (Si. Slocum), that it is the only just and equitable method of settlement for both parties; and, in vogue, the good player will not have to pay twice as much for an hour's amusement as the poor player pays. We think it would be well to adopt it.—*Billiard Cue for September.*

BASE BALL.—THE PROFESSIONAL CAMPAIGN.

The championship issues, both in Canada and the United States, were settled by the September contests. In the United States the Chicago club bore off the palm with a record of 52 victories and 14 defeats, out of 66 league club contests. The battle for second place is still going on between Hartford and St. Louis; but fourth place will be occupied by Boston, and fifth by Louisville, Cincinnati being last. The record to October 2d, showing the games that will count in November next, is as follows:—

CLUBS.	Boston.	Chicago.	Cincinnati.	Hartford.	Louisville.	St. Louis.	Games won.	Games drawn.	Games played.	Games to play.	Series won.	Half-series won.
Boston.....	..	1	10	2	5	4	22	0	46	4	1	1
Chicago.....	9	..	10	1	9	4	38	0	50	0	4	0
Cincinnati.....	0	0	..	6	9	2	5	0	46	3	0	0
Hartford.....	6	4	6	..	7	4	27	1	44	5	3	0
Louisville.....	5	1	8	1	..	4	19	1	49	3	1	1
St. Louis.....	4	6	7	6	6	..	29	0	47	3	4	0
Games lost.....	24	12	41	16	29	18	140	2	282	18

The record of the Canadian championship leaves the honors with the Tecumsehs, of London, as follows:—

CLUBS.	Tecumseh.	Maple Leaf.	Toronto.	Hamilton.	Kingston.	Games won.	Games played.
Tecumseh.....	..	3	3	2	2	10	10
Maple Leaf.....	0	..	3	3	4	10	13
Toronto.....	0	0	..	3	0	3	10
Hamilton.....	0	0	1	..	0	1	10
Kingston.....	0	0	0	1	..	1	7
Games lost.....	0	3	7	9	6	25	50

September has closed, and the appended record shows the model games played in the League arena during the month, the limit being placed at five runs for the winning nines:—

Sept. 15.—Mutual vs. Cincinnati, at Brooklyn.....	2 to 1
Sept. 15.—Louisville vs. Athletic, at Philadelphia.....	3 to 0
Sept. 29.—Louisville vs. Boston, at Louisville.....	3 to 0
Sept. 30.—Hartford vs. St. Louis, at St. Louis.....	4 to 1
Sept. 6.—St. Louis vs. Mutual, at Brooklyn (10 ins).....	4 to 3
Sept. 12.—St. Louis vs. Boston, at Boston.....	5 to 2
Sept. 29.—St. Louis vs. Hartford, at St. Louis.....	5 to 2
Sept. 27.—Boston vs. Cincinnati, at Cincinnati.....	5 to 3

Outside of the League the following model games were played during September:—

Sept. 1.—Hartford vs. Fall River, at Fall River.....	4 to 2
Sept. 1.—Boston vs. Crockett, at Binghamton (5 ins).....	2 to 2
Sept. 1.—Union vs. Paris, at Utica (15 ins).....	5 to 2
Sept. 2.—Hudson vs. Nameless, at Brooklyn (11 in).....	4 to 2
Sept. 2.—Resolute vs. Mutual, at Elizabeth.....	3 to 1
Sept. 2.—Orchard vs. Contest, at Brooklyn.....	5 to 4
Sept. 2.—Electric vs. Western Union, at Boston.....	3 to 2

The Alaska club games and the New York and Brooklyn picked nines are left out on account of alleged "crooked" play. It will be seen that finer games were played outside the league arena than in it.

CRICKET.

PHILADELPHIA, October 2d.

EDITOR FOREST AND STREAM:—

The game of cricket between the English Gentlemen and the American Team, postponed from 22d and 23d ultimo, was begun at the Germantown grounds on Friday last. The Americans won the toss and went to the bat, scoring 139 runs for the inning. Dan. Newhall making 40, Bob, 36, and Magee, 26. Saturday was so stormy that the game was postponed until Tuesday, to-morrow. The English clowns did not make their appearance for the game at the Athletic grounds on Thursday last—their first "trick."

SCULLS.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

P. H. R., New York.—Is rabbit shooting allowed already on Staten Island? Ans. It is.

J. G., Newark, N. J.—Please inform a reader of your valuable paper if there is a change in the law regarding rabbit shooting in this State. Ans. No. The close season for rabbits expires November 1st.

M. F. Hoboken, N. J.—Please let me know in your next if the law is up Oct. 2d on Long Island in regard to rabbit hunting? Ans. Rabbits are only protected on Long Island, and then the law expires Oct. 1st.

E. C. H., Fowler.—Please inform me where I can get the best duck shooting in November, and also the nearest one to the above named place where I can be sure to find plenty of game. Ans. You will probably find good duck shooting on the marshes about Sandusky.

J. T. T., Guelph, Canada.—Capt. Parker Gilmore has the credit of having introduced the *Salmo fontinalis* into English waters. This fish is now successfully bred by Mr. Parnaby, at Borrowdale.

R. T. M., New Haven.—The fish you send is evidently the yellow caranx or yellow mackerel (*Caranx chrysos*, (Mitch.) Gill.) It is found from Cape Cod to Florida, and is very abundant on this coast in September and October.

C. G., Mamaroneck, N. Y.—I have captured a coot. Can you tell me what I can persuade him to eat? He refuses live fish, clams and corn, and shows fight every time I go near him. Ans. We hardly know; if your corn was soaked he might eat it; or try to get succulent young salt-water plants and soft roots.

T. S. R., Minneapolis, Minn.—Where and at what price can I obtain a copy of T. Martin Tripe's "Birds of Minnesota," published in 1871? Ans. We do not know; it is probably out of print, but perhaps some of our readers may know.

H. J., Natick, Mass.—1. Please inform me the best way to trap the fox? I have tried many times to trap him with poor luck; is there any thing I can scent the trap with? Can you tell me the best book to get in trapping? 2. What is the lightest breech-loading (12-gauge) shot gun to be made for \$100? Ans. 1. See answer to D. H. H. 2. About seven pounds.

F. W. S., Philadelphia.—I have a Sharp's sporting rifle, old style (shells and primers), I want to have it altered so as to use cartridges will you please tell me who can alter it and probable cost? Ans. The expense of altering your rifle would be equal to the cost of a new piece. Write to the Sharp's Co., Bridgeport, Conn.

W. H. S., Philadelphia.—1. Can a person not a resident of New Jersey shoot in that State without being a member of the West Jersey Game Association, and if not, how much does it cost to join the association; who is the President, and where would a person go to join? 2. Is reed-bird shooting good now, and how long does it continue so? Ans. 1. Not in the counties of Camden, Gloucester, Salem, Cumberland Cape May and Atlantic. Address Jesse Starr, Jr., Camden. 2. Yes, but the birds leave with the first frost.

W. K. P., Philadelphia.—1. What composes the loading tools of a shot gun? 2. Where can I get the game laws of Pennsylvania? 3. What is the best size shot for reed-birds? also ducks? 4. In Gloan's book, "The Breech-Loader," page 123, he says, "An excellent plan for loading shells is, first fill up the base of the shell with powder, that is, to the top of the walls which surround the cap and over this put a wad. The rest of the powder is then put in and the load completed in the usual way." What do you think of this loading? 5. What do you think of using French chalk, (same as used by boot-makers) as a lubricator for a shot gun? Ans. 1. A Dixon's measure, rammer, cutter and turner; the last named three generally come in one tool. 2. From Chas. Sydam, No. 149 Chambers street, or through the back numbers of this paper. 3. Nos. 10, 11, and 12 for reed-birds and No. 4 for ducks. 4. We do not advocate that mode of loading. 5. Can not recommend it.

L. O. T., Weybridge, Vt.—1. Will you please inform me if cocker spaniels are good for partridges, and where I can obtain one? 2. Is there any trapping for beaver in Arkansas or Virginia, if so, in what streams? Can you inform me where I can find good muskrat and mink trapping this fall? Ans. 1. Cocker spaniels are good dogs for ruffed grouse, called partridges. One advertised for sale in our paper. 2. You will find plenty of beaver in Brunswick, Nottoway and Greenbrier Counties, Virginia. The vicinity of Perth, Ontario, Canada, is said to be a fine trapping region. The upper Ottawa river is the stream.

BEST RIFLE, St. Louis.—I have a .40 calibre, 50 grains twist, one turn in 22 inches, Remington. Do you consider that a good hunting rifle; if not, could I have a barrel with less twist on it? I was thinking also of getting a .32 calibre barrel (extra long cartridge) and have it fitted on for squirrels, etc. What will a barrel cost rifled and blued (steel) suitable for it, and where could I get one? Please give the rate and style of twist in the Winchester. Ans. The "four feet" was an error. One turn in about 2½ inches is correct, and your rifle is right. We doubt if you can have a .32 calibre barrel fitted to it. The Winchester rifle has about one twist of rifling in 20 inches.

GUSTAV BARTEL, New York.—Please inform me, through your valuable paper, what kind of work has a workingman to do in a State hatching house; would he have the opportunity to get acquainted with all the required and different manipulations of hatching, etc., etc.? To whom has a person to address himself to get a situation in the State hatching house of Maryland? Ans. Address T. B. Ferguson, Esq., Fish Commissioner of Maryland, at the Maryland Building, Centennial Exhibition Grounds, Philadelphia.

D. H. H., Ashbysburg, Ky.—1. Can you tell me how to dress deer and coon skins for gloves, strings, &c., something to take the hair off? 2. Where is the best place to go to hunt and trap for the winter, and what time is best to start? 3. Could a green hand make it pay? 4. Do you know of a place where a green hand could get in with an old trapper and learn something? Ans. 1. It would take more space than we can spare to give the information. Send 20 cents to Jesse Haney & Co., No. 119 Nassau street, for the Trapper's Guide. 2. In Nottoway, Brunswick and Greenbrier counties, Virginia. 3. We should think it doubtful. 4. We do not.

SKINNY—Can you give me a recipe for dressing skins of animals? Ans. Take the skin as fresh as possible, and having mixed a sufficient quantity of salt and water till it will bear an egg, saturate it with alum; put the skin into this blood-warm and let it lie and soak 24 hours; then take it out, and having tacked it upon a board (the fur inward), scrape the skin and a thin membrane will come off; then, having warmed up the pickle again, put the skin into it a second time and let it remain five hours more, after which take it out and nail it upon a board to dry (fur inward), and then rub it with pumice stone and whiting. Hare and other skins may be prepared in the same way. They are always in best condition for preparing in winter.

C. S. M., Englewood, N. J.—I have a fine setter dog and I want to get him in trim for quail shooting in November, and I should like to have your opinion on the subject of feeding him; both previous and during the hunting season? He has had perfect liberty this past summer as I have had no opportunity to use him, but I expect to give him pretty steady work this coming fall. Ans. If your setter does not get into any kind of mischief or run off to hunt on his own "hook," as many dogs will in the country, it will be as well to give him his liberty, but as a general thing it is better to keep a dog chained to his kennel or otherwise confined most of the time; but no dog can be kept in perfect health unless he is freed from the chain or confinement once or twice a day. We invariably see that our dogs have their liberty a short time morning and evening for a little exercise, and in order that they may empty themselves away from their kennel. If a dog is loosed twice a day, ten minutes liberty will suffice. In regard to feeding, if you have scraps enough from your table to keep him in good condition, no better food could be given him, but in case you have not enough of such food, boil hasslet or any other rough meat with corn meal or oat meal, making a well cooked mush. And if a dog is fed enough food in the evening to keep him in good condition, it is best to accustom him to this way of feeding, and any healthy dog will do well if thus fed. No dog will make good work on game with his stomach full of food, and no skillful sportsman ever expect them to do well under such circumstances. If you give a dog a hearty breakfast just before he is put to work after a few short turns he will stop and throw it up. The better way is to give your dog his supper and breakfast at supper time. It will surely do him far more good than if the same food is divided and a portion is given him in the morning before he is taken to the field to shoot over.

P. D., White River, Washington Territory.—You would confer a great favor by giving me the address of some person who sells correct colored pictures of the different kinds of trout and other fish? Ans. There are but few scientific works on fish that give figures of trout and salmon colored from life or true to nature. No real artist would gain anything by consulting any such figures. He would, however, do well to read scientific descriptions of the color, as well as to learn the proper proportions of the head, tail, fins, eyes, etc. We can only name two works which profess to give correctly colored figures of salmonoids. The first is Agassiz's "Salmones de l'Europe Centrale," the only part of his projected work, "Histoire Naturelle des poissons d'eau douce de l'Europe," that was published. It appeared at Neuchâtel in 1839 in folio. This first number contains the salmones themselves, and the second, appearing in 1842, by Carl Voght, contains the "Embryologie des Salmones." We shall only speak of the first of these, which has 27 plates, some colored. This part cost 75 francs on ordinary and 150 francs on heavy paper. Each figure is given twice in outline and colored. There is the Rhine salmon in several varieties, several trout and coregoni or whitefish. The figures are drawn and colored with all possible exactitude, but are stiff and wanting in life-like appearance. However, these are the most perfectly true figures of salmonoids that have appeared. The other work is on salmon only. It is "Young on the Growth of the Salmon in Fresh Water," London, folio, date about 1839. William Young gives some very good colored figures of salmon from the young parr, the larger to the full-grown salmon. No other works are known to us that approach the two here mentioned in correctness. Some smaller figures of trout, colored, may be found in the works of Cuvier et Valenciennes, in the "Naturalist's Library," Donovan's "British Fishes," Lloyd's "Scandinavian Adventures," etc. Larger figures are to be found in Bloch, Meidinger, "Fish of the Danube, etc.," but they are not to be trusted. The American grayling is figured only in Richardson's "Fauna Boreali-Americana," London, 1836, 4to. No good figures, colored or uncolored, of American salmonoids have been published. The field is open to one who wishes to occupy it. A series of very correctly drawn plates in folio, appearing in numbers and colored by the chromolith process would repay the undertaking of them. We have several species and varieties of the salmon, salmon trout, brook trout and whitefish, both on the Atlantic and Pacific slope, most of which have not even been described or merely indicated. Their brilliant colors at different ages and seasons would afford a wide scope to the labors of a skillful artist; but he should first take some lessons in ichthyology, in order to give his work scientific and permanent as well as artistic value.—J. CARLSON BREYVOORT.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK.

[Post Office Box 2832.]

Terms, Four Dollars a Year, Strictly in Advance.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 20 cents per line; outside page, 30 cents. Special rates for three, six, and twelve months. Notices in editorial columns, 50 cents per line.

NEW YORK, THURSDAY, OCTOBER 5, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

Trade supplied by American News Company.

CHARLES HALLOCK,

Editor and Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, October 5th.—Racing: Jerome Park; Ottawa, Canada. Trotting: Maryville, Mo.; Piqua and Cincinnati, Ohio; Galesburg, Ill.; Jamestown, N. Y.; Pottsville, Pa. Minnesota State Fair, Minneapolis. Plainfield N. J., Athletic Club meeting. Regatta (postponed) Long Island Y. C. Club. Bench Show of Dogs, St. Louis. Base Ball: Louisville vs. Hartford at Louisville; Our Boys vs. Witoka at Brooklyn; Orange vs. Enterprise at Orange, N. J.; Monticello of Jersey City, vs. Alpha at Staten Island; Manchester vs. Cooper at Manchester, N. H.; Olympic vs. Chelsea at Brooklyn.

FRIDAY, October 6th.—Racing: Ottawa, Canada. Trotting as above. Meeting of American Fish Culturists' Association, Philadelphia. Regatta Greenwood Lake, N. Y. Bench Show of Dogs, St. Louis. Base Ball: Jefferson vs. Alpine at Stapleton, S. I.; Harlem vs. Volunteer at Poughkeepsie, N. Y.; Quickstep vs. Flyaway at Melrose, N. Y.

SATURDAY, October 7th.—Racing: Jerome Park. Trotting: Galesburg, Ill. Fish Culturists' Association, Philadelphia. Regatta, Greenwood Lake, N. Y. Union Athletic Club meeting, Boston. *Spirit of the Times* Badde, Creedmoor. Base Ball: Olympic vs. Resolute at Brooklyn; Elizabeth vs. Alpha at Elizabeth, N. J.; Orange vs. Enterprise at Orange, N. J.

MONDAY, October 9th.—Handicap Athletic meeting, N. Y. A. Club Grounds, Mott Haven.

TUESDAY, October 10th.—Racing: Jerome Park. Trotting: Brooklyn Driving Park, Lowell, Mass.; Point Breeze Park, Philadelphia; Waseka, Ill.; White Plains, N. Y.; Frederick, Md. Pigeon Shooting Tournament, Louisville, Ky. Rifle Tournament, Saratoga Springs.

WEDNESDAY, October 11th.—Racing: Kingston, Canada. Trotting as above. Rifle Tournament, Saratoga Springs. Pigeon Shooting Tournament, Louisville, Ky., and Dayton, Ohio.

The subscription price of FOREST AND STREAM has been reduced to \$4. Twenty-five per cent. off for Clubs of Three or more.

—Tiffany & Co., silversmiths, jewelers, and importers, have always a large stock of silver articles for prizes for shooting, yachting, racing, and other sports, and on request they prepare special designs for similar purposes. Their timing watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. Tiffany & Co. are also the agent in America for Messrs. Patek, Philippe & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of diamonds and other precious stones, general jewelry, bronzes, and artistic pottery is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Union-Square, New York.

—Any friend of FOREST AND STREAM, wishing to send a sample copy of the paper to his friend, to induce his subscription, can have it by dropping a postal card to the editor.

RAVINE REVERIES.

FROM THE HUNTER'S CAMP.

THE musical murmur of the cascade, the monotonous purring of the water as it glides over the stones and gently washes the shelving banks in front of our camp, conduce to reveries. Tall trees shade the glen; catalpas, with broad leaves; maples, whose leaves have not yet assumed the autumn tints; walnuts, which drop their fruitage of a season at our feet; oaks, with their gnarled limbs aloft strive to shut out the sky, but strive in vain. The blue ether, across which sails, anon, a fleecy cloud; the bridge which spans the ravine—a graceful architectural device of man's contrivance; these we can see aloft. Beneath the trees glides the stream, soon lost to view 'neath overhanging, vine-laden trees; paths lead upward and disappear. Were it not for the busy crowds that come down the paths and along the banks of the foaming brook to gaze in upon us we would soon forget the near proximity of a noisy city and of restless thousands, and imagine ourselves in the leafy forests, in the haunts of deer and trout, so much has Nature done to make the camp a part of the sylvan scene. The rough hewn logs, up-bearing a roof of hemlock and bark, seem but an outgrowth of the hillside. Inside are trophies gathered from widely separated fields; along the eastern wall is stretched a skin which once enclosed the frame of a grizzly bear—he from the rocky mountains; close by, a pair of snow shoes, which oft glided over Canada's snow drifts; from the centre of the camp frowns down a panther's head, from West Virginia; beneath this hangs a bow once grasped by hands of wary Seminole, no less a personage than noted "Tiger Tail," moccasins from Labrador; buckskin suits from Texas and Dakota are mingled with hunting suits of more modern type of manufacture. Jack lamps from the wilds of Connecticut, and camp lounges from modern Troy, supply light and comfort at night, when darkness closes around and all is still. Outside, the walls are garnished with antlers of elk, deer, antelope, and caribou, which flank the horns of a Rocky mountain sheep. There lack not trophies, but dreadful dearth is there of game.

There are intervals of quiet—when the thronging people are absent in other portions of the grounds. Then the quiet is dreamy, sleep provoking. The stream murmurs soothing airs; the din of the outside world comes in muffled by the trees to a distant hum; the sun glances down and paints upon the earth soft shadows, imprints of the lifeless leaves and twigs above.

Our pet squirrel darts out from his haunt in the old stump, seizes a walnut lying on the brink of the pond—our stream is dammed—lifts it aloft to test its soundness, sits for a moment poised on his haunches, whisks his tail, darts at us a glance from his bright eye, then is off. This he repeats so long as quiet reigns. There is a rustle in the logs behind me; a whiskered nose is thrust out, a little paw follows, and, seeing the coast is clear, a mouse glides across the rough table, tears a mouthful from the morning's paper and runs away with it to his nest. No ruder noise disturbs, and I relapse into castle building in dreamland. Suddenly I am awakened: "Say, Mister, where's the bar?"

Then I collect my wandering senses, and inform my questioner that the bear is gone. Being further importuned as to why he left, and what reason I could give for deceiving a confiding public into the belief that there was a bear here, I launch forth into a history of the bear's arrival, his stay, and his escape. First, we never advertised to keep a bear; he was brought here merely as an additional attraction to the camp. When he arrived he was, as bears go, very mild. Multitudes flocked to see him; said multitudes carried parasols and canes, and with sundry and divers pokes and punches of said parasols and canes said multitudes provoked the ire of said bear to such an extent that it was only necessary to point in the direction of said bear to see said bear aforesaid rise up and perform sundry gyrations and evolutions with his forepaws—all of which greatly delighted and amused said multitude.

At last there came a man from the Rocky mountains. He was a man past middle age, and had passed the forepart of his life among grizzlies, as it were. He begged the privilege of patting bruin's head, which was granted, with an injunction to be careful. The old man approached to pat *ursus* on the head and call him pet names; but bruin didn't take to this man from the Rocky mountains worth a cent, but arose with his usual demonstrations of welcome—upon which the old man sounded a retreat. As he turned to flee, that gentle bear reached forth and gathered to himself that portion of his raiment the old man usually sat upon. The demand for pins that ensued impoverished the camp, and caused bruin's banishment forthwith.

Across the rude bridge that spans the stream now come fresh arrivals from the train. The motives that impel them to visit us are manifold. Some, perhaps the most, come because they must see all there is to be seen on the grounds. These stare into the camp, bestow upon the hunters a hurried glance, and then depart. Many come from a real curiosity to see what a hunter's camp looks like. They are sage in their questionings, accept all information as gospel truth, and gaze at the hunters as they do at the animals in a menagerie.

Then there is the class who have camped, or who have relatives or friends who once did. This class may be subdivided into those who come from a hearty interest in the matter, and those who come to find fault. The number of the latter, I am happy to say, is comparatively small. They will be recognized at once by the desire they manifest to

impart information. They will point at the grizzly skin and tell their friends 'tis a buffalo, and a mean one at that. They call the snow-shoes dip nets, and will inquire, with a knowing air, for the hunter. If that representative so far commits himself as to acknowledge that he is guilty of following that occupation they accept his information with a stare of derision or half-concealed remark upon his appearance.

But the gods are just! There are the canoes! This party generally wends his way to the water, launches the canoe without permission and steps in to show his proficiency with the paddle. Then the hunter knows he is about to be avenged. If the knowing party succeeds in getting seated it is by a miracle; he makes a mis-stroke, loses his balance, and is next seen floundering ashore on the other side, his arms at right angles to his body, his pantaloons clinging to him desperately, and his feet making time for the train. He will probably denounce the camp as an imposition, and the hunters as frauds.

Some ladies have strangely preconceived ideas of what a hunter should look like. I doubt if there is anything on earth, or under the earth, that will meet a woman's ideal of a "real live hunter." As near as I can ascertain, he must be clad in the skin of wild beasts, must have an inch-thick coating of war paint on his face, a few scalps hung at his belt, a ten-foot Kentucky rifle, and a huge Bowie knife. To be near perfection, he must have an Indian princess for a wife, and must talk of bar and painter and the like in the classic language of Munro and Beadle.

An Englishman is likewise at sea—that is, the Englishman who has never hunted our plains or read extensively of us. They have visited us, and, because your representative did not converse fluently in Choctaw or Sioux, one sentimentally declared to another, in an undertone, "E's, a 'ell of a 'unter."

Is it strange, then, that we hail with delight those who come from a real earnest love of camp life? They are not few. Some days they come by scores and by hundreds. They have read the paper, and they have camped in just such a manner as this. They sit down by us and spin yarns—old hunters from California, from Canada, and from Maine. One will relate a wonderful story of deer shooting, another a tale of the border, in which Indians figure prominently. In listening to them your hunter forgets vexation, and paddles off with them to that hunter's fairyland, the land of delightful reminiscences.

There are many ladies, also, who have camped, and they, of course, are delighted. They will chat of their trips, of their adventures and escapades with zest that is both infectious and charming. There was one who came with her husband, who had met our editor-in-chief away up on the Nepigon. "We did not have as good a shelter as this, and I never enjoyed life as I did then," said she. And then came the stories from her store of camp lore that possessed all the force of masculine yarns, with brighter and more vivid illustrations.

"This is the place I've been looking for," said a beautiful blonde from Kentucky, as she seated herself with a sigh of relief. "This is the only place where everything seems in keeping with the delightful scenery. I can rest here."

The roughness of the place does not annoy them at all. It is a *restful* place when not crowded. The friends and subscribers of the paper take a paternal interest in the camp, and even include the hunter as accessory. Now, there was the old gentleman from Westchester, who said he had a bottle of cider in his cellar for me. He was a fine old man, and, well—somehow I wish that bottle of cider was *not* in his cellar just now.

Our camp is often confounded with the New England cabin—confounded often—and finally it became necessary for me to visit it, that I might intelligently direct inquiring visitors. There was a crowd. A policeman guarded the door, and admitted visitors in detachments. While waiting I gazed. They had a garden in front, and it was a garden, too. Why, they had regular hollyhocks and marigolds, such as my grandmother used to raise up there on Cape Ann. There was, I believe, a bunch of tansy, which I hadn't seen before in a twelvemonth, and, I think, some peppermint and spear mint. I oughtn't to forget those herbs, for I remember that one of my annual duties, when a small boy, was to carry a huge bundle of mint down the road to old Aunt Souard to be distilled. Inside the cabin were gathered things new and old—principally old. Of course they had all the articles of furniture and so forth brought over on the Mayflower, as the Mayflower was peculiarly a Massachusetts vessel, and wouldn't have come over if it hadn't been for Massachusetts people. What became of the Mayflower I don't know. If it had come to Philadelphia, now, they would have had it cut up into canes and selling at twenty-five cents apiece. There were but two things, however, that interested me. One was the fire on the hearth, the other a New England institution—baked beans. I sat down to the table and ordered a plate of beans. For the first time in many a month I was at home. All about me were people devouring beans. It was the only place on the grounds where a person could obtain that somewhat mythical article, a "good square meal." Here, at last, was the long-sought haven. They came; I gazed. My heart warmed—it burned.

"Good heavens! is the man going to eat all them beans?" said a woman near by. I looked at her pityingly. She evidently came not from New England. I did full credit to my bringing up. But there was the fire. I returned to the sitting-room and looked yearningly at that fire. A huge "settee" prevented a near approach, and said "thus

far, only," and demure maidens, knitting in the chimney corners, looked from out the deep frills of their old-fashioned caps and said by looks, "and no further." Had they but known the intense longing in my heart for the warmth of that fire, I hardly think they would have refused me admittance within the charmed circle.

There are three things that beget successfully delicious reverie—three things. The murmuring of falling water, a hard-wood fire, and "Vanity Fair." But the fire is king of them all. To sit in front of an open fire-place, watching the logs glow with bright blaze, watching the glowering red coals, the wreaths of flame, the fitful bursts of smoke, recalls all the sunny memories of the past. Many a winter's night came before me as I looked into the roaring throat of the fire-place; and the days and nights of New England winter—with blustering wind and driving snow and sleet outside the house, but a cheery, glowing flame of hospitality within—were recalled. After the flame comes coals. Glowing with refulgent radiance, from their depths one may draw inspiration for any theme. Denied them, he must seek, as I did in my lonely room, a last resort in "the fragrant smoke of 'Vanity Fair.'"

FRED BEVERLY.

—A great many of our correspondents and visitors complain that they cannot purchase FOREST AND STREAM while traveling, even in the large cities. Friends of the paper everywhere can do it no greater service than to induce the news dealers in their respective towns to keep it on sale. Send to the American News Company for it. Unsold copies are returnable.

A FISH DINNER.—To-morrow, at the conclusion of the first day's meeting of the American Fish Culturists' Association, a dinner will be indulged in by the members of the association and invited guests, which will be at once novel and interesting. The dinner will be composed entirely of fish, not omitting the succulent oyster. By-the-by, why don't the association send for that oyster mentioned by the Cape Ann Advertiser? It was taken recently from its bed (its little bed) at Green Bay, and measured 13 inches in length and 17 inches through. Then there will be soup and chowder of the luscious *Cheledra*, and the more homely *Gadus morrhua*. For a boil we would suggest *Labrax lineatus* and *Salmo salar*. Then there will be *Lucioperca grisea* (a good pan fish) and *Centropomus nigricans*, *Perca flavescens* and *Otolithus regalis*. It is unfortunate, perhaps, that *Alosa sapidissima* is not in season; but *Scomber calias* could be substituted for it. At the conclusion of the dinner the company will be organized as a Fin-nish Commission. The tickets to the dinner are \$5 each, and any gentleman, whether a member of the association or not, desiring to test his capacity at the scales can do so by sending his name to B. Phillips, Esq., Judges Pavilion, Centennial Grounds.

Oh! what an aggregation of brain power will be developed by this feast of fish! What after-dinner speeches may be expected! Heads—tongues—and sounds! Egad!

TAMING QUAIL.—A gentleman from Walpole, Mass., was in the office the other day—don't remember his name. We were talking about game birds. He said he had quail in his barn daily which he prevented being disturbed, to feed with his other fowls. He enjoyed their presence, and managed to keep many of them housed and fed every winter, and then let them out to breed in the spring. If one wishes to keep birds around his premises he must sound the tin pan or bell, and spread out the soft meal or seed, as the case may be, in the spring daily. By so doing your small fruits are protected. Why? Because the birds have something to eat, and become gentle and happy around your premises.

The success which has been met with in various foreign parts of the world as well as at home in taming and domesticating wild fowl has been often referred to in our columns, particularly on pages 68 and 260 of volume five.

THAT CENTENNIAL FISH SHOW.—Some weeks ago we deplored the failure of the Centennial Aquarium at Philadelphia. We did it with feeling. We didn't then say how the disaster was brought about, though we may have hinted at the cause; but now a little bird has whispered that the expected show was killed by red tape. Superintendent Mather was disheartened almost from the start. It took a month to dig holes for the outside reservoir, which they promised to dig in three days—"when they got at it," and they talked about getting "a requisition" to bore a bunghole in a barrel. That's all.

HOMEWARD BOUND.—The Cunard steamship Scythia, which sailed on Wednesday last for Liverpool, had on board a number of the gentlemen who participated in the late international rifle and rowing contests. Of the Dublin University rowing crew there were Messrs. Charles Barrington, Croker Barrington, W. Barrington, G. Ferguson and A. E. Hickson. A number of friends from this city and Philadelphia were at the wharf in Jersey City to bid them good-by.

Colonel J. H. A. Macdonald and eight members of the Scottish rifle team were also among the Scythia's passengers. The names of the eight were Mr. Daniel Fraser, Mr. William Clark, Mr. Charles Ingram, Mr. Robert McVittie, Captain Hodgart, Dr. Mitchell, Mr. John Moir and Mr. R. Renton. Quite a number of persons saw them off and wished them a safe return to their homes in Scotland.

—Sample copies of FOREST AND STREAM will be sent to any one wishing to examine it with a view to subscribe.

THE WILD RICE CULTURE.—We are gratified to perceive that our efforts to disseminate wild rice culture have met with extended responses from the east and the west; that many gentlemen have had success with their planting experiments; and that others are ready to assist in the good work. No doubt valuable results will follow, so far as an increase in wild fowl for shooting is concerned. We print the following interesting correspondence:—

BRainerd, Minn., Sept. 18th.

EDITOR FOREST AND STREAM:—

As FOREST AND STREAM seems to take a good deal of interest in the eastern growing of wild rice, I take the liberty of sending you Mr. Francis's letter, showing that his attempt has at last been a success. I have any amount of rice ready for delivery.

THOS. CANTWELL.

PITTSFIELD, Mass., Aug. 22d.

Mr. Cantwell:—

DEAR SIR—I noticed a few weeks since an advertisement from you as ready to furnish wild rice. Through your kindness last fall I received a bushel, and my experience may be of some benefit to your friends. I was advised by friends (especially Mr. Hallock) to sow both in fall and spring. I did so, say half to each season. That which I put out in fall has come up splendidly, some in three or four feet of water, or on the shore of the lake. I selected muddy bottom and good feeding ground for ducks. This has been a decided success. The seed sown in spring has not done as well, and I would advise sowing broadcast in fall to any depth of water up to five feet.

J. DWIGHT FRANCIS.

Messrs. D. T. Curtis & Co., seedsmen, of Boston, have made arrangements to keep wild rice on sale for such as wish to plant it. The Indians used to push their canoes into the wild rice and thrash in the canoe for domestic consumption, but we are not aware that they do it now, except as it may be to gather their supply for distribution for replanting in other waters.

Mr. Valentine, of Janesville, Wis., has recently issued the following circular, which we cheerfully print.—

JANESVILLE, Wis., Sept. 1st, 1876.

DEAR SIR:—

Having had numerous calls from sportsmen throughout the country for wild rice seed, I have this season made arrangements with reliable parties in northern Wisconsin to gather a large quantity. It will probably be ready for delivery the latter part of this month. Price 20 cents per pound here. It weighs considerably lighter than oats. Wild rice will grow in water from six inches to four feet in depth, but the land must be covered with some water the year round. It should not be planted where the water freezes to the bottom. It will grow on any kind of bottom, but does best in mud. Before sowing it should be soaked in water until it will sink, to protect it from birds and to prevent its floating away. It can be planted any time before water freezes. When once well started it will sow itself every fall. Parties ordering will please give full directions for shipping.

RICHARD VALENTINE.

—Within a month the circulation of FOREST AND STREAM has very materially increased, indicating, possibly, a general improvement in business. The present is a good time to subscribe. The Four Dollars invested will yield ample returns to the investor.

HOW "LITTLE CROW" WAS KILLED.—An occasional correspondent, "A. D. W.," sends the following statement, which we have every reason to believe is authentic. Little Crow was the Great Chief of the Sioux tribe of Indians, whom we all know inhabit our extreme Northwest, and as the late battle was with this tribe, it will not be out of place to relate this incident:—

"Some years ago, when this same tribe was showing enmity to the whites in various ways, a young man in Minnesota, well known to friends of my own in that State, left home for a short journey and never returned. He was mourned for by a large circle of friends, for he was much respected, and no one knew what had become of him. Some months had passed away, when two white men were riding by a small cranberry swamp and saw a couple of Indians picking the berries. The whites well knew that their lives were in danger, and the younger of the two dismounted and crept along slyly until within gun range of the savages. He then fired, and one of the Indians fell and the other fled away, but was some weeks afterwards captured, emaciated and almost starved. When questioned he said that his father was Little Crow; that he had killed the missing young man, and that his father and himself were picking cranberries when the former was killed. This could hardly be believed, that the head of the tribe so dreaded was slain, but the young Indian told the whereabouts of the grave and the body was disinterred, and by unmistakable signs it was found to be that of Little Crow, and it was clad in the coat of the unfortunate young man of whom we spoke.

"Little Crow's son was kept until he had recovered from his lengthened fasts and then let go. This incident, of course, is true; we had it from one who well knows the Indians."

—If every grown male in the United States read the FOREST AND STREAM, every poor man might have fish and game for supper.

—Our readers will notice that there has been another change in the popular sportsmen's emporium. Mr. Geo. B. Eaton has sold his interest to Mr. W. H. Beemer, a well-known resident of Sullivan county, in this State. The new firm will, we hope, continue to prosper. Both gentlemen are practical sportsmen, which will be a great advantage to them in their business. This, we believe, is the only place in this city, if not in the country, where everything is kept under the sun that we require, whether for shooting, fishing, camping, or exploring. Prof. Orton, of Vassar College, who is just starting for South America to be gone a year, purchased his entire outfit there. Also "Texas Jack" not long ago fitted himself out for the plains at the same place. We would add that Mr. Holberton is well posted on shooting and fishing localities, and can often give his customers a hint where to go for sport.

THE HERO OF OKEECHOBEE HEARD FROM.—Hear what Fred Beverly mutters down in his ravine, at the Hunter's Camp, next column to the right.

—There are probably 40,000,000 of people in the United States who have never heard of FOREST AND STREAM. Let the millions who read it now, go and tell the rest.

FISHES OF NORWAY.—We would call attention to the article (from a well-known fish culturist) in our columns of natural history comparing the fishes of Norwegian waters with those of our Northwest, in which there is a striking similarity. Some curious coincidences exist between other classes of the animals of western Europe and western North America; and, on the other hand, our eastern land animals and plants are strikingly like these of northeastern Asia, while the barren steppes of Siberia and our interior plains support similar faunæ. We wish we had more such careful comparisons as the present, which add greatly to our knowledge.

—Last week we called the attention of our inland readers to the fact that, in consequence of the long-continued depression of business, and the necessity of realizing on stock, good English guns (breech and muzzle-loaders) can now be selected in this city at prices below the cost of manufacture. Further, that a practical sportsman and expert in guns, whom we can thoroughly indorse, will, for a few weeks only, act as purchasing agent. Such persons as may wish to avail themselves of his services will please bear in mind that a full description of the gun wanted, and the sum to be invested, must accompany the order. The weight, length, and bend should be specified. The opportunity will be open only for a month.

THOMPSON'S BOOTS!—When Jones, X. M. C., of Virginia fame, abandoned his party of friends in the woods, he left them his old boots as a legacy, much the worse for wear. We are often reminded of this historical pair of boots by Thompson's suggestive advertisement in our columns. We are confident that if Jones had worn a pair of these boots he might have tramped on forever, and enjoyed a period of comfort indefinite in its duration, or at least as long as he had any sole left for pedestrianism. But, then, what would his friends have done for a legacy?

—The Illustrated Sporting New Yorker has some good sketches of the late great match at Creedmoor, the best of which shows the captains of the foreign teams heaping congratulations upon the Americans. Everybody is frantically shaking hands, but Major Leech, under his big helmet in the foreground, grasping Major Fulton's hand, seems the happiest of all. The artist has caught the different portraits capitally.

CURRITUCK SHOOTING FOR SALE.—An opportunity is offered through our columns for a club to obtain, at a small outlay, one of the best shooting properties on Currituck sound.

—Let every present subscriber to FOREST AND STREAM joy his neighbor's elbow and assert its worth.

GAME PROTECTION.

A valued correspondent writes from Indian Lake, Adirondacks, complaining of the law-breaking in that section:—

"Business having called me into the famous old 'North Woods' last summer, I packed my trunk on a lovely June day, with bright anticipation of glorious sport in the intervals of labor. How carefully I selected my flies; how critically I examined my leaders; how lovingly I looked over my rod, with which so many of the speckled beauties have been taken from their liquid home in the waters of the Pine Tree State! Shortly after my arrival, passing one day up the side of a pond four or five miles in extent, I noticed that a boat was anchored at the mouth of each spring brook that debouched into the pond, and the single occupant thereof was either quietly bait-fishing or industriously whipping the water with rod and reel. I was amazed. What do trout bite here in the middle of a July day, with the sun pouring down a flood of fiery rays into the sparkling waters? However, I was too far away to inquire, so I repressed my curiosity until a person informed me that each of these worthies had a gill net set near by, and the fishing was only a blind!

"A residence of two months in these woods has amply confirmed what I was then told. How often have I seen a man—I suppose I must call him a man—with a string of trout, expatiating on the sport he had with such, and such big ones; how they run out his 100 feet of line several times before he succeeded in landing them; and all the time with the accursed net, with which he obtained every fish, in his pocket. His listeners would gather round him and pretend to believe it all; but when his back was turned some one would quietly remark, 'He caught them with a Porter fly!' A shout of laughter from the rest would evince their appreciation of the joke, a 'Porter fly' being, in Adirondack vernacular, a gill net. It is not to be inferred that all the residents here are guilty of this infernal practice. There are guides and others who greatly deplore it, but if asked why they do not enforce the law invariably answer that they would be burnt out of house and home, or their lives endangered. But they all hold it as a point of honor to conceal the facts, as far as possible, from visiting sportsmen. Their scarcity is occasioned by the wet, or the drought, or the heat, or the cold; any cause rather than the true one, as they fear if known it would cause a diminution in the number who yearly resort here for the purpose of enjoying the delights of trout fishing. Last summer, camping in my own State, I caught something over 300 trout, very few of which weighed less than a quarter of a pound; and that without taking scarcely an hour from my business. Here the result of my fishing has been two trout, one of them four inches long and the other six, both of which I returned to grow until they were large enough to fill the meshes of the inevitable net. I read with interest 'Piseco's' experiences here the present summer, well knowing the cause of the scarcity of trout of which he complains.

"Knowing the stand which your journal has always taken for the preservation of game and fish in this country, I venture to suggest a way in which the extermination of trout, surely foreshadowed in this wilderness, might be avoided, and that is, by the appointment of fish wardens at a stated salary, without any interest in the fines collected, the whole of which should go to the State. Plenty of young men can be found to do the work at a very moderate salary. Being, then, officers of the law, simply doing their duty, without any interest in the money received from fines, they would be secure from violence. To attack an officer, backed by the majesty of the State law, is quite a different thing from assaulting a neighbor for informing against you, and taking money extorted from you by a fine. It is proper to state that this wholesale netting of trout is caused by the demand to supply the hotel tables in Saratoga, and accordingly, as one recedes from that great resort of fashionable folly into the northern portion of the wilderness, the practice nearly ceases, and fishing is consequently much better. Still, the headwaters and tributaries of Moose river, in the wildest and least frequented part of the Adirondacks, have been persistently raked through this whole season by parties who remained on the ground, an agent going in each week to carry in provisions and bring out the fish.

"This article is already much too long, but I cannot close without referring to the absurd law which opens the season for grouse shooting on August 1st. It causes almost a feeling of horror in the breast of any true sportsman to see the slaughter of the tiny, half-fledged birds, many of them scarcely able to fly high enough to alight beyond the reach of the dog. When the mother of the brood is sacrificed they convert her into a 'chicken partridge' by simply pulling out her tail feathers. This practice also is carried on to furnish 'game suppers' to the pleasure seekers of Saratoga, 'chicken partridges' being their greatest delicacy."

PENOBSCOT.

Indian Lake, N. Y., Sept. 6th.

GAME LAWS OF CANADA.—Province of Ontario.—Moose, reindeer or caribou, deer, and elk may be killed from the 1st day of September to the 1st day of December. Wild turkeys, grouse, pheasants, or partridges, from the 1st day of September to the 1st day of January. Quail from the 1st day of October to the 1st day of January. Woodcock from the 1st day of July to the 1st day of January. Snipe from the 15th of August to the 1st of May. Water fowl, which are known as mallard, gray duck, black duck, wood or summer duck, and all the kinds of duck known as teal, from the 15th of August to the 1st of January. Hares and rabbits from the 1st of September to the 1st of March. No person shall have in his possession any of the said animals or birds during the periods in which they are so protected; provided they may be exposed for sale for one month and no longer after such periods, and may be had in possession for the private use of the owner and his family at any time; but in all cases the time of killing or taking shall be upon the party of possession. It is enacted that no beaver, muskrat, mink, marten, raccoon, otter, or fish shall be hunted, taken, or killed, or had in possession of any person between the 1st day of May and the 1st day of November. The penalties attaching for transgression of this law are as follows:—In case of deer, elk, moose, or reindeer or caribou \$50, and not less than \$10. In case of birds or eggs, \$25, and not less than \$5. In case of fur-bearing animals, \$25, and not less than \$5.

TENNESSEE.—A correspondent sends us the following letter descriptive of the working of the new game laws of Tennessee. The trespass sections appear to be as strong as those of the Ohio laws, but we believe that much might be left to the good sense and discretion of the farmers. They are certainly able, at least the majority of them, to discriminate between the pot-hunter and the gentleman sportsman, although we reluctantly admit that there are those upon whom any amount of "moral suasion" would be lost.

NASHVILLE, Tenn., Sept. 20th.

EDITOR FOREST AND STREAM:—

Five days ago the limit fixed by the law for the preservation of game expired. The act, which was passed by the General Assembly on the 23d day of March, 1875, and approved on the following day by Gov. James D. Porter has been productive of much good. The excellent results of a general observance of its provisions are demonstrated more and more every day in the increased quantity of game over that of two years ago, and finer sport than ever. The law provided that no person should hunt, kill, or capture deer in the counties of Dyer, Davidson, Giles, Henry, Bedford, Maury, Madison, Hamilton and Wilson between the first day of March and the first day of September in each year. No one was allowed to hunt grouse, quail, pheasants, larks, partridges, snipe, woodcock, or wild turkeys, or any bird of song, such as the sparrow, blue-bird, yellow-hammer, or woodpecker, from the first of May until the 15th of September. The fine imposed upon any person convicted of having violated the law is \$10 for each deer killed, \$5 for every turkey, and \$2 50 for any of the birds mentioned. Another law expressly provides that any sportsman found hunting on an inclosed tract of land without having first obtained permission from the owner to do so, is liable to arrest and punishment for trespass. This act is regarded with great disfavor by the devotees of field sports, who think that as this is a free country any gentleman does not need to gain the consent of the owner of a field to pursue his sport therein, provided he behaves himself as every true owner of a dog and gun should. Of course there are two sides to every question, and I am willing to admit that the land owners have much reason to complain of the conduct of persons who neither manifest a proper regard for the rights of farmers concerning the prevention of hunting on their premises, or the true dignity which every gentleman should possess, and which should impel him to retire from a field when requested to do so. Admitting all this, however, I am of the opinion that the Legislature overstepped their bounds when framing this ridiculous law.

FERN.

WEST MERIDEN, Conn., Sept. 22d.

EDITOR FOREST AND STREAM:—

It was with great pleasure and profit that I read in the columns of FOREST AND STREAM the able address of President J. V. LeMoyné to the National Sportsmen's Convention held at Chicago, and I was deeply impressed with its wise and practical suggestions. In the course of his remarks Mr. LeMoyné said: "Our first great object is to arouse sufficient interest in game protection to make proper legislation possible." Now this is exactly true, for outside of the readers of papers devoted to game preservation and our sportsmen generally, there is a large majority of our citizens who understand but very little about our aims and purposes, and who interest themselves still less about the matter. This I know to be true in the State of Connecticut, and as far as I can learn it is about the same in other States. As it is a well known fact that the masses have been educated and taught to appreciate other matters of public benefit, why cannot the game associations undertake to enlighten the people on the importance of just and proper laws to protect our birds and fish from wanton destruction? I sincerely believe it can be

done if the sportsmen will devote a little time and money to the cause, for it is most certainly a worthy one, and furthermore it is a necessary undertaking, if we wish to preserve the game of America from total annihilation.

Now I would like to suggest to the various game associations a plan (which I believe is worth a trial) to bring about the desired result. What I propose is this: That the local game clubs hold one or more public meetings this fall in some suitable hall, and engage a lecturer—one who is well qualified to present the question to an audience, and who can make his listeners understand its importance to the community at large. The club should issue invitations free (or as cheap as possible) to the farmers, the clergy, their representatives to the Legislature, and the citizens generally, and I believe if this is done, and the question of protection, etc., be discussed in an intelligent manner, the opposition or indifference to game protection, which arises, I believe, more from a lack of information than any other cause, would soon disappear, and I have no doubt but that we would soon have the support of a large class of our citizens, and having gained that we may be sure that our lawmakers will pay more attention to our just and proper demands. Now, the expense of having such a lecture need not be very large, in fact I do not think that the hire of hall, expense of lecturer and printing need exceed the cost of a club pigeon shoot, and I am sure that none will contradict me when I claim that it would be laying out money for a more worthy object. I throw out this idea trusting and believing that, if tried, it may prove of some good to the cause.

VON G.

LITCHFIELD Co., Conn., Sept. 25th.

EDITOR FOREST AND STREAM:—

I am glad to see that you are calling in question the supposed advantages of modern improvements in sporting implements and their relation to the threatened extermination of all game. I think it is quite true that sport diminishes as the certainty of killing your game increases. If this were not so a seven-shooter Colt revolver with laminated steel barrel, or a portable Gatling gun, or mitrilluse, would be the perfection of a sportsman's outfit. Even with a first-class breech-loader a shooter snugly stowed away in his sneak-boat or blind, and sending cartridge after cartridge into a flock of demoralized coots, is about as near slaughter work as anything but a pot shooter or poultry dealer would care to be engaged in. What true angler would care to go to a trout preserve (Caledonia, for instance), where some thousands of tame trout are ready to spring at anything that looks alive, and with stout tackle jerk out 20 or 30 pounds of 10-inch trout, when he could spend his morning in landing a brace or two of wild ones that could only be lured by the tightest tackle, and only landed by the most consummate skill of the most practiced hand? For this reason night lines and nets and trawls are relegated to the pot fishers, and no true angler will give them a moment's countenance; and for the same reason battue and drive are driven out of sight by all lovers of genuine sport. The fact is that the less machinery a man puts between himself and the game he pursues, the better for the man, and the fewer tools he cumbers himself withal, be they landing-nets, gaff-hooks, cartridge-belts, or breech-loader jimcracks, the better for the sport. It is even doubtful if the railroad, with its din, dust, cluders and "whew" is such an improvement over the social old stage coach, as young folks are trying to believe. The Delancy Kane idea is bound to go ahead, and shanks mare is yet a good steed, with dog and gun for a driver. As to the game, we must give it a chance, or lose sight of it in its old haunts forever; for with the increase of sportsmen and crack shots and set days (legal) for turning dog and gun loose to kill everything at sight, it will take more "protection" than the laws can give to prevent its utter annihilation, and it is a mere question of time as to how soon.

MUZZLE-LOADER.

LOUISVILLE, Ky., September 26th, 1876.

EDITOR FOREST AND STREAM:—

We organized on the 22d inst., with a large membership, the Louisville Hunting and Game Protective Club, and the following officers were elected for the ensuing year: President, L. W. Noel; Vice-President, Thos. S. Randall; Secretary, J. L. Booker; Treasurer, Will H. Stanley. The members have determined to have our present game law strictly enforced, as we are badly afflicted with the miserable pot-hunter and close season dealer; so hereafter they had better beware.

ON WATCH.

The FOREST AND STREAM teaches all how to best enjoy the good things that Nature has given, and thus makes life happy and prolongs it. Good reader, let your friend subscribe for it and prolong his life.

COLLEGE NECROLOGY.—The record of Yale graduates who died during the year ending in June last" (36 pp., 8vo), comprised 66 names, representing a majority of the classes between 1808 and 1875, and including 16 clergymen, 14 lawyers, 10 physicians, 6 teachers, and 8 business men. The average age at death was 55½ years, and the deaths occurred in 18 different States, New York standing at the head of the list. Among the more distinguished names were those of Rev. Dr. William B. Sprague, of '14; Rev. Dr. Horace Bushnell, of '27; Judge Lewis B. Woodruff, of '30; and Senator Orris S. Ferry, of '44. The similar necrological record of Williams graduates, prepared by Dr. Calvin Durfee, comprised 37 names, representing almost as many classes between 1802 and 1872. Among the names were those of Judge Jesse O. Norton, of Chicago, class of '35, and Judge John Wells, of Boston, class of '38. The deaths took place in 16 different States or countries, and the average age at death was about 50½ years. Amherst, during the last academic year, lost 22 graduates, half of them clergymen, representing classes from 1824 to 1867, and averaging 58 years in age; Brown lost 27, averaging 68 years of age; and Colby lost 6, whose average age was 52 years. The number of deaths of college graduates reported since commencement time is quite extensive. Dr. John Jeffries, of Harvard '15, died in Boston about the middle of July, aged 81. He was a son of the tory, Dr. John Jeffries (Harvard, 1763), and he some years ago resigned active practice to his son, Dr. Benjamin J. Jeffries, Harvard '54, so that the family has been represented in the profession of the same city for upwards of a century. Dr. Walter Channing, who practiced in Boston for more than 50 years, and was for a long time professor in the Harvard Medical School, died in Brookline, July 27th, aged 90. A college rebellion in 1807 put an end to his career as a Harvard undergraduate (class of 1808), as well as to that of his brother, Edward Channing, and his cousin, Richard H. Dana. Dr. C. was the father-in-law of Col. T. W. Higginson, Harvard '41. Another old citizen of Brookline, Col. William Aspinwall, died there the second week in August, aged 90. He lost an arm in the war of 1812, and was rewarded by the consulship at London, which he held for 40 years. His son, of the same name, graduated in '38, and is well known in Boston as a lawyer and Democratic politician. Octavus W. Weeks, of Har-

ard '76, a resident of this city, aged 22, was killed on the South Side Railroad, July 15th, while alighting from the train at Manor Station, L. I.; and on the following week, L. H. Cheney, of Cape Girardeau, Mo., one of four students in the Harvard summer school of geology, who were buried by falling earth in an Indian mound they were exploring near Cumberland Gap, Tenn., was killed, the other being rescued. Rev. Edward P. Smith, of Yale '49, died on board the steamship Ambrig, near the island of Fernando Po, Gulf of Guinea, June 15th, aged 50. Early in the war he became field agent of the Christian Commission; afterwards established negro schools and colleges in the South; was appointed Indian Commissioner in 1873, and President of Howard University in 1875, which position he held at the time of his death. Allen T. Caperton, of Yale '32, Senator from Western Virginia, died at Washington, in July; and on the 22d of that month, Frost Thorne, a Yale non-graduate of '71, was drowned by the capsizing of the yacht Mohawk, off Staten Island. Charles C. Chatfield, of Yale '66, book and periodical publisher, died at New Haven, August 23d. At the same date died Rev. Chauncey H. Hubbard, of Yale '42, for many years pastor of the Congregational Church at Bennington, Vt. William McCracken Lathrop, of Yale '25, President of the Commonwealth Insurance Company, died at Hamilton, Mass., August 24th, aged 69; and Henry Clay Easton, of Yale '76, died at Covington, Ky., at about the same time Dr. Elijah Stratton, a Dartmouth graduate, died at Northfield, Mass., his native town, the second week in July, aged 65. Rev. Dr. J. C. Bodwell, of Dartmouth '33, died July 17th, at South West Harbor, Mount Desert, aged 64. He was pastor at various towns in England from 1836 to 1850, and Professor in Hartford Theological Seminary, 1866 to 1873. Jonas Cutting, of Dartmouth '23, for 21 years Associate Justice of the Marine Supreme Court, died at Bangor, August 19th, aged 76. Albert P. Sanborn, of Dartmouth '77, died at Lake Village, N. H., August 26th, aged 21. Rev. Jonathan McGee, a Williams graduate, for many years pastor of the Congregational Church at Nashua, N. H., died August 3d, aged 87. Samuel P. Benson, of Bowdoin '25, ex-Congressman of the Kenebec District, died at Yarmouth, Me., August 12th; and at about the same date, a Rutgers graduate, Rev. William A. Cornell, committed suicide, near Poughkeepsie, by hanging himself to a tree. Rev. Charles S. Moore, of Amherst '72, died at Brookfield, Mass., August 29th. Henry S. Randall, of Union '30, ex-Secretary of State of New York, died at Cortland Village, August 14th, aged 65. Rev. Nathaniel M. Wood, recently Professor in Shurtleff College, Ill., died at Camden, Me., August 2d. Rev. Dr. William Hooper, President of the Baptist Female Seminary at Murfreesboro, and formerly connected with the Universities of North and South Carolina, died at Chapel Hill, N. C., August 19th, aged 80.

The price of FOREST AND STREAM is now Four Dollars.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

Black Bass, <i>Micropterus salmoides</i> ;	Weakfish, <i>Cynoscion regalis</i> .
<i>M. nigricans</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
Masalonge, <i>Esox nobilior</i> .	Spanish Mackerel, <i>Cybitum maculatum</i> .
Pike or Pickerel, <i>Esox lucius</i> .	Cero, <i>Cybitum regale</i> .
Yellow Perch, <i>Perca flavescens</i> .	Bonito, <i>Sarda pelamys</i> .
Sea Bass, <i>Sciaenops ocellatus</i> .	Kingfish, <i>Menticirrhus nebulosus</i> .
Striped Bass, <i>Morone americana</i> .	

For list of seasonable trout flies for October see our issue of July 27th.

FISH IN MARKET.—Fish appear from our quotations to be even scarcer than they were last week:—Striped bass are worth 30 cents per pound; smelts, 35 cents; bluefish, 12½ cents; salmon, (frozen), 50 cents; mackerel, 15 to 25 cents each; weakfish, 15 cents per pound; white perch, 15 cents; Spanish mackerel, 75 cents; green turtle, 16 cents; terrapin, \$12 per dozen; halibut, 18 cents per pound; haddock, 10 cents; kingfish, 25 cents; codfish, 10 cents; pollock, 8 cents; blackfish, 15 cents; flounders 12½ cents; porgies, 15 cents; sea bass, 20 cents; eels, 18 cents; lobsters, 10 cents; sheephead, 20 cents; scollops, \$1.50 per gallon; soft clams, 40 to 60 cents per hundred; whitefish, 20 cents per pound; pickerel, 18 cents; salmon trout, 18 cents; black bass, 18 cents; hard-shell crabs, \$3.50 per 100; soft do., \$1.50 per dozen.

BEAUTIFUL TROUT PAINTING.—We saw last week, at the Cashier's office of the Erie Railway in this city, a very meritorious canvas from the easel of Mr. Augustus Rockwell, painted for Treasurer A. P. Sherman, and which is destined to grace his beautiful home at Allandale. It is 18x36 inches in size, and represents a dozen or so well-favored trout, naturally grouped upon a bed of exquisite ferns. To say that the picture will bear the criticism of old anglers and connoisseurs in painting might be considered sufficient praise by the artist or the casual observer; but we cannot refrain from adding an expression of approval of the literal way in which the brush has stuck to the text. It is to be assumed that in paintings of this character the closest imitation of nature is desired. We want to see the fish as they are, carnally; not invested with the romance that enthusiasts surround them. We desire the dish served *au naturel*, with flavor undisguised by garnishes, condiments and sauces.

In the class of average fish-pictures we find some stereotyped forms; as for instance, in one we discover the but of the rod in the foreground, a fish basket, and two fish much too

large for the basket—ferns *ad libitum*. This is all wrong, because it indicates either that the angler was ignorant of the water to be fished, or otherwise he would have taken a larger basket; or else that the fish in question are to be regarded as fair specimens of the ordinary catch of an expert who is in the habit of throwing back all under three pounds. Another common trout study shows five one-quarter pound fish on a cut stick, precisely all alike in size and color, and evidently taken from some man's two-year-old trout preserve, where no one but a stupid or poacher would care to fish. In a third painting we have a big and little fish hanging together to a nail in the wall—out of the reach of the cat, we suppose, when any person of common sense would have had them in the ice-box. Then, there is the standard single trout (sometimes painted on birch bark) set up on edge like a knife, with dorsal fins unnaturally erect and rigid; and—well, there are a dozen types of this class which any observer will recall to mind. Mr. Randolph's picture, on the contrary, represents the catch of an angler who has just concluded his day's sport and emptied his basket upon a leafy bank for inspection. There the fish have fallen naturally in different positions, some of them tolerably large, others of a fair size, and one that might weigh a pound—no fingerlings, but just such a mess of fish as a conscientious and skillful angler would be likely to take in one of our best mountain streams. Some are dark with bright white bellies, these dexterously lured from the deep holes where they laid; others of a pale amber color, like the sunlight that warmed them in the open shallows. On some the blue and crimson spots are brilliant; on others they fade and almost blend with the hues of their mottled sides. Some are fantastically marked on the back; others are without blemish. This is what we like in the picture. No one ever caught a dozen and a half of trout precisely alike in form, color and size, and this painting is simply the mirror held up to nature. The inseparable rod is not in this case an accessory; but we don't believe Mr. Randolph ever took these fish with a net. We can detect no gill-marks on them at all events.

Besides the freshly plucked ferns that the fish lie upon, a landscape of valley and hill, overhung by a cloudy and wet atmosphere, enhances the effect of the study—a good day for angling, we'll say, cool, and not too much food in the stream. The picture hung in the shade, as we saw it, but when the blind was raised to let in the western sun, it shed a flood of light upon it that brought out in brilliant colors all the detail and handiwork of the artist, whom we feel bound to congratulate. Mr. Sherman is certainly the fortunate possessor of a fine picture.

—Black bass fishing is reported good in the Potomac river, in the vicinity of Leesburg, Virginia.

T. M. Jr., of Boston, referring to an article printed in last week's issue relative to keeping minnows alive for a long journey, writes to say:—

"In your last issue I notice a letter in regard to keeping minnows alive during a long journey. I have found that minnows placed in flannel will keep alive a long time. Perhaps it might be well to moisten the flannel slightly. I have carried minnows wrapped in this way miles by rail and sleigh; at the journey's end they were bright and lively."

THE SALMON RIVERS OF CANADA.—Mr. A. J. Wilkinson, in his very readable article, to which *Scribner* for October gives precedence, thus briefly refers to the salmon rivers of Canada. In Hallock's "FISHING TOURIST" they are treated of at great length:—

"The region where salmon can at the present day be taken in sufficient numbers to reward one for the attendant trouble and expense, is a circumscribed one. Beginning at Quebec and following down the river St. Lawrence, the salmon streams are very numerous upon the northern shore, and extend far away to the Labrador coast. Among them are the well-known Laval, Godbout, Trinity, St. Margaret, Moisie, St. John's, Magpie, Migan, Great and Little Romaine and Grand Natashquan rivers. In the last named, the Governor General of Canada and party killed, some years since, 202 salmon in seven days.

"The range of mountains on the north shore runs within a few miles of the St. Lawrence, and hence the rivers upon that side are very short and rapid, giving but few good pools, and are, as a general thing, very difficult to fish. Only a few good streams are found on the south shore, among which are the Rimouski, Grand Metis and Matane. Passing down the Gulf of St. Lawrence we come to the Basin of Gaspé, into which flow three admirable streams, and farther on upon the north shore of the Bay of Chaleur, and at its western end, are some of the best, including the famous Restigouche, fished yearly by Englishmen who cross the Atlantic for that express purpose; also the Cascapedia, made more noted through Mr. Dawson's most charming letters written from there, where, at a good ripe age, he had taken his first salmon. The Nipissiguit on the south shore of the Bay of Chaleur and the Mirimichi on the eastern coast of New Brunswick are the last salmon streams of any account until we come to Nova Scotia, where there are a few upon its southeast coast below Halifax. Mr. Hallock, of the *FOREST AND STREAM*, seems to be the only one who has been favored with much sport in the Nova Scotia rivers.

"In Cape Breton there is a single good river, the Margarie. Here and there small streams are found in other parts of New Brunswick and in the Island of Anticosti, but practically, salmon-angling is confined to the rivers of Canada East and those of the northern part of New Brunswick, which includes the Mirimichi.

"But few of the rivers we have mentioned debouch near a steamer landing, and all others are difficult of access. To reach these latter the angler must manage in some way to get transportation for many miles over a rough country where it is difficult to find horses, wagons, or roads; or he must charter a small sailing vessel and run along a most dangerous coast, carrying with him both canoes and men. The Restigouche and Matapedia are reached with comparative ease from Dalhousie, a landing place of the Gulf Port

steamers*. This line of steamers also touches at Gaspé Basin, leaving one just at the mouths of the three streams flowing into it. There are the York, St. John, and Dartmouth, called by the natives the Southwest, Douglasstown, and Northwest. These rivers are among the best stocked in Canada. They flow chiefly through deep gorges, or cañons, and between mountains, which occasionally rise to the height of a thousand or fifteen hundred feet. Beautiful lakes, filled to repletion with brook trout, are found on the high land between the rivers, which for quite a distance flow within a few miles of one another. These streams are very rapid, and in early spring are almost torrents, and yet they have very few falls around which a "carry" must be made."

*And by the Intercolonial Railroad.—Ed. F. & S.

FISHING MOVEMENTS.—Mackerel have been reported off Cape Cod in considerable quantities, but the weather has not been favorable for seining operations, and the catch has been quite light. The number of fishing arrivals for the week has been larger than for any previous week during the past two months, and about double the number of last week. The tone of the market is well maintained. The number of arrivals from the banks has been 9; from Georges, 42; from shore mackereling trips, 62; total number of arrivals, 113. The receipts have been about 1,035,000 pounds Bank codfish; 546,000 pounds Georges do.; 40,000 pounds halibut; and 6,000 barrels mackerel.—*Cape Ann Advertiser*, Sept. 30th.

—The result of the Newfoundland fisheries this year is below last year in quantity; but increase of prices make up for the small catch.

Yachting and Boating.

OPEN TRIAL REGATTA OF THE ATLANTIC YACHT CLUB.—Saturday the 16th day of September, the open boats of the Atlantic Yacht Club held a regatta for prizes offered by the club at the meeting of September 11th, under the charge of Vice Commodore Fish, W. H. W. Beebe and C. T. Lippit, who were authorized to make such rules as were necessary. Time allowance to be one minute for each foot of length. The course, twelve miles, was a flying start from Gowanus bay to and around Fort Lafayette and return. The start was made as follows:—

Name.	Owner.	h.	m.	s.
Vinita.....	Capt. Farrington.....	2	08	04
Ada.....	Capt. Moffat.....	2	10	06
Lapwing.....	Capt. Morgan.....	2	10	45
Nomad.....	Capt. Higgins.....	2	09	27
Wing.....	Capt. Peet.....	2	11	08

The breeze was light and the start was before it, the Vinita leading along shore, the Ada following, with the Nomad and Lapwing out in the channel to catch what little remaining ebb there might be, and Wind last. The Wind passed the Lapwing just below Hunt's Dock, and there crept towards the shore till she got ahead of the Ada and Vinita so that the Nomad, Wind and Vinita, in the order named, arrived at Fort Lafayette, which was passed, as shown hereafter. Upon coming back, which was to windward, the Wind and the Vinita passed the Nomad, and the former lead the fleet, increasing her lead until the home stakeboat was passed, as follows:—

Name.	Fort Lafayette.			Home stakeboat.			Elapsed time.			Conceded time.		
	h.	m.	s.	h.	m.	s.	h.	m.	s.	h.	m.	s.
Wind.....	3	3	55	3	55	15	1	44	09	1	48	09
Vinita.....	3	4	25	3	57	03	1	48	23	1	51	08
Nomad.....	3	3	35	3	59	20	1	49	53	1	53	28
Lapwing.....	3	8	30	4	02	34	1	51	49	1	52	34
Ada.....	3	9	10	4	05	45	1	55	29	1	55	39

The first prize, which was awarded to the Wind, was a handsome barometer, and the second to the Vinita was card receiver offered to second boat by Warren Greenleaf.

The regatta for the champion pennant of this class will take place on Saturday, the 30th, but over a triangular course in the bay.

CENTRAL HUDSON YACHT CLUB.—The fall regatta of the Central Hudson Yacht Club was sailed at New Hamburg on the 30th September. The Leroy won the first prize for first-class yachts, the Frank the first prize for second-class, and the A. S. Ring the first prize for-third class.

CORNELL'S CHALLENGE.—At a very large and enthusiastic meeting of the various classes of Cornell University, held at Ithaca on the 29th September, it was decided to send a challenge to the winners in the Cambridge-Oxford race, which occurs in March next. The challenge will be for fours or eights, with a coxswain, as the Englishmen may decide, and for a four-mile race over the regular course from Putney to Mortlake.

NEW JERSEY ROWING ASSOCIATION.—The first regatta of the above association, which comprises the Atlantic, Meteor, Empire, Nautilus, and Valencia clubs, was held at Pleasant Valley on Saturday last. The races resulted as follows:—

Junior Sculls—F. Barkelew, Athletic club, 1st; W. J. Hopkins, Meteor club, 2d; no time.
Senior Sculls—D. McQueen, Athletic club, 1st—time, 10m. 42s.; R. S. Murray, same club, 2d—time, 10m. 48s.
Four-Oared Gigs, for championship of the Association—Empire Boat Club—Messrs. R. Hill, Jr., H. Stoothoof, W. S. Church, and J. T. Headley, Jr., stroke; J. Babcock, coxswain, 1st—time, 8m. 41s.
Meteor Boat Club—Messrs. W. T. Hopkins, G. Miller, L. Meyer, and F. Walter, stroke; J. Schoonfeld, coxswain, 2d—time, 8m. 59½s.
Four-Oared Shells, scratch crews—Messrs. Benson, Al-laire, Barkelew, and McQueen, 1st—time, 7m. 35s.
Messrs. Rieley, Taylor, Murray, and Kudlick, 2d—time, 7m. 40s.

RUTHERFORD PARK REGATTA.—An interesting amateur regatta was held on the Passaic at West Rutherford Park, on Saturday. The distance in all the races was one mile. The single-scutt race was rowed in three heats, the first being won by G. S. Atterbury, of the Paterson Rowing Club, in 6m. 13s.; the second by G. D. Small, of the Triton Boat Club, in 5m. 46s.; the third by F. E. Townley, in 5m. 37s., and the final heat by Townley, no time taken. The other race was for four-oared shells, between the following clubs: Hudson Boat Club—F. Sayles, bow; G. Ockershausen, No. 2; H. Ockershausen, No. 3; F. Ockershausen, stroke. Triton Boat Club—G. D. Small, bow; S. A. Smith, No. 2; H. C. Rommel, No. 3; E. L. Phillips, stroke. Bayonne Rowing Club—T. B. Mettam, bow; W. H. Jasper, No. 2; J. H. Chadwick, No. 3; L. Van Buskirk, stroke. The Triton won in 4m. 40s., with the Hudson crew three seconds behind.

GREENWOOD LAKE REGATTA.—The entries for this regatta which occurs on the 6th and 7th insts. promises even for an inaugural event, to be something quite out of the common. It would indeed be a boon if that much desired spot, a National Regatta course, had been discovered at last. The entries as far as received are as follows:—

JUNIOR SINGLE SCULLS.
Arlington Boat Club, Greenpoint—R. V. Young.
Argonauta Boat Club, Bergen Point—G. E. Man.
Atlantic Boat Club, Hoboken—Richard McEwan.
Atlanta Boat Club, New York—Edward Mills.
Cartaret Boat Club, Newark—B. L. Williams.
Harlem Boat Club, New York—A. B. Hoeber.

TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMP'Y

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROT-
ING PARKS and RAC. COURSES in the Middle
States. These lines being CONTINUOUS FROM ALL
IMPORTANT POINTS, avoid the difficulties and dan-
gers of reshipment, while the excellent cars run over
the smooth steel tracks enable STOCK TO BE TRANS-
PORTED without failure or injury.The lines of
The Pennsylvania Railroad Company
also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION
TICKETS are sold at the offices of the Company in
all the principal cities to KANE, RENOVIA, BED-
FORD, CRESSON, RALSTON, MINNEQUA, and
other well-known centers for

Trout Fishing, Wing-shooting, and Still Hunting.

Also, to
TUCKERTON, BEECH HAVEN, CAPE MAY,
SQUAN, and points on the NEW JERSEY COAST
renowned for BAIT WATER SPORT AFTER FIN
AND FEATHER.D. M. BOYD, JR., Gen'l Pass. Agent.
FRANK THOMPSON, Gen'l Manager. feb17 1t

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over
two thousand miles of road, radiating from Chicago.
Like the fingers in a man's hand, its lines reach in all
directions, and cover about all the country north,
northwest, and west of Chicago. With one branch it
reaches Racine, Kenosha, Milwaukee, and the coun-
try north thereof; with another line it pushes through
Janesville, Watertown, Oshkosh, Fond du Lac, Green
Bay, Escanaba, to Nacuanne and Marquette; with an-
other line it passes through Madison, Elroy, and for
St. Paul and Minneapolis; branching westward from
Elroy, it runs to and through Winona, Owatonna, St.
Peter, Mankato, New Ulm, and stops not until Lake
Kameska, Dakota, is reached; another line starts from
Chicago and runs through Elgin and Rockford to Free-
port, and, via the Illinois Central, reaches Warren,
Galena and Dubuque, and the country beyond. Still
another line runs almost due westward, and passes
through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar
Rapids, Marshalltown, Grand Junction, to Council
Bluffs and Omaha. This last named is the "GREAT
TRANS-CONTINENTAL ROUTE," and the pioneer
overland line for Nebraska, Colorado, Utah, Idaho,
Montana, Nevada, California, and the Pacific Coast.
It runs through the Garden of Illinois and Iowa, and
is the safest, shortest, and best route to Omaha, Lin-
coln, and other points in Nebraska, and for Cheyenne,
Denver, Salt Lake City, Virginia City, Carson, Sac-
ramento, San Francisco, and all other points west of
the Missouri River.

TO SPORTSMEN:

THIS LINE PRESENTS PECULIAR ADVAN-
TAGES—FOR PRAIRIE CHICKEN, DUCK,
GEE E, AND BRANT SHOOTING. THE
IOWA LINE TO-DAY OFFERS MORE
FAVORABLE POINTSthan any other road in the country, while for Deer and
Bear Hunting, and for Brook Trout, Lake Salmon,
Lake Pickerel, and Bass Fishing a hundred points on
the Northern and Northwestern lines of this company
will be found unsurpassed by any in the West.

THE

"Boston Shooting Suit."

(NAME COPYRIGHTED).

MANUFACTURED ONLY BY

G. W. SIMMONS & SON,
Boston, Mass.

Sold everywhere in the U. S. by all first-class dealers in

SPORTSMEN'S GOODS.

EACH GARMENT DISTINCTLY MARKED

"BOSTON SHOOTING SUIT,"
made by
G. W. Simmons & Son.

This new design of WATERPROOF SHOOTING SUIT, made from extra quality duck, has acquired quick celebrity. Advertised for the first time in April last in the FOREST AND STREAM, in five months it has attained such popularity as to be called for from all parts of the country, and even from England.

"Shipping clothing to England strikes us very much like sending 'Coals to Newcastle,' but the merits of the 'BOSTON SHOOTING SUITS' have been heard of in the Old Country, and that land of sportsmen has sent an order to Messrs. Simmons & Son, which will doubtless be followed by many others. Our Editor-in-Chief, who knows something about a sportsman's requirements, is using this same equipment in the Adirondacks."—Boston Paper.

The design embraces the best points of the English and French Suits, combined with the necessary requirements for American service. Particular attention has been paid to color.

Each suit is thoroughly water-proofed by a new patent process. The seams and pocket corners being securely fastened, and nothing neglected to render the suit perfect in every respect.

The price has been fixed at \$13, to include Hat or Double Visored Cap, Detachable Haverlock, Coat, Vest, and Pantaloon.

One hundred suits will be kept ready in stock, so that we can furnish to order any size required, at a moment's notice.

In the Golden Rule (Rev. W. H. H. Murray's paper) the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof suit, specially adapted for sportsmen, designed and made up by Simmons & Son, of Boston, and to which we call the attention of all brethren of the out-door and shore-shooting fraternity, because it meets the demand of personal comfort and convenience beyond anything of home manufacture seen by us before. As a sportsman, we give it our unqualified endorsement, as combining the best points of the English suits, and in addition skillfully adapted to the necessities of the American service. It is a most admirable and satisfactory contrivance in color, style, water-proof quality and capacity. The coat is a marvel in this latter respect."

Persons ordering from a distance need send only the following to be sure of a perfect fit:—Bust Measure, Waist Measure, Inside Seam Coat Sleeve, Inside Seam Pantaloon; Mention Height and Weight.

G. W. SIMMONS & SON,

"OAK HALL," BOSTON, MASS.

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 3 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER. GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office

88 Wall Street, New York.
GUNPOWDER.

Dupont's

SPORTING, SHIPPING AND MINING

POWDER.

DUPONT'S GUNPOWDER MILLS

(ESTABLISHED IN 1801),

EAGLE DUCKING, EAGLE RIFLE, AND DIAMOND GRAIN POWDER.

The most Popular Powder in Use. Also,

Sporting, Mining, Shipping and Blasting Powder

Of all kinds and descriptions.

For sale in all parts of the country. Represented by

F. L. Kneeland,

Feb 10-1y 70 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6 1/2 lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.G., FFG, FFGG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 lb.

All of the above give high velocities and less resistance than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER Co.,

26 Murray St., N. Y.

Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

CHALLENGE.

The undersigned is prepared to prove all the superior qualities he claims for his powder.

Safety, Cleanliness, Strength, Little Recoil, Little Smoke, Small Report, Less Heating of the Barrel in Rapid Firing, and its Regularity in Shooting.

He challenges all riflemen to shoot against him with black powder, 200 rounds, without wiping; 100 rounds off-hand, at 200, 500 and 1,000 yards respectively, and 100 rounds in any position at same distances; the 200 rounds equally divided at the three ranges; sighting shots extra.

Will shoot for money if desired.

The powder is also well adapted for shot guns. Inquire for the "Dittmar Powder" of your dealer address the

PATENT

CAMPING and MINING

STOVE.

PATENTED JUNE 22, 1875.

7' Outside dimensions, packed, 12x12x20 inches.

Weighing only 35 pounds, very durable, will cook for ten persons, and is especially adapted for camping purposes. The ware consists of 8 qt. kettle, 6 qt. tea kettle, 2 qt. coffee pot, fry pan, round tin pan, 2 square pans, dipper, gridiron, tent collar, 8 ft. funnel, and an oven that will roast 15 pounds beef.

The ware is so constructed that it nests and packs in the oven, and the oven and funnel pack inside the stove, as represented in cut 2, leaving room for packing half a dozen plates, knives, forks, spoons, and drinking cups. Price complete, \$15.

Paper and Metallic Shells

FOR

Breech Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers. dee23 tf

New Paper Shell Conical Base. WILLIAMS' PATENT.

Shells are not mailable. Sample 100 will be sent by express on receipt of \$1.30 for 10s or \$1.15 for 12s
aug24 9t

Manufactured by the ST. LOUIS PATENT SHELL MFG CO, office 209 North Fourth street. The advantages claimed for these shells are: Cheapness, a saving of 25 per cent. in the use of powder, less recoil. These shells are equal to the best English, and 3 1/2 drachms of powder will do the work of 5 drachms in any other shells. The sizes made are No. 10, 2 1/2 inches; No. 12, 2 1/4 inches. Longer shells made to order at extra cost. Ask your gunmakers for them and use no

 ISHED GRAINED LEATHER SHOE PACKS

DIXONS & HAWKLEY'S SHOOTING TACKLE

STURTEVANT BRASS SHOT SHELLS.

BUSSEY'S PATENT GYRO PIGEON AND TRAP

WITH CASE, AND 100 BIRDS.

Black's Patent Cartridge Vest.

This Vest affords the best ar-
 rangement yet invented for carry-
 ing cartridges. The weight is
 so evenly distributed that it is
 scarcely felt. Cartridges can be
 carried with the heads down in
 this vest, which is of great im-
 portance when brass shells are used
 as when carrying them with the
 head up the weight of the shot of
 ten forces the wad forward, when
 bad shooting is the result. In
 ordering send measurement around the chest.
 PRICE \$7.50.

AGENTS FOR THE
 Union Metallic Cartridge Com-
 pany's Ammunition,

Coast Range Rough Notes.

BY EL CAZADOR.

"IN course, ole pard, a promise is a promise, an' ef you'll jes wait till I tech a chunk ov fier to my pipe I'll talk that story to you 'like a deer in a walk.'"

So sez Tom to me one nite on the Praire Fork. We'd lots ov meat in camp; hedn't bin doin' nuthin' but lofin' all day long, and wuz lyin' on the blankets watchin' shootin' stars an' not feelin' like sleepin'. Now, I'd know'd Tom a heap—a feller kind o' ruff like with men (I never see him speak to a woman), strait es a parm tree, lots ov mussel, an' wiry, clean grit an' on the dead keen shoot; in short, a man anuther man wud nacherally luv to tie to in truble or out ov it, ef he know'd him. And stranger, you kin jes ante up yo' last *peso* I felt mighty curus when, arter a minute or maybe two ov um, he onloused a leetle string frum round his neck an' tuk out ov his ole buckskin shirt like a smallish possibul sak made out ov sum forrin substance, an' sowed to the string, which was buckskin. Seein' I looked kinder frustrated a leetle mite, he sed, "yu needn't be skeered, pardner. I ain't no Indyun, an' ef this here is my 'medicine' it never hurt nobody but me," an' openin a leetle sak he draw'd out an' guv into my han' what it had in it—a gluv, a woman gluv of the kind they calls kid; darkish in color, of the leetlest size, an' tore. Lord! how funny it feelled as it kinder seemed tur nestle down in the parm ov my han', a leetle soft thing like that, up thar in the nite 'mong them tall pines an' ruff mountins! I farly luv'd to hold it, not tite, but gentle like, an' Tom know'd it, fur when I gin it back he tuk my ole ruff han' what hed two fingers chawed off, an' helt it in his'n like a man mite hold a woman's han' what he luv'd. "Its an ole story, pard," sez he, as we rested back in the shadder, "an' maybe you know ho 'tis yourself."

"Not very bad, sez I. I niver keered fur nobody an' nobody niver keered fur me," (but I lied like a two-tongue jay-bird 'bout the first part ov my anser), puffin' like a giser at my pipe, an' makin' up my mine not to chip till he'd got dun an' ein'.

Follerin' ov the trail, he perceeded:—

"I don't reckolec' what I war doin' in partictlar when I first see hur, only thet it wur down on the Santa Clara. I only had room fur seein' her an' feelin' happy. She didn't see me. Ef she'd lukt me in the eyes I shud a gone wild. I war ded broke, travelin' afoot, packin' my blanket an' eatin' *changui* for a livin. Hoofin' it on beef an' water don't do a feller's looks enny good, an' I war dirty, sick, too, till I see hur. That day in the mountin I wur misse- rable an' tired ov sich walkin'. In the evening I wur quicker than a antelope, stronger than a grizzly, happier than a camp meetin' at *Los Nietos*, an' my left arm wur broken. When I kum to myself arter seein' her I wur walkin' down the rode, 'head up an' tale over the dash bode,' as the sayin' is, workin' my mine like litenin' chasin' a colt fur a plan fur a starter. Barrin' my six-shooter I he in't a friend in the State, nor a dollar, only a blanket an' a lot ov ole beef that I hated, but I felt like a man full ov life an' endeavor, an' I wudn't a swapped places with a king without it wuz to git near her; but I mought a saved the truble ov planuin', fur a horse kum tarin' down the rode like the devil, draggin' the feller what hed rode him by a foot hung in a stirrup. By the *hackeymore* on his hed instead ov a bridle I know'd he wuz *broncho*, but I grabbed him an' hung on 'like grim deth to a nigger,' thru the dust, an' rarin an' plungin' til the nite seemed to kum mighty sudden. I spose thet I fainted. When I woke I thought sure I wuz sleepin' an' dremin', but pain in a arm an' my hed changed my mine in a hurry, an' I cussed like that man with the fever. I war lyin' on a hide in a *jacal* made ov tule, es wet es buckskin, a ole woman porein' water on my hed out'n a olla, an' sayin' prayers that sounded like cryin'. The place full ov *paisanos* talkin' an smokin'. One kneeled on the edge ov the rawhide holdin' a bottle,

and I drunk near a pint ov *aguardiente* stronger than pison. Arter fixin' up my arm an' tien up my hed with *trapo* the ole woman tole me thar hed been a *fandango* follerin' up a *rodeo* at Don Peymundo's, that a son ov the ole man named Arturo drinkt too much likker an' doin' sum fool riden fell from a wild colt an' ketchin' his foot in a stirrup hed bin killed mighty nearlly; that thar wur a gal in the case I infurd, for she sed *pobre muchacha*; that follerin' the celt they had found us, me an' Arturo, lyin' still in the rode, me holdin' the hackeymore, which wur broken; thet Arturo hedn't spoke, but kep brethin'; thet they'd sent for a priest an' a doctor, and wur I a christyun. Gust then I heard the noise ov a waggin mixed in with sum sobbin' an' screemin', but it sounded fur off an' peculiar. I got kinder dazed like and sleepy.

"Wakin' up, things hed changed like the mischief; white walls all round me, but fur one winder in a room whar candles wus burnin', revealin' white curtains; sum flowers, a print ov the Virgin, while clost to a big green aloe stood the girl I hed seen in the mornin', like that fawn at the spring on the mountain! I tell you I lay thar an' trembled while she moved with a step soff es starlite acrost to whar I wuz layin. Shut my eyes, yet could see her es plainly, felt her hat fan my cheek es her han' teched an' cooled the hot pillow, saw her lips when she said *pobrecito*. How she jumped when I spoke *quesida mia*, an' run callin', Juan with a voice full ov lafter. In a minit the room wur full ov um, an' the ole man, his wife an' three darters, to say nuthin' ov neighbors. They kum from Artero in the nex' chamber, an' wuz all talkin', laffin' or cryin', an' seemed to think I was a hero, fur sum reason, sayin' I hed saved the life of Arturo, next to God, who had tole me to grab that durn plug es he passed me, that all they hed was mine, an' they wuz my servents, which last sayin' thinking ov her, I doubted. She never sed nuthin', but stood at the foot ov the bed mighty quiet till one ov um called 'Guadalupe.' The name sounded pleasant an' tender. 'Don't you thank him?' Then I seed she wur cryin', not loud, but like rain arter fall on the flowers, and she kum to the hed ov the bed, but sed nuthin' till they all left the room, a weak voice from somewhere callin' *madre*. Then she bent her hed down and she kist me; niver sed a word, but she kist me; a kiss like sunlite in the morning or a shower of rane in the summer; kist me an' left me; but all the nite long I wus happy, an' lay thar, not sl epin' but thinkin' ov her, an' ov home an' my mother, sum, maybe, ov times in the mines, ov cards an' trubble on the day when I shot poker Billy, or La Tarantala, an' the Killer. But I thought ov the bad, like ov things that hed passed me; but the good seemed to stick an' to promise.

"Twar long arter lite the next mornin' when Dolores of the darters thet I've menshun'd, brote me my brekfast, an' openin' the winder, filled the room with the smell ov sweet flowers, fur the garden lay clost to the winder. Dolores, kind-hearted an' pretty, with har flowin down to her ankles, must a thought I war foolish, fur I confess that I felt disapinted, an' maybe spoke cross like to that gentle critter, but in a minnit I wur sorry, sed my hed hurt, when, in fac'—well—I wur hungry an' begun eatin, but slowly, fur I wanted to a-k her sum questyuns. Arter sum hestushun, but keerless, I askt her, how wur Arturo, an' wur Lupe her sister? Arturo much better, and that day kummin' to see me; Lupe not yet; only thar on a visit with Don Juan, her brother, the man what had found us, an' rode fur the *padre*, thirty miles in an hour. 'Not yet!' I felt pale like, quit eatin', while the soft voice tole the story how Arturo, her brother, an Lupe, in three days would be married, but now maybe the weddin', fur which all things wuz reddy, would wait fur Arturo; thet they all loved thur brother; thet I was his savor; thet thur father an' mother wanted me when he'd left them for Lupe to take his place in thur house an' the saddle, have charge ov the cattle and horses an' vineyard; when in kum Arturo, young and pale, but man lookin', to thank me, he sed, fur life. I thought Guadalupe. At first I was blind an' half chokin'—me who hed lokt deth in the eyes without shrinkin' hed backt down the committee at—but all thet is braggin'. I don a man's

part at the last ov it, an' my voice sounded warm when I tole him I wur glad I hed saved him, an' I tried hard to feel it. Soon they seen I looked weary an' left me alone. Fur a minnit I thought ov my pistol; pard, fergive me! twar only a minnit; I know twar unmanly. The day seemed long till the evening, though they talkt an' sung to me, fur she niver come nigh me till evenin'. I heard she wur goin' with Juan home, maybe to prepare for the wed- diu'; thet she hadn't yet gone I knowed, for Juan wur the life of the party, laft and talkt, tole stories 'bout love an' ole missions, played the gittar, an' lookt sweet at Dolores. Arturo, he mostly wur ab-sent. In the cool ov the evenin' (I spose I'd been sleepin', for they'd leff me), dressed as if fur a journey, pale and quiet, but trembly, she came an' stood by me face to face, eyes meetin' an' speakin', I knew that she knowed all about it, pale and trembly, but trien hard to be brave an' speak clearly, in a voice like a whisper, she tole me that on Friday at mid-day she'd be married, thet *he* wished it; she'd promised. Cryin', she rested her hed on the pillow—ole man I can't talk much about it. I staid till arter the weddin', but oneasy an' restless. She fainted in front ov the altar. A sun-stroke they called it. I wur wild, but father John stopped me. Arturo got jeal- ous without reason, an' one mornin' with my arm in a sling, but well mounted, I lit out for Los Angeles.

"Goin' back? well I dunno, I'm afeard so. Stay with me old man; yes I know you will. Thank you."

For Forest and Stream.

EARLY DAYS IN PENNSYLVANIA.

BEING invalided by sickness and temporarily confined to my room a friend had kindly loaned me several numbers of your interesting publication, to assist in whiling away the tedium and *ennui* of confinement for which the many delightful sporting and other sketches it details have proved a most cheering antidote, especially so to one who, in his younger days (40 to 50 years ago), was an enthusiastic disciple of both old Walton and his still older precursor, Nimrod. In those sporting days of "long ago" your correspondent resided in the interior fastnesses (then) of the good old Commonwealth of Pennsylvania, amid the beautiful and romantic Alleghany Range, and just about the central part of the State. At that comparatively early period game of every description was very abundant in that wild and unsettled region which then was on the outskirts of civilization. "Going West" at that day meant to western Pennsylvania, or at the very furthest to the Ohio. The now great northwest, with very slight exceptions, was almost a *terra incognita* to the rest of creation. As early as 1825, I think lock pieces were of course the only ones known, and but comparatively few were double guns. Still, very fine specimens were to be had, especially of English manufacture, by such makers as Nock, Patrick, Mun- ion, etc. Their locks, barrels, stocks and general finish would compare favorably even now with work of the present day, though of course the percussion principle, breech- loading, and improvements made in the bores of modern guns render them far superior in every respect to the an- cient sporting pi-cc. In the part of Pennsylvania I have spoken of, embracing the greater portion of the many mountain tributaries of the west branch of the beautiful Susquehanna river game of all kinds, four-footed and winged, at that period and long after was very abundant. Occasionally elk were killed; deer could be found gener- ally at any time and by still hunting at all seasons, but were not sought for beyond the immediate wants of the few scattered residents, as there was otherwise no market for venison, two or three cents per pound being about the com- mon value for the meat and skins. Bears and panthers were very numerous. The writer has known of many as four grown panthers being killed by a celebrated woods- man and surveyor of Centre county, named Mitchell, in the course of a couple of hours in following up a wounded buck the ownership of which these denizens of the wilder- ness tried to dispute with him. This was about 1830. In

1825 a hunter near the borders of Clearfield county caught a large, full-grown panther in a trap, some ten or twelve miles from any settlement, by the hind legs. It occurred to him that it would be good fun for the boys to take the animal to town alive. Accordingly he set to work by first securing its fore feet together with a hickory withe. He drew an old sack over its head and fore parts, fastening it securely around the body, leaving the strap attached to its legs. Thus arranged, and being a very strong man, he managed to get the whole thing across the back of his old horse (long accustomed to carrying similar wild loads), the panther remaining perfectly quiet during the whole performance and throughout the trip to the settlement. Such was the daring and courage of those old time-honored, iron-hearted men, with no accoutrements save their long flint-lock rifle, powder-horn and bullets, with some greased patches in a small receptacle of the stock, buckhorn-handled hunting knife, tomahawk, and pouch to hold their bullets, flint and steel. Thus equipped (not forgetting the never-failing pipe and tobacco) these men would roam the wilderness for days and weeks alone, camping where night overtook them, striking fire, and forming their shelter and bed of hemlock brush, and roasting on a stick before their fire whatever game might have fallen to their unerring aim. Speaking of marksmanship, it was no uncommon occurrence for hunters of that day to "wing" a deer at full speed at 100 yards distance, and at similar distances take off the head of a duck, pheasant, or squirrel, off-hand with the clumsy flint-lock pieces.

To illustrate the nerve and quickness of eye possessed by nearly all the woodsmen of that period I will relate an anecdote: About the year 1823 or '24 a hunter by the name of Earles (by-the-bye an old man-of-war's man, of 1812 originally, but turned hunter) was sauntering leisurely one fine summer afternoon down the banks of Moshannon creek, a tributary of the west branch of the Susquehanna, the locality being many miles from an inhabitant, he started up a pheasant, which alighted on the branch of a large hemlock, just in advance of him; thinking, as he told the writer the story, that it would make him a good supper, he stopped, and was adjusting his aim to behead the bird, when a slight noise a little above it caused him to glance upward, where, stretched along a large branch of the tree, an immense panther met his gaze, apparently in the act of leaping down upon him almost directly beneath. Without hesitation or change of position he merely raised his cocked gun to a line with the eyes of the fiery beast, and pulled trigger, the animal literally, as he said, jumped against his bullet, which penetrated the brain between the eyes, and it alighted dead under his feet, covering him with dirt and leaves in its final struggles. I could relate many singular incidents connected with panthers that in those old days so numerous infested that wild, mountainous region which, though now changed in some portions by the hand of improvement, will, in a great degree, ever remain a rest for many wild animals and game of all kinds from the nature of its surroundings and formation. A very singular though melancholy occurrence took place in or about the year 1822 or '23: Two hunters were out for deer on the Alleghany Mountains, near the crossing of the so-called Bald Eagle Valley road to the town or settlement of Philipsburg, when their attention was suddenly rivetted upon the proceedings of a very large panther scratching away leaves and dirt from the side of a big pine log. Quickly concealing themselves they watched him closely. In a short time they observed the animal drag a large object on to the top of the log, which to their astonishment they then saw was the body of a woman, and which it attempted to convey up a large hemlock tree growing beside the log, but which, after some effort, it apparently could not accomplish. Cautiously approaching, the men shot the animal and recovered the body, which proved to be that of a resident of the valley who had been missing some days—lost as was conjectured, while picking berries on the mountains.

Timber wolves were abundant, especially in Clearfield county. An old resident surveyor and woodsman of that day named Turner was very successful in destroying many a *Lupus* by fixing in their haunts a heavy log at the foot of a sharp acclivity or hill, with another equally as heavy rolled on skids up the ascent, and held there by a trigger arrangement, baited with a piece of meat fastened firmly to it. Two or three of the animals would perhaps find it together, and in tugging and quarreling for the morsel, start the upper log which, rolling down on them, frequently flattened them all between it and the fixed one below.

Wild turkeys in those early times were also very plenty, and many a time and oft have I had a fine day's sport tracking them, after a favorable fall of snow, frequently bagging many a fat one. The chase usually was very exciting, as they will run, when followed, for miles without taking wing, and continue running after one or more of the flock are killed, preferring that species of locomotion apparently to flying, which is a last resort. They seemed to get enormously fat on beech nuts, acorns, and other wild food, grain fields being a rarity in those wilds. It was no uncommon occurrence for "gobblers" to be killed that weighed 50 pounds undressed, and so fat that in falling, if shot from a tree, they would burst open the fat on the breast. Such birds could frequently be purchased for a dollar each. A very common mode of trapping turkeys in the fall and winter was to build a square pen of fence rails six or eight feet high from the ground, covering the tops also with rails, then merely digging a trench three or four feet wide underneath one of the bottom rails, sufficiently deep to allow a turkey to get through into the pen, and scattering a lot of corn about inside the inclosure, with a trail of the same leading some distance away from it. The birds, following the trail, would pass through the trench into the pen, and when once inside never thought of getting out through the same opening, but constantly endeavored to find a means of escape above them, and thus whole flocks were entrapped, as they all will generally follow their leader into captivity if not alarmed.

The pheasant (ruffed grouse) were always very abundant throughout the region mentioned, and probably are so still. In the writer's younger days he hunted with a good spaniel or cocker, trained to find them, and bark sharply, which caused the birds to "tree" immediately on the nearest hemlock, the whole flock frequently occupying the same tree. At such a time the dog kept up his barking and running around it would so take up the attention of the birds as to enable the gunner to begin with those sitting on the lower branches, and proceed higher as those below were killed, until oftentimes the whole covey were bagged. This mode, though not very sportsmanlike, was about the only way one could secure them, as in the thick hemlock

woods, where generally found, it was rarely that any chance on the wing presented itself; though when such opportunity offered it was always much more acceptable to the true sportsman. Many who followed this species of game often preferred doing so on a well-trained pony, off whose back, thus raised above a good deal of undergrowth, the gunner could see to shoot more satisfactorily and more-over get over the ground with less fatigue. One of the most finished sportsmen of that day and locality, and well worthy all distinction as such in every respect, was the now long-deceased H. Phillips, Esq., the owner of a very extensive body of coal and timberlands on the Clearfield and Moshannon creeks, or rather rivers, both large tributaries of the west branch of the Susquehanna. Being a native of England and in easy circumstances, very gentlemanly and hospitable, his home at Philipsburg was the center at which many of the sportsmen of Philadelphia and other places gathered for the enjoyment in their season, not only of the gun, but also of the more gentle art piscatorial, in which also Mr. Phillips was an adept; and as the mountain streams around afforded the most tempting opportunities for taking those speckled beauties, the trout, with which they teemed in those days, his home was usually the scene of much varied sport to his many friends. The late Dr. Wm. P. Dewees of Philadelphia, John Norris, Esq., of Center county, with many other notables, were constant summer visitors on those occasions, and very successful anglers, handling the rod and fly with the true zest of confirmed disciples of old Izaak. Mr. Phillips possessed a fine selection of thoroughbred English setters and pointers, always at the command of his sporting friends, and at the various seasons of duck, snipe, woodcock, quail and grouse shooting, in all of which the locality then abounded, the sport was excellent and the hospitality superb. In 1816 when Mr. Phillips, then a young man, came over to the United States to take charge of the estate I have mentioned, he promised his father that he would send home some bear hams and skins killed by his own hand. In the autumn of that year, in company with an old hunter named Crowell, he went forth to good bear ground to fulfill his engagement, taking with him four dogs accustomed to that species of game—a species that is always quite willing and ready to give you or your dog the hug fraternal, and that of the most pressing kind. Well, the dogs found a couple of bears of splendid dimensions, and soon came up with them. As the understanding was that Mr. Phillips was to do all the shooting, he began by firing an ounce ball out of a heavy rifle several times into both bears, while the dogs were fighting them; but not until two of the smaller dogs were hugged *hors du combat*, and when one of the animals was about finishing a third favorite dog, Mr. Phillips snatched Crowell's rifle and shot the bear through the head at close quarters, killing it instantly. At this moment (his own gun being empty) he found that the second and largest bear, though badly wounded, was hugging his own highly-prized dog to death, whereupon clubbing his heavy rifle, he after several blows, broke it to pieces over the head and nose of the bear, and thus succeeded in saving his dog and at last finishing Bruin, though at the expense of an \$150 rifle, two dogs, and some pretty severe hurts on his own person from the claws of the bear. He made good, however, his engagement to procure personally the hams and skins for his father.

I will now conclude, as in all probability I may have wearied both yourself, Mr. Editor, and your many readers by these perhaps uninteresting and rambling reminiscences of "long ago;" if not, I may yet venture to inflict a little more occasionally of the same sort upon the forbearance and good nature of the more modern lovers of field sports who read the FOREST AND STREAM.

Orange City, Iowa.

Fish Culture.

AMERICAN FISH CULTURE.

CONVENTION OF THE AMERICAN ASSOCIATION AT PHILADELPHIA LAST WEEK—ADDRESSES AND DISCUSSIONS.

THE American Fish Culturists' Association assembled in convention on Friday of last week, in Judges Hall at the Centennial Grounds, Philadelphia. At noon the convention was called to order by the Hon. Robert B. Roosevelt, of New York City. Among those present were the following: A. A. Anderson, Bloomsbury, N. J.; Prof. Spencer F. Baird, Washington, D. C.; T. C. Banks, of *Rod and Gun*; E. G. Blackford, New York City; J. D. Brewer, Muncey, Pa.; Dr. M. C. Edmunds, Weston, Vt.; T. B. Ferguson, Annapolis, Md.; Seth Green, Rochester, N. Y.; Prof. T. Lyman, of Cambridge, Mass.; A. Bell Malcolmson, Jr., New York City; Fred Mather, Honeoye Falls, N. Y.; James W. Milner, Washington, D. C.; B. Phillips, Brooklyn, N. Y.; H. J. Reeder, Easton, Pa.; Dr. E. Sterling, Cleveland, Ohio; Col. James Worrall, Harrisburgh, Pa. Many of these were officially conducting fish culture for the general or State governments, and all were practical and to some extent scientific men. In addition to those named there were several visitors of foreign birth, of whom the Japanese Commissioner, Sekizawa Akekio was prominent, and an interested audience.

Mr. Roosevelt, in opening the meeting, described the efforts made by writers during the past fifteen years to call attention to the necessity for the protection of the fish in our rivers, these including the writings of the speaker, and of Remy, Green and Ainsworth. Reviewing the gradual depopulation of the rivers, the final awakening of our people to this fact, the discovery by Seth Green of the principle of dry impregnation, the stocking of our waters by means of improved facilities for the entrance of salmon and shad—the speaker said that in the river Corrib, Ireland, in 1853, after the erection of a fish pass, the yield of salmon was increased from 1,600 to 20,000. In America an advance had been made in the mechanical appliances of fish culture and in the variety of species to which these had been applied, resulting not only in adding to our waters yearly millions of certain varieties, but in improving these

varieties. The speaker concluded with an allusion to the probable results of one hundred years of fish culture, his belief being that in much less than that time the waters of America would teem with abundant food for the poor and hungry, of which all may come and take.

Mr. Bernard Phillips, Secretary of the Group Jury on "Fish and Fish Products, Apparatus of Fishing," being called upon, gave an interesting detailed account of the exhibits which had come within the purview of the judges.

Addresses followed by Mr. Jas. W. Milner, explanatory of the Smithsonian Institute display in the Government Building of specimens in plaster of fishes, photographs in natural history, etc.; Prof. T. Lyman, upon the habits of salmon and shad, and the proper arrangement of fish-ways in rivers so as to promote the passage of these fish; Mr. H. J. Reeder, upon the most effective arrangement of fish-ways for the ascent of shad. The last mentioned speaker held that the great timidity of the shad was the cause of the greatest difficulty in the way of its passing through the fishway, and substantiated this from investigations in connection with the dam on the Susquehanna at Columbia.

Colonel James Worrall suggested several theories for the comparative non-appearance of the shad in certain years, and claimed that in this specialty Pennsylvania had taken the foremost rank, having appropriated liberally for the carrying out of the improvements in the Susquehanna.

At the opening of the session on Friday afternoon the Secretary read a letter from George Shepard Page, expressing his regret at being absent, and from W. O. Coup, tendering to the Association the free use of a room in his new aquarium building, at Broadway and 34th street, New York, as a place for their meetings, and in which to deposit a library, together with all the collateral advantages coming from the presence of living fishes and their food in the tanks. A motion having been made to accept, with high appreciation, this offer, the President suggested the need of a library, and asked the members to contribute books. Fred Mather also gave a brief history of the aquarium, and the desire of its founders to make it of educational importance. To the aquarium proper Mr. Coup has added a room for scientific use, which shall be free to all students and scientific societies. He has added fish culture (under Mr. Mather's charge), providing a reservoir and five troughs, in which California and land-locked salmon, lake and brook trout, and, perhaps, whitefish, will be hatched.

A vote of thanks was given to George Shepard Page for his constant aid and generosity toward the association.

Mr. Edmunds having asked Seth Green to talk about black bass, Mr. Green said that there were two kinds—the "marsh" black bass, living in still water with a mud bottom; and "river" black bass, inhabiting running water, hiding among the pond lilies, and feeding on water insects, frogs, crawfish, minnows, etc. The latter was known also as the "Oswego" and "lake" bass, and was much the livelier, sharper fish of the two. The distinction between these two varieties was not recognized by all. There had been much discussion as to the advisability of putting black bass into shad rivers, and it was still a mooted question. The young black bass lived about the rocks—sometimes even in still water—because there he found crawfish. The young shad, on the contrary, took to the middle of the stream, where he drifted down for three or four days before he could hold his own against the current. This would give the bass a great advantage over the shad. Mr. Green also said that he had received many favorable reports from waters stocked in New York State, but had heard more particularly of success with the salmon trout. This year's fishing had not been so good as the previous year's, because the water was "in blossom"—that is, was filled with a floating seed somewhat like thistle down, so that the fishes could not easily see the bait. The commissioners had planted last spring nearly 1,000,000 young brook trout, and were hearing good reports from them. They had been careful to put them in small waters, where there was food enough.

Fred Mather differed, he said, from Mr. Green as to the advisability of stocking streams with black bass. They remained where they were put the year round, and ate more young fish and less helgramites than Mr. Green gave them credit for. He thought the little shad would find them exceedingly dangerous neighbors. He considered that those fish which go in schools—the shad, salmon, whitefish, and the like—and that feed on the minute crustacea, were the most valuable to cultivate, and that the bass' gamey qualities were its chief recommendation.

Mr. Reeder did not agree with this. It was true, he said, that the bass were predatory, but so also were the salmon and shad—what constitutes their food when out at sea in the fall and winter is not known; they may prey on the salt-water fishes as much as the bass on small freshwater species, except that they do not do so when ascending to their spawning beds in the spring. He considered no fish more valuable for cultivation as a food-fish than the black bass, because they were so prolific, guarding their eggs and caring for their young until the brood got old enough to care for themselves and disappeared one by one. True, they were predatory and carnivorous, so were all of our valued fishes, but they would never interfere with the value of shad streams as such, as shown by the Connecticut, Potomac, and James rivers, where shad and bass were both abundant.

Continuing the discussion, Seth Green remarked that he had all his life had to do with fish in a business way or otherwise, and ever since 1838 had been examining carefully into their food. He had opened thousands of lake bass for his customers, and had found one young fish to 500 other things in their stomachs.

Mr. Edmunds remarked that he had raised the question of the probable benefit to be derived from stocking streams with black bass to decide whether this fish or the trout were the better for the purpose. The temperature of the water had so increased in the streams of Vermont (his State) that there were now no trout in all the upper tributaries of the Connecticut, which were once good trout streams. There was a notion that trout could not live in water warmer than 68°, but he had kept them alive up to 76°—longer than salmon endured it.

Mr. Reeder did not believe that bass thrived in very cold water, and thought the failure to stock Racquet lake due to the low temperature.

Dr. Kingsbury, of Philadelphia, who introduced himself as a stranger, but one long interested in the subject,

related that for 20 years he had annually visited the headwaters of the Connecticut on angling trips. Three years ago the State commissioners put in young salmon. At the time he was about introducing black bass for the sake of his own future pleasure, but knowing their destroying propensities had refrained. He wished to know whether he could not now put in his bass without injury to the salmon.

Seth Green answered the question affirmatively by saying that none of those salmon would ever find their way back to northern New Hampshire to propagate, and gave an amusing account of the gauntlet of nets, dams, fishways, and incessant, unscrupulous fishermen, which not one salmon in a thousand could hope to safely run. "But," he said, "the black bass will, and I do not hesitate to say that the bass are best."

Fred Mather then found his feet again, and, alluding to Mr. Reeder's earlier remarks, asked where the young black bass "disappeared" to when they so silently stole away from their parents, stating it as his conviction that they vanished down the parents' throats. He denied that a bass fishery could be found that would compete with the catches made of migratory fishes.

Mr. Reeder retorted that he had never said black bass did not eat shad; but he maintained that, with our present appliances for restocking streams, there was no reason why the introduction of black bass should diminish the shad. As to their prolificness, six years ago 600 bass had been put in the Delaware, and now "there's millions in it," so that one rod can get 50 or 60 pounds in a day's boat-fishing in the upper Delaware. It was not a fish that would yield profit to netting, because every bass would jump the cork-line, but the poor people could pull out a breakfast of it anywhere along the shore the year through.

Mr. Edmunds had long thought the Penobscot salmon would soon die out, owing to the increasing warmth of its native waters. He thought attention should be turned more towards the California salmon, and called attention to the following resolution, prepared at the last meeting by Mr. Eugene Blackford, as very important and practical:—

Whereas, The Fish Culturists' Association believe that data in regard to the catch of staple fish, such as are sold in the markets of the country, would be of great importance, a lowering the positive determinations of questions of vast commercial and scientific importance, be it

Resolved, That the Fish Culturists' Association request the Fish Commissioners to urge on the State Governments, of which they are representatives, the necessity of the State appointing certain officers whose duties shall be to collect such data, so that reliable information may be obtained in regard to the catch of staple fish in the various States.

Mr. Livingston Stone, of the McCloud river establishment, in California, was called upon as to the probable success of the West Coast salmon on the Atlantic slope, but was unable to state from experience. It would certainly survive a higher temperature than the eastern species. California was able to supply all the young wanted, and had been sending them to New Zealand, the Sandwich Islands, and elsewhere. The California salmon laid about 4,000 eggs to the fish, and became ripe at full moon toward the latter part of the season. Mr. Stone also gave a brief sketch of his recent operations.

The adjournment this afternoon at 5 o'clock was in time to attend, at the Lafayette Restaurant, one of the most extraordinary dinners ever sat down to, where, excepting bread, cheese, and wines, the whole menu was made up of fish. There were turtle a la Blackford and bisque of lobster Seth Green style; crawfish, oysters, and scollops a la Remy and Ferguson and Edmunds; mackerel, halibut, salmon, anchovies, and pluk from Norway and Sweden; eels and sardines from Portugal and Spain in all sorts of styles; mullet roes from Turkey—little turkey eggs some called them; crayfish from South Africa; dried salmon from Japan; black shark fins and white, dried octopus eggs and dried fish maws from China; oolachans from Alaska, and other fishes or preparations thereof from every State in Europe. The relevés, entrees, and all the rest were got up after the style of some member of the association—"devilled crabs, Gill's style," for example—but the whole dinner, from its inception to its digestion, was a la Eugene G. Blackford, of Fulton Market. His active mind suggested the curious idea, and his great business facilities and well-known energy carried it through to its happy conclusion. Many of the fishes arrived fresh from Europe that very day, and the English turbot and soles were spoken of by everyone as especially fine. Everyone tried to taste everything, but, not strangely, perhaps, most of the foreign preparations were distasteful to American palates; the Oriental cookery especially must be cultivated to be delighted in. The dinner was greatly enjoyed, and, washed down with an abundance of beverages, but no one went under the table, and the speeches were more than usually coherent. That of the Spanish commissioner, who was a guest, was made in French, and, for those who were fortunate enough to understand it, sparkled with wit.

The session on Saturday was not begun at all promptly, and there was a diminished attendance. John A. Warder, a gentleman from Ohio, who narrowly escaped becoming a fish commissioner through receiving an appointment to represent that State at the Vienna exhibition, told what was being done in Ohio in pisciculture, and the profit accruing to the public. Western salmon had been put into land-locked waters with great success, showing that fish will propagate out of salt water. The whitefish (*Coregonus albus*), however, is Ohio's greatest reliance. The habit of these fish in autumn is to course in large bodies along the shores of Lake Erie, and nets are set out all along as far as the depth of the water will allow—four or five miles often—so that prodigious quantities are captured. Experiments in artificially breeding them have met with great success. They spawn late in the fall, close to the shore where the ice first forms, and the eggs hatch beneath the ice; the treatment, consequently, has been to keep the roe very cold until hatched. *Entomostraca*, microscopic animals allied to the crabs, form the whitefish's food. The muscalonge, the speaker said, were becoming scarce in lake Erie, although they used to be caught up to 100 pounds weight.

In reply to an interrogation from the chairman, Mr. James Milner explained the nomenclature of the pike family, as follows:—The *Esox reticulatus* is the "pickerel," of small size, and both its cheeks and gill-covers are scaled; *Esox lucius* (=estor) is the "lake pike," of about 10 pounds weight, with the cheek scaled and gill-cover smooth; the *Esox nubilus* is the "muscalonge," distinguished by great size, and having both cheek and gill-cover smooth.

Fred Mather had something to say about grayling, to the effect that he had found them much easier to raise than trout, but perhaps not so good a fish to eat. He thought no fresh-water species compared with the sea fishes, and suggested that a large part of the delight of trout fishing

arose from the charming surroundings into which the angler was lead. The grayling seemed to be very desirable for trout brooks.

Col. Worral was called out on the subject of fishways. He considered that every brave fish with individuality—not gregarious like a sheep or a shad—had been satisfied for years with the old-established arrangements, but the shad remained delicate about ascending fishways. The one at Columbia, Pa., is 105x60 feet, and the water runs down at the rate of only eight miles an hour. The fish must be a weak one that could not get through that, and many shad did go through, but only stragglers. "I am nonplussed," said the speaker, "as to how to better it. Shad are afraid of their shadows—perhaps they derive their names from this fact. Even the shadow of a breeze will scare them. It may be that in the course of years they will get accustomed to fishways; the young of those that do go through and spawn above will inherit a tendency to return through the next season, and so transmit the habit until all the shad are accustomed to go above. But now it is impossible to accommodate them. Otherwise the question of fishways is settled." Col. Warrol reported for Pennsylvania everything going on well and the Legislature friendly. Salmon trout were doing well in Chester county, where it was not certain they would be satisfied with streams, because they are a lake fish. The California salmon are not due until next year, "and if they come back then," said the speaker, "we will be a hundred times repaid."

Seth Green argued that the main reason why the shad did not run up the fishways was because the stream was overfished. A close time of 48 hours every week is needed. Then the fish will go above if the young have been planted there. Another reason was because they had been scooped out from below. Mr. Green recommended Brewer's fishway, on exhibition at the Government building, as meeting his entire approval.

Mr. Webber explained the arrangement of the fishway at Lawrence, Mass., which is built in a curved form, with the lower end under the dam, so that the fish can enter from the deep holes where they hide. Fred Mather had tried various fishways with little satisfaction; he thought every fishway should not run below the dam, but be set back into it. He advised the testing of models in hatching troughs.

The last speaker was Mr. Robinson, of Virginia, who reported that fish culture was a new thing there, but that they had operated on California and land-locked salmon with good success. They proposed to work on trout, their mountain streams affording fine water—just as good as the Adirondacks and without the black flies; and with the southern black bass in their tide-water streams.

The association then adjourned, but groups of members stood about the room chatting for a long time, thus bringing out more facts from the stores of each other's memories about fishes and their artificial propagation than all the machinery of the convention had been able to evoke. This informal chatting is the most pleasant, and not the least noteworthy (if it were possible to report it) of the association's business.

FISH COMMISSIONERS IN COUNCIL.—The annual Convention of the American Fish Commissioners was held at the Maryland State Building, on the Centennial Grounds, Philadelphia, on Thursday, Oct. 5. Col. Theodore Lyman, of Massachusetts, presided. Among the gentlemen present prominent in fish culture throughout the country, were Prof. Baird, United States Fish Commissioner; James W. Milner, his Assistant, in special charge of the field work for shad hatching; Charles G. Atkins, Commissioner for the Penobscot Salmon Fishery. Also the following State Commissioners: Col. Theodore Lyman, E. A. Brackett, and Asa French, Massachusetts; Messrs. Powers, Webber, and Wahl, of New Hampshire; John H. Braden, Rhode Island; Dr. Hudson, and Messrs. Bill and Pike, Connecticut; Hon. R. B. Roosevelt, New York; Messrs. Howell, Shotwell, and Anderson, New Jersey; T. B. Ferguson, Maryland; Dr. Robertson and Col. McDonald, Virginia; Mr. Miller, Michigan; Livingston Stone, California Salmon Establishment; Drs. Edmunds and Goldsmith, Vermont; Seth Green, of New York. Prof. Baird made an address giving an account of the work performed by him during the past year, which comprised the hatching and distributing of 8,000,000 young shad in the rivers of all the States, including Alabama, Kentucky, Tennessee, and California; the setting and hatching of some 8,000,000 California salmon eggs, and the distribution of them to the Fish Commissioners of the different States. Half a million of the eggs were sent to New Zealand, and a hundred thousand to the Sandwich Islands. Addresses were made by Mr. Milner and Mr. Atkins, the latter speaking of the landlocked salmon fishery and its success. A discussion was had in regard to the extent of the aid which the National Government could, would, and should give to the protection of the fishery interests, and the interference which should be exercised by the Government where the interests of two States conflict like those of Connecticut and New York on the Connecticut river. Messrs. Dr. Hudson, of Connecticut, Dr. Edmunds, of Vermont, and Anderson, of New Jersey, were appointed a committee to consider what legislation and rulings had been had by Congress, and to report at the next meeting of the Convention. Mr. Miller, of Michigan, made a short address on behalf of his State, and spoke of the profitability of trout raising and the propriety of introducing black bass into the rivers. Mr. Livingston Stone, who has just arrived from California, brought with him 4,000,000 of salmon eggs, the larger portion of which were distributed to the various State Commissioners at Chicago. A number were placed in the Maryland State Building, where the process of hatching is in operation.

THE MINNESOTA FISH COMMISSIONERS.—Dr. R. O. Sweny and Wm. Golcher, of St. Paul, and G. O. Burt, of Mankato, have been distributing 120,000 young land-locked salmon among the lakes of Minnesota, some sixty-two localities in all being supplied.

"Pompey, what am dat what goes when de wagon goes, stops when de wagon stops; it am no use to de wagon, and de wagon can't go without it?" "I gib it up Clem." "Why de noise, ob course."

Natural History.

BIRDS OF LOWER MICHIGAN.

[Continued from Vol. VI., page 402.]

Ardea herodias. Great blue heron. A common summer visitor, arriving here by April 10th. Incubation begins about the middle of May. There is a large heronry 20 miles east of Ann Arbor, where thousands breed; I have counted seven nests on one black-ash tree, some containing eggs freshly laid, others eggs in an advanced stage of incubation, while still others contained young nearly half grown. The eggs are usually four, and of a light bluish-green color. I think the feeding grounds of these birds must have been some distance away, as I have stood at the edge of the swamp at early twilight and seen them return in pairs and trios from a northerly direction. About October 1st this heron leaves for the south.

Ardea candidissima. Snowy heron. Accidental from the south; one specimen taken April 9th, 1872.

Ardea virescens. Green heron. Summer visitor, not common, arriving from the 1st to the 10th of April. By May 5th the nest is built and the work of reproduction is begun. I have never found this bird building in companies, generally not more than two or three pairs being in one locality. The eggs are from two to four, pale light-blue. The young remain in the nest until able to fly. From the 1st to the middle of October these birds depart for their winter homes.

Nycticorax nycticorax, var. *navia*. Night heron. Not rare, arriving here by the middle of April. It soon selects its home for the summer, and by May 15th the eggs are laid. They are usually four, and of a bluish-green or greenish-yellow color. The young are fed by their parents till nearly full-grown. In the last days of September these birds leave for the south.

Botaurus minor. Bittern or stake driver. Very common, arriving here from April 1st to 10th, making its home in bogs and swamps. It is shy and solitary, living alone except in the breeding season, when two or three pairs are often found in the same locality. The eggs are laid from June 1st to 10th. I have always found the nest placed on low bushes never more than four feet from the ground, composed of flag stems, grass and leaves; the eggs are from four to eight in number, of a rich drab and light-ash color. By the last of July the young are turned off to provide for themselves, and about September 1st all begin moving southward, so that by the last of October none are to be found.

Ardeotis exilis. Least bittern. This beautiful little bird, the smallest of the family *Ardeidae*, is a very rare summer visitor in this locality, reaching here from its winter quarters about the middle of April. It is very solitary in its habits. About June 5th the nest is built, but in all my wanderings I have never met with but two nests of this bird. One was at Portage lake on the 8th of June, 1874. It was built in a large clump of bushes growing on the edge of the lake. With a vigorous thrust I had run my boat into the bushes, when I startled the male bird, which was quickly brought to a stop by a charge of No. 10 shot. At the report of the gun the female started from the other end of the bushes. I let her go unmolested, feeling confident that their nest was concealed somewhere about the bush, but after a diligent search of some time I gave it up as a bad job in not securing the female. During the afternoon I had occasion to pass the place again. This time I ran my boat in where I had startled the female, and sat diligently searching with my eyes, when, much to my surprise, I observed her sitting on her nest about two feet from the boat, so quietly that I removed the ram-rod from my gun and struck her on the back of the neck, killing her instantly. The nest was composed entirely of coarse rotten weeds, slightly hollowed, so as to be little more than a platform, and contained four freshly-laid eggs, about the size and form of the eggs of the yellow-billed cuckoo; they were light-blue, with a faint greenish tint. In the latter part of September these birds depart singly for their winter home.

Grus americanus. White or whooping crane. A very irregular visitor; two or three specimens are taken nearly every season.

Grus canadensis. Brown or sand-hill crane. A very rare summer visitor; in seven years collecting I have met with this bird and its eggs only once, on June 2d, 1870.

Rallus elegans. King rail or fresh-water marsh-hen. A rare summer visitor, arriving about April 10th and departing about the last of October. Its nest is simply a platform of grass and weeds; the six to eight eggs are laid about the middle of May, and are of a dirty-buff color, marked thickly with spots of different shades of brown.

Rallus virginianus. Virginia rail. Very common after April 15th. The eggs are laid by May 10th, and by the middle of October they have departed south.

Porzana carolina. Carolina rail. Common with the preceding.

Fulica americana. Coot or mud-hen. A very common summer visitor, arriving here early in April, laying its eggs from June 15th to July 10th. By November 1st they have all left for the south.

A. B. COVERT.

THE SURVEYS.—Advices from Dr. Hayden state that his parties are all in the field with orders to finish the work in Colorado by November 1st. Dr. Goues has charge of the zoological division. Prof. Hayden has been verifying geological observations about the Raton Mountains and in San Louis Park.

Mr. Henshaw of Wheeler's Survey, writes to Dr. Yarrow that his zoological party are working in the neighborhood of Lake Tahoe, with headquarters at Carson City. He finds it a productive field, is well provided, and expects to make a good season of it, although necessarily a short one.

PINE FINCH.—The accounts of Leith Adams and others of the pine finch (*Chrysomitris pinus*) in New Brunswick, differ so much from our own observations upon the bird as it appears here, as to suggest the inquiry whether an arctic form of the European pine finch (*C. spinus*) does not regularly invade New Brunswick during the coldest

weather. The ornithologists of the Province ought to be able to decide this this winter.

NOTES FROM OUR CORRESPONDENTS.—J. Otis Fellows informs us that four white gulls have been shot this season at Hornellsville, N. Y.; a gull had never been seen there before. . . . Also that a fine specimen of the bald eagle was killed at Warsaw, N. Y., last week by a boy only 12 years old. The eagle weighed 18 pounds and measured 7 feet 6 inches from tip to tip of wings. It was preserved. . . . Mr. Harold Herrick of this city sends us word that several red headed woodpeckers have lately been seen near here. Forty years ago they were a common bird, even in southern New England, but for many years none have been seen about, except a few in the fall four years ago. . . . H. C. Munger, Jefferson City, Mo., has a lot of wood ducks, raised by common ducks, which are very tame.

—We are glad to be able to resume the list of the Birds of Lower Michigan, which has been interrupted by the author's absence on a collecting trip during the summer.

SOUTH AMERICAN GAME BIRDS.—In the *Scientific American* of September 3d, Truman Hotchkiss, of Stratford, Connecticut, writes:—

"On the eastern shore of the Uruguay river, from Paysandu to Independencia, there is an open rolling country with frequent small ravines, most of which are bordered with a narrow skirt of timber of stunted growth and flowering shrubbery, which makes a fine retreat for the birds, and also frequently shelters the deer, South American tiger, and wild cat, which, however, are not abundant. The hill tops are also crowned with timber of similar growth, making a pleasant shade and resort from the scorching sun. Except on the hill tops and in the ravines, the country is partially covered with tall coarse grass, which makes a fine cover for quail and partridge. On approaching a ravine, the first thing that attracts your attention is the hum of the humming-birds, which are of numerous different varieties, each bird balancing nicely on its wings while it inserts its long slender bill and extracts sustenance from the desert flower. Along the ravines, wild pigeons, similar to ours, are to be found in plenty, and are easily bagged. Next is the small partridge, very much like our northern quail, which are difficult to bag on foot and without a dog, as they will hide in the tall grass; but with a trained dog, the sport is fine. On horseback, you may almost ride over them before they will fly up. They are in flocks generally, yet they do not huddle; and it is difficult to get more than one at a shot. But you may sit on your horse and shoot a whole flock singly, as they seldom fly except they are flushed by a dog. The large partridges, which closely resemble English pheasants, are generally found singly, and the mode of catching these birds is rather peculiar.

They are found among the tall grass. The sportsman is mounted (carrying no gun, however), and has his dog trained to the work. He walks his horse slowly along, while the dog hunts about among the grass; and when he comes close upon the bird, the latter breaks cover, rises a little above the grass, and flies off on a level. When the bird flies, the sportsman puts his horse to his metal and follows to the spot where he sees the bird alight (probably a hundred yards), and waits the arrival of the dog, who follows at his top speed and rushes in among the grass; and soon again the birds breaks cover and flies as before, but only about half as far. The sportsman and dog follow up as before, and the bird is hunted out again by the dog, and divides the distance again, and drops into the grass, pursued by sportsman and dog, this time closing the race for life. The dog rushes into the grass and directly comes out again with the bird unharmed in his mouth; the sportsman in the meantime dismounts and receives the bird, and disposes of him as he thinks proper. I was once an eye witness of such a race, and was told that these birds never break cover but three times, which seems to me rather strange."

THE CRISAL THRASHER.—In a private letter from Capt. Charles Bendire we have some interesting information as to the characteristics of this little known bird. He writes:—

"*Harporhynchus crissalis* is common throughout the greater part of southern Arizona where I have observed it in a number of different places. This species is one of the first birds to nest in Arizona, and is only found near to the water-courses. It builds close to the ground, preferably in thickets of wild currant bushes or willows. The nest is poorly constructed—not nearly so well as that of the other species. It begins breeding about March 15th and usually lays but two eggs. These are scarcely distinguishable from those of the common robin or cat-bird. In fact in many respects this bird bears a close resemblance to the latter. I took some 36 nests during the season of 1872. An occasional nest contained three eggs, but two are the usual number. It rears two and perhaps three broods in a season, and reoccupies the old nest. It is also an excellent songster, but shy and retiring in its ways, is seldom seen although abundant enough. As it keeps itself in the dense thickets bordering the creek bottoms, and scarcely ever flies when disturbed, but darts swiftly to the ground and runs along to elude pursuit, always hiding in the densest foliage. It is thus easily seen why specimens of this bird are so rare in collections."

FIRST LION IN NEW YORK.—It is about fifty years since the first lion was brought alive to this country. It was a whelp, and the pet of the commander of a French brig which was in the African slave trade, and had come to New York for a return cargo. After the brig arrived at New York the animal became mischievous, and the Frenchman sold him to a servant of one of the Broadway hotels named Gold, who paid ten dollars for his purchase. He took him home and kept him in a cage for two years, at the end of which time he grew to about the size of a Newfoundland dog. His owner then commenced to exhibit him, without the assistance of a brass-band or flaming placards. His price of admission was one dollar, an exorbitant charge at that day, when the choicest seats in the most fashionable theatre were not over fifty cents. Crowds, however, came daily to see the animal, and his owner made money rapidly. Until 1820 Gold remained proprietor of the only lion in this country, and his name became widely known. He, however, finally parted with the animal, and his fame and fortune for a large sum, having realized altogether between forty and fifty thousand dollars.

—In 1875 no less than 200 human beings lost their lives by wolves in Russia. The appetite of the Russian wolf is enormous. His tenacity of life is astonishing, and he has the 'possum's trick of pretending to be dead. It is related in the publication from which we quote that a peasant finding what he supposed to be a dead wolf, took the presumed carcass home. In the night the peasant heard a noise, and found the animal on the table. It jumped at the peasant's throat, and the wife, who rushed out for help, found her husband dead on her return.

THE BUTCHER-BIRD IN NEW YORK.

AUBURN, N. Y., Sept. 30th.

EDITOR FOREST AND STREAM:—

Does the great northern shrike (*Collurio borealis*) breed in New York State?

During the three years that I have collected eggs in this State I have taken some seven sets of eggs, one in 1874, two in 1875 and four in 1876, and I always supposed they were those of the great northern shrike, but last year a doubt was expressed by some of my correspondents about the eggs being correctly named. Accordingly I shot the bird with the first set I collected this year and sent it to Prof. Baird, who pronounced it a loggerhead (*C. ludovicianus*), which places it beyond a doubt that the loggerhead breeds here; but why a bird which has always been considered but a straggler in this State should all at once become common, is something which I leave for "older heads" to settle. In a recent number of the *Oologist* the great northern shrike is represented as breeding commonly in some parts of the State, and it says that three nests were found in Oneida county, and others in other parts, where the birds were identified beyond a doubt. That the great northern shrike is found here in winter I know, and would like to hear the opinions of others as to whether they really do breed or not.

T. J. WILSON.

The Kennel.

GREYHOUND RACING.—Dr. Rosenthal's artificial cat, which is to make a pigeon leave the trap with all the celerity that the most ardent trap shooter can desire, is outdone. The Englishmen have discovered another mode of pursuing sport, as it might be, out of season, by racing their greyhounds against each other. At Hudson, that place where so much sport of one kind and another is always to be found, a sixteen-dog stake was to have been run for on Saturday last the dogs being drawn in couples, as in coursing, and the incentive to the racing being a stuffed hare running on a wire with quite the speed of the animal when alive. As greyhounds run entirely by sight, it answers every purpose, and the distance is long enough for all purposes. The mechanical arrangement for moving the hare is said to be very ingenious though simple. The new sport promises to become extremely popular in England, and we should not be surprised if it was imported to this country. If it is, greyhound stock will look up.

—Mr. W. Vie, of St. Louis, informs us that he has purchased from Mr. D. T. Sherwood, of Skaneateles, N. Y., his bitch Rusa, of imported stock, she being bred by Mr. Asce, of Hamilton, Ind.

—The Laverack setter Pearl by Prince out of Lill II (Pearl is own sister to Petrel) arrived per steamer City of Richmond on the 23d ult., and is now in the Strathroy kennels. Pearl is from Mr. Llewellyn's kennel.

—Pedigree blanks for the registration of pedigrees in the Kennel Register, can be had on application to us. No charge for the blanks or for registering.

HYDROPHOBIA.—An entire pack of fox hounds, numbering twenty-three couples, was recently found to have in some way contracted an illness which, after careful examination, was declared to be hydrophobia, and all were destroyed. The pack had been in existence for more than twenty years, and will be re-established by drafts from other kennels. If the remedy for this disease described below is what is claimed for it, it would be an invaluable article to be kept in every kennel.

ST. LOUIS BENCH SHOW.—Up to the time of our going to press no report of this show has reached us. The following is telegraphed to the Chicago *Field*:—

ST. LOUIS, Mo., Oct. 4th.
This show is a pronounced success; there are no less than 125 entries. Class I.—Imported English setters or their progeny that have never taken first prize at any bench show (native setters of pure English blood and of authentic pedigree eligible). For the best dog \$25, Drake; second prize \$15, Regent, both Luther Adams; bitches, Dora, St. Louis Kennel Club.

Class II.—Imported red or red-and-white Irish setters, etc., as above. Dogs first prize, \$25, Joe; second, \$15, York, J. C. Cooper; bitches, first, Nora, A. E. Sterling, Cleveland; second, Floss, J. C. Cooper; puppies, dogs, Star, St. Louis Kennel Club; bitches, Nora, A. E. Sterling.

Class III.—Black-and-tan, or black-white-and-tan Gordon setters, etc., as above. Dogs first prize, Frank, G. O. Eades; second prize, Tom, W. Sappington; bitches, first prize, Benlah, second prize, Betty, Wadell & Sherwood; puppies, dogs, Carlo, G. O. Eades.

Class IV.—Native English setters, with or without pedigree, that have never taken first prize at any bench show. Dogs, first prize, Dan, J. A. Wherry; second prize, Pride of the West, Wadell & Sherwood; bitches, first prize, Kate, C. F. Demuth; second prize, Polly, Wadell & Sherwood; puppies, dogs, Grouse, St. Louis Kennel Club; bitches, Sue, Wadell & Sherwood.

Class V.—Native red, or red-and-white Irish setters, etc., as above. Dogs, first prize, Pilot, Wadell & Sherwood; second prize, M. Golden. The pointer classes will be judged to-morrow.

CHAMPION CLASSES.

To include any dog or bitch that has taken first prize at any previous bench show.

Class IX.—For the best English setter dog or bitch either imported or native. Rock, St. Louis Kennel Club.

Class X.—For the best Irish setter, etc., as above, either imported or native. Elcho, St. Louis Kennel Club.

Class XI.—For the best Gordon setter, etc., as above. Rap, Dr. A. Hammers.

SPECIAL CLASSES.

Class XIV.—Premium offered by the St. Louis Kennel Club for the best imported Irish setter dog for stud purposes, to be shown with two of his pups; Elcho, St. Louis Kennel Club.

Class XV.—For the best Irish setter bitch, etc., as above; Loo, St. Louis Kennel Club.

Class XVI.—For the best imported English setter dog for stud purposes, etc., as above; Rock, St. Louis Kennel Club.

KENNEL PRODUCE.—The Rev. H. C. Berg's pointer bitch Forte, on the 2d inst. whelped a litter of eight pups to Tell, three have died, leav-

ing two dogs and three gyss. Three of the litter were black and tan—an unusual color for the pointer breed, as they are. Each of Mr. Berg's dogs were awarded special mention or diplomas at the late Centennial Bench Show.

ON THE PROPERTIES AND USE OF THE XANTHIUM SPINOSUM AGAINST HYDROPHOBIA.

BY DR. GRZYMALA.

Extract from the *Therapeutic Journal*, April 10th, 1876, published at Paris, by Prof. M. A. Gubier.

We are in receipt from one of our honorable and distinguished confreres, Dr. Grzymala (of Krivoe-Ozero, Podolia), of the following letter, which, by the virtue of the, to us, well known character of its author, seems to us well worthy of attention:—

KRIVOE-OZERO, March 22, 1876.

TO PROFESSOR GUBLER:

Dear Sir and Most Honored Master:—Permit me to call your attention for a moment, to the therapeutic properties of a very common, but hitherto neglected plant *Xanthium spinosum*.

I hasten to add, that, an enemy to spicificality in medicine and in therapeutics, I believe only in physiological action, but I also believe that the physiological action of a great number of substances is yet little known.

In this particular case, I am convinced that the physiological action of a diaphoretic, notwithstanding inferior to the Jaborandi, the *Xanthium spinosum*, gives or will give, the explanation of its effects against hydrophobia, for it is of the treatment of this hydrophobia that I wish to speak to you. This confession of faith seems to me indispensable when that formidable malady is mentioned.

This plant, which grows in many countries, is found in the middle of France, in Podolia. It infallibly neutralizes the effect of the virus of the rabies, on the single condition that it is administered in time, that is to say, before the paroxysm of that terrible malady appears.

I have used the *Xanthium*, now a number of years with the best success, and it has not yet been my lot to observe a single case where it has disappointed me—although I have had occasion to administer it at least a hundred times to men as well as to animals, bitten by rabid dogs and wolves. You must not be astonished at these figures, which, I assure you, are rather below than above the reality. In the country in which I live, rabies is very frequent; and for more than 20 years that I have used the medicine, ten cases per annum on an average, will readily justify the number mentioned above.

What would you say are the physiological effects of this remedy?

A sudorific, a sialagogue, and a feeble diuretic, the action of which is less pronounced than that of Jaborandi. I have not, however, been able to produce all these phenomena together. Certain patients perspire, others are salivated, and there are some who pass more urine than in the normal condition. The temperature is slightly raised, and the circulation is ordinarily but little accelerated under the influence of this plant. Some patients complain of cephalalgia, others of nausea. I have seen even those who have vomited the first dose of the medicine. Besides a continued state of perspiration during the continuance of the treatment, sudden attacks of dimness are noticeable, which come upon the patient from time to time during the day. The appetite in general is augmented, and the digestion is not at all disturbed by this plant, which I administer in powder.

The dose for an adult is 60 centigrammes (10 grains) of dry powder of the leaves of the *Xanthium* repeated three times a day, and continued during three weeks. Children under 12 receive half this dose. It is needless to say that I never cauterize. Since I possess this remedy, I have no longer any fear of rabies.

Very nearly 12 years ago one of my dogs took this disease, bit a cow, a pig, a dog, a cat, and a tame crane. The cow, the pig, and the dog were placed under treatment for three weeks. All three were left uninjured by the disease. The crane and the cat, which I had left without care, died of hydrophobia, the one at the end of three, and the other 11 days after being bitten.

During the Crimean war, a family composed of 12 persons had been bitten by a mad wolf. Six of these persons entered into my service at the hospital of Olshanka (government of Podolia, district of Balta). These were all cured, while six others treated by the cauterization and the daily use of cantharides, of *Fabu-tonco* and *Genista-tinctoria*, died mad in the course of 12 to 60 days.

Two years ago, six hunting dogs which I had been bitten by a mad dog (an animal which I was able to stop, and which I saw succumb at the end of two days with every symptom of rabies). My bitten dogs were divided into two categories. Three were isolated and left without treatment. These died at the end of 15 days with all the undoubted symptoms of hydrophobia. The others, which were left at liberty, but placed under treatment (30 grammes a day in three doses in a porridge, for three weeks) still belong to me and have been sick. One of them caused me for a moment to fear that I was disappointed, having disappeared the twelfth or thirteenth day of the treatment. It is known that dogs at the beginning of the rabies generally leave their masters' dwelling. I did not know what had become of him; but at the end of three months I found him well, in company with a poacher, from whom I took him back. This dog is still with me, well. This fact proves that 12 days' treatment may be sufficient.

In 1873, Count Malachoski, proprietor of the Odessa country, came to consult me for his son, eight years old, bitten some three days before by a mad dog. Three weeks of treatment placed him out of danger. I saw him four months ago looking remarkably well.

Dr. Grzymala here introduces a number of cases where the plant has proved effectual.

The dose for animals should naturally be much stronger; thus, in 1868, I was solicited by our commissary of police, Mr. L. nka-chevitch (at Krivoe-Ozero, district of Balta), to give him some of my powder—called in common in my country "Antirabic of Dr. Grzymala"—for a heard of 30 horned cattle, all bitten by a mad wolf, eight of which were already down with all the symptoms of hydrophobia. I had each of the animals take ninety-six grammes (three ounces) of *Xanthium* in powder, in bran daily, for four weeks. None of the twenty-two beasts were attacked by the disease which is the subject of this letter.

All the facts which I here relate, my most honored master, are positive, and actual realities which I can, if need be, support by proofs. I have not drawn upon my imagination by dint of gnawing at the barb of my pen, as is often the case. They are personally known to me, and I repeat it, I have over a hundred others that I can place before you if desired. I confide them to you, soliciting insertions in your very estimable *Therapeutic Journal*. I am certain that experiments which you will be able to make with the leaves I send you, upon the physiological and therapeutical action, will confirm what I have stated and I will thus have co-operated though feebly, in that path of therapeutics which you and your distinguished colleagues have so splendidly opened.

Respectfully,

DR. GRZYMALA.

We second the suggestion of our friends of the *Turf, Field and Farm*, that Mr. Bergh, who has both abundant means and interest in this subject, institute a series of experiments to test the efficiency of this alleged remedy. The great difficulty, however, will possibly be to find the required cases of rabies at this time to operate upon. The remedy itself can be purchased of W. H. Schiefflin & Co., Druggists, 172 William street.

ARECA NUT FOR PUPPIES.

WEST TROY, Sept. 29th.

EDITOR FOREST AND STREAM:—

I have just read Mr. Dale Highland's letter in relation to the death of Mr. Glahn's puppies, in your issue of the 28th inst., and think Mr. Glahn is entirely mistaken as to the areca nut causing the death of the puppies. In my opinion those puppies were beyond relief, owing to inflammation of the intestines, caused by the movements of the worms. I have used the areca nut for the past two years with astonishing results, both in puppies and grown dogs, and have removed bunches of both tape and needle worms as large as a butternut frequently, but have never seen any bad result in the youngest puppies. I have always given it when the first symptoms were shown. The symptoms will show in some puppies much sooner than in others; hence the accumulation of numbers. Before knowing of the areca nut I used Santomine and also worm syrup, such as Mr. Highland speaks of, both with good results, but nothing to equal the areca nut.

JOHN H. FITCHET.

Game Bag and Gun.

GAME NOW IN SEASON.

Moose, *Alces macchis*. Pinnated grouse or prairie chicken, *Cupinonia cupido*.
Caribou, *Tarandus rangifer*. Ruffed grouse or pheasant, *Bonasa umbellus*.
Elk or wapiti, *Cervus canadensis*. Quail or partridge, *Ortyx virginianus*.
Red or Virginia deer, *C. virginianus*. Hares, brown and gray.
Squirrels, red, black and gray. Wild turkey, *Meleagris gallopavo*. Woodcock, *Philohela minor*.

"Bay-birds" generally including various species of plover, sand-pipers, snipe, curlews, oyster-catchers, surf-birds, phalaropes, avocets, etc., coming under the group *Lumicola* or Shore Birds.

VARIOUS KINDS OF BEACH BIRDS.

Many of our readers who would not be materially assisted by scientific descriptions in determining unrecognized species, will be able to identify the different kinds of beach birds by the description herein given to the *Sun* by an old Long Island sportsman of thirty-three years experience:—

The little oxeye is the smallest of all. He has dark legs, and brown predominates in his feathers. If he was scarce he wouldn't be worth hunting, for his body isn't much, if any, bigger than your thumb, but he is very sweet and delicate eating. The sandpiper is just about the same size as the oxeye, but is of a more reddish brown color, is rather longer built, and has a shade more bill. He is a good bird, too. Then comes the ring-necked plover, that I class with the snipes, where he properly belongs, because he's a bay and beach bird. He takes his name from his peculiar bright white ring around his neck. The tealers, or steel-yard birds, as some call them, are next in order, and the stonerunners follow. Both these lay their eggs here. They are poor eating. The stonerunner is white, with a black ring around the neck. The strand or surf snipe are still a little larger, and are good eating. They feed close to the water along the beach, where the waves break. Their legs are black, and their feathers a light gray, almost white. Then come the leadbacks. They come earlier and stay later than any other snipe. They are of dark brown color, have a little round black spot on the breast, from which some call them black breasts, and their backs are lead tinted, as their proper name implies.

The dowits are next in increasing size, and take their name from their call or whistle. In familiar parlance about here, people call them "dowiches." They are just about as big as robin-red breasts, dark brown in color, and are easily mistaken for English snipe, for which they are often sold in the cities, and not one out of ten of those who buy them would know but what they are, either before or after they are cooked. They go in flocks, and are probably the most numerous of any of the many varieties we have among the largest sized snipe. Next to the dowits, ranging upward, are what we know as the bastards, because they seem to be a cross between dowits and yellow-legs. There are other evident crosses among the inferior birds I have named, but they are not worth mentioning. These, however, are large birds, and appear in flocks in great numbers. The first bird comes next. He arrives late in the fall, and lives more in the fields than on the shore, though he hunts his grub wherever he can. He is of a frosted color, white with little dark spots, and is good for the table. Then we have the little yellow-legs, light grey birds, pepper-and-salt looking, with the salt predominating, yellow legs and long snipe bill. They rank among the best for eating. The robin-snipe, next in the ascending scale, takes his name from a red patch on his breast, like the bird he is called after. But he does not get that until he is a year old, and when young is sometimes mixed up with other varieties, and puzzles amateur hunters to tell what he is.

Now we have got up to the yelper, or large yellow-legs, than which but one kind of all the snipes is more delicious eating. About the only apparent difference between him and the little yellow legs are that he is two sizes larger, and has a different call.

The whist, a stupid bird, that you can almost walk up to and knock over with a stick—pretty good eating, though—is still a little larger. He is of a bluish-black color as you look at him a little way off, and has black legs. The ring-tailed marlin—so called because of a white ring around the tail, at the out, the feathers beyond being black, while the body is dark brown—is the finest game bird of the whole lot. He is very wild, and the sportsman who gets him, not only has a prize fit for the palate of the king of gourmards, but proves that he is a shot worthy of such a prize. Then come the jack curlews. Some call them futes, but they are not. What the futes really are I'll tell you when we come to plover. Jack curlew has a bowed bill four or five inches long, a body a little bigger than a pigeon, and is of a light brown color. About the same size is the red marlin, which has a reddish brown color and a long, straight bill. The biggest of all the snipes is the sickle billed curlew, which is almost as large as a hen, and has a bill about six inches long, curved just about the same as a jack curlew.

All these are bay and beach snipe that come to feed on the small snails, sand-leas, and long red worms which they pull out with their big bills from the sand, near the water. With the few exceptions I have noted they are all fine birds to eat, and good shooting.

Grass plover to which the local appellation generally applied here is humbirds, feed in the fields and uplands, al-

ways singly, never in flocks, and are very shy, wary birds, difficult to obtain. For delicious game, always commanding a high price in market, they have no superiors. In appearance they much resemble a jack or English snipe, except that their legs are longer and their bills shorter. The best way to hunt them is with a horse and buggy, both because they are so scattered, and one has to cover so much ground to get them, and because in that way you can get so much nearer to them than upon foot.

Next come the black-breasted plover, lightly mottled birds, the males wearing a large round black spot on the breast, excepting which spot they are considerably lighter colored than the grass plover. They feed on angle worms, bugs, and such prey, which they find in stubble fields and old meadows. You will find them in flocks, and gunning on foot will be able to approach them much more easily than you can the humbirds. The green-back or golden plover, a beautiful bird, comes next. Some confuse him with the grass plover, but he is very different. He shows up a sort of greenish black color at a distance, but near at hand is seen to be brown. These green-backed plovers go in flocks, sometimes as many as two hundred and fifty together. In the fall of the year there are frequently seen a sort of plovers which some people call big-headed plovers, but I have never clearly made up my mind that they are not simply young black-breasts. They have enormously big heads, but that is about the only peculiarity about them. Best of all are the futes, short, chunky birds, always very fat, and exceedingly nice eating. They are always found in company with the green-backed plover, and sometimes cross with them. In fact, there are mixtures all through among the plovers, the same as among the snipes. There is one more kind that I did not mention, the brant or streaked backed plover, so named after the resemblance of its markings to those of the brant duck.

Suise shooting on Long Island commences about the 15th of April, is best about the middle of May, and continues until the 10th of June. Then there is a little lull, while the birds are away breeding, until about the 10th of July, when they come back in swarms, and the shooting is good again until about the 10th of September.

GUNS AT AUCTION.—Since Mr. Tolley's sale, a number of auction sales of guns have been held in Liberty and Nassau streets. The material offered, however, although purporting to be, and perhaps justly so, the manufacture of well-known makers, was not so thoroughly and unquestionably authentic as in Mr. Tolley's case. If it was, the prices realized were ridiculously small. For instance, at Mr. Johnson's sale on Thursday last a "Webley" 12-bore brought but \$48, and a "Greener" \$28 50. So many trade guns are branded "Moore" that it is difficult to tell who the manufacturer really is, but guns with that stamp brought from \$30 to \$50. Muzzle-loaders brought from \$11 to \$17. The highest price realized at the sale was \$71 for a W. & C. Scott & Son's side snap-action, 12 gauge.

PIGEON MATCHES.

MAINE.—The annual Maine State shoot for the championship of the State and the diamond badge took place at Little Chebeague Island on Sept. 21st and 22d. Three clubs were entered—the Androscoggin of Lewiston, 13 men; the Forest City's, 20 men; and the Maine's, 5 men, the two latter of this city. The following is the result, the shooting being by teams at 15 birds each:—

Names.	Killed.	Names.	Killed.
Charles Day, Forest City	13	M. Sullivan, Maine	9
John Mac-sure,	10	P. Jerris, Androscoggin	13
C. W. Curtis, Androscoggin	11	W. E. Skillings, Forest City	12
SECOND TEAM.			
W. Noyes, Forest City	14	J. C. Billings, Forest City	12
S. Bartom,	15	H. P. Ladd,	6
C. F. Nason, Androscoggin	14	H. Donovan, Androscoggin	14
THIRD TEAM.			
J. N. Martin, Forest City	12	E. C. Page, Maine	13
R. G. Hall,	12	G. Watrous, Forest City	9
E. G. Nason, Androscoggin	12	E. M. Leavitt, Androscoggin	11
FOURTH TEAM.			
J. C. Dennis, Forest City	14	T. B. Davis, Forest City	10
F. Merrill,	11	A. E. Frost, Androscoggin	12
E. Pomeroy, Androscoggin	14	M. Wormell, Forest City	14
FIFTH TEAM.			
H. Harmon, Forest City	12	F. Curtis, Forest City	11
G. Cobb,	11	E. Perkins, Androscoggin	12
L. Wooley, Androscoggin	11	J. Stinchcomb, For st City	5
J. Crocker, Forest City	12	J. F. Edmondson, Androscoggin	12

On Thursday morning the shoot was resumed.

Names.	Killed.	Names.	Killed.
C. Polister, Maine	15	Jerry Swell, Maine	10
G. H. Rounds, Forest City, retired	15	J. Smith,	12

Ties on 15 for the badge, 25 yards rise, 5 birds.

S. Bartom, Forest City, 0 1 1 0—20. C. Polister, Maine, 1 1 1 1—5.

Polister, of the Maine's, wins the championship of the State and the diamond badge.

Ties on 14, 25 yards rise, 5 birds, for 2d prize, Smith & Wesson revolver, Value at \$25.

W. Noyes, Forest City, 4 J. C. Dennis, Forest City, 2
C. F. Nason, Androscoggin, 4 E. Pomeroy, Androscoggin, 3
H. Donovan, 4 M. Wormell, Forest City, 4

Second ties at 31 yards.

Noyes, 4 Donovan, 4

Nason, 4 retired, Wormell, 4

Third ties at 3 birds

Donovan, 3 retired, Noyes, 3

Wormell, 3

Fourth tie at 3 birds.

Noyes, 3 Wormell, 3

Warren Noyes of the Forest City's wins the second prize.

Ties on 13 for third prize, a Wesson rifle, 5 birds, 25 yards rise.

Chas. Day, Forest City, not present E. C. Page, Maine, 3

C. W. Curtis, Androscoggin, 3 L. Wooley, Androscoggin, 3

P. Jerris, 3 J. Crocker, Forest City, 5

E. G. Nason, 3

Second tie at 3 birds.

Crocker, 2 Nason, 2

J. Crocker of the Forest City wins the third prize.

Ties of 12 for fourth prize, a Wesson rifle.

W. E. Skillings, Forest City, 5 H. Harmon, Forest City, retired.

J. C. Billings, 5 E. Perkins, Androscoggin, retired.

J. N. Martin, 5 J. T. Edmondson, 2

R. G. Hall, 5 S. Smith, Maine, 4

A. E. Frost, Androscoggin, 5

Second tie.

W. E. Skillings, Forest City, 1 J. N. Martin, 2

J. C. Billings, 6 N. E. Frost, Androscoggin, 0

Marlin of the Forest City's wins the fourth prize.

The shooting was at 21 yards rise, 80 yards boundary, plunge traps; ties, set back four yards; in case of second

ties five yards further, so shoot till finished. The judges were A. C. Anderson of Lewiston, and W. F. Woods of Portland. Referee, George A. Holden of Portland, whose duties were performed to the general satisfaction of the clubs. The Forest City's have held the badge for two years in succession, and had they taken it this year it would have become that club's property, consequently there was considerable interest manifested. The shooting of the clubs was very good considering the unfavorable weather. The friends of the "Maine" were highly elated at the success of Polister, and think his shooting (twenty straight) is as good as the best. The club's headquarters was at the Sunny Side House, and Uncle Josh did all in his power to make the shoot a success. May his shadow never grow less.

PENNSYLVANIA.—The Oxford Shooting Club held their regular monthly meeting in Echo Park on the 7th inst., when the following match was shot. Rise, 21 yards; bounds, 80; H. T. traps; 3 diachms powder, to 1½ ounce shot:—

Names.	SINGLES.	Total.	Names.	DOUBLES.	Total.
Watson	0 1 1 1 1 1 1 1 1 1	10	Watson	1 1 1	3
Opperman	0 1 1 1 1 1 1 1 1 1	10	Opperman	2 0 1	3
Buckley	0 0 0 1 0 0 1 1 1 1	10			

Owing to the very high wind and extremely wild flying of the birds the shooting was difficult.

IOWA.—The State badge was shot for last at Nevada, and won by E. Barrill, of Ames. The scores were as follows, 10 birds each being shot at:—

Names.	Total.	Names.	Total.
West	9	Phrift	6
Lockwood	9	Hawthorn	7
Affentanger	7	Bradley	8
L. onard	7	Barrill	10
McLain	9	Edwards	7
Stephens	9		

In a double-bird match between McLain of Ames, and Williams of Marshalltown, which followed, the latter finally won after four ties had been shot off.

MAINE.—Machias, Oct. 3d.—Bears are plenty in Washington county, as are also deer. The season for deer opened October 1st, and same date closed season for trout. Grouse not abundant, owing to the last two or three years' slaughter, but a few years' enforcement of the game laws will remedy the deficiency. Printed abstracts of the game law have been posted in the villages with some good results.

ROAMER.

MASSACHUSETTS.—Cohasset, Oct. 8th.—Gunning during the past week has been very good. The 6th was a great day for sea ducks, some boats getting as high as 50 to two guns. Also some plover left; I shot 34 on the 6th, black-breasts and golden, and a number of grass birds and yellow-legs. Saw some flocks of geese to-day. Lots of quail this year, and we expect some good sport next week when the law is off.

S. K., JR.

Salem, Oct. 9th.—Partridges are more numerous than for several years, and quail are for this section very plenty. Advices from along shore give matters quiet, except with the coots, which are very numerous in the bay. Some geese have been reported, though I have not seen any yet. There are some grass-birds and winters around. Shot a fine blue heron Thursday morning last; and got my first fowl, a gray coot, for this season. We need colder weather before the sea birds come much in shore. Smelts bit well at Marblehead last week, and are expected more plentiful at Salem now.

TEAL.

CONNECTICUT.—Stamford, October 6th.—Woodcock very scarce; partridges quite plenty, also quail. Saw two coverts on Monday; in one the birds were unable to fly yet; in the other just able.

W.

NEW YORK.—Niagara Falls, Oct. 2d.—Woodcock are abundant along the line of the Lake Ontario Shore Railroad, west from Kendall station. Not only are woodcock to be found, but black and gray squirrels are very numerous this season; they can be seen all along the line of the road.

Hornellsville, Oct. 9th.—The quail season opened poorly; have heard of no large bags yet. A few grouse, cock and snipe are brought to bag every week. Two deer, a fine large buck and doe, were seen on the outskirts of the village last week, and now the old-time sports talk learnedly about runways and big bucks, and the good old times when Bennett killed four deer at one shot.

JOHN.

Niagara Falls, October 8th.—The shooting in this locality the past week has been poor, the largest bag of quail being eight. The quail shooting promised to be good during the summer, but the dry weather has, I think, driven them towards the lake, where they are reported quite thick. A few woodcock coming in.

NIAGARA.

NORTH CAROLINA.—Newberne, Oct. 4th.—We have had just a "touch of frost," not enough to kill mosquitoes. Gray Squirrel are plenty, and the woods begin to resound with sounds of the gun. Deer meat plenty in our markets—"the woods are full of them," (the deer, I mean.) Bears in the lake region seem to have been driven off by extensive fires in the Pocosins last summer, but still enough to do the corn-fields some damage. An occasional duck puts in an appearance. I have seen no geese as yet, but presume "The Lakes" are full, as many remain there all summer.

I. E. W.

FLORIDA.—Pensacola, Sept. 30th.—It is not quite cool enough here for much comfort to be taken in hunting, but the doves have returned to us, and a very few ducks. Quails (here called partridges) are quite plenty. I saw some nice venison in the market, killed about six miles out on Carpenter's creek. Turkey tracks are plenty over on the Live Oak reservation, but as the quarantine hospital is located there they are not hunted much, although we have had no yellow fever this season.

MAJOR SARASOTA.

Pensacola, Oct. 2d.—The late cool weather has brought the bay birds in fast. There are a few places where good shooting can be had, but in most parts of the bay the birds are scattering. Plover, snipe, yellow-legs, and curlews are plentiful, and I have seen a few rails and marsh hens. Last night we had frost, and I expect after this the shooting will be better. The quail shooting will be very good this fall, I think, but have not tried it yet. Our fishing is all that could be desired; the fish now in market are bluefish, pompano, Spanish mackerel, sheep-head, cavalli, sea trout, channel bass, red snappers, and groupers. It is reported that northern ducks have been seen here, but I have seen none yet, and I always keep my "weather eye" open for game.

CROISEUR.

Logwood.—Game is plentiful now; any quantity of quail, deer easily found and as easily "made meat of" if you know how to handle a gun. Turkeys are numerous, and no end to black bass and brook trout fishing. F. L. R.

OHIO—Hudson, October 7th.—On the 5th I killed four fall woodcock full feathered even under the wings. These were upon high dry ground. Ten days ago we killed 14 fine birds, to be sure, but not full feathered as these last. They were found in the swamps, generally near cornfields. In the same places I can now find an odd bird here and there, but they are not in the perfection of plumage that the high ground birds are. I cannot understand it. Can someone explain it? The four were certainly travelers, the others, I think, were natives. But why the difference? It is no new thing to me, I have noticed it every autumn. Another point has been stated but never explained satisfactorily. The fall birds have their favorite grounds, and just so many will there be found year after year. There is one patch of cover which holds just nine. Kill nine to day and in a week there will be nine more; kill but three and in a week there will be just nine. Twenty times at least I have noticed this. There is apparently abundance of feeding ground and places for them to lie in. The woodcock is a queer bird, and his ways past finding out. ALIQUIS.

MICHIGAN—Ann Arbor, October 4th.—Weather cold and stormy. A few ducks are shot every day. Plover abundant; woodcock scarce. Ruffed grouse and squirrels abundant. Our sportsmen are doing more shooting around the stove than out of doors this fall. A. B. C.

WISCONSIN—Montello, Oct. 4th.—Game, especially waterfowl, is quite plentiful in this vicinity, and large numbers of mallards and teal are to be found on the marshes, overflowed by the water from the Fox river. Wood duck shooting has been excellent, but is now practically over owing to the lateness of the season, and pinnated grouse shooting is also among things that were, the high water upon the marshes and meadows, driving the birds to the highlands, where they have already begun to "pack," and cannot be approached. Many reports are given of fine bags of mallards and teal, but the steady onslaught upon the web-feet have driven them to seek more safe retreats than the marshes, which being covered with from one half-foot to a foot of water, and the grass uncut, affords good chance of approach on foot, with high-top rubber boots. This is the mode in which most of the ducks have been shot thus far this season. Snipe are quite scarce, but are now coming in from the North in considerable numbers, and wild geese are just putting in an appearance. Ruffed grouse are comparatively scarce in this section, as compared to former years. FRED.

CANADA—Port Rowan, Oct. 5th.—The duck shooting on Long Point was opened on the 2d inst. when five gentlemen made bags as follows: Mr. Lucas, 175; S. S. Woodruff, 138; Major Walker, 126; Col. Tisdale, 119; Sheriff Woodruff, 88, making for the five skiffs 646, the best shooting ever made here in one day.

DRESSING AND PACKING DEER.

Sept. 30th.

EDITOR FOREST AND STREAM:—

The item on packing deer in a recent article of "El Casador" in FOREST AND STREAM brings to mind the annoyance and labor experienced in my first attempts to get the deer dressed and transported to camp, and I have found so much satisfaction in my present method that I take the liberty of contributing it for the benefit of those that do not possess the muscle necessary in Casador's method, which may do for large men and small deer, but with the order reversed would be found impracticable. Either the deer are smaller or the men are stronger on the Pacific coast than with us, as a full-grown deer cannot be carried as he directs by one man in a hundred that visits the woods of the northwest. Of course there may be men that can carry 150 or 200 pounds "over ground too rough for a horse to travel," but they are scarce, and the men that can manage even half that weight are sufficiently above the average to be accounted rare.

My experience is applicable to the light weights, and to such the idea of being able to carry a deer whole, if over two years old, will prove a delusion, and much vexation of spirit will be the only result of an attempt to operate on the California plan of transportation. I take the liberty of prefacing my carrying with some ideas on dressing, which are of first importance in securing choice venison: First, then, "kill your deer" and see that he is well bled; next cut entirely around the arms, working your knife carefully well inward until the intestines are clear of all connection with the flesh through the hams. Cut slits in the hind legs for the gambrel; then cut three poles about twelve feet long and four inches in diameter at large end, leaving a crook at the end of two, and an inch or so of a small limb about a foot from the top end of the third; thrust the end up to limb through the cut in the legs, and place the foot of this pole against some firm object to keep it from slipping back, and then place the crooked end of the two poles over the legs and under the pole at the gambrel, setting the poles so that you can lift on the bottom of each toward the center, crowding downward on the foot of each pole till your deer swings clear of the ground. Commence at a point on the belly about eight inches below where the hams press together; cut only through the skin downward through the brisket and neck to under jaw also from the hook of each fore leg on the inside to the brisket, meeting the downward cut; skin the fore legs, neck and body to the fifth rib, but no farther, and then open and take out intestines, cutting brisket well open to allow all to fall out clear from body, and then divide the body at the fifth rib, detaching the fore-quarters entirely; cut the large strips of meat from the shoulder blades, ribs and the fore-quarters, discarding the remainder. You have now close back of the hind quarters with the skin attached; tie the skin closely together where it leaves the meat, and stow away the pieces from within the inside ribs of the hind-quarters. Now, if the fore-quarters are hanging till the blood drains out and body is weather permits, leave as may be convenient, only taking the precaution to hang over the whole with a packing strap and bag, take off the storms. Provide you have of skin back between the legs, draw down the quarters, pull the neck over, and tie the skin from the fore down the tail and with a cord tie together and tied at the small of the legs should be brought around the body, and you have a comfortable, unjoint the legs just below the gambrel, and in such a pack, clean bundle that includes nearly all the deer, and with a packing strap that the meat is entirely covered with the skin, heavy with the meat shape that can be carried quite handily. If found too heavy for journey, the inside put this in your packing bag and make another weather, and the hind-quarters are now in shape to stand quite a change in the fore-quarters can be transported without injury, while the choice pieces of meat and quarters not used in camp can be stowed away inside and kept in a palatable. A deer cannot be nicely dressed without being hung sufficient time to allow the blood to drain out, and with the three poles mentioned a man that can carry 75 pounds can raise 300, although with a very large animal it may be necessary to use two sets of the poles with the crotches, the first set shorter, to get the body partly up before setting those long enough for the last raise.

Inasmuch as independence lends a charm to woods experience, so the foregoing method has materially contributed to my enjoyment, as with it I could dress and carry my own meat, and having learned to my entire satisfaction that a full-grown deer, whole, is entirely too heavy for one man to handle, I offer the ideas with confidence that they furnish an alternative for small men with large deer who have no better system developed from experience. TRIANGLE.

FROM PITTSBURGH TO IOWA.

ALBERT LEA, Minn., September 9th, 1876.

EDITOR FOREST AND STREAM:—

Our party, consisting of seven Pittsburgh sportsmen and a reconstructed *artiste de cuisine*, (indispensable in a well ordered camp), are here en route for the chicken and duck fields of Minnesota and Iowa. Our camping outfit is complete; yes, alas! when moving, too complete, for four two-horse wagons will not hold our plunder. Think of it! Two wall tents, one about 16 by 20 feet for the party, with a large tent-fly for a porch, and kitchen tent about 12 by 16. For the large tent there is a frame made of gas pipe in sections screwed into one another; seven old fashioned cross-legged cots and camp stools; a 100-pound stove that the prairie blasts can't chill; a barrel of bread and another of potatoes; a bag of corn meal and cracklings for dog feed; many trunks and boxes; 150 pounds of shot; 35 pounds of powder; 1,500 empty shells, guns, rifles, and a keg of—well, some of the party are subject to rheumatism, and they have brought something along in a keg to rub themselves with when they come home. And the dogs—that's our tender as well as a very leading point on this trip. We have ten that have made things interesting and lively at all stations where we changed cars between here and Pittsburgh. The rain was always pouring when this duty was performed, and as Charley, our *maitre de cuisine*, usually had about six of them to hold and lead, a free and wet dog fight which scared the lady passengers, amused the idle gamins, and called down upon your "very humble" the imprecations of the entire party for being the proprietor of Rex, a setter which was the quarrelsome dog and general bonner of all the rest. Any of them that dared to look at Jess, a lady setter and his companion, or come within his reach, had to fight. Ben, a thoroughbred pointer, and Squire, a large orange and white setter, are more than his match, but still he comes to the score at the next apparently to try conclusions. They say, "Whip it out of him." Well, the dogs may do it; I am tired. Let no sportsman turn up his nose at the foregoing enumeration of the smallest part of our plunder and say we are inexperienced and will learn better and go lighter hereafter, for it is our experience that has led us into the inconvenience of bringing so much luggage. This is the third annual trip for us as a club of seven, and the sixth or seventh for some of the number who know the comforts that are derived from having a good raised cot to sleep on and a good solid stove to sit around these cold, wet nights. The rain has been falling in this entire region for two weeks steadily, and there is "water, water, everywhere," but we scarcely ever taste it!

We have not settled upon the exact locality in which to pitch our camp, but after prospecting will probably make it in a region in which we have encamped before, and where we know pinnated grouse, ducks, geese and sand-hill cranes are still abundant. In a subsequent letter I will give you some particulars as we like to first "catch our rabbit" before we serve it. As this party consists, of Christian "good men and true." We are simply laying off for Sunday on our journey at this pretty village of Albert Lea, below which glistens the placid bosom of Fountain Lake, in whose waters sport the pickerel and other excellent fish, all of which we are prepared to interview either upon this or some other of the hundreds of similar lakes of the region. Migratory ducks and geese have not made their appearance yet, but a Mr. T. A. Smith, Jr., of Baltimore, a gentleman who is stopping at our hotel, the Hall House, brought in a few red-heads last evening. There are some native ducks, but not sufficient to tempt the sportsman; the mallard, teal and red-head breed here in limited numbers. I met Miles Johnson, of New Jersey, this morning, who is here breaking some dogs, he pointed out to me two brace of setter pups owned by a New York sportsman, one brace of chestnut and white Gildersleeve, very handsome, and a brace of the Jerome Gordons, all about eight or ten months old. The latter are fair-looking pups, but all of them are too young to break. The more experience I have the more I am convinced of the folly of handling dogs in the field before they are from 14 to 18 months old, especially on chickens where wide ranging and endurance are requisite. A pup eight or ten months old is no more fitted to stand it than a child eight years old is fit to hunt with a ten pound gun. It has been my misfortune to overt break very young dogs, and while their education was admirable the plentiful lack of qualifications that time and uninterrupted maturity alone can give were painfully apparent.

This hotel kept by Mr. Hall is comfortable and cosy. Mr. Hall is himself a sportsman and knows how to treat the wary-faring brotherhood. SOUTH FORK.

THE FOX GUN.

GALVESTON, Texas, Sept. 30.

EDITOR FOREST AND STREAM:—

August 29th I ordered by telegram a Fox gun, 22 gauge, 28 inches, laminated barrels, 2½ drop of stock, weight 8 pounds. Sept. 28th I received gun by express. Loading St. Louis and Sturdevant shells, 3 drms. No. 4 Hazard's ducking powder, 1 1-16 oz. No. 6 shot, with plenty of 30-in. targets, I measured 40 yards with a yard stick shot without rest, right barrel patterned 288, left 210. I fired 20 shells and found very little variation. The action is perfection, a perfect dovetail at finest extremity of breech, very easy to open and snap on shooting. Workmanship very fine, and material case-hardened; locks equal to the renowned Brazier's 4-pin Briddle. Sportsmen patronize home manufacturers. The Fox gun has no hinge to get shaky, and the price is low, even these hard times. B. R. BUFFHAM.

P. S.—I have preserved targets for inspection.—Adv.

THE BAKER GUN CHALLENGE.

NEW YORK, Oct. 5th.

EDITOR FOREST AND STREAM:—

Will you please inform Mr. Chas. Greer that if he will state his terms a little more exact that I think I will take up his offer, and also that there are several others who wish to shoot him on the same terms, viz: No. 8 shot, 1½ oz., 30 inch circle at 40 yards. E. W. HOLBERTON.

Rifle.

CREEDMOOR.—Two matches were shot on Thursday at Creedmoor by the members of the Seventh Regiment. The first was for a diamond badge, presented by Lieut. J. R. Andrews, to be competed for spring and fall until won three times by the same person. The conditions were ten shots each at 200 and 300 yards, standing; Remington State model rifle. There were 40 entries, and the best scores were as follows:—

Names.	200 Yds.	300 Yds.	Total.	Names.	200 Yds.	300 Yds.	Total.
J. W. Gardner.....	36	37	73	W. G. Dominick.....	33	34	67
J. L. Price.....	40	33	73	C. H. Eagle.....	37	30	67
Geo. Waterman.....	39	33	72	E. B. Bensen.....	37	29	66
E. H. Sanford.....	34	36	70	J. B. Holland.....	38	27	65

C. Ogden.....	37	32	69	J. C. Abrams.....	31	29	60
J. L. Bontellier.....	38	31	69	J. P. Burrell.....	36	24	60

The second match was for the Veteran's badge, a beautiful trophy presented by members of the Seventh now re-

siding on the Pacific slope. The conditions of the competition were: Open to active members of the Seventh Regiment; weapon, Remington rifle, State model; distances, 200, 500 and 600 yards; five rounds and two sighting shots at each range; position, standing at 200 and any with the face toward the target at 500 and 600 yards. There were 40 entries. The following are some of the best scores out of a possible 75 points:—

Names.	200 Yds.	500 Yds.	600 Yds.	Total.
J. W. Gardner.....	21	22	13	56
J. C. Ogden.....	18	16	18	52

J. L. Price.....	20	14	8	42
J. B. Holland.....	18	5	18	41

—Saturday being regular match day the sixth competition for the *Spirit of the Times* badge was shot at Creedmoor. The weather was very unpropitious for off-hand shooting, particularly at 300 yards, with an eight-inch bullseye to shoot at, the wind blowing in gusts across the range. There were 20 competitors, the winner being Capt. Price of the Seventh Regiment. The following are the scores out of a possible 50 points:—

Names.	Total.	Homer Fisher.....	Total.
J. L. Price.....	37	C. E. Overbaugh.....	27
T. W. Linton.....	37	F. H. Holton.....	26

C. E. Latimer.....	30	J. G. Story.....	11
B. Hall.....	30	Names.....	Total.

On Saturday next the *Turf, Field and Farm* badge will be shot for at 3 p. m.

NEW YORK.—The return match between the Amateur and Empire City Rifle Clubs was shot on the range of the Seventh Division N. G. S. N. Y., at Rochester, on the 6th inst. Among the competitors was Buffalo Bill, who is a member of the Empire Club. The wind was bad, the shooting poor and the Amateurs are still victors. The following are the scores, 7 shots each at, we presume, 500 yards, but our report does not state the distance:—

Names.	Total.	Names.	Total.
Charles Green.....	14	A. H. Bruman.....	23
S. A. Servis.....	25	C. E. Rider.....	26

NEW YORK—Saratoga Springs.—The regular fall meeting of the Saratoga Rifle Club took place last week on their range. Firing began at 10:36 a. m.; weather cold and cloudy, and interrupted the shooting once by a heavy shower. The club adopted a new style of target for short range, and allowed any gun to compete. The target is a bullseye 1½ inches in diameter numbered No. 25 and surrounded by circles three-quarters of an inch apart and numbered in order to the outside one, which is No. 1. First competition, distance, 100 yards, position, standing; won by Hiram Hays; prize, life membership; score, 217 possible 250. Second competition, same target, position, standing, distance, 200 yards; won by W. H. Benson; prize, Hazard's powder; score 167 possible 250. Third competition, distance, 600 yards; prize, Cobb's gold badge of honor; targets, etc., according to rules of the N. R. A.; won by Odell Gates; score 46 possible 50. A number of spectators witnessed the shooting.

RHODE ISLAND.—The first annual prize meeting of the Rhode Island Amateur Rifle Club was held on the Blackstone Range, near Providence on the 3d and 4th insts. The first event was an open match at 250 and 300 yards, with no restrictions as to rifle, sight or position. Each competitor had a separate card-board target with an eight inch bullseye. The winner, Mr. F. J. Rabbeth, shooting with a Peabody 40 cal. rifle, placed his ten shots within a circle of six and five-eighths inches. Mr. Crowell took second prize. The second event was to have been a team match for the championship of New England, but there being but one team present it was decided to substitute a long-range individual match, seven shots each. The following are the best scores made out of a possible 105:—

Names.	800 Yards.	900 Yards.	1000 Yards.	Total.
E. Thomas.....	30	27	32	89
W. M. Farrow.....	31	31	26	88
G. J. Davison.....	25	32	30	87
F. J. Rabbeth.....	30	29	30	89
N. Washburn.....	31	28	22	81
J. H. Crowell.....	28	25	26	79
D. A. Keyes.....	24	25	8	57

The third event was an all-comers match at 200 yards, seven shots, any rifle within the rules. The following are the scores out of a possible 35:—

Names.	Total.	Names.	Total.
W. F. Alexander.....	29	F. L. Gay.....	27
F. J. Rabbeth.....	29	W. M. Farrow.....	26
E. Thomas.....	29	G. W. Davison.....	25
H. Bull, Jr.....	28	D. A. Keyes.....	28
John Howe.....	28	J. C. Ormsbee.....	23
Edward Totten.....	27	W. L. Tobey.....	15
G. Taylor.....	27		

The first event on the second day was the long-range individual match, seven rounds each at 800, 900 and 1,000 yards. The strong wind blowing interfered somewhat with high scores, but the following were made out of a possible 105:—

Names.	800 Yards.	900 Yards.	1000 Yards.	Total.
G. W. Davison.....	32	22	33	77
J. H. Crowell.....	31	28	23	82
N. Washburn.....	31	29	22	82
F. J. Rabbeth.....	29	30	24	83
Charles Perkins.....	23	27	23	73
W. M. Farrow.....	28	30	28	86
D. A. Keyes.....	28	23	23	74
F. Hemperley.....	19	27	11	50

The last regular event was a military team match, open to teams of eight men, seven shots each off-hand at 200 and 300 yards. Only two teams contested, with the following result:—

PRESCOTT POST TEAM.				SLOCUM GUARD TEAM.			
Names.	Yds.	Yds.	Total.	Names.	Yds.	Yds.	Total.
Gray.....	27	22	49	Stringer.....	29	17	46

Sweet.....	27	11	38	Roberts.....	16	15	31

Team total.....332 Team total.....389

The meeting, on the whole, was a success.

THE STATE MATCH.—To-day a very interesting match will be contested—that is if the conditions are faithfully carried out—a long-range match to be shot by teams of eight men in Louisiana, Vermont, Massachusetts, Rhode Island, Connecticut, Wisconsin, New York, and perhaps one or two other States. The credit of originating this match rests with the Crescent City Rifle Club, of New Orleans, who threw out the challenge to all clubs in the United States. Not that we think that such contests are always to be taken as indicating superior skill in the winners, for the conditions of atmosphere may be most favorable to one team and quite the contrary to another. Still they should be encouraged as being beneficial in promoting emulation as well as goodfellowship among riflemen. The clubs which will participate are as follows: Crescent City Rifle Club, New Orleans, La.; Amateur Club, Providence, R. I.; Amateur Rifle Club Rochester, N. Y.; Dearborn Rifle Club, Chicago; Burlington Rifle Club, Burlington, Vt.; Ogdensburg Rifle Club, Ogdensburg, N. Y.; Connecticut Rifle Association, Hartford, Conn.; Leatherstocking Rifle Club, Goshen, N. Y.; Milwaukee Rifle Club, Milwaukee, Wis.; Worcester Sportsman's Club, Worcester, Mass.; and the Amateur Rifle Club of this city. The teams of the latter club will be selected from the following riflemen: R. Rathbone, Isaac L. Allen, L. Weber, Lieut. Col. W. B. Farwell, Major H. S. Jewell, C. E. Blydenburgh, E. H. Sanford, A. Anderson, Frank Hyde, L. Geiger, and Major Henry Fulton. The conditions of the match will be 15 shots each at 800, 900 and 1,000 yards. The match will begin at 10 a. m., and the result be known by telegraph in the evening.

YONKERS RIFLE ASSOCIATION.—At the annual meeting of this association, held last week, the following officers were elected for the ensuing year: G. L. Morse, President; Matt H. Ellis, Vice-President; William B. Edgar, Treasurer; Hyatt L. Garrison, Secretary; Douglas Smyth, Range Superintendent; A. H. Jocelyn, M. K. Couzens, Hugh Hughes, and H. J. Quinn Directors. The by-laws were so amended that by paying the annual dues, \$3, a person may become a full member without paying an initiation fee. Two matches have been arranged for the fall shooting which will take place on Tuesdays, and a team match for off-hand shooting at 200 yards between members living north and south of Ashburton avenue will probably take place this month.

GLEN DRAKE.—To-day is a special match day of the American Rifle Association. Two matches, one open to all residents of Westchester, and the other to all comers, both at 500 yards, will be shot. There will also be pool shooting. The other match days of this association are Thursday, October 19th, when the De Peyster badge will be shot for; Saturday, October 21st, and Thursday, October 26th. The matches are open to all comers, and at distances varying from 200 to 500 yards. Glen Drake is reached by the N. Y. N. H. and H. R. R. to Pelhamville.

CALIFORNIA.—The fall meeting of the California Rifle Association commences on the 23d instant. Among the matches to be shot are the Military Short Range, Kellogg Challenge Cup Match, and others. The association presents a silver challenge trophy of the value of \$350, the city of San Francisco gives a \$500 trophy, and Messrs. Remington & Sons have presented a Creedmoor rifle to be shot for.

—The annual meeting of the Empire State Rifle Association will be held at Syracuse, N. Y., on the 17th, 18th and 19th insts. A general invitation is extended to all who take an interest in rifle shooting, and any person can become a member of the association by the payment of five dollars on the grounds.

THE FILED SIGHTS.—The quarrel between the Forty-eighth regiment of Oswego and the National Rifle Association still remains in an unsettled and unsatisfactory condition. It will be remembered that at the recent fall meeting at Creedmoor the prize, which had been won by the team of this regiment, was withheld and awarded to the next score on the ground that the sights on the rifles used by the Oswego team had been filed, contrary to the rules of the N. R. A. As the same of the rifles submitted to Col. Wingate for examination at the time certainly had been so filed, it was impossible to do otherwise than to "shut out" the team, and the same rifles were examined by a number of other gentlemen and pronounced by all to have had their rear sights filed. But now the members of the team, having arrived home, make affidavit that their sights had not been tampered with, and Mr. Hepburn of the Remington works also makes an affidavit that the sights had not been changed since the guns left the works. The question now is whether the guns submitted to Mr. Hepburn were the same as those examined by the Executive Committee of the N. R. A.

The "Yate's Dragoons," of Syracuse, prize winners at Creedmoor, also have an explanation to make to clear themselves of the accusation of having men on their team not entitled to the position. While the protest against them was withdrawn on the solemn assertion of their commandant that the men had been members of the troop since last June, it now appears, on application to the Adjutant General's office at Albany, that the men objected to are not on the roll of the Yate's Dragoons.

RIFLE NOTES.—The Oswego papers are indignant over the loss of the prize in the recent State match. The *Times*, in noticing its arrival at Auburn—it having been awarded to the 49th Regiment team—speaks of it as "the cup our boys were swindled out of."...The dates of the Sixth Division (Syracuse) Rifle Association have been fixed for the 24th and 25th of the present month, and seven different competitions authorized, including the Directors' Match, a short range, Duncan badge, Division, officers, military, and long range matches. Prizes to the amount

of \$350 will be offered, and the prospect is good for a fine shoot....The regular yearly rifle tournament at Conlin's gallery, No. 930 Broadway, commenced on Tuesday evening. All riflemen are invited to participate....The range at Creedmoor will be open to the National Guard the present month without charge....Major Leech has been voted a new badge as an honorary director of the National Rifle Association....The number of entries at the late fall meeting of the National Rifle Association exceed those of all former meetings....A "running deer" prize, of the value of \$50, will hereafter be offered at Creedmoor.

New Publications.

BOOKS RECEIVED.

—We have just received from the author, Wm. H. Gibson, "The Complete American Trapper, or the Tricks of Trapping." It is a book which has long been needed, seems singularly good, and will merit a more extended notice hereafter.

MAGAZINES.

In the October issue of the *Galaxy* Mr. Gideon Welles contributes another installment of his political, or rather historical notes, referring, in the present, to Mr. Lincoln's nomination and election. Mr. Welles's official position as Secretary of the Navy under Mr. Lincoln enables him to speak with authority upon many points of great interest bearing upon a momentous epoch in our national history. As a companion picture we have a continuation of the lamented Custer's "War Memories," embracing a portion of the movements of the Army of the Potomac while under McClellan. Mr. Wm. Black's serial story "Madcap Violet," is continued and the heroine makes a most unaccountable move. Mr. Frederick Whitaker's article on "The Kindergarten," is one of the most valuable of the number, embracing as it does a sketch of this popular mode of education for children. The other papers are up to the usual high standard of the *Galaxy*.

Appleton's Journal contains an unusual amount of valuable and entertaining reading matter. Mr. Julian Hawthorne, whose popularity just now is being vigorously assailed, contributes another of his interesting papers on "Out of London." "A day at Dutch Flat," by A. F. Webster, gives a capital idea of California hydraulic mining. A new serial with the remarkable title "As He comes up the Stair," by the author of "Comin' thro' the Rye," is commenced and the other serials, "Avice Gray," is concluded, and Mr. Payn's "Fallen Fortunes" reaches the seventeenth chapter. The illustrated article is "Old Time France," by Geo. M. Towle, in which is depicted the follies and luxuries of the court of Louis XIV. There are a number of other interesting papers by well-known writers.

The *Atlantic* for October opens with a continuation of Gen. O. O. Howard's description of the battles about Atlanta previous to its capture, detailing the first fight with Hood after he had succeeded Gen. Joe Johnston in command of the Confederate forces. What struck us most forcibly in reading this paper was the singular chances of life which had placed these men who were, as we might say, school boys together, in such antagonism, and the conference of Union Generals to discuss their former West Point companion, and upon the knowledge of his character there, basing their views as to his supposed tactics in battle. In "The Thorsdale Telegraphs" an anonymous writer gives us a very pretty but highly improbable story of the adventures of a pair of romantic telegraph operators. Mr. Charles Dudley Warner tells us of the "Neighborhoods of Jerusalem" in which we see more of Moslem squalor than enthusiastic travelers like Mr. Prime are apt to show us. "George Sand" is dissected and discussed by Mr. Thos. Sergeant Perry, and Mr. Dickens through the medium of "Oliver Twist" is served on the same platter by Mr. Edwin P. Whipple. Mr. John Fiske, Assistant Librarian at Harvard, in a very interesting paper, shows us the detail of labor in a great library; the careful cataloguing of the books and the necessity of thorough work. There are a number of other interesting papers and a continuation of Mr. Henry Jarvis, Jr.'s serial, "The American."

In *Scribner's* for October we give the place of honor to Mr. Wilkinson's very interesting and capitally illustrated article on "Salmon fishing," a full review of which appeared, editorially, in our last issue. There are so many excellent papers in this issue of *Scribner's* that it is hard to discriminate. From title page to finish the contents are readable. The tone of all is lively and cheerful. "That Lass o' Lowrie's," the first of the serial tales, grows in interest as it proceeds, and the same may be said of Mr. Hale's "Philip Nolan's Friends," in which we look anxiously for a denouement. Mr. George E. Waring, Jr., the "farmer" who recently took such a charming "vacation abroad" continues his trip in a Mosel row-boat under the title of "The Bride of the Rhine." The illustrations to this article are capital. The other contributors are writers well known in connection with the literature of the day, such as Mary Mapes Dodge, Donald G. Mitchell, and Richard Henry Stoddard; but our supply of adj. clives is exhausted, and we can only commend the whole table of contents as well selected.

There is lots of fun as well as instruction for the young folks in Messrs. Scribner's other popular monthly, *St. Nicholas*. As usual the table of contents occupies nearly an entire page, and, to use a bull, we recognize many new names among the contributors, as well as some more familiar. Mr. Noah Brooks's story, "The Boy Emigrants," is concluded, and we see the boys whom we have followed through so many adventures at last homeward bound with their hard-earned fortunes. In December we are promised a story by Mr. Trowbridge, the popular author of "The Young Surveyor," lately concluded. *St. Nicholas* is profusely illustrated with well executed engravings.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

S. F. T., New York.—Please give us your address, and we will answer your question by mail.

G. A. F., Canandaigua.—What is the close season for salmon trout in New York? In 1874 it was Oct. 1st to Mar. 1st. Has it been changed since that date? Ans. The law remains unchanged.

C. M. S., Rockford, Ill.—The bird whose feathers you send was the cedar or cherry-bird (*Amphisp. cedrorum*), which is not uncommon in all the northern States.

BREECH LOADER, Poughkeepsie.—Please inform me if, where, and on what terms I can hire a No. 8 breech-loader for a fortnight's use? Ans. You can hire guns from H. C. Squires, gun dealer, No. 1 Courtlandt street. The terms will depend upon the value of the gun.

E. C. M., New York.—Will you please inform me through your paper where there is good hunting around New York, say within three hours ride, and what kind, and also inform me if there is any shooting worth going for in Fairview, N. J., and what kind? When game laws expire? Ans. See advertisement of E. S. W. in our paper, or address A. J. Huyler, Tenafly, N. J. In N. J. about the only game you can shoot before November 1st is woodcock.

H. C. M., Jefferson City, Mo.—Will you please tell me how many kinds of wild ducks can be kept as our domestic ducks; and if there is any convenient way in which they can be taken alive without injuring them for keeping as ornamental fowls? Ans. We have heard of the

mallard, the wood duck, the green-winged teal, the muscovy, and, we believe, the widgeon, being kept, but cannot now refer to records. We know no better way to capture them than by netting. We should be glad to hear of your success.

E. W., Brooklyn.—What sort of shooting may be expected in the vicinity of Denver, Col., as I intend going there shortly and would like to know how to prepare myself? Also what calibre rifle is adapted to deer shooting? Ans. You will find in Colorado wild turkey, elk, deer, antelope, bear and mountain sheep. The close season for prairie chickens commences November 1st, but you will find some ducks and geese. Take a 44 calibre rifle.

SCUP, New Brunswick.—1. Will you please give me the address of a reliable dealer in spaniels in Chicago, Ill.? 2. Also the proper dose of areca nut? I have the areca nut but do not know the proper dose. Ans. 1. John H. Whitman has a good strain of water spaniels. 2. For a full grown dog, setter size, give 20 grains of the powdered nut at a dose, every two hours, and four hours after giving the third dose, give one ounce castor oil.

JOHN, Hornellsville, N. Y.—A mushroom was found here that measured 7½ inches across the top and weighed over nine ounces. Was it not a large one? and do they grow so large? I should like to know the best way to cook them? Ans. An extraordinary mushroom, surely, but about Omaha they grow to the size of the crown of a hat. Such a mushroom might be simply peeled and broiled with seasoning, or peeled, put into a skillet with little water and plenty of butter (or cream), a single clove of garlic (or a slice of onion), salt and pepper, and stewed and poured out over toast.

E. H. G., Brooklyn.—Please inform me the best plan for keeping a body of salt water in an aquarium, say five or six gallons, in a fish condition for the best health of its finny occupants for a length of time before being changed. Please state with plan the length of time? Ans. In an issue of July 6th will be found full direction for a salt water aquarium. The water is kept pure by plants, such as the common sea lettuce and others, which supply the requisite oxygen. When properly cared for the water will remain pure for all time, it only being necessary occasionally to put in a small quantity of fresh water to supply the loss by evaporation.

W. A. W., Providence, R. I.—Can you give me any information in regard to making greenheart trout rods. What is greenheart wood, where does it come from, and in making rods of it is it used for the whole rod, or for only certain parts? Can you give me any information as to where I could get some, and what would be the probable cost? Ans. Greenheart is a wood found principally in Surinam, but usually imported into this country via Liverpool. It is used to manufacture all the joints of a rod. You can procure it in the rough through any of the city fishing tackle dealers advertising in our paper. We do not know the cost.

J. McG., Hamboldt, Pa.—I want your advice in regard to the proper treatment for my dog Dash. Last season I could hardly restrain him, when after game, but now he cannot be induced to range by any means that I have tried. He goes on a miserable jog trot, a few feet ahead of the gun, without showing a desire to hunt. He had the mange very badly but is well enough now, seemingly. His pedigree is lost, but I think he is not more than five or six years old and is by Horace Smith's Dash, out of John H. Powell's Lou? Ans. A dog five or six years old is just in his prime and should do good work, but perhaps yours is older than you think, or has been pumpered with food and become too fat to work. If the latter is the case the only way is to run the fat off by compelling him to follow when you drive out, and give him less food.

CLIFF, Baltimore.—1. A friend of mine has a very valuable fox hound about nine years old; some nine or ten months since he noticed a sore upon one of his ears and supposing that he had cut it with briars, applied the usual remedies, with no results. Since that time the sore has continued to grow larger, or rather to eat farther in, as it has now eaten a hole large enough to place a silver half dollar in without touching the sides. The dog appears to be in good condition and runs well. Can anything be done for it, for if it continues he will soon have no ear left. 2. I have a setter 19 months old. Is it too old to dock part of his tail? Ans. 1. Dissolve 20 grains of blue vitriol in 2 oz. water; apply the solution twice a day for two days, after which, anoint the part with simple cerate until healed. If the dog shakes his head and ears, as most dogs do, under such circumstances, you must make a canker cap for him. "Dinks Mayhew and Hutchinson," page 423. 2. If a setter's tail requires docking to improve his appearance, it can be done at any age, but it should be done by one having skill in such matters, else the dog may be disfigured instead of being improved in appearance.

G. C., Highland, Ulster Co., N. Y.—Will you please tell me: 1. Are the names "pilot" and "copperhead" different names for the same serpent, or are there two species of reptiles known by these names? 2. How many species of adder are to be found in this locality? 3. Is the Labrador jumping mouse found in this State, and by what characteristics can it be recognized? Ans. 1. The "pilot" we understand to be the Alleghany black snake (*Coluber altigianiensis*); the "copperhead" is the *Agkistrodon contortrix*,—a very different snake. Whether these names apply as given above in your region you must determine for yourself. 2. We do not know of any serpent properly called an adder occurring in your district, unless it might be the water adder (*Nerodia niger*). 3. It is. Its systematic name is *Jaculus hudsonius*; it is about 2½ inches long, with the tail often twice that length, usually having at the tips a pencil of long hairs. The body is dark-brown above, yellowish-brown on the sides, and white, or at times rusty-white, on the under surface; the fore-legs are small, but the hind-legs are very long and muscular, by which it is able to make prodigious leaps—8 or 10 feet. It is not very prolific and no where numerous, but is spread over the northern United States generally.

E. K., Ottawa.—I have a clumber spaniel that had the distemper this fall. I followed Dr. Webb's treatment, and the dog seems well now, save that his muscles are constantly twitching and jerking. How shall I treat him? Ans. Your dog probably has chorea, or St. Vitus's dance, a nervous disorder proceeding sometimes from constitutional causes, but more frequently from some, perhaps long-forgotten, blow on the head or spinal column; it appears in several forms, local, general, constant, or intermittent, and exhibits itself in many ways, as an involuntary jerking or twitching of the limbs and muscles, or a sudden loss of power and temporary paralysis when making extra exertion; it is seldom really cured, for though the symptoms may be ameliorated, a slight derangement of the digestive organs, or other falling off from health, will almost invariably cause a return of the complaint. The proper treatment is to regulate the bowels, and this will be done readily and effectually by the hepatic balls, though we doubt if a severe case of chorea is often cured. The food must be of a nourishing and easily digestible nature, and the tonic balls must be persevered with for one month. If no improvement is manifest one of the following pills may be given twice a day as a last resource, cure being taken that they are not left about, as they contain a powerful poison: Strychnia, gr. j.; Quinia disulph.; pulv. acacia, aa gr. xii.; ext. hyoscyami, gr. xlvij.; ferri sulph., gr. xxiv.; make into 24 pills. Exercise and fresh air are very essential for the successful treatment of this complaint.

DISTINGUISHED AND MERITED HONOR.—The noted Rochester firm, W. S. Kimball & Co., carried off the very highest honors at the Centennial in their display of manufactured tobacco—Vanity Fair and King, Peerless chewing tobacco and cigarettes. While all worthy exhibitors received the uniform bronze medal, Kimball & Co. received in addition the Diploma of Honor—and what is more—knowledgeed the highest proof of merit, the *Judges' Special Report*, an honor to receive. No gold medals are given at the Centennial, else this firm would have secured it in their department. These three honors, therefore—the Grand Medal of Merit, the Diploma of Honor, and the *Judges' Special Report*, added to their honors at Vienna, are a record to be proud of.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,

[POST OFFICE BOX 2832.]

Terms, Four Dollars a Year, Strictly in Advance.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 20 cents per line; outside page, 30 cents. Special rates for three, six, and twelve months. Notices in editorial columns, 50 cents per line.

NEW YORK, THURSDAY, OCTOBER 12, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

Trade supplied by American News Company.

CHARLES HALLOCK,

Editor and Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, OCT. 12TH.—Racing: Jerome Park, N. Y.; Kingston, Canada. Trotting: Kingston, N. Y.; Lowell, Mass.; Point Breeze Park, Philadelphia; Watseka, Ill.; White Plains, N. Y.; Frederick, Md. Loubat Cup, New York Yacht Club. American Rifle Association matches. Glen Duke. Inter State match, Creedmoor. Pigeon tournament at Louisville, Ky., and Dayton, Ohio. Base ball: Chelsea vs. Olympic, at Brooklyn; Orange vs. Enterprise, at Orange, N. J.

FRIDAY, OCT. 13TH.—Trotting at Point Breeze Park, Philadelphia; Watseka, Ill.; White Plains, N. Y.; Frederick, Md. Base ball, Enterprise vs. Chelsea, at Brooklyn; New York Nine vs. Olympic, at Paterson, at Jersey City.

SATURDAY, OCT. 14TH.—Racing: Jerome Park, N. Y. Trotting: Frederick, Md. Athletics, Amherst College. Turf, Field and Farm badge. Creedmoor. Yale Fall Races, Lake Saltonstall. Base ball: New York Nine vs. Orange, at Jersey City.

MONDAY, OCT. 16TH.—Employees' rifle meeting, Creedmoor.

TUESDAY, OCT. 17TH.—Trotting. Woodbury, N. J. Empire State Rifle Association meeting, Syracuse, N. Y.

WEDNESDAY, OCT. 18TH.—Trotting: Woodbury, N. J.; Brooklyn Driving Park, L. I. Empire State Rifle Association meeting, Syracuse, N. Y.

"AL FRESCO" AS A GOOD SAMARITAN.—It was a pleasant recognition of the medical skill of Dr. C. J. Kenworthy, known to our readers as "Al Fresco," that the authorities of Jacksonville placed him on the Board of Health soon after he located in that city. Dr. K. was for several years connected with the Government hospitals in Australia, and is reputed quite as skillful in plying the scalpel as in wielding the fly-rod, to which he has devoted the leisure of his later years. They tell a good story of the Doctor's adventures while looking after the sanitary condition of the City of Jacksonville. A suspicious dame in the suburbs mistook him for a tramp, and sent for a policeman to eject him from the premises, which constitutes an amusing episode in his Florida experiences which we shall leave him to record in the circumstantial detail it deserves. Our special object now is to refer to some of his recent acts of heroic benevolence which would never reach the public through any word of his. We are informed that he has raised \$600 for the yellow fever sufferers in Brunswick, and that he has tendered his professional services gratuitously in their behalf. Such acts of devotion ought not pass unnoticed.

—Frequent inquiries are made for books of instruction in artificial fly making. Those who are anxious to learn the art can now avail themselves of the services of a competent instructor, see advertisement elsewhere.

LARGE GAME IN THE TERRITORIES.

GOOD hunting is at present scarcely to be found east of the Missouri river. West of that stream, however, there is a wide extent of territory, in many parts of which large game of all descriptions may still be found in considerable abundance by those who are sufficiently acquainted with the country to know where to look for it. There remain on the plains and in the mountains seven species of ruminants that are sufficiently abundant to make it well worth while that the different State and territorial Governments should attempt before it is too late to protect their game by severe laws—buffalo, elk, white-tailed deer, mule deer, antelope, mountain sheep and moose are still to be found in considerable numbers in various portions of the trans-Missouri States and territories, but owing to a savage and indiscriminating warfare which has been inaugurated against them within the past few years their numbers are decreasing more rapidly than ever before.

Most of us remember the good service done some years ago by Gen. Hager in bringing before the public the facts in regard to the wanton destruction of the buffalo along the line of the Smoky Hill Road in Kansas and Colorado. The discussion at that time resulted in the adoption of some measures to protect the buffalo, though it is to be hoped that ere long still more stringent laws may be enacted and enforced. But we have just now to speak of a country distant from the railroads, out of the way of the average tourist, and far from the haunts even of the gentlemen sportsmen; we refer to the territory lying between the Missouri river and the main divide of the Rocky Mountains north of the Union Pacific railroad. It is in this region that the most abundant supplies of wild game are to be found, and it is here that these animals are slaughtered for their hides alone by the professional hunter.

Buffalo, elk, mule deer and antelope suffer most, and in the order in which they are here mentioned. They are destroyed without regard to season; the hides only are taken and the meat left to feed the wolves, or to rot when the spring opens. We know directly of thirty-four cow elk killed out of a band of forty, about the middle of April, 1875, by one man. The snows were deep, and the butcher followed the poor animals until all but six were slain. Each of these animals, if allowed to live, would have produced a calf in a little over a month after the time of its slaughter. Here there were sixty-eight elk killed by one man in a day and a half. It is estimated from reliable information that in the winter of 1874-5, during the deep snows, over three thousand elk were killed for their hides in the valley of the Yellowstone between the mouth of Trail creek and the Hot Springs. For the Territories of Wyoming and Montana the destruction must have been twenty times as great. An elk skin is worth from \$2.50 to \$4, and to secure that pitiful sum this beautiful life is taken and the 300 to 500 pounds of the most delicate meat is left on the ground.

A buffalo hide is worth \$1.50 in September and \$3 in October, and \$2.50 in November, and at those prices many men can be found to do the work of butchery. For, as many of us know by experience, a man without any pretensions to being a skillful hunter can slaughter a dozen or two buffalo in a day wherever they are numerous. Mule deer and antelope are more difficult to kill, but in these days of breech-loading rifles a fair shot can kill several out of a band before the rest can get out of reach. It is a melancholy sight to see as we have seen in a morning's march, half a dozen fresh doe antelope carcasses stripped of their skins, with the milk still trickling from their udders; and it is sad to think that in addition two little kids must starve for each of these.

Mountain sheep and moose do not suffer to any considerable extent from these skin hunters. They are too wary to be successfully pursued by these men, many of whom are vagabonds of the most worthless description. There are some good hunters and good fellows among them; men who would gladly relinquish the business could it be wholly stopped, but who think and say that if the game is to be exterminated they must make the most of it while it lasts. Taken as a whole, however, they are a miserable set, and many of them do not kill more than enough to keep themselves in provisions and ammunition from month to month. If all were as good hunters as Yellowstone Kelly there would now be scarcely an elk or an antelope left in Montana.

This skin hunting is quite a new thing in the territory, having been initiated, as has been said, only three or four years ago. In 1872 or '73 a firm of Fort Benton traders, who have since achieved an unenviable notoriety by selling arms and ammunition to the hostile Sioux, conceived the idea of fitting out parties to kill game for the hides, and the result was so successful that the trade in wild hides has been increasing ever since.

What now can be done to remedy this state of affairs? Stringent laws should be enacted, and not only enacted but enforced. Game should not be killed except for food, and then only during the autumn. In other words, no more game should be killed than the hunter can use, and indiscriminate hunting at any and all seasons should be prevented. But we know that legislative bodies move slowly, and that knots in red tape are as difficult to untie as that of Gordius of old. In the mean time much, very much, may be done by the officers of the army who are stationed on the frontier. The skin hunters who, of course, violate the laws of all the territories which have game laws, may be warned off, arrested, and so annoyed that they will in future sedulously avoid the vicinity of posts where they

have received such treatment. Action to this end at Camp Baker, by Major H. Freeman, Seventh infantry, has quite driven the skin hunters out of the country. The little exertion entailed by this course will be amply repaid by the increase of large game in any section of the country where its wanton and unnecessary disturbance is prevented.

As things stand at present the country where game most abounds is that which is now, or has lately been, infested by hostile Indians. The red fiends know enough to preserve their game from excessive and continual persecution, and it is where the white man dare not go that it is found most abundant and most unsuspicious. The Indians are the only real preservers of game in the West.

Will not every officer and every western man to whom these lines come think seriously on this matter and endeavor to do his part to put down terrible butchery?

We observe that the Manitoba *Free Press* has authentic information that the vanguard of migratory buffalo herds moving eastward has arrived on the western boundaries of that province, where they have not appeared before in years. It says: "The Sioux Indians residing at Devil's Lake in Dakota, have already been on a great hunt, and have returned to their homes with an abundance of buffalo meat and numbers of robes."

"The party of Mounted Police, who came into the city yesterday from Fort McLeod and the Cypress Hills, passed immense herds during their journey, the last seen being about seventy miles west of the Mounted Police post at Qu'Appelle, heading eastward."

INSECTS AS FOOD.

AN article in a late number of the *Scientific Farmer* points out some of the insects used as food in various parts of the world. It will be remembered that Prof. C. V. Riley, State Entomologist of Missouri, cooked grasshoppers in various ways and found them palatable and nutritious. He advised the prairie farmers to give up the idea of starving and eat their pests. Locusts have always been a relished dish among the natives of Africa, having a strong vegetable taste, the flavor varying with the plants on which they feed. Diodorus Siculus and Ludolphus both refer to a race of people in Ethiopia supporting themselves upon locusts. Ludolphus remarks: "For it is a very sweet and wholesome sort of diet, by means of which a certain Portuguese garrison in India that was ready to yield for want of provisions held out till it was relieved another way." Madder states in his "Travels": "The Arabs dry them and grind them to powder, then mix this powder with water, forming them into round cakes, which serve for bread." Dr. Livingstone considered them palatable when roasted. They are eaten also by the Persians, Egyptians and Arabians, and many others. The South Africans also make food of spiders, white ants and their larvæ, as well as the larvæ of the flesh-fly, and various caterpillars, which last were considered dainties by the ancient Romans. Moths of several varieties are eaten by the natives of Australia; one species called *Bugong*, is said to be more prized by the Australian than any other sort of food. The bodies of these insects, it is stated, are large, and contain a quantity of oil; they are sought after as a luscious and fattening food. Grubs of all kinds also are eaten by the natives of Australia, and the chrysalis of the silk-worm by the Chinese. The inhabitants of New Caledonia are said to be fond of spiders, and ants are said to be sour and good by those who have tasted them. Bees are eaten by various people. The Moors in West Barbary esteem the honeycomb, with young bees in it, as delicious; but by one witness it has been spoken of as insipid to his palate, and as having sometimes given him heartburn. Probably he had neglected to extract the bees' stings, as a bird or a toad always does before eating them. Several species are eaten by the Egyptian women, cooked with butter, to make themselves fat, and certain species are supposed to make them prolific. The women of Arabia and Turkey also eat a species of *Tenebrio*, fried in butter, to make themselves plump. Some of our Indians, especially in the Southwest, feed extensively in the winter and spring on dormant insects, when they can find nothing better, and among civilized persons they are used to some extent as medicine.

THE AQUARIUM.—The New York Aquarium was formally opened on Tuesday night with a reception attended by at least fifteen hundred people. Hon. Robert B. Roosevelt delivered the opening address, in which he described the progress made by fish culture during the past thirty years and argued its importance. Mr. Roosevelt drew upon his large experience as Fish Commissioner of this State for facts and data regarding the productions of fishes and the ease with which their numbers could be increased by means of artificial invention. He was followed by Prof. Ward who explained the mode of constructing and regulating the aquarium. After the addresses, the company partook of a supper identical as to the menu with that given by the Fish Culturists Association in Philadelphia last week, and which is described elsewhere. The white whale from Labrador, which had arrived that morning, disported in the large circular tank, and the little seals attracted great attention. Mr. Paxton, of Detroit, had also just arrived with a number of fine specimens of lake fish. Fred Mather was almost broken down with the care of the whale and his pet salmon eggs (brought by Mr. Livingston Stone from the Pacific), and the bursting of a small tank about finished him. The Aquarium promises to be a favorite resort.

—"How Gambler's Cheat at Cards" is the title of a very interesting article in the current number of *The Illustrated Weekly*.

GAME PROTECTION.

GAME LAWS OF NEW JERSEY.—It may not be known to many of our readers, and particularly those resident of this city who are in the habit of crossing the Hudson river to shoot, that the game laws of New Jersey have undergone some material alterations since the last shooting season. For their edification, therefore, and with a view of, perhaps, saving them some unpleasantness, we recapitulate the close seasons. Quail, ruffed grouse (partridges) and rabbits cannot now be killed in New Jersey before Nov. 1st; squirrels, July 1st; woodcock, July 4th, and wood-ducks, rail and reed-birds on Sept. 1st. The season making a close season for snipe from May 1st to Oct. 1st has been repealed.

It is a great pity that the close seasons in the contiguous States of New Jersey, New York and Pennsylvania could not be made identical, and we urge this matter upon the attention of the sportsmen of those States as worthy of the most strenuous effort. Not only would it put a stop to the confusion and misunderstanding which now exists, but the cause of game protection itself, through equalizing market seasons, would be largely benefitted. How absurd it seems that in the State of New York ruffed grouse can be killed on Sept. 1st, while in the adjoining State of New Jersey sportsmen are compelled to wait until Nov. 1st. The consequence is that the temptation offered by our open market to pot-hunters and law-breakers is too great to be resisted, and the conscientious sportsman who waits until the close season has expired finds either broken and scattered coveys, or no birds at all. The suggestion contained in the letter from a well known sportsman, which we print below, we indorse most heartily, and trust that a general close season expiring on Oct. 1st, and including woodcock, may be arranged for not only the two States he mentions, but to take in Pennsylvania also:—

MORRISTOWN, N. J., Sept. 29th.

EDITOR FOREST AND STREAM:—

The constant yearly changes in the game laws of adjoining States are as annoying as they are foolish. If we could bring the laws of New York and New Jersey to abolish summer cock shooting and make the open season in both States commence Oct. 1st for ruffed grouse, quail, woodcock and wild rabbits, and make the penalty for every infraction \$25, the bird- and the sportsmen would alike have a fair chance, and pot-hunters could not kill off every kind of game under pretense of shooting September woodcock. It is not a valid objection that quail are too small for shooting Oct. 1st. There are, indeed, bevies too small both on that date and also on Nov. 1st, as all sportsmen know; but the law is made for the rule and not for the exception, and the average quail is strong enough Oct. 1st to afford good sport in the thick covers of that month.

C. A. R.

—Quail are being killed in Pennsylvania by pot-hunters and others, although the close season does not expire until the 15th inst.

—According to the *Pall Mall Gazette*, one of the Prussian Provincial Governments has prohibited pigeon shooting matches on the ground that they come under the definition of cruelty to animals.

CALIFORNIA GAME LAWS.—The following synopsis is taken from the *San Francisco Chronicle*:—

"In the counties of San Bernardino and Los Angeles it is a misdemeanor to kill partridges or ducks between the 1st of April and the 1st of September. In Lassen, Plumas and Sierra the same is prohibited from the 15th of March until the 15th of August. The counties of Del Norte, Humboldt, Shasta and Mendocino are the hunter's paradise, as there he can kill game all the year round—if he can find it. In the remaining counties of the State it is a misdemeanor to kill quail, grouse, spoonbill, broadbill, or any other kind of duck, between the 15th of March and the 15th of September. Any person who kills elk, deer, antelope or mountain sheep in this State, between the 1st of January and the 1st of September, is guilty of a misdemeanor. If he kills such animals wantonly and without using their carcasses for food or sale, he is guilty of a misdemeanor, even when the game laws are not in force. Any person who has in his possession, or buys and sells any of this forbidden meat, between the above prohibited dates, is likewise guilty.

"It is a misdemeanor to catch trout between the 1st of April and the 15th of October, though there is nothing in the statute preventing a man from going fishing, but he must not catch any. Fish must be caught with hook and line. To inveigle them with nets, baskets traps, etc., is a misdemeanor. It is a misdemeanor to catch, buy or sell a fresh salmon between the 1st of August and the 1st of November. To catch or sell fresh shad before the first Monday of December, 1877, is a misdemeanor. It is made a misdemeanor to catch fish out of a stream on another person's land without first gaining his consent. A Chinaman, or any other man, who catches between sundown on Saturdays and sunrise on the following Monday is guilty of a misdemeanor. The Penal Code defines the shrimp to be less than one and a half inches in length—and they generally are.

"It is a misdemeanor to use or distribute phosphorus in the counties of Santa Clara, Contra Costa, San Joaquin, Santa Cruz and Santa Mateo, between the 1st of March and the 1st of November. It is also a misdemeanor to hunt, camp or discharge firearms on inclosed lands, without first having got permission from the owner. It is likewise a breach of the law to kill or maim any of the animals on those grounds, leave the camp fires burning, tear down or destroy or leave open fences or gates. A misdemeanor is punishable by a fine not exceeding \$500 and imprisonment in a county jail for six months, or both, at the option of the court. The Sportsmen's Club of California offers a reward of \$50 for the arrest and conviction of any person violating the above laws.

"The owners of hunting grounds and fishing waters are already being persecuted by amateur sportsmen for permits to shoot and fish over their property. One generous gentleman who owns a valuable preserve near this city, upon which he has expended much money, had received yesterday nearly 200 applications from friends for permits, and in the goodness of his heart he obliged all of them, and will go elsewhere himself to indulge in the sport he is fond of. One man asked for a day's permit. Upon its being

cheerfully granted he asked that the time might be indefinitely extended. Another asked for a permanent permit, as it was so much trouble to call on the owner of the premises frequently.

—This is the way the Sheffield (England) *Daily Telegraph* puts it:—

"We are at all times extremely happy to chronicle for the benefit of our sporting readers any incident of a novel and exciting character, leaving to their better judgment to decide whether the deed of daring should be emulated or not. In this instance the matter has reference to our piscatorial friends, of whom, we are happy to say, we possess many, and we invite them to read, mark, learn, and inwardly digest. We are credibly informed that there was on the afternoon of the 10th inst., an immense take of fish on the Derwent, in which a certain landed proprietor, resident in a sequestered nook of a very pretty and popular fishing village, and a hundred miles from Sheffield, took a distinguished part. Ably assisted by a friend staying with him and two of the sons of a neighboring squire, the party proceeded to the river in pursuance of their object. Having, we presume, heard of the destructive properties of the silvery trout when left undisturbed in their native element, a full determination was arrived at to remove so great an evil, and the evidences of a master mind were shown in the production of a net—*mirabile dictu*—which swept the stream, being dragged from both sides the river. With an energy and a skill worthy of so honorable an object, for five and a half long hours was the work proceeded with, the skill and dexterity shown in casting the net being unanimously decided to be equal to if not greater than that needed in deluding the unwary fish by the cast of a fly. The result of the afternoon's sport showed a total of 15½ brace of fish, and though the quantity was so great the net did not, as in the story of old, break. Many of our readers will probably wish it had so done. Such is "sport" in this year of grace 1876.

OUR CENTENNIAL LETTERS. NO. 11.

CELEBRATING WITH THE PENNSYLVANIANS—HUMANITY EN MASSE.

FOUR weeks or more have slipped away since my last letter from the World's Exhibition was written, and a great change was apparent when I returned last week. It happened to be Pennsylvania Day, and the followers of the late W. Penn had evidently determined to leave all other State demonstrations entirely in oblivion. Everybody went and took his wife and, generally, his babies. Everything in Philadelphia on wheels was pressed into service—steamers, horsecars, omnibusses, hacks, express wagons, trucks, hay-carts and butchers' carts, not to mention "shank's mare." A steady stream poured through the patient gates, and besieged the wearied keepers until at 1 p. m. 175,000 had entered. How many came after that I did not hear. Stand where you would and on all sides were people. The buildings were thronged—Memorial Hall especially, where it was "a regular pack." In any narrow space, like the aisle in the Colorado building in front of Mrs. Maxwell's stuffed animals, the jam was terrific, and here was an excellent opportunity for mulish persons to exhibit their "bucking" propensities, and add a vast deal of discomfort to those who were near to them only because they couldn't get away. The little ones suffered the most, having hard work to keep their feet, and being able to see nothing. Outside of such narrow channels there was little inconvenience except that it was all but impossible to get anything to eat at the restaurants. People stood rank behind rank awaiting their turn at the lunch counters, and incessantly admonishing the fortunate possessor of the three-legged stool to hurry up and finish his beef and beans because they were nearly famished. It made a man forget his hunger and feel as though he had done something wrong in availing himself of the chance to "get a bite." The provisions seemed to hold out pretty well though, being supplied from some invisible point like the manna in the wilderness, and the prices were not extortionate. Those fared best who brought their lunch, and many a merry group circled about a napkin spread beside the brook in Landsdown Ravine, smiled complacently at the hungry mortals vainly calling for a sandwich and a glass of beer. Yet it was a good-natured crowd. Everybody had come there for a good time; this wrangling with all the world for a crust was a part of the fun. Men met on a common plane of hunger. Where you came from, or where you were going, no one cared; if you were eating, all right—"but hurry up and give me a place;" if I was eating, all right again, "wait till I despatch this dreadfully hot coffee, and meanwhile hang on to my stool."

It has been said many times that the most lonely place in the world is to be alone in a crowd. It might also be said that nowhere does a man feel more humble. Climb up on a lamp-post, and look at these people filling full this immense area between Machinery Hall, the Main Building and Memorial Hall, as they crowd up to get a good view of George's Hill where the fireworks are to be let off after dark. You are only one in 50,000—it takes a large object to make one fifty-thousandth part of it of much value. You think you are exceptionally tall and strong and heroic, but look at the hundreds of broad shoulders lifting up above the level of the massed heads; you are active, but see how the trees, and roofs, and bridges are filled with men agile as monkeys; you are beautiful—look at the lithe and graceful maidens beside you whose motions are like lilies swayed by the wind; you fall back upon your modest consciousness of intellectual merit and thus comfort yourself until you begin to scan the keenly intelligent, studious countenances scattered thickly about, and reflect how the next morning's paper or the next month's magazine will have an account of this very pageant which you could not hope to equal for vividness and power and completeness; and you get down off your lamp post and mingle with the people unnoticed, hugging to your wounded breast the single quality that this multitude intensifies in your nature instead of diminishes—that you are an American!

Here one is surrounded by the whole world and all-time. The four-quarters of the globe present their labors and

products to his eye at one glance. The years and ages so distant that like far-away mountains they can only be dimly outlined against the unknown space beyond them, file up beside the refined, luxurious, thrilling centuries of the Cæsars, and both together contest with the swift flying present for the lion's share of his regard. Standing thus in the gathering twilight, with so much of the past and the foreign grouped about him, one can easily imagine this vast throng to belong to any age or latitude. Do they all face the mountain watching for the light upon its crest. So stood the hosts of Israel before Sinai. Is this great display for the pleasure of the whole people? How many such gay concourses have shouted with united voice at the triumphal celebration of wreathed conquerors moving along the Appian Way. Or, as the outlines of the buildings begin to lose their sharpness, the lights to glitter here and there among the trees, and the fountains live in a halo of reflected light, one can easily imagine himself at a brilliant *fête* in the imperial gardens of Paris. Time and place become mere accidents; the same moon shines upon us which yesterday glinted upon the newly-cut arches of Palmyra and Thebes, which to-day rebounds from the burnished dome of St. Peter's, which to-morrow (may, we trust) will light the thousandth birthnight of the Union. Man's life is rounded with the same few facts, the same simple relations everywhere; and we do not need to travel to be reminded of the identity of human nature in all ages and zones.

The moon shone so brightly that it was difficult to tell when the day had really left us. But at last the band began to play a medley of lively airs, which set the crowd humming, or dancing, or marking-time, by turns. There was everything in that band's repertory, from "Rory O'More" to "Hold the Fort" and "The Sweet By-and-Bye," and it was well-taxed to keep the people amused until—"O-o-h! there goes one!" and another rocket, and another, until George's hill seemed volcanic with fiery colors, and shot out detonating bombs so fast that they almost kept time to the music below, accenting it with a noble staccato. Meanwhile magnesium lights were lighted among the bushes all over the grounds—red, blue, white, green, and purple—tinging the thousands of faces with alternate blushes and ghastly paleness. It was a strange, wild sight, as weird and eldritch as a garden of witches, and for a few moments the silence was almost unbroken. Then the dense, lurid smoke and colored atmosphere of the magnesium torches gave way to the intense white beams of electric lights in the towers of the Main Building and Machinery Hall, which were pointed here and there, changing to solid white the leaves of the trees they shone upon, so that they looked like the foam of breaking waves seen in the dark.

And all the time the barking bombs over George's hill were counting out the finished century—*one! two! three! four!*—and on up to a hundred. Then the head of the all-suffering Washington burned in glowing outlines, and was greeted with a cheer, notwithstanding the fact that one eye was black, and the right ear of the Father of his country didn't appear. Then there were balloons drifting aloft, trailing spiral banners of sulphurous smoke, and shooting rockets from their invisible baskets; mines of vari-colored balls of light, eruptions of bundles of snakes, and all the gay pyrotechnics which made the night populous with brief but brilliant meteors.

The fireworks over, the multitude began to think of getting home, for though there had been a steady stream down town ever since 3 o'clock, there seemed little diminution. The narrow exit through the gates let the crowd drain out very slowly, and meanwhile thousands strolled about the grounds, enjoying what seemed to me the most lovely part of the whole glittering spectacle. The tinted lights had ceased to glow, rockets no longer burned their way through the sky, and the queenly Moon resumed her supremacy, flooding the whole scene with soft light, which made the white walls of the Art Hall all the whiter, cast shadows behind the great guns of the War Department blacker than their grimy throats, played with the thousand points and pinnacles of the lofty Halls, nestled in the folds of the flags, and curtained every object in dreamy haze. The two electric burners, of which I spoke before, now turned their full beams upon the large cone shaped fountain in the lake. The strong, white light penetrated to the fountain's very core, so that the drops and jets of water lost their shining transparency and became solid, opaque, and yet wonderfully mobile. It was like driven snow, or powdered ice. Had it not been for the musical tinkle I should have said it was a fountain of dead silver, wrapped in the hoary mantle of a frosty night.

But frost was far away. All was warm, and gentle, and tender. The feet trod in fairyland, and the mind wandered fancy-free to Elysian fields. The picture was foreign and poetic, and as full of romance as a scene in the "Arabian Nights." It will live in my memory as long as Diana smiles serenely upon the Earth, which is not utterly lost while it has such sweet companionship.

HEALTH OF FLORIDA.—For the satisfaction of persons intending to visit Florida we print the following note from our correspondent, Dr. Kenworthy:—

JACKSONVILLE, Fla., Sept. 28th.

EDITOR FOREST AND STREAM:—

As many of your readers are interested in the sanitary condition of Florida, I deem it advisable to state that a single case of yellow fever has not occurred in the State. During the last eighteen days but one death has occurred in the city limits, and this was a case of bilious fever. This exhibits but a small mortality in a city of over 10,000 population, more especially during the month of September. Jacksonville has nobly succored Savannah and Brunswick, where yellow fever is prevailing. We are quarantining against infected places. The first frost, which may be expected about the 1st of October, will put an end to the epidemic prevailing in Georgia.

AL FRESCO.

A NOVEL SCARE-CROW.—Mr. J. N. Davis of Washington, D. C., sends us a description of a most novel device to keep the birds off of a newly planted field of grain:—

"A very successful plan has been tried by placing in Mr. Crow's way a number of grains with a horse-hair run through them. He is bound to swallow one, and his note of alarm is soon sounded. It is impossible for him to dislodge the grain, and if he can be watched a sufficient length of time he will be seen to cut his own throat in scratching at it. His usual note is changed, and I can assure you life to him is such a misery he could 'even wish that he were dead.' It has been noticed that after the note of alarm has been sounded all the crows in the vicinity will leave that field and approach it no more that season. It is a simple thing, yet all who try it will find it a success."

BE-MURRAYED ADIRONDACKS.

ON all sides we hear complaints of the constantly-diminishing resources for good sport among the Adirondacks, particularly in those portions which are most accessible, or have been most tenanted by summer tourists. This is particularly the case with respect to the fishing, which has been prosecuted, in season and out of season, with such pertinacity that now the aggregate catch of a summer is almost nil. Even the headwaters of the streams are raked, and the North Woods, which were a terror to our childhood imaginations, have become almost as full of paths as the park of an English deer preserve. The simple-hearted, generous mountaineers of ten or fifteen years ago, who were glad to see you for your own sake, and happy to show you the mysteries of trout pool and deer covert, have learned that the metropolitan is lavish of his money but sparing of his gratitude; the mountaineers find themselves no longer trusted guides, so thoroughly did they do their work the seasons before, but servants. The Adirondacks are no longer the old North Woods of the trapper, but a resort of such fashion as does not care to go to Long Branch or Saratoga. Even those earnest devotees of nature and sport who first discovered the grand solitudes where the Hudson takes its rise are beginning to find this out, and warn the friends, whom they have so long and so ardently invited, to stay away from the streams, which must be restocked before it will pay to joint a single rod, forgetting that their exaggerated stories of woodland life, sung too long and loud, have brought about as their legitimate result the very desolation they deplore.

No one has contributed more to spread abroad the fame of the Adirondack wilderness as a hunter's paradise, and all the guides as Arcadians, than the Rev. Mr. Murray, of Boston. But even he is disgusted, and in a recent letter to his paper—*The Golden Rule*—tells us that he has not put his rod together four times in four years, because it was of no use. He says—

"The Adirondack waters will have to be stocked by artificial means before a fly-rod is needed on them, and it will take six years to do it. The average guide of to-day is as miserable a piece of luxury as one can have about him, if he searches the world over for a foolish way to spend his money. They know little and like to do less; no more like the old guides of ten or fifteen years ago than a tramp is like a thrifty Vermont farmer. Their companionship costs a man \$35 a week, which is pretty steep for workmen that you can hire the like of in Boston for \$15 a month and their board, and whereas formerly one needed a guide, he now needs only a servant, viz., a man to pull an average oar, chop wood, bring water, and cook a plain meal indifferently well. And to have to pay such a man \$5 a day is simply barefaced extortion."

Commenting upon this unequivocal statement, Dr. John S. Ordway, President of the Massachusetts Anglers' Association, writes from Rangeley lakes, Maine, to the *Boston Journal* as follows:—

"Now, while I fully agree with Mr. Murray in many points of his letter, descriptive of the beauties of life in the woods, I cannot but feel that much of this extortion, which has cost the people who have visited the Adirondacks thousands of dollars more than it ought, is due to the overdrawn description of individual guides, and particular localities in Mr. Murray's published books and letters of the Adirondack waters. Many friends of mine, who have been induced to visit those waters from this description, have returned unsatisfied, and have come here to find enjoyment to their hearts' content. When I first came here, ten years ago, but very few fishermen went 'into camp,' as it is called, but now twenty to one at that time go in, and the increase is caused by one who has realized the pleasure speaking to a brother sportsman of the certainty of enjoyment to be had in the Androscoggin waters."

To this we say amen! Too much advertising is ruinous to a region which depends for its attraction upon preserving inviolate its pristine wildness. It is only to be hoped that the Rangeley lakes may not suffer a like calamity with the Adirondacks, from a similar cause.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

Black Bass, *Micropterus salmoides*; Weakfish, *Cynoscion regalis*.
M. *nigricans*. Bluefish, *Pomatomus saltatrix*.
Mascalouge, *Esox nobilior*. Spanish Mackerel, *Cybus maculatus*.
Pike or Pickerel, *Esox lucius*.
Yellow Perch, *Perca flavescens*. Cero, *Cybus regale*.
Sea Bass, *Sciaenops ocellatus*. Bonito, *Sarda pelamys*.
Striped Bass, *Morone americana*. Kingfish, *Menticirrhus nebulosus*.
White Perch, *Morone americana*.

FISH IN MARKET.—Fish of all kinds are more plentiful and prices lower. Live codfish and blackfish have commenced to arrive in market. We quote:—Striped bass 20 to 25 cents per pound; smelts, 18 cents; bluefish, 12 cents; salmon, (frozen), 40 cents; mackerel, 15 to 25 cents each; weakfish, 15 cents per pound; white perch, 15 cents; Spanish mackerel, 75 cents; green turtle, 15 cents; terrapin, \$12 per dozen; halibut, 20 cents per pound; haddock, 8 cents; codfish, 10 cents; blackfish, 15 cents; flounders 12 cents; porgies, 12 cents; sea bass, 18 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 20 cents; turbot, 20 cents; scallops, \$2.00 per gallon; soft clams, 30 to 60 cents per hundred; whitefish, 15 cents per pound; pickerel, 18 cents; salmon trout, 20 cents; black bass, 20 cents; pompano, 75 cents; hard shell crabs, \$3 per 100; soft do., \$1.50 per dozen.

—There is good black bass fishing at Rondout, N. Y., where fish have lately been taken that weigh five pounds a piece.

—Lake trout now take the spoon in Lake Memphremagog. Their flesh of this season is very firm and sweet. There is excellent ruffed grouse shooting in the vicinity of Magog, at the head of the lake where excellent hotel accommodations can be found at the Park House.

—A large number of men are daily employed near Bathurst, N. B., in fishing for smelt for American markets, principally New York and Boston. During the past two weeks about forty tons have been forwarded by rail.

—The steamer Leopard at St. Johns, Newfoundland, reports the loss of 37 vessels, with their cargoes, on the Labrador coast. No lives are reported lost. All the vessels were wrecked in harbors and at anchor. The herring have struck off from every part of the coast.

—A well-known angler of this city, the other day, counted 91 boats containing anglers, anchored in the upper Delaware along a distance of 40 miles, commencing at Trenton.—*Germantown Telegraph*.

—An immense number of black bass were taken in the upper Delaware with rod and line during the month of September. In one pool alone, near the Bushkill creek, we are told, three thousand thus summarily came to an end. The low water that prevailed during the greater part of the month induced the fish to frequent the deep holes, and there they collected in large numbers.

BLACK BASS.—Sunapee Lake, in New Hampshire, is splendidly stocked with black bass, and the following paragraph from the New Hampshire *Argus*, will be read with pleasure by all anglers who are desirous of engaging in this sport:—

"The Fish Commissioners of Winchendon, Mass., viz: E. S. Merrill, S. Fairbanks, G. S. Loud, and A. Bateman, came to Chandlerville, near Sunapee Lake, on a fishing excursion on Wednesday of last week, and returned on Friday noon, carrying away with them 500 black bass, varying in size from two ounces to three pounds—every one of which was caught with hooks. They were caught for the purpose of stocking Dennison Lake and Whitney's Pond, in Winchendon, Mass. This is certainly the most successful catch of black bass, in less than two days, on record hereabouts. The lake is well stocked with them, as is Sugar river from Sunapee to Newport. Sometimes they will take the proffered bait and sometimes they won't."

ANGLING INCIDENTS.—Having met with two rather curious adventures with salmon this season, I send you an account of them, as it may interest some of your readers. On the 11th of May last, while fishing for salmon in the river Taw, North Devon, I hooked a large fish that broke my gut line almost immediately after taking the fly. I tied on a fresh fly of exactly the same description, and fished the pool down again, and on arriving at the spot where I lost my fish (in less than ten minutes) I had another rise, and was soon fast in another fish, as I thought. After playing him for about twenty minutes I brought him to land, and, to my great surprise, found my lost fly in his mouth. The fish proved to be a kelt of about 13 pounds, which I returned to the river. My second adventure took place yesterday (August 29th). I was fishing in the same river with worm for perch, with a small trout rod and very fine tackle. My first bite was from a perch of about three ounces, and my second from a salmon of about 10 pounds, which gave me fine sport for nearly half an hour, and was eventually landed by a friend who, after three attempts at taking him out by the tail, succeeded at last in getting his fingers into his gills and bringing him to land.—*Pastor, in Field and Country Gentleman*.

—Here is William C. Prime's opinion of the pickerel as a food and game fish:—

"Pickerel have fearful tenacity of life. I took five in Echo Lake one day, in a hot sunshine, and they lay in the bottom of the boat some time; then I carried them in my landing net down to the house, a half-mile, and passing by the wash-room I emptied the net into a marble basin and filled it with the cold spring water. An hour later I found the five pickerel wide awake and making the water fly out of the basin. Then I killed them dead. I cut off their heads, and I trust that finished them. They are wretched fish for the table, enemies to all other fish, and their presence in Echo Lake prevents its being made a trout lake, which it once was, before some insane pickerel lover put the pickerel into it."

FISHING MOVEMENTS.—The number of fishing arrivals for the past week has been unusually small, numbering 30 in all, including one from the Bay of St. Lawrence, with a catch of 70 barrels of mackerel, 5 from off shore, with about 60 barrels do., 4 from the Banks with 180,000 pounds codfish, and 20 from Georges with 200,000 pounds cod and 65,000 pounds halibut. Prices are well sustained, with no prospect of immediate change in any important line of the trade.

The fleet of Boston boats have recently had a good haul of herring, which have found a ready sale in this market. They are peculiar looking crafts, sloop rigged, with the mast near the centre of the boat. The herrings are caught in nets during the night and good schools of them are now found in Boston bay.

Porgies have made their appearance in Ipswich bay, and several of our fishing fleet have been baited by the Lanesville fishermen.

The mackerel fleet have had a poor week's work. They report large quantities of "tinker mackerel," which would hardly be worth the catching.

Schooner Margie Smith had her seine full of fine large mackerel on Tuesday; but the seine burst and she only succeeded in saving twenty barrels.—*Cape Ann Advertiser*, October 7th.

—On last Saturday a heavy haul of fish was taken at the Chapel Cove, Creignish. One crew nearly sank their boat with a single net. On the same day herring struck heavy at the mouth of Long Point river. Very good fishing done along shore all the week, and the fish are better than usual. After an amusing chase ten whales were easily beached in McKay's Cove, by one boat, last Monday, the 2d inst. Fourteen blackfish of small size were driven ashore at Judique this week.—*Halifax (Nova Scotia) Herald*, Oct. 6th.

—An ingenious device is practiced in Cochín China for the capture of eels, which consists in cutting pieces of bamboo as thick as the arm into sections of about three or four feet in length, the divisions of the interior being broken out, with the exception of the one at the end, which

forms the bottom of the snare. At the entrance is placed a slight grating of bamboo, and some bait, either of fish or earthworms, is introduced into the interior. The bamboo is then laid at a slight depth in the mud, and the eels enter the hollow tube, in which they can scarcely move, and cannot turn themselves, and are consequently taken captive. The bamboos are taken out every morning, and the eel, which holds on very firmly to the interior, is pulled out by means of a very strong hook.

FISHING IN MOOSEHEAD LAKE.

BOSTON, September, 1876.

EDITOR FOREST AND STREAM:—

So many of your readers have been to Moosehead Lake, have sailed over its blue waters, looked on the grand old mountains surrounding it, and have learned to love it, that I have ventured to say something of my trip thither this Centennial summer. I have been there again and again, and yet I always feel my blood quicken when I catch the first glimpse of the dear old lake from the hill just as you descend into the town of Greenville. Trout I have caught there until I was fain to cry enough; hungry, active fellows leaping in the air, rising ere the fly touched the water. Moose had I seen in its wilds, years and years ago, a sight not to be forgotten.

"I know each lane, and every alley green
Dingle and bushy dell in this wild wood."

And to renew my acquaintanceship from year to year is to me a quiet, quaint angler, most pleasing. The railroad has crept nearer and nearer the lake until now you are landed at Abbot, 23 miles distant. The stage ride from there we found delightful, the view from the stage most glorious. At Monson we took in a droll specimen; he talked all the time, saying a great many bright things. His observations in regard to traveling were certainly trite. He said that for lunch baker's bread was first rate and "sassaengers," that he never was such a fool as to call at a railway station for anything *hot*, which you did not have time to eat; he always called for "cold mince pies." We reached Greenville cold and hungry, but mine host of the Eveleth House soon had a blazing fire and hot supper for us. The next day (Sunday) we drove to the top of the high hill where the Mac Farland place is situated. The road winds through the woods by a gentle ascent until you find yourself at the summit, where a splendid view awaits you—mountain, lake and forest are before you, forming a scene most enchanting. The fishing at Wilson's pond is at times excellent, as is also that at "Rum" pond. From the latter we saw 76 brought in in one day. We can heartily recommend the Eveleth House; the traveler will find there a most attentive landlord, and an excellent hotel. The Lake House, in another part of the town, is said to be a very good house. We arrived at the Mount Kineo House on the following day, where we secured good rooms. Our old friend Mr. Dennen still has charge, and the house was never better kept—his many friends will bear witness to this, and to his interest in their welfare.

The view from the piazza is still the same, ever to be remembered. There is a stream called "Misery," doubtless many "Kineites" know it, and have there cast a fly. It empties into Brasna Lake, and near it is a deep wood, where many a jolly party has camped. What pleasant times have I had there; shall I ever forget them? What strings of trout have I seen on that sandy beach; 166 pounds three of us caught in 48 hours; but I fear the glory of the stream has departed. Thither we turned our steps with trusty "Sam" as guide, and before night had fallen our two tents were pitched in the woods off the beach. We found the next morning that Misery trout were still the same lively fellows, game to the last. Day after day we whipped the stream, catching all we could eat and more, having some fine sport. The trout, however, are not there in the same numbers as formerly; had they been we should have put back all not needed. Misery stream is much exposed to westerly winds, and we should advise parties never to attempt to camp there when the wind blows strongly in that direction. A heavy rain having swollen the stream, we left for Kineo, which we reached after a damp walk through the woods and a pleasant sail across the lake. At the Kineo House were Mr. Strong, Mr. Lippitt, Dr. Booth, Col. Leland and Mr. Carpenter—fellow anglers all. After a few pleasant days there we left Kineo one bright morning and sailed away into the sunshine for home. Somehow the lake never looked more alluring.

BLACK HACKLE.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER, FOR THE WEEK.

Date.	Boston.	New York.	Charleston.
	H. M.	H. M.	H. M.

THE LOUBAT CUP.—This handsome cup valued at \$1,000, placed in the custody of the New York Yacht Club by the spirited owner of the Enchantress, will be sailed for to-day over the regular club course to Sandy Hook Lightship and return. It is open to schooner yachts of 100 tons or over, with a time allowance of twelve seconds per ton. The entries had not closed up to the time of our going to press, but it is said that the Idler, Palmer, Atlanta and some other fine yachts still in condition, will contend.

WILLIAMSBURGH YACHT CLUB.—The fall regatta of this club was sailed on Monday, the course being from the North Brother to and around Sand Point Buoy, a distance of twenty miles. Eleven boats competed, of which the Katie and Pluck and Luck capsized. The wind, which in the morning promised to be light, increased to almost a gale later in the day, and gave the crews all they could do. The following table gives the entries and the result of the race:—

THIRD CLASS SLOOPS—OPEN.

Names.	Start.	Home Stakeboat.
Rosina.....	12 9 25	5 15 5
Favorita.....	12 10 35	Towed in.
Gilbert J. Orr.....	12 11 20	5 53 0

SECOND CLASS SLOOPS—OPEN.

Mary Gibson.....	12 15 45	5 2 35
Katie.....	12 16 20	Capsized.

THIRD CLASS SLOOPS—OPEN.

Endeavor.....	12 23 10	5 55 30
Nettie.....	12 23 35	6 1 15
Greenpoint.....	12 27 20	5 22 15
Pluck and Luck.....	12 28 34	Capsized.

FIRST CLASS SLOOPS—CABIN.

Sorceress.....	12 37 30	Time not taken.
Chester Arthur.....	12 43 20	5 45 55

The champion pennant for the first boat in, of all classes giving time allowance, was awarded to the Mary Gibson, and the class prizes in the order given to the following boats: Rosina, Mary Gibson, Greenpoint, and Chester Arthur.

LONG ISLAND YACHT CLUB.—On Monday four sloops of this club, the Twinkle, Reveille, Admiral Rowan, and Nellie D. sailed a race over a course around Diamond Reef Buoy, Fort Lafayette, and repeat. The yachts were started at 1:30, the Nellie D. being first away, followed by the Rowan, Twinkle, and Reveille in the order named. On the return the Twinkle was first around the home stake-boat eight minutes ahead of any other boat, and was never afterwards caught. She passed the home stake-boat on the last round at 6h. 6m., the Reveille second at 6:35, the Rowan half a minute later, and the Nellie D. last.

GREENWOOD LAKE REGATTA.—The gale which prevailed on Friday compelled a postponement of the races which were to have been rowed on Greenwood Lake until the following day. The success, however, with which the regatta was carried out demonstrates the fact that we have as good a piece of water as could be required for regatta purposes close at hand. At this season of the year it could scarcely be expected that the calms of summer would be found, but with a high wind prevailing, the lake on Saturday, particularly in the latter part of the day was as smooth as could be desired. One fact is worthy of note: that is, that the regatta was under the supervision of and given by, the Greenwood Lake Sportsman's Association, so that there were no axes to grind. The course for all the races was two miles straightaway. Mr. Richard C. Neville acted as referee; Messrs. W. W. Skiddy, L. L. Spring and Harry Knowlton as timekeepers, and Mr. E. R. Craft, Secretary of the National Rowing Association, as judge at the finish. The first race was for six-oared gigs, with the following starters:—

Dauntless Boat Club, New York.—Horace Walters, bow; H. W. Peckwell, No. 2; C. E. Knapp, No. 3; W. G. Demarest, No. 4; Frank Gillilan, No. 5; David Rouché, stroke, and Marshall Freeborn, coxswain. Neptune Boat Club, Staten Island.—A. Shana, bow; T. R. Keaton, No. 2; O. T. Johnson, No. 3; J. H. Riley, No. 4; C. C. King, No. 5; Julian Kennedy, stroke, and John Edwards, coxswain. Eureka Boat Club, Newark, N. J.—John Erb, bow; John Young, No. 2; Watson Ryno, No. 3; Charles Loveless, No. 4; John Angelman, No. 5; Peter Young, stroke, and J. P. Cantrell, coxswain.

The Nassau and Hudson crews, both of which had entered, withdrew. The Neptunes led when a few strokes had been rowed, Eurekas next and Dauntless last. When a mile and a half had been rowed the Eureka crew stopped, and the Dauntless sputtering at the finish won by half a length from the Neptunes. Time—11m. 55s.

For the double scull race Messrs. Keaton and Riley of the Neptune Club rowed over in 13m. 27½s.; their only opponents, Messrs. Young and Thomas, of the Arlington Club not being ready at the starting point, the other claimed the race, which was allowed. For the Senior single-scull race but three of the eight entered appeared, viz: Julian Kennedy, of the Neptune Club, R. H. Orr, of the Seawanhaka Club, and Thomas Fearon, of the Vesper Club. The three retained positions throughout the race in the order above, Kennedy winning easily in 13m. 59½s., Orr 12½ seconds later, and Fearon's times being 14m. 54s. The following crews appeared for the four-oared race, the event of the day:—

Argonauta Boat Club.—Fred. Eldred, bow; Ed. Smith, No. 2; G. E. Man, No. 3; Charles Dunbar, stroke. Eureka Boat Club.—John Young, bow; Watson Ryno, No. 2; Peter Young, No. 3; John Angelman, stroke. Triton Boat Club.—S. A. Smith, bow; M. P. Hayne, No. 2; H. C. Rommel, No. 3; E. L. Phillips, stroke. Atalanta Boat Club.—Edward Blake, bow; Edward Mills, No. 2; W. H. Downs, No. 3; J. E. Eustis, stroke. Arlington Boat Club.—J. B. White, bow; George Thomas, No. 2; R. V. Young, No. 3; J. B. White, stroke.

The Argonautas led at the start, followed by the Eurekas, Tritons, Atalantas, and Arlingtons, in the order named. Some wild steering was indulged in and at the mile post the Atalantas were third with the Tritons next. The Argonautas maintained their lead and the finish was made in the following order: Argonauta, 11m. 56½s.; Eureka, 12m. 8½s.; Atalanta, 12m. 10½s.; Triton, 12m. 42½s.; Arlington, time not taken. The Viking, Nassau, Harlem, and Passaic clubs, who had entered for this race, withdrew before the start.

The regatta was concluded on Monday with some brilliant racing. The first event was for pair-oars, in which the starters were: James H. Riley, bow, and Julian Kennedy, stroke, of the Neptune Boat Club, New Brighton, Staten Island; Edward Smith, bow, and Frederick Eldred, stroke, of the Argonauta Rowing Association, Bergen Point, N. J.; W. H. Downs, bow, and John E. Eustis, stroke, of the Atalanta Boat Club, Harlem. The Neptunes took the lead at the start, and notwithstanding the efforts of the Atalantas, were never headed. The Argonautas gave up the race at the mile point, and the Neptunes going on with a strong stroke won by ten lengths in 12m. 20½s., the fastest time on record. The time of the Atalantas was 12m. 57½s. The second race was for junior single scullers, in which the following men started: J. D. Foot, of the Nassau Club; Ed. Mills, of the Atalanta Club; Gerald McLaughlin, of the Nautilus Club; R. H. Orr, of the Seawanhaka Club; Emil Conlon, of the Friendship Club, and G. E. Man, of the Argonauta Club. Orr was the favorite, and started off with the lead, Mills and Man struggling for second place, the latter getting the best of it at the mile and three-quarter flag. Foot and McLaughlin dropped out after rowing a mile, and Orr, keeping his lead, won in 14m. 15s., Man second, Mills third, and Conlon fourth. After the races the colors and lockets were presented to the winners at the Brandon House, by Mr. A. H. Vernam, Chairman of the Regatta Committee, to whose enterprise the success of the regatta is in great part due.

Yesterday the professional single scull race was to have been rowed, but we go to press before the result is known.

YALE FALL RACES.—The fall races at Lake Saltonstall will come off Saturday, October 14th. The events will be as follows: Barge race (six oars); single-scull (open to all members of the University except Herman Livingston and Johnson); Freshman barge race; shell race (six oars).

HARVARD TO CHALLENGE YALE.—At a meeting of the Harvard Boat Club held on the 3d inst., it was decided to challenge Yale for an eight-oared, four-mile, straightaway race next summer.

—The Bowdoin College navy at Brunswick, Me., has voted to withdraw from the Intercollegiate Rowing Association, and in favor of forming the proposed New England Association; also to send a four-oared crew to the next regatta.

—On the 7th inst. R. W. Boyd, of Gateshead, beat J. H. Sadler, of Surtiton, by five lengths in a sculling race on the Thames, from Putney to Mordlake. The men started even in the betting, which had previously been six to four in favor of Sadler. The stakes were £200 a side.

—Halifax (N. S.) has raised \$1,783 for the "Fishermen's crew," which lost the race with the Thames crew at the Centennial Regatta.

BOND'S METALLIC BOATS.

A correspondent asked last week for information regarding the best boat for him to carry on a short wagon-bed. The following letters may assist him:—

BELLEFONTAINE, Ohio, Sept. 24th.

EDITOR FOREST AND STREAM.—

I have used Bond's metallic boats for 15 years. The advantage it has over all the other canvas folding boats is that it occupies little or no space in the wagon when carried. The Fenner boat occupies a place about four feet. The Hegeman boat occupies a space about three feet, while the Bond boat occupies no space at all, as it can be filled with luggage, and will hold as much as the bed of the wagon without it. I generally drive my wagon, when intending to fish, as near the water as possible, and pulling out the boat lay both pieces on the ground with bottoms up, lock the pieces together at the bottom, then turning the boat half over I fasten the clips in the side nearest me, let it fall and fasten the other clip, when it is ready for the water. It can all be done in two minutes, and I doubt if any one of the folding boats can be prepared for service quicker.

JOHN J. PALMER.

CHICAGO, Ill., Feb. 24th.

I have seen of late in your paper a great many "good things," viz: a certain gun, a particular rifle, this strain of setter, that strain of pointers; this brand of powder, and that kind of shot, etc., etc. Now I wish to add another to the list of "good things"—Bond's portable boat, the best boat I ever saw for duck shooting. I spent the fall of '75 in one of them and never had so much comfort and pleasure for a season from a boat as I took in that one. They are light, dry, handy to get about. Do not take but little cover for a "blind" or but little water to float them, and one of its greatest merits is shown when shooting from it, as it is as staunch as a "raft." I have built sporting boats for the last fifteen years, and was quite an "egotist" in reference to my own make. (I can refer you to many of our local sports who will tell you that my boats have merit). But the conceit was taken completely out of me last fall, and I have no hesitation in saying that the new "Bond boat" is as near perfection as we may expect or wish for. In fact, I do not know how you can improve them. Now if all the good things we read about in your good paper are as meritorious as a "Bond boat" they are the best of their kinds, if you will let me tell it. I intended to have had my "say" last fall when I returned from my hunt, but have hung fire until the present writing.

E. O. DOW.

—We gave Bond's boats a pretty fair test last winter in Florida, and found them very serviceable. If the bottoms were sheathed with iron they would be proof against both the teredo and the sharp-edged coon oysters that line most of the creeks.

CORNELL UNIVERSITY.

ITHACA, October 2d.

EDITOR FOREST AND STREAM:—

At a meeting of the students of all classes at Military Hall, on Friday, Sept. 29th, it was unanimously decided to send a crew to England to compete with the winners of the Oxford-Cambridge race. Ostrom will of course captain the crew, and preparations will be commenced immediately for the trip. The cost is estimated at a trifle over \$3,000, and it is thought the sum can be very soon made up, one generous Ithacan having already signified his intention of donating a large amount.

The fall regatta will shortly come off and the freshmen are in active training to secure places in the crews. In the race between freshmen crews this fall, the freshmen will use six oared gigs with coxswain, instead of shells. This is a new idea, but it is thought a good one. Besides the freshmen race there will be a close contest between '78 and '79, a race between Watkins, Union Springs, and Seneca Falls crews, and possibly a single-scull race.

President and Mrs. Grant visited Cornell last week, the guests of President White, who, by the way, departs for Europe again this week.

SENECA.

National Pastimes.

The fall handicap meeting of St. Paul's School Athletic Association took place October 4th, 1876, at Concord, N. H., with the following results; J. D. Cheever, Field Marshal:—

100-Yard Dash—Handicap (44 entries).—Won by 1st, L. Jacob, Jr.; time, 10½s., 4ft.; 2d, J. Conover; time, 10 4/5s., handicap scratch.

2-Mile Run—Handicap (17 entries).—Won by 1st, H. K. Norman; time, 60s., 44yds.; 2d, F. Everts; time, 60½s., handicap scratch.

Running Long Jump—Open (4 entries).—Won by 1st H. G. Chapman; distance, 18ft. 7in.; 2d, J. Conover; distance, 17ft. 11in.

2-Mile Walk—Handicap (16 entries).—Won by 1st, W. H. Drayton; time, 18m. 13s., handicap 2s.; 2d, J. D. Cheever; time, 18m. 13s., scratch.

100-Yard Dash—Handicap for all boys under 15 years of age, (12 entries).—Won by 1st, W. Foster; time, 13½s., handicap 15ft; 2d, J. Chapman; time, 14s., handicap, scratch.

J. D. C.

POLO.—The season at Newport having ended, the Westchester Club has transported all its ponies and paraphernalia to the Fordham grounds and commenced practice on Saturday last. A regular series of games will be played during the present month.

A NEW METHOD OF PHYSICAL CULTURE.—The late Dr. G. B. Winship familiarized the youth of Boston with the idea of the absolute necessity of physical culture, but it is probable that he brought into vogue a fashion of excessive and extreme exercise which, in its ultimate effects, is rather more weakening than a total abstinence from all exercise whatever. We understand that, shortly before his death, he had adopted this view himself, and, after having his attention called to the new principle involved in the Pocket Gymnasium, patented by the Goodyear Rubber Company, he contemplated adopting it in this city. In a letter addressed to the Goodyear Company, a short time prior to his decease, he applied for the exclusive right to use and sell the patent in this section. Dr. Winship was, therefore, an undoubted convert to the new idea of gymnastics which this happy invention embodies.

It consists, briefly, of elastic tubes of various dimensions, from a diameter of five-sixteenths to that of an inch or more, constructed of pure India-rubber, and vulcanized by a process which deprives them of unpleasant odor. Suitable handles are inserted into the ends of these tubes, and are there firmly secured. A safety cord passes through the handles, and coils loosely within each tube to prevent all danger of injury from the flying ends of the tube, should a breakage occur. These tubes are eight in number, and to these other and more powerful ones are added if demanded. The series of eight appears to supply the general want. By the proper use of the entire series, it is safe to say that the strength of any individual can be more than doubled in thirty days. For all chest exercises, such as rowing, boxing, putting up dumb-bells, and swinging clubs—in short, all

employment of the muscles of the chest, arms, and shoulders—they will be found to be superior to all other appliances. A single tube may be employed with the hands, as are the exercising straps, and much more safely and advantageously; but great advantage is gained, and many new and graceful movements are secured, by the addition of the hooks and eyes with which the largest size is supplied.

Instead of violent and spasmodic exertion, the weak man is enabled to attain strength and vigor by a series of exercises gradually increasing in their demands on the cords and sinews of the frame, and thus building up, with a sure but steady progress, the muscular system. We should be glad to know that some intelligent advocate of physical development had undertaken the enterprise of introducing the Pocket Gymnasium in this city and State. Once properly explained to the public, its superiority over other methods of physical culture would be readily recognized. The Goodyear Pocket Gymnasium is sent in wholesale or small quantities from the headquarters of the manufacturers, No. 697 Broadway, New York.—Boston Times.

CRICKET.

—The Manhattan Club defeated the St. George Club in a one-day's play match at Prospect Park, on Oct. 6th, by a score of 71 to 35. The St. George had but seven men at the bat in the innings which decided the game, they not having the services of their three bowlers, Messrs. Gibbs, Jones and Soutter. The game was not played out, the first innings deciding the contest.

—The Young America Club is coming on here to play the St. George eleven this week, weather permitting. This will be the wind-up club match, after which St. George will have a closing day's play.

BASE BALL—THE PROFESSIONAL ARENA.

—The championship question being settled with Chicago holding the honors, the only other issue to be decided is that as to which club is to occupy second place, and this contest at present is a close and interesting one, inasmuch as St. Louis leads Hartford by but one game, and Hartford has four more games to play, dating from Oct. 9th, and St. Louis but one. The record to this date shows the clubs occupying the appended position. The games of the Athletic and Mutual Clubs have been left out, as they will not count at the close of the season:—

CLUBS	Chicago.	St. Louis.	Hartford.	Boston.	Louisville.	Cincinnati.	Games won.	Games to play.
Chicago	6	4	6	9	9	10	38	0
St. Louis	4	6	6	6	6	7	31	1
Hartford	4	4	6	9	7	7	30	4
Boston	1	4	2	5	5	10	22	2
Louisville	1	4	1	5	8	8	19	0
Cincinnati	0	2	1	0	2	2	5	3
Games lost	12	18	16	26	31	42	145	10

—The Chicago and Boston Clubs are evidently preparing for a grand struggle for the pennant in 1877. Chicago has added the famous pitcher of the St. Louis Club to their new team for 1877, and Boston has secured White and Bond. Chicago is determined that St. Louis shall not again divide the honors of the season with her.

The model games for October, thus far, are as follows:—

- Oct. 1.—Reds vs. Blues, at Memphis.....3 to 0
- Oct. 2.—Hartford vs. Indianapolis, at Indianapolis.....5 to 3
- Oct. 3.—St. Louis vs. Boston, at St. Louis.....5 to 3
- Oct. 3.—Buckeye vs. Cincinnati, at Columbus.....4 to 1
- Oct. 3.—Star vs. Cricket, at Syracuse.....5 to 2
- Oct. 4.—St. Louis vs. Boston, at St. Louis.....3 to 2
- Oct. 5.—Chicago vs. St. Louis, at St. Louis.....2 to 0

GIGANTIC ADVERTISING.—Probably the largest advertisement in the world is that of the Glasgow News, which displays its name on the slope of the Ardenlee, Scotland. The length of each letter is 40 feet; the total length of the line is 323 feet, and the area covered is 14,845 feet. The borders of the letters are sown with a pure white flower, the centre is set with dwarf beet, the dark purple of which shows well at a distance, and on each side of this there is a row of light purple candytuft.

Tiffany & Co., Silversmiths, Jewelers, and

Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes.

Their timing watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. Tiffany & Co., are also the agents in America for Messrs. Patek, Phillippe & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of diamonds and other precious stones, general jewelry, bronzes and artistic pottery is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. FRANK THOMPSON, Gen'l Manager. Feb17 1f

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over two thousand miles of road radiating from Chicago. Like the fingers in a man's hand, its lines reach in all directions, and cover about all the country north, northwest, and west of Chicago. With one branch it reaches Racine, Kenosha, Milwaukee, and the country north thereof; with another line it pushes through Janesville, Watertown, Oshkosh, Fond du Lac, Green Bay, Escanaba, to Nagaunee and Marquette; with another line it passes through Madison, Elroy, and for St. Paul and Minneapolis; branching westward from Elroy, it runs to and through Winona, Owatonna, St. Peter, Mankato, New Ulm, and stops not until Lake Kameska, Dakota, is reached; another line starts from Chicago and runs through Elgin and Rockford to Freeport, and, via the Illinois Central, reaches Warren, Galena and Dubuque, and the country beyond. Still another line runs almost due westward, and passes through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar Rapids, Marshalltown, Grand Junction to Council Bluffs and Omaha. This last named is the GREAT TRANS-CONTINENTAL ROUTE, and the pioneer overland line for Nebraska, Colorado, Utah, Idaho, Montana, Nevada, California, and the Pacific Coast. It runs through the Garden of Illinois and Iowa, and is the safest, shortest, and best route to Omaha, Lincoln, and other points in Nebraska, and for Cheyenne, Denver, Salt Lake City, Virginia City, Carson, Sacramento and San Francisco, and all other points west of the Missouri River.

TO SPORTSMEN:

THIS LINE PRESENTS PECULIAR ADVANTAGES—FOR PRAIRIE CHICKEN, DUCK, GEESE, AND SPANT SHOOTING. THE IOWA LINE TO-DAY OFFERS MORE FAVORABLE POINTS

than any other road in the country, while for Deer and Bear Hunting, and for Brook Trout, Lake Salmon, Pike, Pickerel, and Bass Fishing a hundred points on the Northern and Northwestern lines of this company will be found unsurpassed by any in the West.

MARVIN HUGHITT, W. H. STENNETT, Gen. Supt., Chicago. Gen. Pass. Agt., Chicago. apl6

Thomson's

Oil Finished Grain Leather Shoe-
Pack or Moccasin.

With Sole, Price, \$7.50. Without Sole, \$5.50

Made with heavy sole for land use; also without
sole for snow and canoe purposes. All hand sewed
and strongly made. Laced in front with hooks (over
English style of water-tight tongue), thereby securing
PERFECT FIT around ankle, thus preventing all
slipping at the heel. Made with broad soles and on
scientific principles.

Fills the want long felt by sportsmen for an easy
fitting and durable shoe.

In ordering, state size of boot worn. Sent by mail
on receipt of price, with 40 cents additional for post-
age, or by express C. O. D. everywhere. Manufact-
ured by THOMSON & SON, 338 Broadway, New
York. ju27-1f

Good's Oil Tanned
Moccasins

THE "Boston Shooting Suit."

(NAME COPYRIGHTED).

MANUFACTURED ONLY BY

G. W. SIMMONS & SON,
Boston, Mass.

Sold everywhere in the U. S. by all first-class
dealers in

SPORTSMEN'S GOODS.

EACH GARMENT DISTINCTLY MARKED

"BOSTON SHOOTING SUIT,"
made by
G. W. Simmons & Son.

This new design of WATERPROOF SHOOTING SUIT,
made from extra quality duck, has acquired quick
celebrity. Advertised for the first time in April last
in the FOREST AND STREAM. In five months it has at-
tained such popularity as to be called for from all
parts of the country, and even from England.

"Shipping clothing to England strikes us very much
like sending 'Coals to Newcastle,' but the merits
of the 'BOSTON SHOOTING SUITS' have been
heard of in the Old Country, and that land of sports-
men has sent an order to Messrs. Simmons & Son,
which will doubtless be followed by many others.
Our Editor-in-Chief, who knows something about a
sportsman's requirements, is using this same equip-
ment in the Adirondacks."—Boston Paper.

The design embraces the best points of the English
and French Suits, combined with the necessary re-
quirements for American service. Particular atten-
tion has been paid to color.

Each suit is thoroughly water-proofed by a new pat-
ent process. The seams and pocket corners being
securely fastened, and nothing neglected to render
the suit perfect in every respect.

The price has been fixed at \$13, to include Hat or
Double Visored Cap, Detachable Haverlock, Coat,
Vest, and Pantaloon.

One hundred suits will be kept ready in stock, so
that we can furnish to order any size required, at a
moment's notice.

In the Golden Rule (Rev. W. H. H. Murray's paper)
the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof
suit, specially adapted for sportsmen, designed and
made up by Simmons & Son, of Boston, and to which
we call the attention of all brethren of the out-door
and shore-shooting fraternity, because it meets the
demand of personal comfort and convenience beyond
anything of home manufacture seen by us before.
As a sportsman, we give it our unqualified endorse-
ment, as combining the best points of the English
suits, and in addition skillfully adapted to the neces-
sities of the American service. It is a most admirable
and satisfactory contrivance in color, style, water-
proof quality and capacity. The coat is a marvel
in this latter respect."

Persons ordering from a distance need send only
the following to be sure of a perfect fit:—Brest Mea-
sure, Waist Measure, Inside Seam Coat Sleeve, Inside
Seam Pantaloon; Mention Height and Weight.

McBride Flies,

The Standard Flies for American Waters.

These flies are imitations of American insects, or
combination of colors, that an experience of forty
years has proved most successful. Parties sup-
plied with casting lines and artificial flies for
Pennsylvania trout streams, Adirondacks, the Maine
Woods, Lake Superior, Thousand Islands, Canadian,
and other waters. Anglers not acquainted with the
nomenclature of these flies, by mentioning the local-
ity where they intend fishing, will have the varieties
best suited to those waters sent to them. Flies copied
from any natural insect or pattern desired. SARA

The Hazard Powder Co., MANUFACTURERS OF Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 3 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short gun.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12 1/2, and 6 1/2 lbs. and cans of 5 lbs. FFFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office

88 Wall Street, New York.

Of all kinds and descriptions.

For sale in all parts of the country. Represented by

F. L. Kneeland,

Feb 10-1y 70 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6 1/2 lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.G. FFG, FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 lb.

All of the above give high velocities and less resistance than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER Co.,

26 Murray St., N. Y.

Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

CHALLENGE.

The undersigned is prepared to prove all the superior qualities he claims for his powder.

Safety, Cleanliness, Strength, Little Recoil, Little Smoke, Small Report, Less Heating of the Barrel in Rapid Firing, and its Regularity in Shooting.

He challenges all riflemen to shoot against him with black powder, 200 rounds, without wiping; 100 rounds off-hand, at 200, 500 and 1,000 yards respectively, and 100 rounds in any position at same distances; the 200 rounds equally divided at the three ranges; sighting shots extra.

Will shoot for money if desired.

The powder is also well adapted for shot guns. Inquire for the "Dittmar Powder" of your dealer address the

SOLID ANVIL

Paper and Metallic Shells

FOR

Breech Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers. dee23 tf

THE TRAPPER'S STORY.

[From the Globe Democrat.]

T WAS a moonlight night, the trapper began
As we lay by the bright camp fire—
Come fill up your pipes, and pile on the brands,
And draw a little higher—

'Twas a moonlight night when Bet and I,
Bet, she's the old mare, you know—
Started for camp on our lonely route,
O'er the dreary waste of snow.

I had been to the clearing that afternoon,
For powder and ball, and whiskey, too,
For game was plenty, furs in demand,
And plenty of hunting and trapping to do.

I had no fear of the danger that lurked
In the regions through which my journey lay,
Till Bet of a sudden picked up her ear,
And sniffed the air in a curious way.

I knew at once what the danger was,
And Bet struck out at a forty gait;
'Twas life or death for the mare and me,
And all I could do was to trust to fate.

Wolves on our track, ten miles from home!
A pleasant prospect that—eh, boys?
I could see them skulking among the trees,
And the woods re-echoed their hideous noise.

At last, as their numbers began to swell,
They bolder grew and pressed us close;
So "Old Phil Driver" I brought to bear,
And gave the leader a leaden dose.

Now, you must know, if you draw the blood
On one of the sneaking, ravenous crew,
The rest will turn on the double quick,
And eat him up without more ado.

This gave me a chance to load my gun,
With just a chance to breathe and rest,
When on they came! a gaining fast,
Though Bet was doing her level best.

I began to think it was getting hot;
"Phil Driver," says I "this will never do;
Talk to 'em again!" You bet she did,
And right in his tracks lay number two.

Well, boys, to make a long story short,
I picked them off till but one was left;
But he was a whopper, you'd better believe—
A regular mammoth in size and heft.

Yes, he was the last of the savage pack,
For, as they had followed the natural law,
They had eaten each other as fast as they fell,
Till all were condensed in his spacious maw.

For Forest and Stream.

Running the Manistee.

CAPT. JACK projected the expedition. Not Capt. Jack of the murderous Modocs, for he has passed through a hempen noose to that mythical land where he now way-lays emigrants, shoots commissioners, and steals ponies *ad libitum*, but Capt. Jack of Grand Rapids, part owner and master of the section boat Modoc, such a boat as we sometimes see pictured in the advertising columns of FOREST AND STREAM. I had never seen our Capt. Jack until I joined him on our late trip, although our correspondence commenced more than two years ago, when he first ordered fly-fishing tackle of me. Our letters gradually became more and more friendly as we discussed the geographical position and grayling capabilities of the various branches of the Manistee, and this, early last summer led to an invitation that I should join him in a trip to the source of the main branch. So I started from Philadelphia on the 21st of August at 1 p. m. and bowled along over the smooth steel rails of the well-ballasted track of the Pennsylvania Railroad, sleeping soundly in my berth as I passed through Pittsburgh, and ained the next day at Fort Wayne. Here I transferred myself to the Grand Rapids and Indiana Railroad, and in passing over the level and undulating lands of Michigan noticed many lakes of various areas,

suggestive of pickerel, mascalonge, and bass. Capt. Jack and his friend joined me at 10 p. m. at Grand Rapids with their cabin car, containing two boats, provisions, and camp equipage. And here let me describe my youthful fellow voyageurs: Capt. Jack I found to be a sinewy youth of twenty-one, 5 feet 10 inches high; his companion, whom I shall call "the Navigator," was of the same age, rather shorter and more robust. Better men could not have been found for our journey down the difficult river. By breakfast time next morning we had reached the town of Mancelona, well up towards the Straits of Mackinaw, and found our men, Taber, an experienced woodsman, and Egan, a sturdy fellow and excellent cook, awaiting us. Having replenished the inner man, we proceeded to look after our outfit. There were two section boats with live boxes amidship, one of about 33 inches beam and 16 feet long; the other, the Modoc, nearly 4 feet wide and 18 long. I at once saw that they were not of appropriate model for running a smooth rapid stream obstructed by sweepers and sunken logs. They had not floor enough, of course, and drew too much water. The smaller was not over 20 inches across the bottom, and the larger not over 27—very different in carrying and floating capacity from the light-draft boats of my friend Dan Fitzhugh, and then they were fitted with awkward oars, and the men were inexperienced in the use of the setting pole. They were the only boats, however, that could be procured at Grand Rapids for our journey. We loaded boats, our two tents, our provisions, and our many etceteras on a two horse wagon, fastened all securely with ropes, and proceeded eastward on the road towards Otsego, which is on the northern branch of the Michigan Central Railroad. Otsego is a village by the side of a small lake of that name 12 miles above Crawford, or Grayling, as it is now called, and is 20 miles east of Mancelona. At 1 p. m., having traveled a distance of eleven miles, we came to the bridge near the head of the main branch, and as I supposed the most westerly of all the branches. Capt. Jack, however, most averred that it was the head of the main stream, regardless of its being a westerly or easterly branch; and its being one or the other was a matter of much conjecture and discussion among us as we descended it. We were disappointed in its size, and had some little misgiving as to there being water enough to float our large craft when loaded. We joined the two sections of each boat, launched them from the bridge, stowed our traps, lunched, and commenced our journey. The river here was a mere brook, the outlet of a small lakelet a few miles to the north; the water still retained the same temperature it had acquired in the pond, and much too warm to be palatable. We knew, however, that the constant influx of springs as we descended would, within a few miles more, bring the temperature down to that of spring water. There were many windings, many sharp curves in which the Modoc rubbed her nose and stern against opposite banks, much dodging of alders, much scraping and pushing over shallow places until 5:30 p. m., when, after making a distance of two and a half miles or so, we thought it time to camp for the night; so we pitched our tents while Egan rigged up the camp stove—for Capt. Jack, the luxurious scamp, had brought one along—boiled our potatoes and coffee, and fried our bacon flitch. And how good it all tasted, this woodman's rough fare. I don't think I ever ate such potatoes. I never knew until then that potatoes had a flavor.

We had scarcely started next morning when we found we had come to cold water, and with the cold water the sweepers.

And now my dear reader, unless you have run a trout or grayling river in Michigan you hardly know what sweepers are. They are invariably white cedars, the arbor vitæ of the east, and invariably grow on the very margin of the streams, which wash away the friable sandy loam from their roots, and cause them to incline over the water, and at last to fall into it, and in most cases directly across. Probably no boat or even a canoe had passed down this incipient river from the bridge above "since the time of

the Indians," and most likely not before. So our men Taber and Egan, who were exports with the axe, and were well equipped in that way, had some chopping to do. Not unfrequently the sweepers were partly under, or the upper sides just even with the surface of the water, which rendered the chopping of the log thrice as difficult. Then we would occasionally come to some monster log eighteen inches or two feet through, extending entirely across the stream, the moss growing on many of them having matted and spread until broad highways were made for bears and other "varmints." And on such bridges we frequently, in our journey, saw evidences that prated of Bruin's recent whereabouts. Sometimes a row of thrifty cedars, many of them apparently fifty years old, sprouting from the prostrate parent trunk at intervals would span the current that glided beneath. You would think such an old trunk rotten—that you could dig through it with a grubbing hoe; but scrape away the moss and strike your axe in; by the time you had got the outside chip off you were into sound timber. A cedar, and especially a white cedar, in the water never rots. I believe some of these logs had been there a century. Over such we made a "carry," although a short one. Piling our luggage on the log itself, or on shore, we would pull the empty boats over with a "he O heve," and loading them again go on chopping sweepers and hauling our boats over logs whose upper side came only to the surface until we came to another carry. And so we continued until Saturday night, and then the Sabbath sun dawned upon us. No open water yet; our potatoes were nearly exhausted, our twelve pounds of bacon gone, and we had not struck grayling; there were plenty of them rising among the sweepers and logs that obstructed our way, but they were not for us, although I essayed with an alder pole and then at great risk, even with my ringed rod to entice them, but it was "no go." Our men had worked and chooped in the water in their stocking feet or barefooted three mortal long days. Capt. Jack, who started from home with a cold in his head, donned his India-rubber waiting pants, and worked with them until his cold had nearly disabled him, when the Navigator succeeded him in the use of the leggings, and rendered good service. To make our plight still more sad, Taber, our head man, had snagged his foot badly, could not wade, and was obliged to chop logs standing in the large boat. But Capt. Jack, the Navigator, and Uncle Thad still enjoyed the scene and the adventure, and with our plucky men were determined to go through. It was a question with us this bright Sabbath morning whether we would rest a day or plead the necessity of getting out of the bush as an excuse for pushing on. We had hoped by this time to get down to the open water and meet with the gang of men who were improving the river by clearing it of logs and sweepers, and replenish our depleted commissariat; that we would have found good fishing, and that our troubles would be ended.

Measuring the distance by land I don't think we had come four miles, and certainly not over ten by water from the bridge above. One day we did not make over a half mile. The stream, however, had quadrupled in volume, and that was encouraging. I had been so confident that we would strike the headwaters of one of the western branches that up to this time I had not consulted our pocket map. On producing it, what was my astonishment to see that the road from Mancelona to Otsego (that is if the map was correct) crossed only the head of the eastern branch, those to the west of it rising south of that road. After all hands had taken a look at it we were inclined to think that the map was wrong, or Capt. Jack in error. But he stuck to it that whether an eastern or western it was the main river that he had fished lower down the previous summer; that we would soon come to unobstructed water, and had vainly imagined the day before that he heard the sound of axes and the halloaing of the gang of the River Improvement Company. In fact, we had noticed the previous day in several places that the sweepers had been cut by some persons who had evidently worked a passage upward in a canoe at high water a year or two ago, probably trappers or land hunters. As we had a long river

to run before we got down to Walton, where the Grand Rapids road crossed it, we resumed our journey. Since the Navigator had placed himself in Capt. Jack's shoes, or rather in his India-rubber leggings, he utterly refused to relinquish them, but accompanied Taber and Egan in lifting the Modoc—which, by-the-by, drew ten or twelve inches—over logs and sunken-sweepers, and worked with a will. Capt. Jack and I occupied the smaller boat, which had but a light load. It was very encouraging when we came to twenty rods or so of open water, and then Capt. Jack, would exultingly exclaim, "sailing on summer seas," but the next bend of the river would bring us again on the sweepers. An hour or so after lunch, however, we did get clear of them. The bright, swift, noiseless, smoothly-gliding stream, with its yellow sand and pebbly bottom sped onward, the graceful cedars fringed the bank, while towering white and Norway pines backed them in their majesty where the rising ground retreated from the river, and we were happy.

About 5 p. m. we came to an enlargement of the river which might have passed for a lake; but it was quite shallow, had reedy islands in it, and we had much difficulty in pushing over sand-bars. Then the river narrowed somewhat, and was still free of sweepers, and it was time to camp for the night. I had put my rod together an hour before, and taken a few fruitless casts as we pushed rapidly along. Now I saw diverging circles as the fish rose, and determined to have grayling for supper. So coming to the lower point of an island, my cast of flies dangling in the water, a grayling took hold nearly under the boat. I "whopped him in." "We have got to them at last," said the Captain; "now fish for the larder." They took the fly "like mad," these unsophisticated grayling. To them it was "a delusion and a snare," which had never been dreamed of in their philosophy, or that of their progenitors. It was a virgin stream. No fly had heretofore been cast on its waters. In less than a quarter of an hour, for I used no landing net, but pulled them right in, Capt. Jack had counted 20 fish. "That will do now," he said, "we have plenty for supper and breakfast; we will tarry here a day or so and pay our respects to them in the morning."

As we were to remain at this camp for at least two nights, the Navigator, who was always solicitous as to "the old man's" comfort, was determined to have a softer bed than usual. All around on fallen trees and stumps grew that beautiful moss so common to this part of Michigan. It was soft, thick and long, and on the stumps which it entirely obscured, gave the appearance of high rounded green mounds. What ornaments these would have been to a gentleman's lawn. My young friend tore the sods from where they had grown and piled them doubly deep; on them we stretched our India rubber blankets and then our buffalo robes.

On Monday (August 28th), after breakfasting on fat little sand snipe, which the Navigator had bagged on the small islands of the shallow lake above, we tackled the grayling, Captain Jack and Uncle Thad in the Modoc with Egan to hold her steady, and the Navigator with Taber in the small craft. We slew them *ad nauseum*. We dined at 2 o'clock, and went at them again when the sun had shaded the camp side of the river. It required no skill; all one had to do was to pitch his flies towards them; and the Navigator, who had never cast a fly before, far outnumbered a certain old fellow who had written a book on angling. I laid aside my rod in disgust at their tameness, and was well contented to see the tyros enjoy the sport, and by sundown the live boxes of both boats had as many fish in them as could possibly be kept alive.

After a single day's sport here we started on Tuesday morning (August 29th) and, as we had feared from an early survey by the Navigator, found our course again obstructed by fallen logs and sweepers. We made about two miles by the river, however, resumed our chopping the next day, and at about 4 p. m. came to open water once more; a wide, deep water surrounded by swampy land, and reminding one of the bayous of Louisiana. When we pitched our tents Egan was quite unwell from wading in the cold water. The next morning he was feverish and chilly by turns, so we determined to leave him asleep in his tent while we enjoyed a day's fishing.

On August the 31st we once more put our rods together for a raid on *Thymallus tricolor*, Captain Jack and the Navigator in the small boat and Uncle Thad with Taber in the Modoc. The fish were not as numerous as on the first day above, but sufficiently so to satisfy the most greedy angler. Below our own we found a camp occupied earlier in the summer, and as evidences around indicated, by a party of Chicagoans. A copy of the *Times* of July 5th was found among their relics.

On Friday (September 1st), Egan having recovered from his illness, we loaded our boats once more. "Sailing on summer seas" was the oft repeated quotation of Captain Jack and Uncle Thad as they glided down the beautiful river. An hour or so after starting a boat of Dan Fitzhugh's model came around a bend, and I recognized the sturdy fellow who with his setting pole drove it against the strong current as Ramsdell, who was one of our party the previous summer. He had with him an angler setting on the cover of the fish-well. "Mr. Norris," said Ramsdell, "this is Mr. Trout, of Mercer county, Pennsylvania."

We lit our pipes, and then I questioned Ramsdell: "How's the fishing over in your branch of the Manistee?" "My branch! Why this is my branch."

"Where did you come from?" "From Crawford."

"And did you cross another stream to get here, and do you mean to say this is the east branch—the branch Fitzhugh and Townsend and I and you and Len Jewel and Johnny Sharp were on last summer?"

"Well it ain't any other."

I turned around to Captain Jack, who sat in the stern. "The mystery is solved, I know now where we are, and you are right that we are on the main branch, although the east branch," Ramsdell informed me that we were some ten miles above Babbitt's Camp, where Jones and his bear "Billy" had their quarters the previous summer. That Jones had taken to trapping, that Babbitt was not fishing for the market this summer, but working at his trade of shoemaking at Crawford.

Onward we floated, passing the camp of the River Improvement gang, where we lunched and the friendly fellows replenished our stores of pork, butter, potatoes and onions in exchange for fish. Then we passed Babbitt's old camp, now occupied by Jones, whom we met a few miles below. He said he had captured and killed fourteen bears besides smaller furred animals last winter. Presently we passed our old camp, where we had spent five happy

days of the summer of 1875, and camped two or three miles below. Seated in the bow of the small boat, while under full headway, I had, by casting on either side as Captain Jack paddled and directed its course, killed a good many grayling.

Saturday (September 2d) we devoted to fishing as we floated down the river, stopping at the most likely places, and when we stopped to camp had captured about two hundred fish, which we put into an old live box that we found at a deserted camp.

September 3d being Sunday, Captain Jack packed away his rod, but the Navigator and Uncle Thad could not resist the temptation to toss their flies to the grayling as we ran the stream, and by lunch time had scored over a hundred. Then the river became a perfect torrent, running in many places five or six miles an hour, and this with its many sharp bends forced us to give undivided attention to our navigation. At 5 p. m. we landed at Hawley's camp, eighty miles or so above Walton where we expected to leave the river.

Hawley I found to be a fine specimen of a boss lumberman, and has the credit of keeping one of the best ordered camps on the river. In winter he employs forty or fifty men. He has occupied his present camp for about two years, has an immense log house for cooking and for boarding his men, another for a lodging house, and a large barn, stable, grainery, store room, and an office. Adjoining the latter he had a comfortable room, and a bed which he insisted on my taking possession of for the night.

A European or Eastern State laborer would open his eyes if he sat down to a table provided at a well managed lumbering camp on a Michigan river. Besides the usual necessities, pork, flour, potatoes, and tea, I found at Hawley's, and also at the camp of the River Improvement Company, good butter, good coffee, pies, cakes, cookies, etc. Egan, whose usual occupation is to cook for lumber camps, informed me that such fare was customary, that no boss could get or keep good hands if he did not feed them well and even luxuriously; that fish could generally be had for the casting of a line or spear, and venison and bear meat in season were quite common, and that men were frequently employed to fish and hunt for the camps. Provisions are cheap, however, in Michigan. At Grand Rapids potatoes are being sold in quantity at 15 cents per bushel, good butter at 15 cents a pound, choice cuts of beef at ten cents, and the whole beef dressed at four or five cents. Hawley refused to take pay for the butter, potatoes, pork, and onions, with which he furnished us and treated us in the most hospitable manner.

Monday (September 4th) our host volunteered to help us transport our boats over a long jam of logs a mile below his camp, then to start two shorter jams farther down, and lent us his cant-hook in case we should meet with others on our way. After supplying his moderate wants in the way of flies, leaders, and lines, that he might have an occasional mess of grayling, and giving him some of our own fish, we reluctantly bade him good bye about 1 p. m. We still continued to fish, casting in shore and hooking many a lusty grayling as we rapidly ran the river. The stream, as we descended was not appreciably wider than forty miles above, but deeper, and the current stronger, with the exception of some wide still pools, as if river had been piled upon river until in many places the setting pole failed to find the bottom. As we passed along we noted the influx of the stream from Portage Lake, the branches on the western, and the minor tributaries on either side. An hour before sundown we were stopped by a jam of long small timber a hundred yards below a roll-way, and camped by the side of a brook not much in temperature, above ice water.

Tuesday (September 5th). With the aid of Hawley's cant-hook, Taber had the jam opposite our camp started by 9 a. m., and then we threaded our way through, and had many a race with logs that floated sometimes lengthwise and sometimes crosswise, at the imminent risk of having our boats stove or crushed. As it was, we succeeded after a few squeezes in slipping in between, and then at last in out-running them. At noon we lunched at the State road bridge, and about an hour by sun were stopped by another jam about two miles from Walton Station. Here Captain Jack, who had been absent his allotted time (two weeks) prevailed on a man at a lumber camp, near by, for a fee of two dollars to pilot him in the dark to Walton, from whence he started in the night train for Grand Rapids; leaving the Navigator and Uncle Thad with Taber and Egan to procure a team and transport boats, luggage, and fish to the station next morning. Our provisions were again exhausted, butter, lard, pork, all gone, so we had to content ourselves with a supper of boiled grayling, tea, and potatoes.

Wednesday (September 7th). After a frugal meal like that we had partaken of the night before, Egan started in the rain to a lumber shanty a mile off to procure a wagon. By the time we had transported our disconnected boats, our baggage and fish from the bank of the river to the high ground, a distance of 20 rods, he returned with a long loaded vehicle drawn by a pair of horses. At 1 p. m. we were at Walton station, and next morning at 6 a. m., with our fish packed in ice at Grand Rapids. We had been feeding on grayling for ten days. Taking them at an average of a half pound, and each of the five men eating six per day, the consumption per diem was 15 pounds or 150 pounds for ten days. We, moreover, gave away a good many fish to the river men, and my two young friends had a bountiful supply for their families and friends at Grand Rapids.

We found that since Mr. Fitzhugh, and then our party subsequently with him, in the summer of 1875, had explored and fished the east or main branch of the Manistee, it had become known to anglers from various parts of the West, and as we ran the river found vestiges of several camps that had been occupied by anglers earlier in the season, and at one of them unmistakable signs that ladies had been of the party.

One peculiarity of the Michigan rivers is their many short turns and windings. The distance from where we launched our boats to Walton by water could not have been less than a hundred and fifty miles, by land not a fourth of that distance. From Walton to the town of Manistee, on Lake Michigan, it is said to be 300 miles by the river and only 60 by land, and we are told of one of the bends below Walton which is ten miles around and only 40 rods across by land. The River Improvement Company, which is a chartered corporation and charges a toll or royalty, on all logs that are floated to market, had scarcely worked up as far as Walton, until a little over two years ago. The lumbermen are an independent, rough, hardy set of fellows.

It is somewhat wonderful to an Eastern man to see one of them—and sometimes a mere boy—when he has an errand down stream, jump on a log and after dancing about on it a few moments to keep it from rolling, get it "on an even keel," and with his setting pole direct its coarse as skillfully as if it was a canoe.

There is no State more accessible to the sportsman, particularly those of the West, than Michigan. One can leave Cincinnati at 7 a. m., sup at Grand Rapids and by next morning find himself nearly up at the straits of Mackinaw. Nearly every station above Grand Rapids has a lake with bass and pickerel, or a stream with grayling or trout within a few miles. The pamphlet circulars with maps accompanying, issued by the Grand Rapids and Indiana R. R., and to be had at the office of FOREST AND STREAM, give full particulars of them.

I was the guest of Captain Jack on this excursion, as I was also for a few days of his hospitable family at Grand Rapids, and saw much of that flourishing young city and the neighborhood around. It is a railroad center of importance, and I was surprised at the extent of its manufactures, particularly of household furniture; the Grand river which is here nearly a hundred yards wide, supplying an abundant water power. The soil of this section of the State is a sandy loam, containing an abundant admixture of vegetable deposit. I admired greatly the rich pasture lands and thrifty cornfields and orchards. At last I had to bid Captain Jack adieu, and to parody the lines of the author of John Gilpin:

"Next time he doth a fishing go,
May I be there to see."

THADDEUS NORRIS.

For Forest and Stream.

THE THOUSAND ISLANDS.

WE shall doubtless, cease to wonder, before our Centennial summer is ended, that Sancho Panza regarded eating and sleeping as the greatest of human inventions. The excursion is an invention of later date, and "Cook's Tourist" was then unknown to fame. Now, however, there is no doubt, but that the men who invented excursions, have superior claims to immortality. We are not only convinced that they are good things to have, but we know they are easy things to have. They are plentiful—they are various. There are excursions by moonlight, big ones and little ones, long ones and short ones, and the ever-graced round ones. No one need go excursionless. Out here on the borders of the famous old St. Lawrence (which the Indians called "Sweet Water" to distinguish it from the bitter briny ocean) there is a grand store house of excursions, devoid of mummies, but redolent of "fresh muscalonge." No pickled, dried, smoked, or salted heresies will answer here. Everything must be newly caught and as fresh as the green waters, which Cooper's British Captain called the "Sailors' bane." The fish that languisheth is not the fish for the educated palate of the Thousand Islander. It must flounce from the shining fishing hook straight into the smoking frying pan, or it is fit only for the wayside cat. If one can only manage to escape from the "Centennial," here is a pleasant refuge where he may have his views widened. Wandering through Cook's circular pavilion will of course give one a notion that there are no excursions left; that Cook has cooked them all up. To dispel this illusion, you need only to be set down at the foot of the Great Ontario, that "one gun" among the lesser lakes, and behold for the first time the gay little excursion steamer, T. S. Faxton, nodding at you through the mist-destroying sunshine. As you scramble on deck with 499 other fellow excursionists, with traveling bag or lunch basket in hand, the fresh blood will surge through the veins and possibly send up its batch of interfections, which explode like "the foam on the wave" into Oh's and Ah's, and Splendid! Charming! For here be it known there are no drawbacks, no weary miles of vessel-lined shores like the New York Harbor, no "purgatory" of a dreary channel to plunge through; at one bound you are in paradise, sailing among the green "Islands of the blest," and feasting the eye on the happy hunting grounds of the defrauded Indian. The Faxton, herself, makes no poor show. A splendid set of colors stretches far out and waves its crimson stripes over the water as though endeavoring to outstrip the green waves beneath. Another flag with forked ends exhibits her monogram in national colors, and a third has the portrait of the unselfish muscalonge who is waiting to be eaten at your pleasure. Last but not least of all, standing squarely on the lofty summit of the wheel house is the brassy lion, with hoisted flag-like tail which "latter" must have been counted in by the truthful Sunday school lad, who informed his mother that there were four flags on the Faxton. By the way, this lion reminds us of another lion—the Hon. Caleb Lyon, of poetical as well as practical proclivities, who sang

"The Thousand Isles, the Thousand Isles,
Their charm from every care beguiles."

Once afloat on the St. Lawrence and you are as much beguiled as any constant human being need to be. The stimulating breeze scented with the fragrant pine and cedar, brightens the eye and unloads the care-laden brain. You cease to puzzle over the Eastern difficulty, you forget the Bulgarian atrocities, and lose all interest in the "fall campaign." As you look down into the green, translucent waters you will perhaps be reminded of the Russian Malachites at the Exhibition; but "our Centennial" is no longer a tiresome melting reality—it has become a dim, mottled picture, pleasing to memory's eye; and if you should chance to have a nervous feeling, that you are drifting too far away from it, a gentle look will set you right in a moment. For it will inform you that there are 13 ways to get back to it, and that each one is more rapid and delightful than the other. Perhaps you have visited Niagara Falls years ago and been awed by its mighty cataract. If so you will smile at the superfluous editor who assures you that you can "derive far more pleasure from the exquisite scenery of the Thousand Islands than from any such watering place as Saratoga or Niagara Falls." It is a pleasant conceit truly, but you are forced to admit that you had never before thought of Niagara Falls as a "watering place," although there is undoubtedly more water there to the acre than any other part of the world can boast of. As to the pleasure to be derived, you are deriving it already in magnificent doses, and expect to continue to derive it, so long as this lovely flock of islands flits past. There is Carlton Island, with its long low line of shore, reminding you of the Jersey flats. Only recently it has had its little romance. At its head was found a corked bottle containing the fol-

lowing letter apparently written hurriedly on a bit of paper torn from a memorandum book:

"DEAR WIFE:—I have only one moment to write this. We foundered outside of Charlotte, at 2 o'clock on the 6th of July. We join in death." CAPT. H. FINLEY."

Can it be possible? Are we really on dangerous waters? The sun shines gayly; the waters curl back upon us from the dividing keel, in friendly fashion; the lovely islands hover about us like guardian angels; the smoke of the pale-face fires rises like little clouds above the wooded shores, cannon, and starry flag, to do us honor as we pass. Row boats, sail boats, yachts and steamers, big and little, royal and un-royal, flock the green waters. How could 500 souls go down amidst all this material aid? It seems quite impossible. Perhaps the bottle story is all a fiction. It may have been set afloat by a squad of rollicking Harvard or Yale fishermen, in the intervals of pickerel fishing, under solemn compact, just as an experiment to prove the reliability of bottles as message bearers. Or it may have happened a century ago before excursions were invented, patented or made proof against "unmerciful disaster." Then of course if it happened it was in the night time, when the skies were black with clouds, the sailors sleepy and the Captain's eyes inflamed. Now it is broad daylight, the skies are as blue as sapphire, the boat is well officered and as safe as a rocking chair. Surely nothing will happen—but the memorable accident to the "small boy" who always loses his hat overboard, and has to take refuge from sun-stroke under his sister's parasol. But the islands! How they dodge about! Now they "circle all around" you—now they lead off single-file like Indians on the war path. Yonder comes a little one, which you call baby or papoose island for want of a little name. It looks no bigger than a man's hand in the distance, but now you discover it has its aspiring trees and its growing vegetation. From Weld's "Journal," written almost a century ago, you learn that the lake of the Thousand Isles, which is that portion of the St. Lawrence lying between Cape Vincent and Brockville, is 25 miles in length and six in width. Since then 800 islands have been added to the list, so it might, with more truth, be called "The 1800 Isles," and yet sentiment will probably cling to the old name. There has, however, been a great rage for naming and re-naming these islands since the excitement of 1872, at which time many of them were bought up either for speculation or as summer residences by private individuals. Whether this "pale-face" baptism is an improvement, is doubtful. Here are some specimen names: Harmony, Sunbeam, Sunny Side, Wild Rose, Little Charm, Little Angle, Free and Easy, Friendly, Pleasant, Knobby, Elephant Rock, Devil's Oven, Nigger. Only one has been named after their original owners, the Indians, and that is "Iroquois Lodge," formerly owned by Seth Green, the noted pisciculturist, and at present by the American Club of New York city. So it seems that even in matters of minor importance we compel the dusky native of the soil to share the honors with his darker imported brother. Strange as it may seem the educated foreigner can never quite understand the rapidity with which we accomplish our enterprises. The Antwerp Gazette states that "Even now there is a live baronet stopping at the Hotel at Alexandria Bay, who dare not go out to the islands for fear of being scalped by the Indians. Since Custer's misfortune he has also given up his intended trip to California, which he thinks is situated in Canada." As a native American and a well-tutored excursionist, you have no fears of the untutored red men. You are positive that the "Indian hunting encampments" have disappeared entirely, and you will find in their places nothing more wild and dangerous than the camps of the shouting Methodists. As a people, they, the Methodists, have the reputation of being quiet and peaceable in everything except their religious ways. They only desire to relieve you of your sins, instead of your scalp, or rather perhaps to relieve you of your sins here in order to save your scalp in the "hereafter." Perhaps the high-born foreigner, who has spent his whole life in baronial halls or with the High church piety, might get the thing confounded and evade the red-hot Methodist exhorter, who now roams over the Islands, as he would the yelling scalping savage and know no difference; but you have got used to the two different styles and know that the "exhorter," even at high tide, is harmless. You are not afraid of the camp meeting natives or any other inhabitants of these lovely Isles. You prowl about the islands; you land upon them; you swing your shining bait over their grassy or rocky sides; you hunt in the resisting fish; you cook it over the smoky-est kind of a "Yangeese fire;" you eat it off from a plate of birch-bark freshly peeled, and under the shadow of the dense foliage maple; you scream and halloo wildly enough to scare even the wild Indian himself; you sing of course, but you get your campaign songs and Hallelujah choruses, strangely mixed up; you feel happy, fearless and just as gloriously free as though you owned every foot of the island over which you are capering so joyfully; you are free indeed in all but one thing—you are tied to an excursion; you forget it until the shrill whistle calls for you. Then how you hasten back, through untrimmed woods whose skeleton branches reach down, and catch off your hat; and over slippery stones that play the treacherous Injun with your flying heels. Nothing could be more unfortunate than to be left *tentless and flagless* behind an excursion even though she is a little arbitrary, as to hours and minutes. Upon the whole, her ways are ways of "pleasantness," and as she steams slowly away from the red light of the setting sun, you realize that a great change has come over you. It is just as it should be, however, sentiment follows naturally on the footsteps of joy. The merry voices of your tellow passengers are toned down. The heavy parasols are no longer to be seen, the green islands have turned black, only the white foam on the green water is now visible. As the last red line of light sinks below the watery horizon your imagination is wide awake. You almost fancy that with the last flash of sunset you saw in the dim distance the dusky form of "Lo the poor Indian," shooting over the "clear translucent water" in his skin canoe; but unfortunately for the romance of it—you know the Canadian boat song:—

"Row brother's, row, the stream runs fast,
The rapids are near and daylight's past."

is not an Indian song. It was composed years ago by Thomas Moore while visiting an island in this vicinity and is often sung at twilight by the college boys from Kingston, whose favorite pastime is a vigorous row over the water at eventide. Twilight illusions, however, have sometimes a lingering way with them. Perhaps this sunset one is so richly dyed it will last until you are ashore and in bed. Perhaps you will even go so far as to dream

that you have bought three of the "loveliest islands" and have named them, (not Tom, Dick, and Harry) but "Tuscarora," "Arrowhead," and "Dew of June." Yes, indeed! You have done your duty by the poor dispised Indian. Life has no other duties except those of the Sancho Panzian order, so you trail your oars and float aimlessly down the silent shrouded river of dream-land. Down, down you go, until nothing but thin ghosts of excursions go flitting past. Finally old ocean opens its monstrous mouth and swallows up "sweet water," Indian, excursions and all. There is your sleep restful and dreamless. The best kind of preparation for the morrow's fishing, island visiting and gossiping.

Fish Culture.

WILL TROUT LIVE IN WARM WATER?—The popular notion among fish culturists has been, and is, that brook trout will not live in water warmer than 68 degrees. Mr. H. P. De Graaf, President of the Bowery National Bank, who has some fine trout ponds near the headwaters of the Croton river, informs us that during the past dry summer, when the streams everywhere had become low, and many of them nearly dry, the trout naturally collected in the deep holes in considerable numbers. Marvelling that they did exist in apparent good health under such unfavorable conditions, he took occasion to repeatedly test the temperature of the water with a thermometer, and found it as high as 82 degrees. The fish did not die, but are now alive and flourishing. Doubtless bottom springs supplied colder water, but the tests failed to discover a lower temperature than that mentioned. These facts are certainly of value.

GOOD NEWS!—SALMON IN NEW YORK WATERS.—The *Pulaski Democrat* states that the constant rains in that section have so raised the waters of Salmon river, that salmon are now coming up to spawn. On Sunday these handsome fish commenced jumping at the high dam near Wood & Ingersoll's machine shop, and a number of persons gathered on the river bank to watch them. Several monstrous fellows thought to weigh twenty-five pounds, were seen to spring from the water to a height of several feet. Others of a smaller size were observed. A few were seen to go up the "shoot" and into still water above. This is the first time a genuine salmon has been above what is known as the Bennett Dam for years. Now that so much money has been expended in the construction of these chutes, and expressly for the use of salmon, it is hoped these privileged fish will avail themselves of this opportunity afforded them to navigate Salmon river as far up as the Falls, and again stock our stream with their species, once so plentiful here. In this connection it is well to state that in accordance with the last fish law, salmon must not be caught for a period of three years. This is enforced with a penalty sufficient to deter any fisherman from attempting their capture. Give the salmon a fair chance.

PIKE AND PICKEREL.—At the recent meeting of the Fish Culturists' Association in Philadelphia, Mr. J. M. Milner, of the Smithsonian Institution, defined the nomenclature of the pike family as follows:—

"The *Esox reticulatus* is the 'pickerel,' of small size, and both its cheeks and gill-covers are scaled; *Esox lucius* (=estor) is the 'lake pike,' of about 10 pounds weight, with the cheek scaled and gill-cover smooth; the *Esox nobilior* is the 'muscalonge,' distinguished by great size, and having both cheek and gill-cover smooth."

The distinction given agrees with our own, a few weeks ago in a reply to a correspondent. We are pleased to be endorsed by such good authority.

—The Oregon Legislature now in session is wisely moving in the matter of protecting the fishing interests of that State.

For Forest and Stream.

"PISECO" ON THE AQUARIUM.

Loquing in the corridors of the Gilsey House, with an hour's waiting for the train time before me, and nothing to do, I bethought me of the new Aquarium at 35th street and Broadway, and although it was not yet open to the public, resolved on an attempt at a visit. My *nom de plume* secured me ready entrance, and inside I met my genial friend Fred. Mather, an unexpected pleasure, and under his auspices had a pleasanter twenty minutes than the Centennial with its rush and crowd had afforded me. Fred was making preparations, in his own line of business, and his well-arranged troughs and boxes of salmon eggs gave fair promise that to those who attended the opening, the mysteries of the birth of the *Salmo salar* would be made clear. I was impressed with the cheerful, pleasant aspect of the place—clear, light and airy. In the various tanks, a great variety of fish from salt and fresh water were disposing, among others a great muscalonge, which lay sullen upon the gravel bottom of one of the tanks. I would have given a large sum to have been as near to him two months ago, on Lake Ontario. Skates, sharks, cat fish, crabs, shrimps, and many other varieties carried me back to my "Blue-light" days of last summer, when at Wood's Hole, we, too, had an aquarium. The tank or pit for the sea lions is prettily arranged—two terraces, a pit on each, with a stairway through a stone grotto for the convenience of the inmates. One big fellow, alone in his glory, however, gave constant evidence of discontent by his uninterrupted unmelodious bark. It is an interesting display, and the enterprise one well worthy the support and attendance of all fond of seeing fish in their natural state. I feel that I have one more place of interest in New York, and wish the project success. PISECO.

FISH CULTURE IN SMALL PONDS.—From a gentleman owning a small pond of fresh water, two or three feet deep and 15 by 60 in extent, we have received an inquiry as to whether he can profitably raise fish in such contracted quarters, and if black bass would thrive in such a pond. We should have no hesitation in deciding that the profits from such an enterprise, carried on upon so limited a scale, would be very small, if, indeed, any profit at all could be realized.

Not being particularly familiar with practical fish culture, we referred the inquiry to a gentleman who is well posted on the subject, being one of a company organized under the laws of Massachusetts, with a large capital, and having a superior pond for experimenting, in the business of fish culture. The letter of our correspondent got mislaid during its travels, and does not return, but the reply of our friend is received, and may be taken as excellent authority by all who are contemplating fish culture, either on a small or large scale. The letter reads as follows:—

"In such a small pond, it will be difficult to raise fish profitably. If the water is very cold, trout may be tried, and fed liberally. You can no more expect a swarm of fish in a small pond to prosper than will a flock of sheep in a limited pasture. If the trout starves, he grows slowly, or not at all, and the progeny becomes, year by year, more puny. If the sheep starves, the same results follow, but more quickly. Fish will live in a stream or a pond without food for a very long time, as witnesseth those cases of trout in wells existing for very many years—their heads being of the size of a large fish, but the body dwindling to long and narrow proportions. Although disliking the pickerel, and although it goes against the grain to recommend him, yet I really think that it is more probable that your inquirer would gain more satisfactory results by stocking his pond with pickerel, and occasionally putting in buckets of minnows, which may be readily caught in large numbers in a hand net throughout nearly the whole summer. If he does the same with black bass they will grow and propagate, but he will not be able to catch them very readily when his fry-pan cries 'fish.' It is about time that the romance should be dropped from the directions of the fish culturist. Under proper conditions, and in the right hands, the culture of pond fishes has been demonstrated a success, but, equally with other business, it will not thrive under improper conditions and personal neglect." —New England Farmer.

THE DAYS WHEN SHAD WERE PLENTY.—Apropos of the stigma attached to shad-eaters, at the opening of the present century, it may be proper to state that I have heard my father say (who settled in the town of Gill, in 1806) that persons then in middle life told him, as a matter of their personal knowledge, that it was almost at the cost of respectability to eat shad, that delicious fish being considered as worthy of the tables of the very poorest classes only. Turners Falls was the great seat of the fishery on the upper section of the river, and on the last Wednesday of May—the old "lection day"—the whole back country came with their kits, firkins, and barrels to that rendezvous, and caught or bought and salted their fish supply for the year. They were sold at two "Bungtown coppers" apiece. During shad time, if a stranger was entertained at any farmer's house, he was studiously kept a stranger to the prescribed fish, although probably nothing could have been more acceptable to his taste; and a piece of salt pork, even, was cooked for him rather than that the reputation of the host's family should be compromised. Query: Were the present abundance of shad equal to that of eighty years ago, would history repeat itself thereon.—E. W. B. CANNING, in *Springfield Republican*.

HABITS OF BLENNIES.—While the Manchester aquarium was in my charge during the years 1874 and 1875, I devoted one tank of considerable size to the blenny tribe, the little shanny or smooth blenny being of all others the species most abundantly represented. Just about Whitsuntide last year, an unusual commotion was observed in the neighborhood of a little ledge or rock in one corner of the tank. The chief *dramatis personæ* in this commotion were a pair of blennies, male and female, which held possession of this ledge, and upon the floor and sides of which it was found that the female had already commenced and was continuing to deposit her eggs. The male, meanwhile, constituted himself guardian of the citadel, a post which soon proved to be no sinecure. The existence of these eggs having been discovered by his companions in captivity, a raid upon them was immediately commenced, and throughout the greater portion of the day the little fellow was busily occupied in repelling their attacks. When one or two only took part in this onslaught, our little champion easily held his own; but occasionally it happened that five or six, or more, appeared simultaneously on the scene, and thus, while he was opposing an attack in front, others quietly slipped in at the rear, and swiftly detaching a few eggs, made off with their booty to devour at leisure. This condition of matters was in existence for several weeks, during which interval a second female fish placed herself under the protection of the same champion, and deposited her ova on the ledge to be fertilized and guarded by him. By this time, however, the poor little fellow was so exhausted with his onerous duties that he was no match for his assailants. The fame of blennies' eggs as a delicacy, and a knowledge of the spot where they might be obtained, had evidently spread throughout the community; there was a general onslaught upon the rocky fortress, and one morning, exactly one month from the date of the first observance of these phenomena, our little friend was found lying dead at the bottom of the tank, and literally torn to pieces by his assailants. Every egg had meanwhile been stripped from off the rock; the female fish had been driven away, and not a trace remained of the little aerie so long guarded with jealous care, and which had proved such a source of interest to lookers-on. One remaining circumstance has to be related in connection with the foregoing incident. At the usual feeding hour at the Manchester Aquarium the blennies, in common with the other inhabitants of the tanks, had a substantial meal, in the shape of chopped fish and mussels, placed at their disposal. On such occasions our little hero enjoyed a brief interval of rest from his customary watch and ward, and descending from his rocky fortress, hurriedly availed himself of the opportunity of recruiting his strength and energies for future encounters. Not content, however, with satisfying the cravings of his own appetite, he, like a gallant knight errant, remembered his lady-love at home, and seizing a morsel in his mouth, bore it aloft and placed it at her disposal.—Field.

—On Martin's place, five miles north of Millican, Texas, a gray wolf snatched a negro baby sitting in the door of a cabin, and was in the act of running off with it when the mother picked up a rifle and shot the brute dead.

—A Profile House, White Mountains, stage was upset Monday, and rolled over several times, but of eight passengers two only were slightly injured.

Natural History.

GLOSSARY OF OUR WATER-FOWL.—"Teal" (R. L. Newcomb, Salem, Mass.) suggests to us that he would be glad to collect the local "nicknames" of all the shore-birds, wild fowl and water birds from Florida to Maine; and asks us to invite his brother sportsmen to send him lists. He says it would form a sort of sportsmen's dictionary, and if enough material was gathered it might be compiled into a small publication which he thinks would be of great value to gunners. This is very well, but we suggested that very thing sometime ago and have supplied the only means of making such a list of any value, by furnishing the means of identifying with their systematic names the birds which appear under such different appellations in different places. Our "Key to the Shore Birds" (FOREST AND STREAM, Vol. VI., No. 26, and Vol. VII., No. 1), gave each man the means of easily telling precisely what bird he had killed. We asked for a list of the common names of birds thus identified from any and every locality, but thus far have had few answers. If "Teal" can suggest any better or surer way to accomplish the object; or tell us how he is going to gain anything by knowing simply the common names from Florida to Maine without their proper identification we shall gladly help him all we can. It is more important that every gunner should be a well-informed ornithologist than that the ornithologists should be gunners.

TWO LISTS OF BIRDS.—We conclude this week the List of the Birds of Lower Michigan by Mr. Adolphe B. Covert, of the University Museum at Ann Arbor, in that State. He promises us an addendum of those birds which have been overlooked, similar to the appendix to Mr. Fowler's List of the Birds of Central New York, which we will print next week. Each of these lists was among the most valuable results brought out by our "Invitation" to naturalists to study and report upon the characteristics of the fauna of their respective districts. In each case the district covered was comparatively unknown, ornithologically, and thus the limits of our knowledge of the distribution of our birds has been so much extended. It only needs enough information of this very sort to enable us to arrive at general laws and relations. Mr. Covert promises us further contributions in the shape of detailed accounts of the rarer birds of Michigan, and also of the animals of that very interesting State.

NOTES FROM OUR CORRESPONDENTS.—Considering its slender legs and weak claws, a remarkable fact is reported of the great northern shrike (*Lanius borealis*) by a correspondent who is an excellent observer of birds. The shrike was seen sitting on a fence-post eating a small bird; when, alarmed at the gentleman's approach, it seized its prey with its feet, and holding it straight down like a hawk, flew off, affording an excellent view.... "Roamer" writes us that a Carolina or turtle dove (*Z. carolinensis*) was killed at Machias, Me., on Oct. 9th. It is extremely rare so far north, and this bird was the only specimen the writer had ever seen there.... Mr. Roberts writes from Minneapolis that Harris's and Lincoln's finches are both common there just now—a rare occurrence.

BIRDS OF LOWER MICHIGAN.

[Concluded from page 147.]

Cygnus buccinator. Trumpeter swan. Very rare and accidental; one specimen was taken near Ypsilanti, Mich., March 19th 1867.

Anser hyperboreus. Snow goose. An accidental spring and fall migrant.

Branta bernicla. Brant goose. A rather common migrant in spring and autumn.

Branta canadensis. Canada goose; common wild goose. A very common spring and fall migrant, passing here from March 10th to the middle of April.

Anas boschas. Mallard duck. Very common, arriving about April 1st. Many breed in this vicinity. The eggs are laid from April 25th to May 10th.

Anas obscura. Dusky or black duck. Common, breeding about May 10th.

Dafila acuta. Pintail or sprigtail. Not very common.

Nelion carolinensis. Green-winged teal. Common, arriving by April 1st; the eggs are laid by the middle of May.

Querquedula discors. Blue-winged teal. Very common with the preceding, arriving and breeding about the same time.

Spatula clypeata. Shoveller. Very rare and included in this list on the authority of gunners.

Aix sponsa. Wood duck. Very common. The eggs are laid about the middle of May. Sometimes it remains all winter, one such instance being recorded.

Fulix marila. Scaup or big black head. Common in spring and fall migrations.

Fulix affinis. Scaup or little black head. Very common in spring and fall.

Aythya americana. Red-head. Not common.

Aythya vallisneria. Canvas-back. Exceedingly rare.

Bucephala clangula. Golden-eye or garret. Common in migrations.

Bucephala albeola. Butter-ball; spirit duck. Very common in migrations. I think this duck undoubtedly breeds, as I have often found them in the season.

Oamptolamius labradorius. Labrador duck. One specimen taken at Delphi Mills, Mich., April 17th, 1872.

Erismatura rubida. Ruddy duck. Not rare in spring and fall migrations.

Mergus merganser. Goosander or fish duck. Very common in migrations.

Mergus serrator. Red-breasted merganser. Not common. A few taken every spring and fall.

Mergus cuculatus. Hooded merganser. Rarely taken; have never found it in the markets.

Larus argentatus. Herring gull. Sometimes taken in the spring migrations.

Larus tridactylus. Kittiwake gull. One specimen taken April 9th, 1875.

Larus atricilla. Laughing gull. Rarely taken.

Larus philadelphia. Bonaparte's gull. Very common in spring and fall migrations.

Sterna hirundo. Common or Wilson's tern. Not rare in spring migrations.

Sterna macroura. Arctic tern. Rare in migrations.

Coymbus torquatus. Great northern diver or loon. Very common, arriving by the middle of April. The eggs are laid from May 15th to June 10th.

Podiceps cristatus. Crested grebe. Very rare; one specimen taken September 12th, 1873.

Podiceps auritus var. *californicus*. Eared grebe. One specimen taken September 15th, 1876.

Podilymbus podiceps. Pied billed grebe. Very common, arriving about the middle of April, and breeding about May 10th.

A. B. COVERT.

A PET QUAIL IN NEW YORK.—Seeing a small article upon tame quail in your journal, I will state that I have a quail that I caught in Riverhead nine years ago and brought home. My mother has tamed her so she will sing for anyone that comes in the house. You can hear her all over the house. She laid 37 eggs last year. She is so tame that if you ask her if she wants her dinner she will follow you all over the house in expectation of it. She eats almost anything you can mention, and will fight like a game rooster. If anybody would like to see this bird they can call at No. 66 Ridge street, New York City.

J. E. YOUNGS.

HOUSE FLIES IN VIRGINIA CITY.—The *Enterprise* says:—Previous to the change of weather which we experienced, the swarms of house flies which congregated in certain portions of our city, and especially the lower portions, were enormous. In fact, the like has never been seen in this vicinity. Even some of the hoisting works of the mines around the city were literally covered with them so as to present a blackened appearance. In some localities fly paper, and the various preparations of fly poison killed them in incredible quantities. One house showed a nail keg filled with their dead bodies. But, however troublesome these little pests are, their presence is a harbinger of health. They are generally found to leave or are lying dead at the approach of any prevailing epidemic.

It has been maintained by many writers of distinction that these insects, especially in out-of-the-way places, where no prepared food is found, subsist upon a sort of ethereal infusoria of so minute an organization as to be invisible except by the aid of the most powerful microscopes. These floating atoms of life the flies gather up on their wings while playing about, then rub them off with their feet and feed upon them, and this is their occupation, as frequently seen after having alighted, and when rubbing off their wings with their feet. The same powers which enable these flies to run up and down a pane of glass, or to crawl, back-down, upon the ceiling, enable them also to retain this kind of food upon the feet till transferred to their proboscides and consumed.

ALLIGATORS.—A correspondent in Florida sends us a letter about alligators and alligator hunting from which we extract the following:—

The average size is from four to six feet, and you see one that will measure ten feet very seldom. The largest one I ever saw was twelve and one-half feet. I believe there are larger ones, but as they grow older they are wiser in proportion, and live far in the dense swamps where men cannot get. I could not find this year, nor in years past, any account with the slightest foundation of truth where a person has ever been attacked by an alligator, except when it was wounded and forced to fight; then the tail is the dangerous weapon, not the mouth, and it is certain death to dogs, and broken legs to men. For a rifle to shoot them I prefer a Winchester, but as for shooting alligators in the eye I cannot do it. We were able to shoot wild geese on the wing, a fox on the run, or a deer on a jump, or make 35 to 40 at 200 yards off-hand. Creedmoor target: but hitting an alligator in the eye at 100 yards (which is as close as you can get in the daytime) I have yet to see done. The best time to hunt them is on a moonlight night, and the best bait a live kid tied about six feet from the water with a string to his leg to make him bleat. Your position must be at an angle, so as to get a good sight at the fore shoulder. Stout stakes should be put around the goat, or the beast will kill him if he gets one snap at him. In one night we shot three, the largest one being about nine feet long, and it took three bullets before he stopped his tail. It is not sport to hanker after, as you have too many companions, such as snakes, mosquitoes, etc., to make it lively for you during the long hours of watching. Their eggs are very queer. They will not roll off a table, and will always turn feet-side up, as the young always lie on their backs with feet and tail curled up, so that the body side being much heavier the shell will always turn to that side. On hatching they are almost all eaten by the old males, only a few being left to grow up. Herons, pelicans and snakes also take their share. The eggs are four inches long and very tender, so much so that the rats killed a number belong to me in the city of New Orleans, when they were about six weeks old.

S. K., JR.

SPIDER FROM NEWFOUNDLAND.

HARBOR GRACE, N. F., Sept. 25th.

EDITOR FOREST AND STREAM:—

Nature has great curiosities. In the jewelry of the heavens, the wonders of atmosphere, earth and sea, how vast are the themes to instruct and humble us all. Job's treatise on Natural History is full of thought. But to the spider. I saw one the other day nearly as large as a boy's small marble. Lot on the back was a beautiful form of a cross which we duly, as thoughtful philosophers, examined with my lens. It was very visible to the naked eye. I am not an entomologist, but this was wonderful. Some persons call this spider one name, others another. What class does it belong to? We have had a lovely summer here, but a cold stormy September, with seas rolling at night like sheets of fire from the phosphorous. Is the atmosphere as well as the sea phosphorescent? Why that sky covered with luminous green (not auroral) patches? Come, New York, enlighten our darkness. Our beautiful bay is safe and would make a fine place for American yachts and girls (there are two here now) to cruise in during the summer months.

[Your spider was perhaps one of the "garden" spiders of the genus *Epeira* which have some such markings on the back as you describe. The atmosphere is not known to be phosphorescent, and the greenish appearance you describe is due to the reflection from the lambent glow of the ocean.—ED.]

ARRIVALS AT THE CENTRAL PARK MENAGERIE SEPT. 30 TO OCT. 14.—One rhesus monkey (*Macacus rhesus*); one hedgehog (*Echinaceus europaeus*) presented by James Dyche, New York city; one elk (*Cervus canadensis*) bred in the menagerie; one Cooper's hawk (*Nisus Cooperi*) presented by James W. Jenkins, Stamford, Conn.; one yellow-bellied woodpecker (*Sphyrapicus varius*), presented by Angel Martin, New York city; one yellow-shafted woodpecker (*Colaptes auratus*) presented by Messrs. Fay Brothers, New York city; one zenaida dove (*Zenaida amabilis*) bred in the menagerie.

W. A. CONKLIN, Director.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

Black Bass, *Micropterus salmoides*; Weakfish, *Cynoscion regalis*.
M. *nigricans*. Bluefish, *Pomatomus saltatrix*.
Macleague, *Esoc nobilior*. Spanish Mackerel, *Cyprum maculatum*.
Pike or Pickerel, *Esoc lucius*.
Yellow Perch, *Perca flavescent*.
Sea Bass, *Schenops ocellatus*.
Striped Bass, *Roccus uncinatus*.
White Perch, *Morone americana*.
Cero, *Cyprum regale*.
Bonito, *Sarda pelamys*.
Kingfish, *Menticirrus nebulosus*.

FISH IN MARKET.—Fish are in fair supply, and prices rather lower. We quote:—Striped bass 20 to 25 cents per pound; smelts, 20 cents; bluefish, 10 cents; salmon, (frozen), 40 cents; mackerel, 15 to 25 cents each; weakfish, 15 cents per pound; white perch, 15 cents; Spanish mackerel, 75 cents; green turtle, 13 cents; terrapin, \$12 per dozen; halibut, 20 cents per pound; haddock, 8 cents; kingfish, 25 cents; codfish, 10 cents; blackfish, 15 cents; flounders, 12 cents; sea bass, 20 cents; eels, 18 cents; sturgeon, 8 cents; lobsters, 10 cents; sheepshead, 20 cents; scollops, \$2.00 per gallon; soft clams, 30 to 60 cents per hundred; whitefish, 15 cents per pound; pickerel, 20 cents; sunfish, 10 cents; yellow perch, 10 cents; salmon trout, 20 cents; hard shell crabs, \$3 00 per 100; soft do., \$1.50 per dozen.

—When our friends Abbey & Imbrie, or Andrew Clerk, Esq., of the old Maiden Lane firm, go down the bay, their departure means business. It is portentous of success; for these old anglers never go fishing where there are no fish. Last Saturday they took a turn among the striped bass, and report says "caught plenty." This is the month for this festive fish, on which drawn butter never was wasted. Baked bass is also good. By the way, did we ever tell of the big bass sent to us from Noman's Land by our friend "Concha" of New Bedford? We did not weigh it, but it measured 52 inches in length, and was divided into eight parts by the married employes of FOREST AND STREAM office, and no doubt made a delicious square meal for forty or more persons. That was a bass. Forty appetites appeased—forty stomachs made content. If the apostles caught fish of that size no wonder their nets brake with "two hundred and fifty and three."

—The first two weeks of this month were very satisfactory to the striped bass fishermen. In fact, during October almost any one can, at Martha's Vineyard, Cuttyhunk, or Noman's Land, catch his fill of this fine fish. A party composed of gentlemen from New York and New Bedford, chartered the steam tug Nellie, early in the month, and went to Noman's Land on a sort of competition fishing cruise, the "smallest catch" to pay for a fish dinner, which was paid on the 8th instant. Mr. Thomas E. Triplett, of this city, whose fish "kicked" the balance at 54 pounds, did not have to pay for it.

—A school of mackerel a mile long and a fourth of a mile wide was struck by fishing smacks off New London, Conn., Saturday week, and although many of the nets had to be cut because of the weight, 300,000 fish, worth \$10,000, were taken.

—Our regular correspondent at Kinsey's Ashley House at Barnegat Inlet, reports bluefish as having been plenty off the coast during the latter half of last week, running from four to six pounds in weight—10 to 20 boats out each day, averaging 40 to 80 per boat.

—Smelts bit splendidly at Swampscott, Massachusetts, last week.

—The fishing at Rangeley Lakes has been much better than common this autumn—better than for several years, a fact partly due, perhaps, to the absence of many habitués at the Centennial.

BLACK BASS.—Some fine black bass were taken last week in the neighborhood of Turner's station on the Erie Railway. One gentleman took two weighing together eight pounds at the same cast, and on the same day captured in all nine fish ranging as high as two and a half pounds. Mr. Mallison caught a number in the same water on Friday, one of which weighed three pounds and five ounces.

ACCIDENT WHILE BLUE FISHING.—Frank White, Wesley Halse, and Frank Wells, of Good Ground, were setting a bluefish net on Tuesday of last week, the wind blowing a gale. There was a line attached to the net leading to the shore, by which to haul in. The boat ran on the top of a sea for some distance, and the line snatched White overboard. One of the men left in the boat fell on an oar and broke it, so that they could not row back to White; but he caught the net, cut off a powder keg used for a toggle, and started for the shore. When about half way he was heard to scream, and suddenly disappeared. It is supposed that he was caught by a shark, as his body, at last accounts, had not been recovered.

WHALES IN VIRGINIA.—Last week a large black whale grounded on Occohanock bar, Northampton county, Va., about 40 miles from the mouth of the Chesapeake, and was killed next day. The leviathan grounded about 7 a. m. in six feet of water, where he remained all day, and crowds of people came from all sections to get a look at the unusual visitor. The whale at intervals spouted up the water and made great exertions to get off, but each succeeding effort sent it further into shallow water. On Monday it was attacked with axes, guns and harpoons, and killed, when lines were attached to the carcass, which was taken ashore at high tide. The whale was 37½ feet long, weight about two tons, length of tail, six feet; mouth, three feet.

An old bruise on its back was believed to have been received by striking the bottom of a vessel.

LANDING A FISH UNDER DIFFICULTIES.—In the bay, just below town, Judge Emerson and his wife, of Ironton, Mo., were out in a very small boat trolling. With two hundred to three hundred feet of line out and wound around his hand, and while on his feet adjusting a seat, a terrible surge on his line threw him off his balance and into the St. Lawrence. He held fast with only one foot inside the little boat, with head and arms stretched out at full length in the water toward the fish.

The boat being very light, the struggles of the fish made the situation perilous, and several boats instantly pushed out to assist; but by the aid of his wife, who is something of a sailor, and the Judge's aquatic qualities, he regained the boat. Meantime the fish, which proved to be a thirty-six-pound muscalunge, was jumping several feet into the air, and anon plunging to the bottom of the river, throwing the spray high and wide in his wild contortions. It took more than an hour to subdue this monster, during which the contest was watched by dozens of excited persons on shore and in boats. However, by going on shore, judicial firmness finally triumphed over fish force, and this monster of the deep was safely landed, amid the hearty plaudits of a crowd of anxious spectators.—*Cape Vincent Correspondence of St. Louis Republican.*

DOINGS OF THE FISHING FLEET.—The past week has been a quiet one in fishing movements, outside the inshore herring catch, and the number of arrivals reported has been unusually small. Only two arrivals have been reported from the Banks, eight from Georges, and two from the Bay St. Lawrence, giving a total of twelve for the week. The receipts have been about 260,000 pounds Bank cod, 120,000 pounds Georges cod, 135,000 pounds halibut, and 320 barrels of mackerel. The light receipts and small stock have given a firm tone to the market, and prices have been well maintained.

The hake and pollock off-shore fishing is now being prosecuted vigorously and with good success. Many of the Georges fleet have gone into this branch of fishery. Herring have struck in at Magnolia, and there has been a good catch during the week, affording employment to some 85 men. It has been a busy week in that village, and about a thousand barrels have been thus far secured. Messrs. Procter, Frisk & Co. furnished the seines and salt, and have engaged the entire catch. There have also been good catches of herring at the eastward.—*Cape Ann Advertiser, Oct. 13th.*

THE SEASON AT THE NEPIGON.

RED ROCK, Lake Superior,
Ontario, Canada, Sept. 29th.

EDITOR FOREST AND STREAM:—

Herewith I beg to hand you a list of parties who have visited the Nepigon during the season just closed. We have not had as many visitors as usual this season, owing I fancy, to the Philadelphia Exhibition, and also to the exceedingly irregularity of the steamers, most of the parties having to hire sail boats or chance tugs to get away. The fishing, notwithstanding the high state of the water, has been excellent, and all visitors seem to have been well pleased with their visit. I also inclose an averagesome made by the Hon. Edmund Rice of St. Paul's, and party of three gentlemen; from it, I think, you will admit that the trout are as numerous as ever:

Total score, three rods, ten days, 233 brook trout averaging 2 lbs.

Average catch per day, 18

Largest fish—one 6 lbs., one 5 lbs., one 4½ and twenty ranging from 3½ to 4 lbs.

Fourteen lake trout weighing 88 lbs.

Best day, 42 pounds of speckled trout, 1 whitefish on fly weighing 2½ lbs.; 1 lake trout on fly weighing 14 lbs.

The following gentlemen have visited the Nepigon river during the season of 1876, viz:—

July 15th.—Myron W. Reed, Milwaukee, Wis.; C. D. Roys, M. B. Rice, Chicago, Ill.; C. B. Udey, Milwaukee, Wis.

July 18th.—H. C. Culbertson, J. S. Baker, Wm. M. Cameron; Cincinnati, Ohio; Lewis McIntosh, Pittsburgh, Pa.; Fayette Brown, Mc

Bride, Cleveland, Ohio; Norman Spang, J. H. Bi-sell, Pittsburgh, Pa.

July 21st.—The Hon. John Simpson, Capt. Wm. Burke, J. L. Strowger, W. B. Simpson, John Simpson, Jr., Bowmanville, Ont.; A. H. Walbridge, New Castle.

August 3d.—The Hon. Edmund Rice, St. Paul, Minn.; Frank H. Clark Philadelphia, Pa.; Col. C. H. Graves, Duluth Minn.

August 9th.—Dr. S. M. Sargent, H. W. Payne, E. P. Williams, H. M. Hanna, Cleveland, Ohio.

August 10th.—Amo Wright, Thunder Bay, Ont.

September 5th.—H. J. Currier, Oliver Lundy, C. A. Adams, U. S. N., C. F. Ehlers, C. A. Beits, and party of 6 ladies, steam yacht Wabun from Green Bay, Mich.

We have the promise next year of a great many visitors, and if the steamers could only be induced to advertise the days and dates of their trips to the Nepigon, double the number would come every year.

ALFRED P. VENNOR.

Deep line fishing by amateurs is now being practiced at very many places around our coast when the weather will permit. The sport off Cornwall appears during the last week full of interest, mackerel, gurnet, skate, dabs, conger, pollock, and chad, and even young shark, being taken while afloat by one boat during the day, the bait being fresh pilchards. A conger of 16½ pound was taken on a single silkworm gut snood, after a severe fight, a circumstance without parallel. Off Teignmouth the hook and line fishing has been excellent, 150 to 250 mackerel being taken per boat, and one boat brought in 500. During the past week the seines shot for sprats and pilchards have been well charged with whiting, and mackerel purposely netted have run from 3,000 to 5,000 a boat. The drift nets off Torbay are getting herrings. Bass are off here, but shun the hook, except in Teignmouth harbor, where they feed greedily. A Torquay boat brought in 1,100 hooked mackerel, and there are 90 boats thus engaged between this and Babbacombe. Tons of sprats are coming in and await a sale; the mackerel very fine and above the average. The correspondent of the *Pied* says:—"It is believed so many mackerel and sprats have not visited that part of the coast for some years." Nor, it may be added, has this most agreeable and healthful sport been more practiced by amateurs, including the fair sex, than during the present season.—*London Illustrated Sporting News.*

—Samuel Ford, of 46 Carleton avenue, Brooklyn, is authority for saying that, if mushroom eaters would sprinkle a little salt on the mushrooms they could easily pick out the poisonous plants. Good ones will turn black and bad ones red.

GAME NOW IN SEASON IN NEVADA.—Quail, monte, grizzlies, chuck-a-luck, cotton tail rabbits, poker, wild doves, tiger, squirrels, and "top-and-bottoms."

Game Bag and Gun.

GAME NOW IN SEASON.

Moose, *Alces malchis*. Pinnated grouse or prairie chicken, *Cupidonia cupido*.
Caribou, *Tarandus rangifer*. Ruffed grouse or pheasant, *Bonasa umbellus*.
Elk or wapiti, *Cervus canadensis*. Quail or partridge, *Ortyx virginianus*.
Red or Virginia deer, *C. virginianus*. Wild turkey, *Meleagris gallopavo*.
Squirrels, red, black and gray. Woodcock, *Philohela minor*.
Hares, brown and gray.

"Bay-birds" generally, including various species of plover, sand-pipers, snipe, curlews, oyster-catchers, surf-birds, phalaropes, avocets, etc., coming under the group *Limicola* or Shore Birds.

SHOOTING PROSPECTS.—The gale which prevailed along the coast on Sunday last was preceded and followed by a most unusual flight of bay birds, English snipe and wild fowl. Along the Long Island shore, on the Great South Bay, many excellent bags of English snipe were made, and yellow-legs and bay birds generally were more abundant than at any time during the season. Ducks also appeared in great numbers, and even geese were started on the southern journey by the unusual cold. Of the latter we have heard of a number being killed on Jamaica Bay. The duck shooting will now be excellent, and as the bay men will be for some time yet engaged with their oysters, it will be possible to find a vacant point or space to sink a battery.

We took a run last week along the line of the Erie Railway for 30 or 40 miles. Found quail abundant and much more advanced in growth than on Long Island. Ruffed grouse are also plentiful, and when the law is up in New Jersey—November 1st—the shooting will be excellent. Up to the present writing there has been no fall flight of woodcock, although they may be expected any day. English snipe have not been so abundant for years. In the neighborhood of Turner's Station quail and grouse are both plentiful. Mr. Mallison of Fulton street, and friends made a fine bag there on Friday.

DUCK AND GEESE IN NEW YORK BAY.—We are much obliged to our correspondent for his communication, for the statements which he makes can easily be verified, and the occurrences are as he says, quite unusual. Our attention was called to the five Canada geese on the day and hour which he mentions, and we had already made a note of the same for publication:—

NEW YORK, Oct. 16th.

EDITOR FOREST AND STREAM:—

I thought I would write a few lines telling you of the number of water fowl that I have seen passing through the harbor (East River) this fall. About ten days ago I noticed three teal passing over the end of Pier No. 2, East River, and on Friday evening, while crossing South Ferry, at 2:30 p. m. there were five Canada geese in mid stream. The pilot of the boat tried to run into them, but they managed to get to one side and were less than 100 feet from the boat, and would not have got up if he had not kept the whistle going. They then got up and flew over Governor's Island. At the same time there was a flock of over 30 duck passing over Hamilton Ferry house, and this morning a bunch of seven broad-bills passed just in front of the ferryboat. Do you think this means we are going to have plenty of ducks to snoot this fall? I have never seen but one bunch of ducks pass up the river until this year, and our office is so located I can look off on the river all day.

F. M. BENNETT.

[These signs indicate severe weather to the northward, which the telegraph has already reported; but not necessarily a protracted severe winter. We are likely to have several weeks of mild weather before Christmas.—ED.]

—There are plenty of ducks now at the Thimble islands, off Guilford, Ct.

—Quail are quite abundant on South Side of Long Island, but are not yet fully grown. When the leaves are all off the trees, it will be the time to shoot them.

—On Tuesday, Oct. 10th, Ira Hallibrant, John O'Neil, and John M. Pierson, of Johnstown, Fulton county, N. Y., started a bear near that town and ran him all day with dogs, and two hours on the following day, when they treed and finally killed him. He was very black and weighed 160 pounds.

RABBIT SHOOTING.—The general game laws of the State make no provision for the protection of rabbits. The Board of Supervisors of Richmond county (Staten Island), however, have resolved that "no person shall kill, or have in his or her possession, after the same has been killed, any rabbit between the 1st of January and the 1st of November in each year, under a penalty of \$50 for each and every rabbit so killed or had in possession. All persons trapping or snaring rabbits are liable to the same penalty." And the Staten Island Sportsmen's Club are determined to prosecute all persons violating this law, which was passed August 9th, 1873. As this conflicts with no State law it is perfectly constitutional and valid. When we stated in our last issue that rabbit shooting was permitted on Staten Island we were not aware that the above law existed.

—Long Point, Lake Erie, is owned by an influential club, and has been known for years as one of the finest preserves and shooting grounds in the country. Citizens of Canada and the United States are joint members. A great deal of fur, as well as some game and fish is taken there annually, but the duck shooting affords the sport *par excellence*, we believe. Here is a score for the 3d day of October which is thought to be the best one day's shooting ever made at Long Point:—

Mr. Lucas, 176; Mr. S. Woodruff, 138; Colonel Walker, 126; Colonel Tisdale, 119, and Mr. J. A. Woodruff, 88.

THE DUCKS OF LONG ISLAND.

Last week we copied from the *Sun* some valuable information concerning the numerous varieties of beach birds found on Long Island. From the same source we derive the following information relative to the ducks, of which

there are some 13 varieties. The shooting season begins about October 10th and continues until the middle of April:—

"First are the old squaws—worthless, fishy things, not worth marketing. Next are the coots—fairly good birds, very numerous and easily killed. They are a dumb sort of duck, and can be shot within twenty yards. The sheldrake duck is a little larger than the coot, but is fishy, hardly eatable, and not valued. The broadbill is a good duck, medium sized, and very numerous. You can take ducks right to shore. Have a red blanket or scarf, or shirt, or anything else that is red, or nearly red, and shake it in the sedge near the water, and if there are any ducks near they will swim right toward it, so close up that their breasts will touch the shore. It seems to fascinate them, and when once you have them close up you can rise and talk and cock your gun, and you will not scare them away, only keep the object moving all the time. They will swim around in a circle, and if you watch your chance and let drive when you have a lot of them in range you can rake the biggest part of the flock. We call that playing them in.

"Those not shot will fly away a short distance, but in half an hour can be played in in the same way, and so on until the flock is pretty much exterminated. A reddish-colored dog, trained to run backward and forward along the beach, is excellent to attract them. Sometimes a brown buffalo robe shaken before them is as good as anything else, and I have known a flock played in with nothing but a bunch of dried brown sea weed waved to and fro in the sedge. I suppose the idea was got from the foxes. I've been told by old hunters who have seen it, that a fox, seeing a flock of ducks near shore, will run to fro to attract them, and so play them in close enough to snatch one by the neck. Next to the broad-bills come the black ducks, which feed in shoal water, and do not dive like the others. They haunt around the meadows and on shallow flats, are very wild, and one must hide very carefully to get near enough to them for a shot. The red-necks, or red headed broad-bills, follow the black ducks in size, but are the superiors of all others found in these waters in delicacy of flavor. Indeed, they are considered almost equal to the canvas-backs. They are not wilder than the broadbills, but are much more scarce.

"Of teal, an excellent duck, we have a great many, both the blue-winged in summer and the red-winged in winter. We have some canvas-backs, but they are rather infrequent. Much more numerous with us are the gray and mallard ducks. We also have a good many wood ducks and wigwags, and, in winter time, lots of whistlers—all good and salable ducks. Brant have been numerous here until the stupidity of our South Hampton neighbors caused the closing up of the inlet every year for four years past. Then the waters of the bay became too fresh for the brant, and they left us, only a few coming every season. Wild geese we still get a good many of, but not so many of them since the inlet closed as formerly.

"The favorite and most successful way of shooting ducks and geese is from a battery, or rig, as we indiscriminately term the contrivance. To prepare a battery, you first take about 30 yards of light jean or muslin, or canvas stuff, and with oil colors paint it to look like water. Then stretch that on a light frame and fix it firmly on the windward side of a board platform, twelve feet long by eight wide. In the centre of that platform you have, sunk below its surface and just about level with it at the top, a water-tight box, only big enough for the shooter to lie down in on his back, with his gun in his hands. Along the sides of the platform you have a row of short pins, from which you depend a series of heavy weights, sinking the platform until it does not show more than an inch or an inch and a half above the surface of the water. But for the painted canvas to windward, the water would soon swash over, soak the shooter, and sink the concern; that, however, keeps it off. Then, around the platform you put, for thirty yards all about, say 125 wooden decoy ducks. Now your battery is ready. The keenest eyes of either man or bird would fail to descry its existence at a very little distance. The shooter lies down in the little coffin like box, his feet leeward, with another man, his 'tender,' in a small boat hidden in the sedge four or five hundred yards away. The shooter is absolutely helpless should anything happen to him; he is in a cramped position, cold and damp. It is anything but pleasant work, I assure you. All his communication with the tender, far away, must be by noiseless signals, and there he must lie and wait until a flock of ducks, attracted by his decoys, comes within range. Then he sits up, blazes away at them with both barrels, reloads, and sinks back to wait for more. The dead ducks float off to the tender, who has chosen his position with reference to the running of the tide, and he picks them up. Sometimes things become as unpleasant for the tender as they normally are for the shooter. Those occasions are when ducks swoop down between the two, and the eager shooter blazes away at them without noticing that his associate is in range. To restrain such excessive ardor, the tender sometimes finds it advisable to carry a gun in his boat, and have it clearly understood that if a shot is fired at him he will fire back; but generally the boys don't mind a few shot."

MASSACHUSETTS—Salem, Oct. 16th.—There has been considerable excitement about here the past week by the sport in this vicinity. Among the assortment has been the cooting at and about Cape Ann. It is safe to say that the sea ducks have been more numerous this fall than for several seasons. Parties get messes figuring well towards the hundreds. An incident I never heard before: A man gunning coots at Tinker's island, when he saw a bunch of fowl coming would stand up and wave his hat, as he said, to make the coots think it was more birds in the air. This is a fact. There has been some splendid shooting on winters and grass birds and buffle heads in this neighborhood. This may be doubted by some of your readers, but it is just as I tell you, and I can name the parties that did it. Boston market has not been so filled with birds for a long time. Wilson's snipe bring 10c., winters 15c., grass birds 2½c. to 5c. each. To-day is the great day, being the opening day for quail, and with good prospects. Yesterday the glass in the morning stood 32°, and fell to 29° at 12 m. Ground covered with snow, and a cold northwester blowing. And so it goes—just as you think the birds have deserted your country one finds them quite plenty. And still we are not happy.

Cohasset, Oct. 16th.—Coot, or sea-duck shooting has been in its prime the past week. Brant have been flying some, also a few flocks of geese. Black-duck shooting in the

ponds is also fine now. Bay birds still hold on, mostly winter yellow-legs and grass birds, and some fine bags have been shot. Partridges not plenty with us this year, but quail and wild pigeons are abundant; shall commence to shoot them this week. G. K. Jr.

NEW YORK—Greece, Monroe county, October 13th.—Shooting has been first rate in this vicinity lately. Wild ducks have been unusually plenty the past week. One man killed 17 ducks one afternoon, mostly red-heads and blue-bills. A young man by the name of Connolly succeeded in killing nine brant geese with two shots. They came and settled among some tame geese in a lot. Woodcock have been plenty. I wish they would change the law so that all shooting would be commenced on the 1st of October, and then when we shot a bird he would not spoil before we got home. A. E. R.

Niagara Falls, Oct. 16th.—A good many quail have been killed north of here the past week, and the beaves seem to be unusually large and full grown. Very few woodcock reported as yet. Sixty wild geese passed over here last Friday, going southwest. "NIAGARA."

NEW JERSEY.—Snipe are abundant on Hanover Neck. A sportsman of that place showed us a bunch of 90 on Saturday, all of which he stated were shot by himself in two days.

Kinsey's Ashley House, Barnegat Inlet, Oct. 14th.—Our shooting season commences to-morrow. I have noticed several bundles of brant the past week coming in the inlet. Black ducks, sprigtails, and broad-bills have put in an appearance. Birds have been very plenty the past week. John Mullen killed 65 on the 12th. B.

PENNSYLVANIA—Blooming Grove Park, Pike county, Oct. 16th.—Within the past two weeks Dr. Glenney and family, and Messrs. Dore, Fonda, Burns, Avery, Yard, Myers and friends have visited the park and brought home good bags of grouse. Several deer were started. One woodcock, 2 rabbits, 1 grey squirrel, and 13 grouse was a two-day's bag for two men. A.

WEST VIRGINIA—Ronceverte, Oct. 16th.—Quail quite plenty for this section. Ruffed grouse about as usual. Plenty of squirrels, owing to abundant white and chestnut oak mast. C. C.

RONCEVERTE, Greenbrier County, West Va., Oct. 9th, 1876.

EDITOR FOREST AND STREAM:—

In your last week's paper you say in answer to a correspondent that beaver are found "in Greenbrier Co., Va." So far as Greenbrier County is concerned I think you must be mistaken, as although familiar with nearly every water course in the county from end to end, I never have heard of a beaver, nor have I seen any evidences of their existence in the region. There are a few otter, some mink and muskrats, but I think the beaver lives elsewhere. What was your authority on the Greenbrier County locality? C. C.

[Greenville County was intended.—ED.]

OHIO—Ashtabula county, Oct. 12th.—There has been pretty good squirrel shooting in this vicinity lately, and there are still a few left. We ran upon a covey of about 25 quails last week. Pheasants are only moderately plenty. We hear of several flocks of wild turkeys in the woods about us. There are no pigeons at all here. Blackbirds have been here in great quantities, and roosted in the woods at the north side of the village.—Sentinel.

WISCONSIN—Club House, Koshkonong, Sept. 9th.—Duck shooting opens well. Canvas-backs and red-heads coming in from the north, and a few being shot every day. Snipe shooting must be good soon, as all marshes are in splendid condition. Late arrivals here are Col. L. A. Harris, Cincinnati; W. J. Doolittle, W. S. Lion, H. C. Fredericks, C. Hoagland and R. A. Peters, Chicago; A. C. Scoville, Michigan; Fred Johnson, Marquette. A. M. VALENTINE.

CALIFORNIA—Oct. 5th.—Rabbits and quail are abundant in the hills west of Lakeport.

Excellent hunting is reported in the vicinity of Santa Monica. The canyons are alive with quail, and the lagoons and beach with snipe and curlew.

Deer are reported plentiful in the mountains back of Santa Monica.

In Kern county deer can be seen in all parts of the mountains, the season of their shyness being past. They may now be found in bands of five to twenty.—Pacific Life.

THE GREEN GUN.

OIL CITY, Pa., Sept. 30th.

EDITOR FOREST AND STREAM:—

Having had some experience, I may say a great deal in the gun line and owning one of the guns whereof I speak, what I shall say may have some weight with parties contemplating the purchasing of a gun. I have of recent date had cause to agree with J. W. Long (I think it was) in the opinion that it is unnecessary to make a specialty of English guns in our buying.

I lately had built to order by Mr. Chas. Green, of Rochester, N. Y., one of his best weapons, and in comparison with Scott, Greener and Parker guns, all of which makes I have owned the Green holds its own. The Parker I have no use for, and can truthfully say that I have seen more shaky than sound ones; more over they are, as a rule, so light in metal at the breech that I wonder at their standing as well as they do. I do not recommend Chas. Green's gun above all others of American build, because there may be and no doubt are numerous native gun-makers fully up to the mark. The action of his gun (the lever is on top like many of English make) is not as fascinating at first sight as many others, but it has the rare merit of extreme simplicity and locking at the furthest point from the fulcrum gains extra leverage thereby at the breech end, and does away with all necessity for a double lug and bolt. Another point is the check joint which completely takes off all strain in dropping the barrels open, not of the doubtful and difficult-to-be-seen, into kind of a check like the Remington, however, but one which absolutely fills the bill. The boxing is another feature; the barrel is trim and light at the muzzle, and have given an equal pattern and penetration to a Scott Premier choke-bore, and less recoil, I think, while the latter gun has about double the metal at the muzzle, a distinction I note, as it is evident that one gun has little strain comparatively at the muzzle, while the other has a great strain. In general appearance the gun will compare favorably with any. There are other points which need to be told, not seen to be appreciated, for I believe the more the locking and fastening devices the greater will be the demand for the guns having them, notwithstanding the fact of their greater liability to become shaky, and consequently greater trouble in the repairing.

In conclusion I will say give our reliable American makers a fair share of patronage, so that they can afford it, and it will be found that as good an article may be had here as anywhere, and at a great deal less figure. V.M.

JACKING DEER.

NEW YORK, Oct. 9th.

EDITOR FOREST AND STREAM:—

I have noticed many articles from some of your correspondents depreciating, or rather strongly denouncing the practice of hunting deer with jacks. Nearly all of the above mentioned articles, assert that it is unfair and unsportsmanlike. Now I have hunted deer by nearly every known method, and I know of no way by which more exciting sport may be had than by this same night hunting. Your guide must understand paddling and the habits of the deer thoroughly or it is useless to hunt, and it requires something more than an ordinary shot to take a correct aim at a couple of shining specks, 25 or 30 yards off in the darkness. Add to this the fact that the favorite feeding grounds of deer, particularly in the Adirondacks, are where the lily-pads are thickest often making it next to impossible to shoot, and I think that to jack a deer becomes as difficult a feat as to stalk one. The sensation of sailing over the dark waters of the lake or river, every nerve strained to catch the faintest sound which may signal the approach of the game is delightful, and the intense stillness which prevails over everything, broken now and then by the sharp plunge of a muskrat, or the breaking of a twig in the bush, by the step of some wild animal, or perhaps by strange sounds, which even the trained ear of your guide cannot recognize, all combine to make an experience as pleasant as it is novel. In one of the articles I have mentioned a correspondent congratulates himself, that as hounding is done away with by law, night hunting is no longer practiced, and the woods are no longer filled with men who still hunt the deer, the prospect for sport in such and such a county is exceedingly good. Comment is unnecessary. I would like very much to see an editorial on this subject. "BRUSH."

The arguments presented by our correspondent in favor of jacking have already been advanced by the editor of this paper, and subscribed to; provided that jacking is done after the fawns are well grown.

TO PREVENT LEADING IN GUNS.—We are indebted to Mr. G. S. Gelston, the "Bald Eagle of Currituck," for the following information in regard to the leading of guns, which may be of value to our readers. Mr. G. was very much troubled in this respect until he hit upon the expedient of first firing from his gun a couple of shells loaded with powder only. This apparently had the effect of "smoking" the barrels and preventing the lead from adhering, as he was never afterwards troubled with leading. This may be a valuable hint to riflemen.

The Kennel.

Have you seen the Dachshunds? Rather a good joke for the Chicago Field, but how does Dr. Twaddell like it?

THE MEMPHIS FIELD TRIALS.—We have received the programmes of the Memphis Field Trials to be held on Nov. 13th, 14th and 15th, and copies of the same can be had at our office. This event promises to be the most interesting of the year as regards kennel matters. The list of competitors will be larger than ever before, and as birds are abundant, nothing should be wanting to make them successful. We acknowledge with thanks a courteous invitation from the Tennessee State Sportsmen's Association to be present, of which we shall avail if duties here will permit. In addition to the very liberal prizes already advertised in our columns, Mr. Luther Adams gives \$25 gold to best trained pup in the puppy stakes, and \$25 gold to the best trained brace; Mr. P. H. Bryson gives \$25 gold to the best trained dog or bitch in the champion stakes. All purses paid in full; no prorating.

THE KENNEL REGISTER.—The pedigrees of the following dogs have been recorded in the Kennel Register since the list was last published. As soon as our space will permit we will print an abstract of the second hundred pedigrees, and hope soon to get to work on the book. In the mean time our readers will bear in mind that there is no charge for registering their dogs, and that we will send them pedigree blanks gratis on application:—

THE DANDIE DINMONT TERRIER.

THE increase in the number of bench shows is causing a rapidly expanding interest in dogs of all kinds, if we may except the Spitz, whose predisposition to rabies is so marked and has become so generally known that it seems probable he may be improved off the face of the earth, or else consigned to his native and congenial clime. Of all the four-footed companions of man none is more intelligent and faithful than the little Dandie Dinmont, immortalized by Sir Walter Scott, but, as yet, almost unknown in this country. It is with pleasure, therefore, and in the hopes of a better acquaintance with the subject thereof that we print the following letter from Hugh Dalzell, Esq., Honorary Secretary of the Dandie Dinmont Terrier Club of England:—

EDITOR FOREST AND STREAM:—
I feel sure there are among your numerous readers many who, in addition to their admiration for the genius of Scott, have a liking for the game little terriers that he has immortalized, and will be glad to know what we are doing in the old country to preserve it in its purity, and if possible to still further improve and develop its excellencies. Since the rage for dog shows set in here some sixteen years ago, a very great improvement is observable in many of our breeds; but the system, or rather

no system of rule-of-thumb judging which has been practiced, early gave rise to bickerings which led to great wars (in type) ending for the most part in smoke and smother, and left some breeds at great risk of being ruined. Of these none seemed more likely to be improved off the face of the earth than the Dandie, as not only was the breed frequently judged at our principal shows by men with no knowledge of it, but they had the effrontery to defend their ignorance in the sports papers, and but for a few champions of the genuine article, the Pepper and Mustard of Charleshepe, that "fell chield at vermin that fears naething that ever cam wi' a hairy skin out" would have been obliterated to make way for a woolly-coated, pig-eyed abortion of recent manufacture as ugly as it is useless. Such an event would indeed have been a "consummation devoutly to be dreaded," and as a barrier against it some staunch admirers of the true blood joined together twelve months ago to resist the consequences of wrong decisions by ignorant judges, and the industrious promulgation of error by designing owners of mongrel stock. The club, once formed, has gone on without a check, although its action is necessarily slow, as the numbers are so scattered that meetings are few, and this will explain to readers why we have been so long in settling the standard of excellence and relative value of points I am now able to lay before your readers. Before coming to that permit me to state we have for President of the Club the Right Hon. Viscount Melgund, a staunch supporter of the breed; Vice President, E. Bradshaw-Smith, Esq., a breeder for over forty years, whose name will be at once recognized by readers of "Stonehenge," and the list of members includes the names of our oldest and best breeders and judges, of whom I may mention the Rev. S. T. Mosse, the owner of that grand old dog Shamrock who, after being on the shelf for some years, came out this summer at Maidstone carrying the burden of his ten years most jauntily, and beating the largest and best class of dogs ever exhibited—the present writer judging at the request of the club—and a month after repeated his victory over his younger rivals in another strong class at the Crystal Palace, Mr. James Locke, the owner of one of our best kennels, judging. Of course Mr. Locke is a member, as are the other hunting Carricks, Coulth, and H. Foster, of Carlisle; T. Sommer, Pool, Richardson, etc., etc. The Honorary Secretaries are Messrs. W. Strachan, Linlithgow; W. Wardlaw Reid, Peckham Rye, London, and myself, and either of us will be pleased to communicate with and be of service to brother fanciers in America. Below I give the standard of excellence as defined by the club. HUGH DALZELL, Honorary Secretary.

STANDARD OF EXCELLENCE AND VALUE OF POINTS OF DANDIE DINMONT TERRIERS.

Agreed to at a meeting of the Dandie Dinmont Terrier Club, held within the Red Lion Hotel, at Carlisle, on 5th September, 1876.

Present: Rev. S. T. Mosse, Messrs. J. A. Maier, Edinburgh; W. Pool, Dumfries; J. B. Richardson, Dumfries; W. Wallace, Kirkcudbright; Coulthard, Carlisle; Foster, ditto; Wm. Carrick, Jr., ditto; J. C. Carrick, ditto; Sturdy, ditto; Charlton, Brownhead, Selkirk; Haywood, Bangor; Miller, Moffat; Brugh, Carlisle; Locke, Selkirk; W. Reid, London; Robertson, Carlisle; Wright, ditto; Beaby, Wigton; Geo. Bendall, Carlisle; and W. Strachan, Linlithgow.

Head.—Strongly made and large, not out of proportion to the dog's size, the muscles showing extraordinary development, more especially those that move the lower jaw. Skull broad between the ears, getting gradually less towards the eyes, and measuring about the same from the point of the eye to back of skull, as it does from ear to ear. The forehead well domed. The head covered with very soft silky hair (which should not be confined to a mere topknot, and the lighter in color and silkier it is the better). The cheeks, starting from the ears proportionately with the skull, have a gradual taper towards the muzzle, which is deep and strongly made, and measures about three inches in length, or in proportion to skull as three is to five. The muzzle is covered with hair of a little darker shade than the topknot, and of the same texture as the feather of the fore legs. The top of the muzzle is generally bare for about an inch from the black part of the nose, the band coming to a point towards the eye, and being about one inch broad at the nose. The nose and inside of mouth black or dark colored. The teeth very strong, especially the canine, which are of extraordinary size for such a small dog. The canines fit well into each other, so as to give the greatest available holding and punishing power, and the teeth are level in front, the upper ones overlapping the under ones. [Many of the finest specimens have a "swine mouth," which is very objectionable, but it is not so great an objection as the protrusion of the under jaw.]

Eyes.—Set wide apart, large, full, round, bright, expressive of great determination, intelligence, and dignity; set low and prominent in front of the head; color, a rich dark hazel.

Ears.—Large and pendulous, set well back wide apart and low on the skull, hanging close to the cheek, with a very slight projection at the base, broad at the junction of the head, and tapering almost to a point, the fore part of ear tapering very little—the taper being mostly on the back part of the ear coming almost straight down from its junction with the head to the tip. They are covered with a soft, straight brown hair in some cases almost black, and have a thin feather of light hair starting about two inches from the tip, and of nearly the same color and texture as the topknot, which gives the ear the appearance of a distinct point. The animal is often one or two years old before the feather is shown. The cartilage and skin of the ear should not be thick, but rather thin. Length of ear, from three to four inches.

Neck.—Very muscular, well developed, and strong, showing great power of resistance, being well set into the shoulders.

Body.—Long, strong, and flexible; ribs well sprung and round, chest well developed and let well down between the fore legs; the back rather low at the shoulder, having a slight downward curve and a corresponding arch over the loins, with a very slight droop from top of loins to root of tail; both sides of backbone well supplied with muscle.

Tail.—Rather short, say from 8 in. to 10 in. and covered on the upper side with wiry hair of darker color than that of the body, the hair on the under side being lighter in color, and not so wiry, with a nice feather about 2 in. long, getting shorter as it nears the tip; rather thick at the root, getting thicker for about 4 in., then tapering off to a point. It should not be twisted or curled in any way, but should come up with a regular curve like a scimitar, the tip, when excited, being in a perpendicular line with the root of the tail. It should neither be set on too high nor too low. When not excited it is carried gaily, and a little above the level of the body.

Legs.—The fore legs short, with immense muscular development and bone, set wide apart, the chest coming well down between them. The feet well formed, and not flat, with very strong brown or dark-colored claws. Bandy legs and flat feet are objectionable, but may be avoided—the bandy legs by the use of splints when first noticed, and the flat feet by exercise, and a dry bed and floor to kennel. The hair on the fore legs and feet of a blue dog should be tan, varying according to the body color from a rich tan to a pale fawn; the fore legs, &c., of a mustard dog are of a darker shade than its head, which is a creamy white. In both colors there is a nice feather, about 2 in. long, rather lighter in color than the hair on the fore-part of the leg. The hind legs are a little longer than the fore ones, and are set rather wide apart, but not spread out in an unnatural manner, while the feet are much smaller; the thighs are well developed, and the hair of the same color and texture as the fore ones, but having no feather or dew claws; the whole claws, should be dark; but the claws of all vary in shade according to the color of dog's body.

Coat.—This is a very important point; the hair should be about two inches long, that from root of tail to skull a mixture of hardish and soft hair, which gives a sort of crisp feel to the hand. The hair should not be wiry; the coat is what is termed pily or pencilled. The hair on the under part of the body is lighter in color and softer than that on the top. The skin on the belly accords with the color of dog.

Color.—The color is pepper or mustard. The pepper color ranges from a dark bluish black to a light silvery grey, the intermediate shades being preferred, the body color coming well down the shoulder and hips, gradually merging into the leg color. The Mustards vary from a reddish brown to a pale fawn, the head being a creamy white, the legs and feet of a shade darker than the head. The claws are dark, as in other colors. [Nearly all Dandie Dinmont terriers have some white on the chest, and some have also white claws.]

Size.—The height should be from eight to eleven inches at the top of shoulder. Length from top of shoulder to root of tail should not be more than twice the dog's height, but one or two inches less.

Weight.—From 14 lbs. to 24 lbs.; the best weight as near 18 lbs. as possible. These weights are for dogs in good working order.

The relative values of several points in the standard were apportioned as follows:—

Head.....	10	Coat.....	15
Eyes.....	5	Color.....	5
Ears.....	5	Size and weight.....	10
Neck.....	5	General appearance.....	10
Body.....	20		
Tail.....	5		
Legs and feet.....	10		

"Guyon," of Corinth, Miss., writes: "My liver and white pointer bitch Nora, has just been visited by Jersey liver and white, out of the lemon and white 'Pious-Guyon' bitch Nettie, by Pious James' liver and white dog Billie."

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

THE LOUBAT CUP.—The challenge cup presented by Mr. Loubat, owner of the Enchantress to the New York Yacht Club, was sailed for last week, the course being from Owl's Head to and around the Cape May lightship and return. The only competing yachts were the Idler, 191 tons, Mr. S. J. Colgate, and the Atalanta, 145 tons, Mr. Wm. Astor. The Idler is well known as one of the fastest schooners in these waters, and the race was looked upon as a certainty for her. The Atalanta was built by David Carl, of City Island, on what remained of the old Calypso, burned two or three years since. She was not generally credited with a turn of speed, but those who were on the judges steamer at the spring regatta of the New York Yacht Club must have remembered how she held her own, not only with the steamer, but with the Idler, then the winner, on the last stretch of the course. The two yachts were started at 3:25 p. m. on Thursday, the signal being given from the schooner Vesta. The wind was ahead down the coast, the Idler after rounding the lightship, making short tacks inshore, while the Atalanta stood off shore. At Barnegat the Idler was ten miles ahead of the Atalanta but soon after was becalmed. The Atalanta meanwhile held her wind, and passing the Idler in the darkness, at daylight was five miles ahead and off Atlantic City. At 1:37 p. m. Friday the Atalanta turned the Nine-fathom lightship and the Idler at 3:22.30. The run home was before the wind, which was light, and the Atalanta increased her lead, reaching the lightship at 4:01.30 on Saturday morning; the Idler at 6:53. The Atalanta won by 2h. 50m., actual time, and 2h. 59m. 6s. corrected time, as the Idler allowed her nine minutes and eight seconds. Both yachts are centre-boards.

GREENWOOD LAKE.—The professional single-scutt race rowed on Greenwood lake on Wednesday of last week, under the auspices of the Greenwood Lake Sportsmen's Club, was one of the best ever witnessed in this country. Of the 13 entries but six appeared when ordered out by Mr. Richard Neville, the referee. These were Frederick Plaisted, of New York; John Biglin, of New York; Edward Powell, of Pittsburgh; Harry Coulter, of Pittsburgh; John McKiel, of Cresskill Station, Penn.; and John N. Landers, of Boston. The course was three miles, with a turn. At the start Landers was fully a length behind his five competitors, all of whom obtained a pretty even start. Coulter led the three-quarter flag, followed closely by McKiel, Plaisted, Landers, Powell, and Biglin, in the order named, when Landers, who up to this point had been pulling the quickest stroke of all, shoved his boat ahead and showed in front. Coulter fell back into fourth place, while Landers led, and Plaisted and McKiel fought for second place, and for nearly a quarter of a mile they rowed side by side, the former leading slightly. McKiel then dropped back, and Plaisted pushed forward toward Landers, whom he overtook and passed. Plaisted turned first, Landers second, Coulter, McKiel, Powell, and Biglin. None of the men, however, with the exception of Powell, Landers, and Biglin, turned the stake from east to west, as ordered by the referee. Plaisted continued to lead, and came in an easy winner. The time of the men in the order they crossed the finish was: Plaisted, 21m. 45½s.; Landers, 21m. 53½s.; Coulter, 22m. 3½s.; McKiel, 22m. 4½s.; Biglin and Powell, time not taken. As soon as the race was concluded Biglin rowed to the referee's boat and entered a protest against Plaisted, Landers, and Coulter, as he claimed that they had turned the stakes in the wrong direction. In answer to the protest, the referee rendered the following decision:—

"In the single-scutt race held this day on Greenwood lake, the following is the order of the men coming in: Plaisted, Landers, Coulter, McKiel, Biglin, Powell. But inasmuch as the contestants at the start were instructed by the referee to turn the stakes from east to west, and Plaisted, Coulter, and McKiel failing to do so, and turned in the opposite direction, the race is given, and first, second, and third moneys go, in the following order: First, Landers; second, Biglin; third, Powell."

Greenwood lake is now conceded to be as good a regatta course as could be desired. The sportsmen's club gives an international regatta in June or July next for the championship of the world, colors to be given to the winning club, gold lockets to the winning men, and prizes to be rowed for each returning year.

SEAWANAKA BOAT CLUB.—The third annual regatta of this club was held at Newtown creek on Wednesday of last week. The following is a list of the races and the results:—

1. Pair-oared Gigs.—J. Keppel and N. Smith against C. Searles and W. Wilson. The Keppel crew got off ahead, and turned first, and crossed the line in 11m. 45s., the Searle crew making the distance (one and a half miles) in 12m. 48s.

2. Pair-oared gigs—George Smith and William Wood against N. Goldenkirk and J. Moller. Both crews took the water easily, the former winning in 12m., the latter crossing the line in 12m. 10s.

3. Junior single sculls.—Three entries were made—C. Searles, W. E. Kelly, and W. Wilson, but Wilson fell out half way to the upper stakeboat, and Searles had almost a walk over, beating Kelly easily by three minutes.

4. Senior single sculls—Robert H. Orr, John Keppel, and N. Goldenkirk started. Orr got away first, Keppel close to his heels. Goldenkirk spurted when he found the others leading him. Orr reached the home stakeboat in 11m., Keppel being but five seconds behind him, Goldenkirk distanced.

5. Four-oared gigs—Two boats started, the Harry Moore—Orr (bow), Wilson, Kelly, Goldenkirk (stroke), crew—and the Charles A. Grider—Searles (bow), Moller, Rankin, Keppel (stroke), crew—and made a good pull, the former winning on five seconds' headway in 10m. Water rough.

YALE REGATTA.—The fall races of the Yale Boat Club were rowed on Lake Saltonstall on Saturday. The attendance of spectators was very large. The first race was for six-oared barges, with coxswain and three crews entered from the classes of '77, '78 and '79. E. C. Cook and W. W. Collin, of the last University eight were in the '77 crew, and O. D. Thompson, of the same eight in the '72 crew. The race was very close throughout the two miles turning course, and was won by the '77 crew by a spurt in 13m. 27½s., '79 second in 13m. 28½s., and '78 third in 13m. 40s. The next race was for single sculls, two miles. There were three entries—T. Peet, of '77; P. J. Wilson, of '77, and E. P. Livingston, of '79. Livingston won easily in 16m. 2½s. Peet second in 16m. 55½s., and Wilson third in 17m. 16½. The third race was for six-oared barges, with coxswain, same course, two Freshmen crews, '80 academic, and '79 scientific. Academic took the lead and kept it, winning in 14m. 07s. Scientific second, in 14m. 43½s. The last race was for four-oared shells, course three miles, with a turn. There were two entries from the classes of '77 and '79. The crew of '79 took the lead, and won in 21m. 35½s.; '77 second, in 29m. 18s. Collin, of the Philadelphia four, was stroke of the losing boat. The day was pleasant, but the water rather rough. In the first race, when the '77 crew was leading by a length and a half at a half mile from the finish Cole of this crew was taken suddenly ill, but nevertheless his accustomed pluck and endurance kept up till the finish. The '77 crew weakened very much indeed by this accident, and had Cole been in his usual trim '77 would have won the shell race without a doubt. W. W. Collin, '77, was elected captain of the University crew for the coming year, and the prospects are very good for a crew next season.

CORNELL.—Cornell's fall regatta occurred Oct. 14th. The course was two miles in length on Cayuga Lake, and a special train was run on the C. L. Railroad, following the course of the boats in each race. The first race, between two freshmen crews in six-oared gigs, with coxswain, was won easily by coxswain White's crews; time, 13.30. The next race was between the '79 six that won last summer's freshman race at Saratoga, and a crew from '77 and '78. After a very exciting contest the '79 crew won by only three feet in 12m. 48s. Waterman steered beautifully for '77 and '78, preserving a perfectly straight line the whole distance. A single scull race followed this; with only two competitors, Francis and Ostrom, the former winning by two seconds. Neither of the contestants rowed with vim, notably Ostrom, who rowed in a heavy knit jacket and straw hat. Francis's time was 15:15. The last contest was a scrub race between '79's Sprague crew, and a picked crew from '77 and '78, the latter winning easily; time not stated. It is rumored that Robinson of Union Springs, who has defeated Francis two or the times in a single scull race, and who is an excellent oarsman in every way, will enter the freshmen class next term. SENECA.

Rational Pastimes.

BASE BALL—THE PROFESSIONAL ARENA.

—While the League Association dates its seasons close from Nov. 15th, the amateur clubs do not consider their season ended until Thanksgiving Day in November, and then they look forward to frequent games of ball on the ice at Prospect Park, where there is a field of ice set apart for such contests during the winter. The League pennant race is practically ended and the result is the signal victory of the Chicago nine in winning the first place in the race, while Hartford has pluckily earned second position, thereby forcing the St. Louis nine to third place. Boston is content with being rated fourth, the place Harry Wright said last May he would occupy. The Mutual, Athletic, and Cincinnati clubs, are last on the list, the Athletics being obliged to disband before the close of the season. The record of the games played by the clubs which are now in the arena is as follows. We give the names in the order of games won:—

CLUBS	Chicago.	Hartford.	St. Louis.	Boston.	Louisville.	Cincinnati.	Games won.
Chicago.....	6	4	9	9	10	33	32
Hartford.....	4	6	6	9	9	33	32
St. Louis.....	6	6	6	6	6	31	31
Boston.....	1	2	4	5	10	22	22
Louisville.....	1	1	4	5	8	19	19
Cincinnati.....	0	1	2	0	2	5	5
Games lost.....	12	16	18	26	31	44	147

CHESS.

THE PRICE CHESS TOURNAMENT.—The chess tourney in progress at the Cafe International in this city has been proceeded with quite rapidly in comparison with that of last winter, some very fine contests, too, having marked the play during the past week. Very singular results have characterized some of the games. For instance, "Orchard," a good player from South Carolina, won but one game out of his first nine, and that was with Mason, the strongest American player in the tourney; and Bird, who leads the score, scored his first defeat in the tourney at the hands of Williams, who is accustomed to receiving the odds of the knight in contests with the crack players at the cafe. Clark, from Brooklyn, has been scoring victories rapidly, and Delmar of this city is now second on the list. The leaders are as follows:—

Players.	Games Won.	Games Lost.	Games Drawn.	Total.
Mason.....	15	2	0	17
Delmar.....	14	1	1	16
Bird.....	14	2	0	16
Esnor.....	10	3	0	13
Wernich.....	9	8	1	18
Dill.....	8	4	3	15
Clarke.....	8	4	1	13
Limbeck.....	8	4	1	13
Becker.....	6	2	0	8
Rozer.....	6	1	0	7
McCutcheon.....	5	3	0	8
Lissner.....	5	5	0	10

WRESTLING.—The long-anticipated wrestling match between McLaughlin and Martin, of Michigan, was decided at Central Park Garden in this city on Wednesday evening. McLaughlin was the victor, winning two falls out of three.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

STELLA.—Lice may be attracted from canary birds by spreading a white cloth over the cage at night. In the morning the lice are found on the cloth.

G. M. Philadelphia.—Will you be so kind as to state a cure for cataract on dog's eyes? Ans. We know of no cure unless the cataract could be removed by a skillful surgeon.

W. H. Gibson, author of "The Complete American Trapper," just published, will oblige us by giving us his address, as our efforts to communicate with him by letter seem to have failed.

H. H., Newport.—My dog will notice little birds when in the field. Can you suggest a remedy? Ans. Any sensible dog will soon give up noticing small birds if he is rated for it, and is worked properly on game birds.

J. J. D., Fort Monroe.—What is the address of N. Y. S. S. P. Co., and what are the smallest steam launches they build and the price of them? Ans. No. 30 Courtlandt street; 25 feet long by 5 feet 8 inches beam; \$1,200.

J. H. Sweet, Boston.—We know of no better method of keeping shrimp bait alive than by covering them with seaweed, sawdust, or bran. We believe we once published a different and better method, but a search through our files fails to discover it.

OTAKA, LeRoy.—Will you please inform me if there is any person in this part of the State who has wild pigeons for sale? Ans. Wild pigeons are exceedingly scarce now, and we doubt if you could get them, unless it was by paying an exorbitant price.

J. D. M., New York.—Will you please inform me of whom I can hire a dog for two or three days, and what would be the probable cost per day? I wish a dog that would answer for shooting quail and partridge. Ans. You cannot hire a dog for two or three days. Your best plan would be to go out with some professional sportsman whose address we can give you, and shoot over his dog.

R. McL., Perth Amboy.—Can any county make a special law of its own in regard to quail? I ask because a number of people have told me that the law is not up for quail on Staten Island until the 20th. Ans. No, not if it conflicts with the State law. There is no special law for Staten Island. The law expired there on the 1st instant, as in the rest of the State.

J. C. E., New York.—1. Is there any pamphlet published on making aquaria for goldfish, etc.; if so, where can I procure it? 2. Also do you know where I can get a Newfoundland pup? Ans. 1. No pamphlet that we know of, but you will find full descriptions of aquaria in our issue of July 6th. 2. You can buy a Newfoundland of almost any dog dealer but we cannot mention one in particular.

A. H. S., Marshall, Texas.—Whereabouts in New York can I obtain the English hard shot manufactured at Newcastle, what is the price per bag of 28 pounds, and how do the different sizes correspond with New York shot, such as Leroy's or Tatham's? Ans. From H. C. Squires, No. 1 Courtlandt street, \$3.50 per bag. Of the No. 6 English there are 261 pellets to the ounce; Tatham's No. 6 has 218.

W. S. S., Pottsville, Pa.—What effect does crimping shells have upon the shooting qualities of a gun? Does it tend to shoot closer? Does the shortening of the shell spoil the effect? Does it not confine the shot too closely? Ans. We prefer shells turned to crimped, but the tighter they are turned the better the shooting. The shortening of the shell, we think, interferes with the shooting, inasmuch as the shell does not fill the chamber. The shot cannot be confined too closely.

L. M., East Minneapolis.—Which, in your opinion, is preferable as a stock raising country, Colorado or Texas? Please give reasons. 2. Do the Indians still winter near and on the Republican in Colorado? Ans. 1. For general stock raising, particularly on a large scale, we should give the preference to Texas, for the reason that there is a larger expanse of grazing country, and less probability of drought through lack of summer rains. For sheep raising exclusively we should prefer Colorado. 2. We believe they do.

HERRINGTON, Greenwood, Ill.—I intend spending the coming winter trapping muskrats, and will be much obliged to you if you will inform me of a good place in Wisconsin or Minnesota, the former State preferred. Ans. Take the West Wisconsin Railway that runs through the Big Woods, and strike in from some suitable point along the route. If you are a thorough trapper, you can determine pretty nearly where to locate your lines, eliciting what other information you can obtain by inquiry.

TAUNTON SPORTSMEN'S CLUB, Taunton.—A, B, C, D and E agree to shoot a handicap match. A allows B 2 points, C 3 points, D 4 points, and E 5 points. After shooting they find their totals to be—A, 44; B, 44; C, 44; D, 44; and E, 44. Does A take the prize? Ans. If 44 points represents the scores actually made by each man, of course A loses and the others tie or settle their precedence by the retrospective mode of counting. If the allowance of points is included in the scores, B wins, as he did not agree to allow points to C, D, and E.

D. E. B., Worcester, Mass.—1. What is the difference in the breech action of the Whitney and Remington rifles, and which would you recommend as being the best? 2. Would a 44 cal., 60 grains of powder cartridge be accurate at 500 yards, and would it be a good cartridge for hunting purposes? Ans. 1. Principally in an arrangement in the former to prevent the flying back of the hammer, and which permits the piece to be loaded without bringing it to full cock. 2. It would answer for sporting purposes, but for target shooting at 500 yards we should prefer 70 grains.

EASTON Easton, Md.—What do you think of the following target for a No. 10 breech-loading, 10½-pound, cylinder-bored gun, charge, 1½ oz. No. 6 shot; 3½ drs. powder; distance, 40 yards; target, one of Harper's magazines in center of 30-inch circle; right barrel 4 shot in book and 44 more in circle; left barrel, 14 in book and 51 more in circle. Ans. The first target is a poor one, the others much better. A fair average target for the gun you mention would be 100 pellets.

F. W. C., Cincinnati.—Please inform me what will cure mange. My setter has had it all summer, and has lost most all her coat. When fed much else than raw meat will vomit it up. Ans. Take bazillion ointment 2oz; flour of sulphur 4oz, enough spirits of turpentine to make the ointment of proper consistency to be well rubbed into the skin, after washing the dog well with carbolic soap. Besides, give him ten drops of Fowler's solution of arsenic twice a day for three days. Feed little or no meat, and give him plenty of exercise.

TERRIER, Philadelphia.—My tan terrier has sores on his legs and crown of his head; his breath is very offensive; the dog is quite old. Are these indications of old age, or is it a disease? 2. Will a 20-inch rifle shoot better than a 24-inch one in respect to range and accuracy, provided the same charge is used in both? Ans. 1. Give your dog the condition powders we have mailed to you. 2. For sporting purposes the 24-inch barrel would answer as well, but for long-range shooting the 20-inch barrel would be the best, as it would burn more powder.

PLUVIER, Boston.—I have used Dupont's "Duck Eagle" powder; No. 1 grain in my Scott breech-loader, and I find it sticks to the barrels just beyond the breech chambers, and is impossible to get off, even after oiling with kerosene, without the use of emery, wood ashes, or something of that nature, and on holding them up to the light on an angle I can see just beyond the chambers several small, irregular black lines. Is this the fault of the powder, or what is the cause? Ans. The lines you see are owing to the leading of your gun, and can be removed only by the most careful use of emery, or the wire swab attached to your cleaner. It may be obviated by having shells which fit (when not turned snug) to the shoulder, or apparent shoulder in the chamber of your gun. Before shooting again first fire two shells, loaded with powder alone, which will smoke your gun, and, we think, prevent leading.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCUKATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[Post Office Box 2832.]

Terms, Four Dollars a Year, Strictly in Advance.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 20 cents per line; outside page, 30 cents. Special rates for three, six, and twelve months. Notices in editorial columns, 50 cents per line.

NEW YORK, THURSDAY, OCTOBER 19, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible. Trade supplied by American News Company.

CHARLES HALLOCK,

Editor and Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, October 19th.—Trotting: Woodbury, N. J., Brooklyn Driving Park, L. I. Rifle: Special March Day, Glendrake; Empire State Rifle Association meeting, Syracuse; Cricket: St. George vs. Young America, Hoboken. Base Ball: Alaska vs. Alpha, at Brooklyn.

FRIDAY, October 20th.—Trotting: Brooklyn Driving Park, L. I.

SATURDAY, October 21st.—Rifle: Schuyler, Hartley & Graham and Geiger Matches, Creedmoor; Regular Match Day, Glendrake. Base Ball: Nameless vs. Union, at Brooklyn.

MONDAY, October 23d.—Rifle: Fall Meeting California Rifle Association.

TUESDAY, October 24th.—Racing: Maryland Jockey Club, Baltimore. Trotting: Driving Park, Fleetwood Park, N. Y.; Washington, D. C. Rifle: Fall Meeting California Rifle Association; Sixth Division Rifle Association, Syracuse.

WEDNESDAY, October 25th.—Racing: Baltimore, Md. Trotting: Washington, D. C.; Fleetwood Park, N. Y.; Rittersville, Pa. Rifle as above.

AN IMPOSITION ON GOOD NATURE AND A FRAUD—A friend has remitted to us a copy of FOREST AND STREAM into which had been clandestinely folded a four-page advertising sheet entitled "New York and London Supplement," Vol. I., No. 1. The prospectus of this emission says:—

"Arrangements have been made to place this supplement inside the following named English and American publications."

Following the announcement are the names of 19 New York and 11 London papers, including the FOREST AND STREAM.

We here wish to deny that we have ever made any such arrangement, or were even aware of the existence of such publication, or of its proprietor, who signs himself C. D. Murphy, Advertising Agent. We do not wish any such affix to our paper. The imposition is a base one and unworthy the genius of the inventor. If any such fraud attempts to steal a ride on the tail of our wagon, we shall cut behind.

STEINWAY'S.—Mr. Theo. Thomas is giving a series of concerts at Steinway Hall, which are well attended, as a matter of course. Mr. Thomas's popularity as a leader and the excellence of his orchestra are as well sustained as ever. Steinway's pianos also hold their own in the public esteem, and although not so highly puffed as some others received equal honors at Philadelphia.

WILD RICE.—Mr. R. Valentine, of Janesville, Wisconsin, writes: "The price of wild rice given in my circular, which you printed last week, should be ten cents per pound, which makes it about \$2 per bushel. This is just the cost with freight added."

PORTABLE SHOOTING BOXES.

PORTABLE wooden houses are manufactured in London at various very low prices. A house 10 feet by 10 feet, with boarded roof and boarded floor, covered with felt, suitable for a store-house, shed, or tool-house, is sold for \$50. With the addition of varnished matched boarding inside, a very comfortable room is obtained, quite comfortable enough for game-keepers' lodges, shooting boxes, or temporary summer lodgings. These are furnished at \$75 each. Structures of this kind ought to find ready demand and sale in America. We believe there is a Portable House Building Company at Paterson, New Jersey, and one at Cincinnati. Perhaps there are others in this country; but we do not know of them. We remember to have examined a schedule of prices some five years ago, but the list did not contain any structures of the kind referred to above. The lowest priced of all was a dwelling to cost about \$500; and the rates ran up to a very desirable cottage with verandahs and many rooms at \$1200. We have no doubt that if the New Jersey company, or any other company in existence, would undertake to manufacture shooting boxes, such as we suggest, they would reap abundant profits. Gentlemen going to Curruck, Patuxent, Barnegat, and Shinnecock, could take their houses with them year after year, and be independent of hotel charges and exacting guides. With a gunner who can cook, and his necessary provender and equipments, the sportsman would be a full lord of the manor, and could snap his fingers at the gradgrind world outside. In winter this house would furnish snug quarters and save many a rough night of hardship. We can imagine nothing more cosy than one of these fitted up with a camp lounge, a Dunklee's stove, and plenty of blankets, after a day of shivering and fatigue among the ducks. How delicious canvas backs and coffee for supper, then! The summer dweller in the Adirondacks could pitch his substantial camp beside the still waters or tumbling stream, and fish, and read, and smoke, without fear of being molested or giving offence to other boarders, while the visitor to Florida could migrate *ad libitum*, from point to point, as easily as a tortoise, with his house on his back and shelter always at hand.

"Portable." This word conveys a good deal of meaning. With a house that can be taken to pieces in one hour and packed into an ordinary one-horse wagon, traveling with household gods and goods becomes almost as easy as traveling with Saratoga trunks and nothing else. By rail, steamer, boat or wagon, aye, even on foot, one can move as easily as the crab can fold his tents and steal away.

This much for the sportsmen.

We can go farther than this, and wonder why it is that more summer and winter tourists, alternating between the high and low latitudes, and sojourning for the season, do not buy these portable houses, of from three to eight rooms each, and locate at their pleasure, wherever the scenery invites, or circumstances may dictate or compel. It would be vastly more agreeable, and comfortable to them, and less expensive, than boarding at hotels, or even at ordinary boarding-houses, where neither bed or food is delectable; securing privacy for all, and better chances of health, and a continuance of life. Besides, living thus would make women of our frivolous belles and watering place exotics, and teach them to be independent of help, revealing the pleasure of providing for themselves in this fashion—bringing more joy to the heart than the empty adulations of suitors ever can, and more enviable roses to the cheeks than admirers ever bestowed, with added health, wisdom, increasing knowledge of natural objects, and a love and appreciation of all.

THE NEW REGATTA COURSE.

IT must be a source of gratification to the oarsmen of this and neighboring cities to know that a regatta course has at last been found which, while combining all the advantages of others formerly used, is without many of their drawbacks. Greenwood Lake, one of the most beautiful sheets of water in the whole country, is very accessible by railroad direct and is but two and a half hours distant from the city. While provided with ample hotel accommodations for crews and spectators, it is free from the expenses, reckoned both in time and money, of Saratoga. The crowd of boats which throng Harlem river and hamper the contestants are unknown, and it excels the Schuylkill in its greater width, which enables a larger number of boats to compete at the same time. While much larger than Saratoga lake, it is surrounded by land so much higher that the disturbing influence of even an ordinary breeze which ruffles that piece of water, is scarcely felt. It must be admitted that on the day appointed for the recent regatta, the water was too rough for rowing, but it must also be remembered that the season was the fall of the year, and the wind such as to render rowing impracticable anywhere.

When the Sportsmen's Club of Greenwood Lake extended their courteous invitation to the several rowing clubs that took part in the recent regatta, which was so admirably conducted that all who participated in it look forward with pleasurable anticipation to the enjoyment of a permanent annual regatta on that beautiful sheet of water, the gentlemen did not perhaps look further than the temporary gratification of witnessing the splendid rowing of the victors and their competitors; and the magnificent development of power in Riley, Kennedy and Keator, victors of the double-scutt, single-scutt and pair-oar races. The first

regatta were, however, to be made memorable, as was the Saratoga single-scutt race of 1876, where Mr. Riley made the fastest time on record; so at Greenwood lake the pair-oar heroes, Messrs. Riley and Kennedy, did their best for their hosts and their Neptune Club by making the fastest time yet attained in a pair-oar race. Mr. A. H. Vernam, the ruling spirit of the Greenwood Lake Regatta, in addition to the satisfaction of knowing how much his efforts for the general success were appreciated, will, if what we hear be true, be able to say that the laurels won at Greenwood lake by Messrs. Riley and Kennedy are to be carried to England, where it is probable these gentlemen will compete at the Henley races during the ensuing spring.

The railroad company who have recently extended their line to Greenwood, are desirous of doing everything in their power to foster boat racing, and the management of the regatta is in the hands of a club of wealthy business men, whose names are a sufficient guarantee that everything will be conducted in an honorable and thorough manner. Not a rowing organization, and therefore not partisan, but a sportsman's club having at heart not only the interests of the lake as regards rowing, but in its game and fish, and, above all, preserving intact its integrity as a resort for gentlemen. With this guarantee we cannot see how it can fail to become a most popular course for aquatic contests, easy of access, inexpensive, and with all the necessary requirements for such purposes.

Greenwood lake has been immortalized by Frank Forester. It is but a few miles distant from the "vale of Warwick," and in one of his works he describes a deer hunt, in company with Tom Draw, if we remember right, on its shores. The great exponent of American sport fully appreciated its value as a sporting ground, and although the deer no longer feed in the cedar crowned summits of its surrounding hills, and the woodcock and quail have been sadly thinned in the neighboring "Warwick woodlands," the partridge still drums on the fallen hemlocks, and the lake itself is fairly stocked with that gamest of fish, the black bass. Beautiful Greenwood is a boon to New York, destined to be a source of rest and pleasure to many an over-worked city man, who in these times can afford neither the time or expense of a trip to a more distant and perhaps more frivolous watering place.

CORNELL'S CHALLENGE.—We have already noted the fact that the Rowing Club of Cornell University had voted to challenge the winners in the next Oxford and Cambridge boat race. One of the greatest drawbacks to the carrying out of this very praiseworthy intention on the part of Cornell will be the want of funds, the college being a comparatively young one, not having a list of wealthy alumni who would come forward with the sinews of war. With this in view our contemporary, the *Spirit of the Times*, has, in a most praiseworthy "spirit," opened a subscription list, the proceeds to be applied towards defraying the expenses of the crew should they go, heading the list with a very handsome sum. The amount already subscribed considerably exceeds \$1,000, and there is very little doubt but that it will reach the required figure. Subscriptions can be sent to the *Spirit* office. The last time an American crew participated in a college race in England was in August, 1869, when Harvard was beaten three lengths by Oxford on the course between Putney and Mortlake on the Thames. Since that time the art of rowing has made wonderful strides in this country, and it is by no means too much to hope that in the next contest the tables may be turned.

HONORARY DOCTORATES.—The *Congregationalist* of August 28d, contains a list of 80 "honorary doctors" (39 of "laws," and 41 of "divinity"), created by 34 of the colleges this summer. Last year, the *Independent*, by means of a special circular sent to the college officers, managed to get together a similar list of 202 (L. 73, and D. 129), representing 79 colleges, which list was printed in the issue of July 29th. In 1874, the *Christian Union*, of October 7th, had a list of 185 doctorates (L. 49, and D. 136), conferred by 70 colleges; and the *College Courier* of July 27th, and September 12th, that year, made out a record of the "doctorates of '73," comprising no less than 250 names (L. 101, and D. 149), honored by 88 colleges. The United States Bureau of Education, which made a systematic attempt to secure a complete list of the honorary degree of 1873—the only year when an attempt has ever been made at an official record—failed to do as well as the *Courier*, and secured reports of only 77 colleges, whose doctorates numbered 219 (L. 84, and D. 135). As the number of collegiate institutions in America which are authorized to confer degrees of all sorts is supposed to be between 300 and 400, it is fair to assume from the records actually compiled, that the annual crop of American "honorary doctorates" cannot be less than 300; but so long as no one succeeds in getting together a complete list of even so much as the names of these institutions, the complete statistics of that crop must remain unattainable. The full record of New England's twenty colleges for the last four years, is believed to be known, however, and it shows that 9 of them in 1873, 5 in 1874, 8 in 1875, and 9 this year, refrained from making any honorary doctorates at all. New England's average crop of these degrees is a little more than forty, the four years' lists showing 83 LL. D.'s, and 84 D. D.'s. Dartmouth during that interval has conferred 24, Yale 18, and Harvard 10. Princeton, which is outranked in age and fame only by the two last mentioned colleges, actually issues two series of these doctorates each year, having created a round dozen (L. 7, and D. 5) during the eighteen months ending with

the first of last December. It is a mistake to suppose that the very obscure "universities out West," individually issue a like number of these "honorary," though their issues in the aggregate are of course considerable, and outnumber the aggregate "honorary" issued by the well known institutions of the East, two or three to one. "The Pacific Methodist University," for instance, whose graduating class of 1873 was composed of a single individual, contented itself that year with conferring a single D.D.; and the recipient of it was changed as completely from a "Rev." to a "Rev. Dr.," as if his embellishment had been derived from Harvard itself, which, by the bye, created that summer no honorary doctorates whatever. The clergymen, indeed, seem to be the persons chiefly benefitted by this sort of thing, because the more dignified form of address thereby attaching to them, presumably renders people willing to pay them higher salaries. On the other hand, though nobody addresses a person as "Doctor" because he has been "dubbed LL. D.," the honor, perhaps, has a little commercial value to a college professor, by virtue of the dignity which it is supposed to add to the owner's name when printed in the "list of faculty and instructors," or on the title page of a book. Though it has been shown that New England, in the last four seasons, has created almost exactly as many LL. D.'s as D.D.'s, the attainable record of the rest of the country for the same period, which doubtless represents the average proportion of what the complete record would be if discovered, show only 232 LL. D.'s to 459 D.D.'s. The contribution of the Western colleges to this last summary, shows an even greater disproportion, 79 to 194, in favor of the D. D.'s. Turning again to the *Congregationalist's* article, of which free use has already been made, we find among the 39 LL. D.'s three college presidents, and a dozen professors, two clergymen not professors, two generals, one judge, five past or present state governors, and three or four past or present congressmen. Harvard honored Gov. Rice, of Massachusetts, a graduate of Union '41; Princeton, Gov. Bedle, of New Jersey; Tufts, Gov. Conner, of Maine, a graduate of its first class ('59); Marietta, Gov. Erwin, of California, a graduate of its '48; Middlebury, ex Gov. Stewart, of Vermont; and Rutgers Female College, ex-Gov. Edwin D. Morgan, of this State, the present Republican candidate for election to his former office. Yale gave the title to Gen. Sherman, whose son graduated there this year; Harvard to ex-Senator Carl Schurz, and the College of Washington and Jefferson to ex-Secretary Benjamin H. Bristow. Of the 41 D.D.'s, three were given to presidents, and five to professors in colleges. In looking through a list of college presidents, belonging in the Atlantic States, from Maine to Virginia, it is hardly possible to find an individual not possessed of at least one of these honorary doctorates, and most of these who are clergymen have both of them. The doctorate of philosophy (Ph. D.), which is given by Harvard, Yale and European universities only in return for years of actual study, was conferred, this year, as an "honorary," by about a dozen institutions, a practice which seems open to much graver objection than can be urged against the other two sorts of D's, which are understood by everyone to possess a purely complimentary significance.

Ho! To THE LISTS!—The 19th inst. is the day in which the States of Maryland, Virginia and Delaware, and the District of Columbia will do their devoirs at the great Centennial. The occasion is to be celebrated by a grand tournament, not of pigeons, but of Knights clad in coats of glittering mail and mounted on fiery steeds, who will do battle in the cause of love and beauty. We noticed in the list of judges the name of our esteemed friend Col. Skinner, of the *Turf, Field and Farm*. Now this is eminently correct, as far as it goes, for a more proper judge, one who is intimately posted in all that relates to chivalry, or more devoted to the gentler sex, could not be found. But we would suggest that the gallant Colonel should himself take the field and do service in the cause. Gladly would we equip him with our own good lance and gallant steed, and our Centennial Squire shall buckle on his spurs and bear his helm and gorget. And when the crash is past and the heralds proclaim him victor would that we could be there.

By the bye, of all the celebrations held at the Centennial we have yet to hear of one commemorating the habits of the aborigines of this country, the poor Indian, Lo; the gentle savage. We therefore call on Col. Skinner to immediately arrange for a scalping knife and hatchet fight between his friends the great White Chief of the Onondagas and the Bald Eagle of Currituck. Let Pious Jeemes be umpire and Ted Grayson hold the stakes, while the Japanese kite hovers over the lists.

WEIGHT OF WILD TURKEYS.—Some time ago, in referring to the weight of English turkeys, we instituted inquiries among our own market dealers, for the sake of comparison, and ascertained that 50 pounds was an exceptional maximum weight, and equal to the champion English weight; but we observe that a trustworthy correspondent, who wrote some interesting Pennsylvania reminiscences for our last week's issue, says that thirty years ago in Clearfield county "it was no uncommon occurrence for gobblers to be killed that weighed 50 pounds undressed, and so fat that in falling, if shot from a tree, they would burst open the fat on the breast."

—The establishment of the New York Aquarium elicits frequent and favorable mention in European journals.

FOREST KNOWLEDGE.—For the sake of fostering all interests of forest planting and conservation on this continent, we reprint the following points to be investigated, and upon which it would be useful to have information recorded from as many different parts of the country as possible. It is important to ascertain:—

- 1st. Estimates of the area of woodland, in square miles or acres, and average ages of the trees.
- 2d. Estimates of their productiveness per acre in cubic feet of lumber and cords of fuel.
- 3d. Lists of native trees and woody plants, with local and botanic names, and their special value in the arts.
- 4th. Location of species, relatively to elevation above the sea, to soil, et cetera.
- 5th. Natural grouping and consociation of species, et cetera.
- 6th. Numbers, kinds and acres of artificial forests planted, and areas protected from cattle in order to encourage the natural reproduction of trees.

THE BOSTON SHOOTING SUIT.—One of the most successful manufacturers of Waterproof Shooting Suits is the firm of G. W. Simmons & Son, Oak Hall, Boston. We have had one of their suits on duty at the Hunter's Camp at Philadelphia Centennial Exhibition ever since last May. It has grown gray in the service, but is good for use yet. This suit is known as the "Boston Shooting Suit," in contradistinction, no doubt, from the garments which are manufactured out west by Holabird, and at Washington by Henning, each of which has a local demand of its own. It is said that the western prairie fowl can distinguish any sportsman who visits their domain by his clothes. They can tell him "by the cut of his jib," and the old educated birds (which no one cares to eat, by the way,) know exactly what distances to keep from the rail-shooters, the brant men, and the chicken-killers respectively, to be safe. They have "got them all down fine." This used not to be so before the waterproof shooting suits were invented. Bostonians, Hoosiers and Buckeyes all stood the same chance then. But now it is—with a shrill pipe to leeward by the old-weather cock—"here comes a Simmons; cheese it!" or, "'Ere's a 'Enning—lie low!" or, "Look out for Holabird! Scatter! you beggars, scatter!"

ALONG THE FLORIDA ROAD.

THOSE who closely scan the map of Florida will find in the extreme northeastern portion a small island named Amelia. At the northern end of this island lies a city. I say it *lies*, but whether it lies or not, or whether I lie in saying so, or whether the city fathers lie in calling it a city, is open for discussion. On the local map of the Land Company and Immigration Society it is set forth as a large city, occupying all the narrow peninsula between its fine harbor and the ocean, with wide streets crossing each other at right angles, spacious wharves, elevated corner lots and fertile garden sites. It is well laid out, and much of the land can be secured at a reasonable price on easy terms. Geographically Fernandina has many natural advantages. The river St. Marys comes down from some hundreds of miles in the interior, from a country fat with resin and turpentine and huge mill logs, and throws its waters into the ocean ten miles from town. The city is built between a system of sounds and creeks extending from the St. Johns river to Savannah, Ga. The peninsula here is about two miles in width, the land rolling and depressed. The harbor is magnificent, and the best on the South Atlantic coast. A weekly line of steamers connects with New York, which, under able management, has now an immense business. Semi-weekly lines run to Savannah, Charleston, and Jacksonville, and the various ports along the Georgia coast. A railroad 150 miles in length connects the Atlantic with the Gulf of Mexico, terminating at Cedar Keys. Its connections seem to have been made with an eye to its being the port of entry for all east Florida. Unlike many southern ports Fernandina has something upon which to draw to support its communications, and bids fair to float to prosperity on the incoming tide of immigration. Through the railroad and the smaller steamboat lines it can drain the entire State of its supplies, and afford abundant facilities for the transshipment of freight.

The first question asked when Florida is mentioned is: "How's the climate?" In a word, it is mild. Though variable, and at times tyrannical, the climate of Fernandina is nearly as mild and fully as enjoyable as that of the St. Johns and southern Florida. Take the temperature of New Year's week for example. There came to us vague hints of the thermometer at 20 in New York, but we had it so warm as to need no fire; an under coat was a burden and shirt-sleeves a luxury. The sun shone, birds were singing, and flowers in full bloom. Peas were green in the garden, and plump on the table fresh from said gardens. A few roses, jonquils, geraniums and tuberoses were blooming out of doors, oranges hung ripe on the trees, and a few plum trees were prematurely in bloom. It recalled a northern spring to see the birds we were wont to welcome north in March and April. The beautiful yellow-rumped warbler and the various vireos filled the shrubbery with bright colors, and the native birds, the cardinals, mocking-birds and doves fraternally greeted them. An occasional norther comes down upon us, but it lasts but a few days, and the man who was one day shaking the camphor out of his overcoat, the next was exposing the patches on his pantaloons. The royal birthright of Fernandina, the ocean beach, must not be forgotten; sixteen miles in length, hard as rock, white as snow, broad and smooth, it forms a drive unsurpassed on the coast. The waves break upon the beach with the whole Atlantic to back them;

the sand hills on the shore are fantastic in shape and peculiar in a vegetation semi-tropical and wild.

The lighthouse is picturesquely situated a mile from town on the bluff of a ravine, just where the great inland marsh runs in. It is surrounded with large oaks, and forms, with the keeper's cottage, a pleasing picture. From the lantern dome is obtained an extensive view of the island, the ocean, the town, and of southern Georgia. Old Town is, as its name implies, the ancient portion of Fernandina. It is a mile from the city proper, and reached by a wretched road and a plank walk across the marshes. Here live the pilots, who have a "look out" 60 feet in height from which to observe the vessels in the offing. The ancient earth-works erected by the Spaniards upon the first occupancy by them of Florida, may still be traced. They are semi-circular in shape, and inclose the present Government house. Fort Clinch, a brick structure, now going to decay, commands the entrance to the harbor.

Not least on the list of attractions to Fernandina is the cheapness of living there. The hotels do not display the rapacity so commonly met with along the St. Johns river, and at the principal one, the Mansion House, one may get for ten dollars a week very good living and the best of attention. This much for Fernandina.

I left the town one morning at daylight in mid August. It was very cool; for, though our days are rather hot in Florida, the nights and mornings are delightfully cool. In fact, the temperature, even by day, was not so oppressive as I have sometimes felt it at the north, and the summer—my first in Florida—had been very agreeably passed. The train glided out of the station and along the shore of the bay with 150 miles before it to Cedar Keys, and all day to accomplish it in. As we crossed the marshes the sun was just rising, and its beams beautifully gilded the trees of the forest and painted the lovely bay in rosy tints. Leaving the marshes, the home of busy snipe and curlew, we plunge into the pine woods where, on each side of the track, the vegetation is dense and luxuriant. Attractive creeks glance at us as we cross them, revealing cool depths of water suggestive of trout and perch. The pine barrens stretch away on either side far as the eye can reach; here and there a settler's cabin, and lowing herds of cattle proclaim man's presence; but the country is sparsely settled, and there is room for many thousands more. Twenty-seven miles from Fernandina is Callahan, where a projected railroad from Savannah to Jacksonville crosses the Florida road. There is little attractive here, though the gardens and peach trees speak well for the soil.

The character of the scenery remains about the same for many miles—pine levels with occasional hammocks. My attention is called to the car in which we are riding, and I am surprised to learn that it was made in the shops of the road, and that it is made of Florida wood. Panels of magnolia with trimmings of red bay, cedar and cypress, tastefully relieved and set forth, with no artificial ornamentation, form an interior elegant and agreeable. The work throughout was excellent and I have rarely seen it surpassed by our northern workshops.

A few miles east of Baldwin we are very near the big bend of the St. Mary's river, where, I am told, are several good parcels of land and springs of sulphurous water. We reach Baldwin about 9, to connect with train for Jacksonville. Baldwin is a place of eating houses. It, consequently, is much maligned. Everybody is supposed to curse Baldwin; it is so flat, so wet, so disagreeable generally, because, frequently one has to wait hours there to make connection. But I have waited there eight hours, in the heat of early summer, and found it not so very disagreeable. Seated on the piazza of the only hotel, the "Farmer's House," with a cool breeze playing around the corner, with the fragrance of roses wafted to me, I slept comfortably away those tedious hours, and departed from Baldwin feeling that it had been much maligned and overmuch abused. But our train keeps on, after the Jacksonville train has passed, and we reach near the highest portion of the road at Lawtey, where I leave the train to take a look into the forest. It may as well be stated here that my object in making this trip was to ascertain the most desirable place for a residence during the winter months, and for starting an orange grove. I had heard of a lake near Lawtey where the water was clear and the banks about it high. We were met, my friend and myself, by the proprietor of the place, Mr. Burrin, who insisted that we should dine with him before leaving for Kingsley's Lake, six miles distant. Mr. Burrin is the owner of 25 square miles of pine land. He purchased it with a view to logging for timber and turpentine, and, where three years ago was a wilderness of pines, he has created a small town by tireless industry. The store, station, and the turpentine still, the long row of houses for workmen and his own comfortable cottage have all arisen within three years, at the will of an energetic man. His house, a miracle of cosy neatness, is surrounded by a garden, a miracle of luxuriant vegetation. From the soil of the pine barrens he has produced vegetables and fruits in abundance. The tropical wealth of bananas, with which his house is surrounded, is worth making a special visit to see. From them he has had tons of fruit, I forget how many—all in three years time, and aided only by muck from the swamp and judicious drainage. His orange trees presented a fine appearance, and peaches gave promise of early reward. We did justice to an excellent dinner, and then set out for the lake. My companion rode a wiry little mare, and I occupied a mule cart, with a negro driver, all provided by our worthy host, Mr. Burrin. The road was rough and the mule—well, he was a mule, and though the driver most violent

whacked him, he would only gently vibrate his ears and wiggle his stumpy tail, so that it was very late in the afternoon when we reached the lake. We found it a clear sheet of water, nearly round, two miles in diameter, with high, sloping pine covered banks. There are but few settlers on the lake and these few living in a state of contented happiness.

Where we struck the lake was an old plantation, now well covered with corn, bananas, and bene—the latter an oil-producing plant said to produce valuable crops. The lake, as seen through the long avenue of bananas, which Mr. Harrison, the proprietor, had planted, appeared like a lake in the tropics. Directly opposite us a little stream made out, the source of Black creek, which runs into the St. Johns river. The sun was near setting and we left the lake, feeling that it might some day be surrounded by houses and orange groves, so pleasantly sloped the land and so sheltered was the spot. I rode the mare in returning, and led the advance, the mule following. Soon the rain came down and we jogged on with heads down, feeling very uncomfortable. Darkness soon came around us rendering the trail scarce discernable, so that it was late in the evening when we reached the hospitable roof of our friend Burrin, where a welcome supper and refreshing bed awaited us. The next morning we arose at daylight, in order to get a ride with the section master, who was going down the road on a pole car. We were stealing cautiously out of the house when a cheery voice bade us hold on. "Wait," says our friend, the host, rattling a tumbler and spoon together, "for a parting ceremony." The ceremony having been gone through with, aided by two more spoons and tumblers, we said good by and started off. It was my first experience riding on a pole car and it was as delightful as it was novel. Four negroes, two on each side, propelled the car—a small platform car for working purposes—rapidly ahead. To sit on the front of that car and feel yourself gliding swiftly over the rails, with your heels just high enough to escape striking the sleepers, and the panorama of swamp and forest gliding by you, was to experience a new sensation. Groups of cows were constantly crossing the track, and some of these would remain till the gliding car got dangerously near. The section master related several instances where workmen had been badly hurt by coming in contact with cattle with these cars.

We reached Temple's mills early in the morning and after examining the large saw mills here turned our attention to something of greater interest to us then—an avenue of bananas, tall, symmetrical and graceful, loaded with fruit, attesting the adaptability of soil and climate to the raising of tropical fruits. Mr. Temple then hitched up his teams and conveyed us a few miles into the woods, to Fort Harlee, where grew the largest orange tree in the State. All around was forest growth, this old tree stood alone a deserted clearing. It was a magnificent tree, worth miles of travel to see. It was over 30 feet in height and nine feet in circumference close to the ground. It had divided at the ground into three stems, and it was at the base of these the measurement was taken. Its immense solid head of green, with thousands of oranges gleaming among the leaves, was a wonder of vegetation. From the tree last year, there were sold 6,500 oranges; besides these many were eaten and stolen. There is much good land about here, available at low prices and near the railroad. We returned to our pole car and sped on toward Waldo, passing occasional groves of orange and cottages surrounded by orange and fig trees. Waldo, at present, is not a very attractive town, but it seems to be growing rapidly and trying to improve itself. A new hotel, in course of erection, faces an open square by the railroad, and bids fair to be an attractive resort. At Waldo we procured a team for famous Santa Fe Lake, five miles distant. There we visited the grove of the oldest resident, Gen. Early, and shared his hospitality.

Lake Santa Fe is about seven miles in length, surrounded by high land well adapted to orange culture. The soil is good, the climate healthful, and there seems nothing lacking to promote the welfare of those who may settle here. The land is held at a higher rate than land along the railroad, as the owners here think that the beauty and salubrity of this locality will more than compensate for the distance from the line of travel. Gen. Early's orange grove is not large, but the trees are large, well-formed, and the oranges of excellent quality. Near his plantation is Balmoral, where a large hotel of sixty rooms is being constructed. It is a most delightful site for a hotel, overlooking the whole lake, high and airy. The grounds are laid in excellent taste by the proprietor, and avenues of bananas and eucalyptus lead from the hotel to the shore of the lake. If the entertainment provided us by mine host, Mr. Klee, and his charming wife and daughters, was a foretaste of that to be expected when the hotel is completed, happy, indeed, will be his guests. We bade adieu with regret to the hospitable residents of Santa Fe, and hastened back to Waldo, again to essay a ride by pole car. By the way, there is a chain of small lakes connected with Santa Fe which are said to be well supplied with game. Our pole car experience was repeated to Gainesville, about a dozen miles from Waldo, where we stayed over night. Gainesville is a thriving and populous town, with churches, schools and a new hotel, also in course of erection. In fact, it would seem from the number of hotels going up that there was promise of an unusually large number of visitors next winter.

Though Gainesville may be interesting as a town, it was the natural scenery that we were in quest of, and early next morning hired a hack to convey us to the "Prairie Sinks," three miles from town. According to report the

sink was one dry prairie, and this prairie, from five to seven miles across once sustained herds of cattle. Suddenly it began to grow wet, water accumulated, until now the once dry prairie is several feet under water and forms an extensive lake. On the border where we went was a deep "sink" in the limestone substratum, and an immense cavern in the rock had its outlet here. It was the choking of this outlet, or the water belched from it—undetermined which?—that caused the overflow of the prairie. The scenery about this sink is peculiarly beautiful. Huge oaks tower into the air, every limb heavily hung with moss. The limestone crops out in fantastic shapes, supporting a vegetation wildly grotesque. Deep dells and glens are formed along the shore, where the gray moss heavily overhangs and shades the deep water. Oranges grow wild on the banks and grapevines grow to huge dimensions. The view from the high shore is of an inland lake with green borders, on which feed numberless cattle, and in the waters of which sport heron, ibis and other water-fowl. We feasted our eyes on the scenery, but though a beautiful place to see, it was not healthful enough to justify a residence, so we jogged back to Gainesville. Here my friend left me and I pursued my way alone by the next train.

At Bronson, 122 miles from Fernandina, or rather back of the town, lies some excellent land, high pine land, with beautiful clear water ponds—just the place for winter residence and for cultivation of fruit and vegetables. I left the train at Otter creek on the eastern border of the great Gulf Hammock, and again enlisted the services of a section master with his car and workman. Here the scenery assumes a more tropical appearance, and the palmetto appears mingled with the pines, singly and in picturesque groups. Passing through this skirmish line of palmetto and pine we strike the dense hammock, where the rank vegetation comes down to the very track, forming a wall of impenetrable solidity. Through this jungle the track was cut, and I trace its straight lines till they appear to meet in the distance, swallowed up by the forest. This is the most famous haunt of bear, deer and turkey in all Florida. Full confirmation of the stories told of the abundance was furnished before we had run a mile into the dark woods. I saw a black speck far ahead and called the section master's attention to it. "Turkeys!" said he, and urged the darkeys ahead. With two stout negroes on each side our little car, spinning it on with their whole energies thrown into their setting poles, we gained on those turkeys with a rapidity that was astonishing. As soon as they desisted as they made their best tracks along the road, never turning to the right or left. There were fourteen of them, a huge old gobbler leading, with neck outstretched and his family spread out behind him like the tail of a comet. We got within a hundred yards of them, and I was anxiously noting the fast-decreasing distance between us, when out darted an old deer dog from behind our car and put those turkeys up with a celerity that was as astonishing as unexpected. I cannot tell who was the most disappointed, the section master, the sweating, puffing workmen or myself. We beat the jungle for an hour, calling vainly to the scattered flock, then pursued our way. In returning, without me, that evening they secured three turkeys from that same flock. Quite frequently they run up on a bear on the track, or spot him as he is noisily foraging in the woods. We reached the western edge of the hammock late in the afternoon, and I stopped for the night with Ford, a genial Yankee from Massachusetts. Mr. Ford has a cosy house here at Rosewood, the name of the station, and entertains sportsmen and wayfarers in excellent style. The soil here is good, and the water apparently healthful. A large bear was killed here the night before I arrived, and much damage had been done to corn and sweet potatoes by bear and deer. In the morning I went on to Cedar Keys where I refreshed myself with a salt water bath, and passed the day pleasantly at the Island House.

After what has been written by "Al Fresco" upon Cedar Keys and the coast south, little can be said except to endorse his statements. The numerous inlets and lagoons are actually alive with ducks and geese in the fall, and the fishing, for extent and variety, would be hard to beat. All along the shore and along the banks of the numerous creeks and rivers are camping places prolific in game, and these, with the populous Gulf Hammock, will make the west coast the hunting ground of the future henceforth. It can be reached more readily and easily than the St. John's river, and at a great saving in fare and transportation. The New York and Fernandina steamship line takes one direct to Fernandina for \$20, and the Florida Road runs daily trains to the Gulf, making connection by rail and steamboat with all parts of Florida. The field now opened promises well, and if your correspondent does not reach it next November he will be much disappointed.

FRED BEVERLY.

FLORIDA.—We shall begin the publication next week of the journal of a 500-mile boat trip along the southwest coast of Florida, to occupy eight or nine numbers of this paper, and when completed these will be followed by another instalment from "AL FRESCO," who is having a boat built to meet the requirements of the special mission which he will undertake at the proper season. These letters will render almost complete the history of the resources and attractions of Florida which this paper has published, and will form a very valuable addition to the volume entitled "Camp Life in Florida," of which three editions have already been published.

—The St. Augustine (Florida) Press says that, on the 26th ult., while hunting near Pablo creek, Mr. Yulee Mick-

ler ran upon a large rattlesnake. The snake struck the horse, and the dog running up to shake it, was also struck dead. The horse was led a distance of about three miles, where he died late in the afternoon. The snake was a large one, measuring about six feet in length, and had 14 rattles.

—Capt. E. E. Vail, of the St. Augustine Hotel, has added a steam elevator and other desired improvements to his very commodious and attractive house in the Ancient City.

CEDAR KEYS AND TAMPA.—A much needed want has been supplied at Cedar Keys—that of a hotel where a visitor can obtain a square meal and good accommodations at a reasonable figure. Dr. R. H. Melvaine has opened the Island House, which he has enlarged, repaired and painted. The Doctor can comfortably accommodate forty guests. The host pledges himself to "liberally supply the table with fish, oysters, turtle and game in their season, in a style to suit the most fastidious." Some weeks since we tested the Doctor's table and beds, and found a marked improvement upon the hotel accommodations of Cedar Keys. The host intends "giving special attention to procuring transportation for sportsmen and others who wish to visit points along the coast." He owns two schooner yachts, one of 5 and the other of 6 tons, which will be open for charter for trips along the coast, at about \$6 per day, to include the services of captain and one man. The services of a cook can be obtained at about \$20 per month. These vessels are nicely fitted up, and will comfortably accommodate from six to eight persons. Necessary supplies, such as coffee, condensed milk, pilot bread, flour, etc., can be purchased in the town. Smaller boats with captain can be chartered at from \$3 to \$5 per day. To ardent sportsmen who have never tested the sports of the southwest coast, we can, without hesitation, assert that they would enjoy the shooting and fishing south of Sarasota Bay.

Messrs. McKay and Miller, of Tampa, are building a new propeller at Wilmington, Del. She will be large and fast, and will have excellent accommodations. She will make semi-weekly trips, beginning about the middle of November, to Tampa, Manatee and Palmetto.

The citizens of Tampa have been aroused from their Rip Van Winkle sleep by Mr. Wall and a few other enterprising citizens, and are laying sidewalks, and other needed improvements have become the order of the day. The climate of Tampa offers many inducements to visitors, but the residents have been too slow in the past to take advantage of their opportunity.

The Orange Grove Hotel of Tampa will accommodate forty guests, and is run by D. L. Crane & Co. From representations of others we have reason to believe that visitors will be better satisfied with the table and accommodations. The terms are, per day, \$2; per week, \$12; per month, \$40. The Tampa Hotel is kept by Dr. Isaac Craft, and we have reason to believe that visitors will be pleased with the accommodations.

HOMOSASSA.—"This paradise lost in a wilderness" was ferreted out by "Al Fresco" during his cruise on the southwest coast of Florida, and his notice of the place in our columns turned the tide of sporting travel in that direction. Then it was that Alfred P. Jones and his estimable lady found themselves in trouble. Visitors poured in and overflowed; they abandoned their own room, filled "Liberty Hall" and the "Den," erected bunks in the meat-house, where Dr. F. and Mr. P. roosted for weeks; and still accommodations continued in active request. The house was not constituted of India rubber, and sportsmen were packed in the dining-room like sardines. Many of last season's visitors have engaged rooms for the winter of '76 and '77; and to accommodate the press, Mr. Jones is now erecting a wing 60 feet long and building a new dining-room and kitchen. This will be good news for many. Owing to the lack of accommodation, dozens were prevented from visiting this attractive spot last winter; but we are pleased to state the fact that enlargement is the order of the day. From personal experience we are warranted in saying "May the shadow of this hospitable home never grow less."

THE AQUARIUM.—This journal has watched with constant interest the desire which has been growing in the minds of the people of this city during the past five years for the establishment of an aquarium, and has done everything in its power both to stimulate this desire and to procure its satisfaction. The early efforts of *Appleton's Journal* to persuade the people to invite Mr. Saville Kent of the Brighton Aquarium, England, to construct an aquarium in Central Park were aided by us without stint, and when this plan failed and Mr. Coup attempted to induce the Legislature or city to put tanks for living fishes in the Park, and afterwards when he pluckily undertook the enterprise alone, we gave him our influence, because we had great faith in the educational value of such an institution in this city. It is therefore with peculiar pleasure and pride that we hear of the continued success and growing favor of our new aquarium. The attendance is daily increasing, and the capacity of the building fully tested by the crowds of visitors. The managers have received notice of the shipment of 40,000 salmon eggs from Redding, Cal., on October 8th, by Prof. L. Stone of the U. S. Fish Commission. These will probably be placed in the hatching troughs in the Aquarium in a day or two. The lake and brook trout eggs will not arrive here until about the middle of November, and Prof. Baird of the U. S. Fish Commission has promised to send at the same time 40,000

eggs of land-locked salmon from Maine. The water in the tanks, which at first had a muddy look, is now very clear, and the movements of the various specimens of the finny tribe can be closely followed. Workmen are engaged in putting up steam pipes, and in giving finishing touches to the building in various points. The exhibition is undoubtedly one of the most attractive, and at the same time most instructive, entertainments ever opened in the city.

GUNNING ACCIDENTS.—It is our painful duty to report two serious accidents this week, both occurring to popular gentlemen well known in our highest social circles. Dr. Thebaud, of this city, on Thursday last was loading some of Ely's blue paper shells, two friends being in the room with him. Each shell was placed in a brass case (to prevent the bulging of the shell). The shell and casing were then set upon a small block of hard wood fashioned for that purpose, and perforated in the centre in order to render it impossible for anything to come in contact with the primer at the moment of loading. Under these conditions 98 shells had already been successfully loaded by the Doctor with rammer and mallet, two wads over each charge of powder. While forcing the double wad upon the powder of the 99th shell, in some way or other the concussion of the blow reached the fulminate and the charge exploded. About an inch and three-quarters in height of the brass casing was completely torn away from the upper part, and was again divided vertically into halves. One of these halves struck and unquestionable entered the Doctor's chest; the other flew in the opposite direction, tearing his fingers badly, and when afterwards found was almost perfectly flattened out, evidently by the original explosive force. While several theories may be advanced as to the cause of the explosion, the following seems the most likely one, namely, that the interior metallic dome was defective in point of strength, and was itself forced against the anvil (already in contact with the fulminate) by the blow of the mallet acting through the charge of powder, and communicated a sufficient vibration to fire the primer.

The other unfortunate accident occurred to Mr. Benj. F. DeForrest, a well known and universally popular gentleman of this city, who, while shooting near Redding, in Connecticut, was accidentally shot by his companion in the thick brush, the charge tearing away one eye and part of his face, and perhaps destroying the sight of the other eye. We have seldom heard of a more distressing accident than this last, for the suffering is not only with the victim, but with the unfortunate gentleman who has been the cause of his best friend's disfigurement, if not his death. The lesson it inculcates is the same as has been taught a thousand times before—caution, particularly in cover shooting. Our latest information is that Dr. Thebaud will recover.

Rifle.

THE INTER STATE MATCH.—The long range match to be shot between teams of different States simultaneously on their own ranges occurred on Thursday last. The Amateur Rifle Club represented this State and shot at Creedmoor. The gentlemen, however, who had been selected to shoot in the match, with the exception of Messrs. Allen, Rathbone, Jewell, Overbaugh, and Weber, failed to appear, and it was necessary to make up a team from among the spectators. Fortunately Messrs. Smyth, Perry and Hayes, were on the ground, and these gentlemen were invited to assist. From the fact that the team had never shot together before, and also owing to an unfavorable wind blowing during the match from all points of the compass, the scores were necessarily small, aggregating only 1,423 points out of a possible 1,800, which was considerably below the lowest scores in the late international match. The conditions were the same, 15 shots each at 800, 900, and 1,000 yards. The match was won by the Crescent City Rifle Club, as will be seen from the following scores:

Name.	Total.	Name.	Total.
Crescent City Club, N. O., La.	1507	Hartford Rifle Association	1371
N. Y. Amateur Club	1422	Worcester (Mass.) Club	1097
Dearborn Club, Chicago	1424		

The scores of the Creedmoor team are as follows:—

Names.	800 Yards.	900 Yards.	1000 Yards.	Total.
Isaac L. Allen	68	62	63	193
R. Rathbone	53	71	61	187
Douglas Smyth	66	58	62	186
William Hayes	62	52	66	180
H. S. Jewell	64	64	51	179
L. Weber	67	57	59	173
C. E. Overbaugh	55	60	55	170
Dr. S. G. Perry	56	50	49	155
Total	483	474	466	1,423

The scores of the Milwaukee team were as follows:—

Names.	800 Yards.	900 Yards.	1000 Yards.	Total.
John Johnson	64	68	54	186
H. P. Yale	43	61	53	157
E. Fielding	64	49	60	173
W. T. Cagrain	61	48	57	166
C. Turner	61	51	45	157
E. D. Bangs	56	57	59	172
J. M. Arnold	61	60	48	169
John Meunier	58	49	46	153
Grand total				1,333

The Milwaukee team also had a "fish-tail" wind.

The following are the scores of Dearborn Rifle Club of Chicago:—

Name.	800 Yards.	900 Yards.	1000 Yards.	Total.
Geo. Willard	74	64	61	199
R. S. Thompson	70	60	57	187
S. E. Bliss	71	52	62	185
Walter Burnham	72	54	54	180
W. E. Strong	66	66	43	175
H. G. Howe	74	53	43	170
J. W. Roberts	71	53	38	162
S. W. Burnham	62	66	34	162
Grand total				1,420

In New Orleans the light was good and the wind light, but variable. Gen. Greene, Assistant Adjutant General, Department of the Gulf, acted as umpire for the absent

teams, the marking and scoring being also under his supervision. Gen. Augur and staff were present during the shooting.

CREEDMOOR.—Saturday's match at Creedmoor was for the *Turf, Field and Farm* badge, shot at 200 yards, 10 rounds. There were 25 entries only, an unusually small number for this match. The day was bright but the wind was blowing strong across the range. The winner was Mr. Wm. Hayes, well-known as one of the most expert short-range rifle-men in the country, and who is rapidly approaching the first rank of long-range shots. The following are the scores:—

Name.	Total.	Name.	Total.
Wm. Hayes	43	G. L. Morse	34
J. L. Price	41	G. H. Moller	33
J. L. Kellinger	39	George Waterman	32
G. F. Merchant	39	F. Hyde	32
W. H. Cochrane, Jr.	38	A. M. Maltby	32
D. C. Pinney	38	Lewis Cass	32
N. D. War	37	C. E. Truslow	31
J. W. Todd	37	J. L. Farley	30
T. W. Linton	37	J. L. Volca	27
C. E. Latimer	36	E. W. Price	27
O. Wiswell	35	E. S. Bangs	22
Philip Bossert	34	W. N. Bangs	18

CONLIN'S SHOOTING GALLERY.—The marksmen's badges were shot for last Tuesday, Oct. 10th. Eight beautifully designed badges, four of gold and four of silver were contested for. The shooting was fine, and this season's series of competitions promises to be very close and interesting. The conditions are 10 shots, rifle, off-hand, 110 feet, 200 yards Wimbledon target reduced in proportion for the range, Creedmoor rules; no practice allowed on the 110 feet range during the competition. The following are the winners of badges for the first competition:—

Name.	Total.	Name.	Total.
Fred. Kessler	43	J. B. Blydenburgh	41
Chas. E. Blydenburgh	43	Chas. A. Cheever	40
M. B. Engal	43	S. S. Root	40
H. D. Blydenburgh	43	John Dutil	40

The second competition takes place Tuesday, Oct. 17th, at 4 p. m., and ends at midnight. All-comers are invited.

NEW YORK—Saratoga Springs.—The Centennial rifle tournament under auspices of the Saratoga Rifle Club, commenced Tuesday, Oct. 10th, according to programme. Two clubs presented teams to compete for the mid-range prize. The officers of the clubs agreed to shoot only three men on each team. J. F. Finlay was chosen umpire; conditions, 600 yards; rules of the N. R. A.; 15 shots; no sighting. The following are the scores:—

Name.	Total.	Name.	Total.
T. E. Sargent	70	L. Geiger	63
Byron Parker	64		
Grand total			297

Name.	Total.	Name.	Total.
Odeil Gates	70	Jerome Pitney	66
F. A. Weller	68		
Grand total			198

The Parthians were declared the winners by nine points. The first miss of Mr. Pitney was caused by firing with an elevation for 900 yards, through an oversight. The sixth one was on the wrong target. Good feeling and gentlemanly courtesy was recognized everywhere, and the contest was witnessed by a large number of spectators.

SECOND DAY, OCT. 11TH.

Two matches were shot this day, the first being an all-comers match, distance 600 yards; rules of the N. R. A. The weather was very cold and overcast, and a strong wind that seemed to take delight in blowing from every quarter, very materially lessened the scores. The following is the list of entries and scores, 10 shots, no sighting:—

Name.	Total.	Name.	Total.
F. A. Weller, Saratoga, N. Y.	46	Wm. Hayes, Newark, N. J.	37
W. M. Farrer, Newport, R. I.	46	Jerome Pitney, Saratoga, N. Y.	36
B. Parker, Hudson, N. Y.	42	S. B. Gates, Victory Mills, N. Y.	35
Dr. W. H. Hodgman, Saratoga	41	J. M. Dennis, Schuylerville, N. Y.	31
L. Geiger, Hudson, N. Y.	41		

The following scores were made at 200 yards, 10 shots; no sighting; rules of N. R. A.:—

Name.	Total.	Name.	Total.
W. M. Farrer, Newport, R. I.	44	L. Geiger, Hudson, N. Y.	40
Wm. Hayes, Newark, N. J.	44	Odeil Gates, Saratoga, N. Y.	38
A. F. Mitchell, Saratoga, N. Y.	44	T. Sargent, Hudson, N. Y.	38
B. Parker, Hudson, N. Y.	42	S. B. Gates, Victory Mills, N. Y.	32
W. H. Benson, Saratoga, N. Y.	41		

CANADA.—The "Queens Own Rifles" had their annual match at Toronto on Saturday week. The weather was unpropitious, the wind blowing in gusts across the ranges. The prize list was a long one, embracing some 35 of the best shots. We give the best 20 in the first list, which was open to members of the regiment only:—

Name.	Total.	Name.	Total.
Corporal Brady, Co. A	60	Private Denny, Co. H	51
Private Margates, Co. D	60	Corporal Meredith, Co. A	50
Lieutenant Brown, Co. A	58	Major Miller, Co. D	50
Sergeant Ashall, Co. C	57	Sergeant Mace, Co. G	49
Sergeant Cunningham, Co. D	51	Captain Allan, Co. A	48
Private Mercer, Co. D	53	Private G. Fox, Co. C	47
Private Langford, Co. H	53	Private Heaker, Co. A	47
Sergeant Meredith, Co. A	52	Private Dummely, Co. A	47
Sergeant Manly, Co. I	52	Private Williams, Co. I	47
Sergeant Lewis, Co. C	51	Sergeant Knox, Co. A	44

The second match was open to all-comers who had never won a prize at any previous annual match. The prize list was as follows:—

Name.	Total.	Name.	Total.
Lieut. Brown, Co. A	58	Private Green, Co. D	40
Private Langford, Co. H	53	Private Culham, Co. I	39
Capt. Allan, Co. A	48	Private Cull, landsman	38
Private Williams, Co. I	47	Private Monkton, Co. I	38
Private McCaul, Co. I	41		

The third match was open to members of the Association only. Ranges—200, 500, and 600 yards. The following is the prize list:—

Name.	Total.	Name.	Total.
Private D. Margates, Co. D	57	Private Donnelly, Co. A	40
Lieut. Brown, Co. A	51	Capt. Allan, Co. A	40
Sergt. Meredith, Co. A	49	Sergt. Lewis, Co. C	40
Sergt. Manly, Co. I	48	Sergt. Knox, Co. A	39
Sergt. Cunningham, Co. D	46	Private Denny, Co. H	37
Private Clarke, Co. A	44	Capt. Gibson, ex-member	35
Sergt. Ashall, Co. C	52	Langford, Co. H	33
Maj. Miller, Co. D	41		

The last match was open to members of the Regiment or Association who were present with the Regiment in the engagement of 2nd June, 1866. Ranges—200, 400, 500, and 600 yards:—

Name.	Total.	Name.	Total.
Sergt. Meredith, Co. A	68	Sergt. Lewis, Co. C	61

These prizes were competed for with much interest, there being nine entries, viz.: Lieut. Col. Gilmor, Major Jarvis, Capt. Edwards, Gibson, and Allen, Sergeants Meredith and Lewis, and privates Clarke and Donnelly.

MASSACHUSETTS.—The Springfield Amateur Rifle Association has not yet retired from the field to go into winter quarters. During the past two or three months they have been doing some very good shooting at 200, 400, and 500 yards, and below we append the result of their last week's shooting at 200 yards, off-hand, for positions on a team to shoot a match with the Holyoke Rifle Club, of Holyoke, which contest occurred on the range of the Springfield club on Thursday of last week, and the result will be given in our issue of next week, it having reached us too late for publication this week. The distance was 200 yards, 15 shots off hand. The score of the Springfield club at their practice shoot, was as follows; the highest possible score being 75 points:—

Name.	Total.	Name.	Total.
S. S. Bumstead	59	W. S. Gompf	57
J. B. Squires	58	W. H. Chapin	56
Luther Clark	58	T. E. French	49
L. H. Mayott	57	Geo. Hunt	40

MORSEMERE.—The first of a series of matches for the fall season begun at Morsemere on Tuesday last. The off-hand match at 200 yards, 15 shots, no sighting shots, for a gold medal to be won three times, resulted in a victory for Mr. Morse. The four highest scores were as follows:—

Name.	Total.	Name.	Total.
Morse	63	Quinn	57
Morgan	59	Clark	51

At the close of this match the first contest for the National Rifle Association Bronze Medal, at 500 yards, was held; 15 shots each. The four leading scores in this were:—

Name.	Total.	Name.	Total.
C. A. Hodgman	75	A. H. Jocelyn	68
D. Smyth	70	G. L. Morse	65

Mr. Hodgman not only made a perfect score, but what is more wonderful still, his third, eighth, and eleventh shots were the only ones outside of the eleven-inch carton; and had the match been upon the special target where it has been customary to give an extra point for the carton, he would have made 87 out of a possible 90 in his 15 shots.

ILLINOIS.—The off-hand rifle tournament, open for all comers, terminated Saturday morning, October 7th, at the Standard shooting gallery, 113 Clark street, Chicago, with the following result, on a Creedmoor target reduced to 65 feet; bullseye $\frac{3}{4}$ of an inch; guns .22 calibre. Competitors 44. First prize won by M. W. Lyman, 45 out of possible 50; second prize won by E. P. Hall, 44 out of possible 50; third prize won by Dr. J. A. Freeman, 41 out of possible 50.

CONNECTICUT.—The first annual competition for the "T. Steele & Son Cup" will be held at the range of the Connecticut Rifle Association, Saturday, October 28th. Conditions of the match: 10 shots each, at 500, 800 and 1000 yards; no sighting shots; open to teams of four (members of the association only) from any town in the State. Shooting to commence at 11 o'clock.

—In returning from Greenwood Lake on Saturday morning last we witnessed a curious incident. The train was leaving Pompton Junction and moving at the rate of six miles per hour, when every one in the passenger coach was startled by the shattering of a plate window glass. On investigating the cause a stunned bird, a young ruffed grouse, was found upon the floor of the car. It would seem that it had been flushed on the hillside and was flying across the valley with the speed of a bullet when it struck the car window and shattered the glass to atoms. The bird revived in a few moments, and was brought as a captive to New York. Its eyes were good, and the only injury it had received was an apparent fracture of the breast bone. The ruffed grouse evidently flies with a great deal of force. The next time you travel press your hand against the plate glass of the car window, and then calculate the strength of a blow that would be required to break it.—*Turf, Field and Farm.*

—The bounty on wolf or coyote scalps in Colorado has been fixed at 50 cents each. The scalp must include the ears entire, and within two months from the time the animals are killed the person who has slain them must take the scalps before the county clerk and make oath to the time and place of killing.

Tiffany & Co., Silversmiths, Jewelers, and

Importers, have always a large stock of silver articles for prizes for shooting, yachting,

racing and other sports, and on request they prepare special designs for similar purposes.

Their timing watches are guaranteed for ac-

curacy, and are now very generally used for

sporting and scientific requirements. Tiffany

& Co., are also the agents in America for

Messrs. Patek, Phillippe & Co., of Geneva, of

whose celebrated watches they have a full

line. Their stock of diamonds and other pre-

cious stones, general jewelry, bronzes and

artistic pottery is the largest in the world,

and the public are invited to visit their estab-

lishment without feeling the slightest obliga-

tion to purchase. Union Square, New York.

TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMP'Y

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTER PARKS and RAC COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars run over the smooth steel tracks enable STOCK TO BETRANSFERRED without failure or injury.

The lines of The Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to KANE, RENOVIA, BEDFORD, CRENSON, RALSTON, MINNEOLA, and other well known centers for Trout Fishing, Wing-shooting, and Still Hunting.

Also, to TUCKERTON, RECH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for ALT WATER SPORT AFTER FIN AND FEATHER.

D. M. BOYD, Jr., Gen'l Pass. Agent.

FRANK THOMPSON, Gen'l Manager. feb17 1f

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over two thousand miles of road radiating from Chicago. Like the fingers in a man's hand, its lines reach in all directions, and cover about all the country north, northwest, and west of Chicago. With one branch it reaches Racine, Kenosha, Milwaukee, and the country north thereof; with another line it pushes through Janesville, Watertown, Oshkosh, Fond du Lac, Green Bay, Escanaba, to Negaunee and Marquette; with another line it passes through Madison, Elroy, and for St. Paul and Minneapolis; branching westward from Elroy, it runs to and through Winona, Owatonna, St. Peter, Mankato, New Ulm, and stops not until Lake Kameska, Dakota, is reached; another line starts from Chicago and runs through Elgin and Rockford to Freeport, and, via the Illinois Central, reaches Warren, Galena and Dubuque, and the country beyond. Still another line runs almost due westward and passes through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar Rapids, Marshalltown, Grand Junction to Council Bluffs and Omaha. This last named is the "GRAND TRANS-CONTINENTAL ROUTE," and the pioneer overland line for Nebraska, Colorado, Utah, Idaho, Montana, Nevada, California, and the Pacific Coast. It runs through the Garden of Eden of Iowa, and is the safest, shortest, and best route to Omaha, Lincoln, and other points in Nebraska, and for Cheyenne, Denver, Salt Lake City, Virginia City, Carson, Sacramento and San Francisco, and all other points west of the Missouri River.

TO SPORTSMEN:

THIS LINE PRESENTS PECULIAR ADVANTAGES--FOR PRAIRIE CHICKEN, DUCK, GEESE, AND BRANT SHOOTING. THE IOWA LINE TO-DAY OFFERS MORE FAVORABLE POINTS

than any other road in the country, while for Deer and Bear Hunting, and for Brook Trout, Lake Salmon, Pike, Pickerel, and Bass Fishing a hundred points on the Northern and Northwestern lines of this company will be found unsurpassed by any in the West.

MARVIN HUGHITT, W. H. STENNETT, Gen. Supt., Chicago. Gen. Pass. Agt., Chicago. apl6

Thomson's
Oil Finished Grain Leather Shoe-
Pack or Moccasin.

With Sole, Price, \$7.50. Without sole, \$5.50
Made with heavy sole for land use; also without
sole for snow and canoe purposes. All hand sewed
and strongly made. Laced in front with hooks (over
English style of water-tight tongue), thereby securing
PERFECT FIT around ankle, thus preventing all
slipping at the heel. Made with broad soles and on
scientific principles.

Fills the want long felt by sportsmen for an easy
fitting and durable shoe.

In ordering, state size of boot worn. Sent by mail
on receipt of price, with 40 cents additional for post-
age, or by express C. O. D. everywhere. Manufactured
by THOMSON & SON, 338 Broadway, New York. jn27-tf

McBride Flies,

The Standard Flies for American Waters.

These flies are imitations of American insects, or
combination of colors, that an experience of forty
years has proved most successful. Parties sup-
plied with casting lines and artificial flies for
Pennsylvania trout streams, Adirondacks, the Maine
Woods, Lake Superior, Thousand Islands, Canadian,
and other waters. Anglers not acquainted with the
nomenclature of these flies, by mentioning the local-
ity where they intend fishing, will have the varieties
best suited to those waters sent to them. Flies copied
from any natural insect or pattern desired. SARA

ADIRONDACK GUIDE.

NEW EDITION, WITH MAPS.

BY E. R. WALLACE.

Gives all possible information relative to
Routes, Hotels, Resorts, Outfits, Guides,
Distances, &c., with amended railway
schedules, &c.

The only Complete Guide to the North Woods.

The instructions embrace everything that can be de-
sired. Taking it all in all it is the most complete
book that has been published on the Adirondacks,
not excepting even my own—Hon. J. T. Headley.

I regard your "Descriptive Guide" and the "Appendix"
as a most useful—nay indispensable, manual for tour-
ists to that wonderful Wilderness. A tour in that
region is eminently a practical matter, and for that
reason I regard your "Guide" as an important, useful,
and timely publication.—Benson J. Lossing.

It is the only thing of the kind that has yet been pub-
lished—the very thing that has been so long wanted
and waited for.—Alfred B. Street, Author of "Woods
and Waters."

FOREST AND STREAM PUB. CO.,
(by whom the copyright is now held.)
Aug 10 17 17 Chatham street, N. Y. City.

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 3 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short gun.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 lbs., and 6 1/2 and 12 1/2 lb. kegs. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6 1/2 lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.g. FF.g. FFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 lb. All of the above give high velocities and less recoil than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS. SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER Co.,

26 Murray St., N. Y.

Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

CHALLENGE.

The undersigned is prepared to prove all the superior qualities he claims for his powder.

Safety, Cleanliness, Strength, Little Recoil, Little Smoke, Small Report, Less Heating of the Barrel in Rapid Firing, and its Regularity in Shooting.

He challenges all riflemen to shoot against him with black powder, 200 rounds, without wiping; 100 rounds off-hand, at 200, 500 and 1,000 yards respectively, and 100 rounds in any position at same distances; the 200 rounds equally divided at the three ranges; sighting shots extra.

Will shoot for money if desired. The powder is also well adapted for shot guns. Inquire for the "Dittmar Powder" of your dealer address the

Paper and Metallic Shells

FOR

Breech Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, never miss fire, and are highly prized by all that have used them.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells. Not sold at retail by the manufacturers. Dec 23 tf

New Paper Shell Conical Base. WILLIAMS' PATENT.

WILLIAMS' PAT. CONICAL BASE PAPER SHELL. ST. LOUIS SHELL MFG CO.

Manufactured by the ST. LOUIS PATENT SHELL MFG CO., office 209 North Fourth street. The advantages claimed for these shells are: Cheapness, a saving of 25 per cent. in the use of powder, less recoil. These shells are equal to the best English, and 3 1/2 drachms of powder will do the work of 5 drachms in any other shells. The sizes made are No. 10, 2 1/2 inches; No. 12, 2 1/4 inches. Longer shells made to order at extra cost. Ask your gunmakers for them and use no other. Shells are not mailable. Sample 100 will be sent by express on receipt of \$1.30 for 10s or \$1.15 for 12s

 ISHED GRAINED LEATHER SHOE PACKS
DIXONS & HAWKSLEY'S SHOOTING TACKLE
 STURTEVANT BRASS SHOT SHELLS.
 BUSSEY'S PATENT GYRO PIGEON AND TRAP
 WITH CASE AND 100 BIRDS.

Black's Patent Cartridge Vest.

This Vest affords the best ar-
 rangement yet invented for carry-
 ing cartridges. The weight is
 so evenly distributed that it is
 scarcely felt. Cartridges can be
 carried with the heads down in
 this vest, which is of great impor-
 tance when brass shells are used,
 as when carrying them with the
 head up the weight of the shot ef-
 fect forces the wad forward, when
 bad shooting is the result. In
 ordering send measurement around the chest.

PRICE \$7.50.

Volume 7, Number 12.
17 Chatham St. (City Hall Sqr.)

For Forest and Stream.

The West Coast of Florida.

NUMBER I.

Being Notes of a Family Cruise of Five Hundred Miles and Return, in a Sloop-Yacht twenty three feet long, by Major Sarasota and his Family.

IN offering the following notes of a cruise along the coast of Florida, from Pensacola in the extreme western part of the State, to Little Sarasota Bay, which by the coast line is over five hundred miles to the eastward and southward, my chief aim will be to give such readers of FOREST AND STREAM as may wish to take a similar trip, information which will enable them to sail over the same waters in safety, and without a pilot.

The greater part of the route, and the most difficult, viz: from Pensacola to Cedar Keys, was entirely new to me. I admit that I rather enjoy searching out the strange nooks and corners for myself, although it may take a little more time, but I find it pleasanter to hang up on a mud flat once in a while, until the rising tide lifts me off, than to have the self-sufficient knowledge of the ordinary pilot continually thrust upon me. There is another, and to my mind a still greater advantage, in dispensing with his services. I wished to make a family affair of this cruise, as we were to visit our old home at Sarasota, and if I take my wife along, a strange man is sadly in the way upon a small craft, where a voyage of so great a length is undertaken. I hope also to show to others who may wish to cruise on Florida waters, that if their better halves will stand a little roughing it, and take kindly to living in the close quarters of a boat's cabin, they need not leave them at the hotels, but let them also join in "A life on the ocean wave, a home on the rolling deep." If they are only as fond of fishing as Mrs. "X." is, I know they will put up with some of the little discomforts, for the sake of the pleasure to be experienced in pulling in the fine grouper and red snapper, to say nothing of many other kinds of lesser note, which are to be met with all along shore. And beside this, many of the discomforts exist in the imagination only.

First, a few words about my yacht and outfit. In making my selection of a boat, I was greatly influenced by the fact, that between Pensacola and Apalachicola, nearly all the route is outside, upon the deep waters of the gulf, and where harbors are a long distance apart. For this kind of cruising I am a believer in the keel boat, as being safer than the center-board. For the coast between Apalachicola and Charlotte Harbor, I prefer what I know as the Newport or Providence river sail boat. An experience of some four years on the coast south of Cedar Keys, leads me to differ with those of your correspondents who recommend a skiff boat for these waters. The Newport model draws but little water with the center-board up, only from 6 to 15 inches, yet as the bottom is rounded it is much the safer boat, and in beating to windward there is none of that heavy "chug," "chug," as each wave is met, often deadening the headway completely. I have heard the sound compared to the noise of the clods thrown upon a coffin, and I think the comparison good, but it isn't a pleasant thought to call to mind, when the weather looks dirty, with night coming on, and you are still a long way to leeward of the wished for harbor or home.

So, if going no farther west than Apalachicola, or farther south than the Caloosahatchie river, I recommend the Newport style. If beyond these points, I think the keel boat the safer. In either case the boat should be sufficiently decked over to afford shelter at night or during bad weather. Although the people all along the coast will be found very hospitable, and never refuse to share what they may have with the voyager, it will be found better as a rule to make one's home on board; for I am sorry to say that I found many places in West Florida, especially just before the new crop comes in, where they have but little to share. It is, therefore, a good plan to lay in a liberal supply of provisions, even more than you want for your own use of

some kinds, such as tobacco, sugar and coffee, as I found several places where I could not buy meal or potatoes for money, but they were only too glad to exchange for syrup or coffee.

Living up to my theories as to a boat, I found one at last, at a fair figure. She was sloop rigged, 23 feet long, 8 feet beam, and drawing two and a half feet of water. It did not promise to be very fast, but dry and safe. As she was only quarter decked, I exercised my Yankee handiwork with tools, and built a cabin on her. I left stern sheets 3½ feet long, and a locker of two feet at the stern, which used up the space aft the cabin. In this locker I stowed canned meats, fruit, and milk, with other articles of provisions that would be in constant demand, while the more bulky articles were stowed forward of the mast. A trunk placed just aft the mast acted as a bulkhead, and as there was no centre-board case in the way, we still had room in the cabin to spread out an extra large mattress for our bed. This was rolled up out of the way when not in use. There was just enough room to sit in a low chair with comfort in the cabin. I would have built it higher had I not feared to make the boat top heavy. An oil-cloth carpet covered the floor, and rows of hooks for clothing were placed near the top. I arranged slings on each side just under what used to be the combings, before the cabin was put on, where I could sling my Ballard and double-barrel shot gun. The cooking utensils, consisting of furnace, stewpan, bake kettle, coffee pot, &c., were stowed under the seat, just aft the cabin, which runs athwart ship, canvas flaps keeping the soot from marking our clothing. All sheets and halliards were so arranged as to belay aft, and everything possible was done to make her handy for one man to manage. As my crew was to consist of Mrs. "X." and my little son and daughter, aged respectively six and nine years, it would not do to expect much assistance from them at first, but I am happy to say they all broke in very quickly, and became first class sailors long before the trip was over.

Monday Morning, May 1.—Before many were stirring we went quietly on board the "Idle Hour," and with a light northerly wind slipped away from the wharf, the "stars and stripes" fluttering gaily at our peak. The wind died away completely before we were half way across the bay, but we had not long to wait before the regular S. W. sea breeze set in for the day. As Town Point which is on the opposite side, lies S. by S. W. from my starting point, it was necessary to do some beating. A shoal makes out from this point to the west, and is quite broad on the north side for some 200 yards out, and if drawing over two feet of water it is well to keep at least 350 yards away. There is no stake or buoy at the end, and as the water is often made dark and opaque by the fresh water coming down from the rivers, the shoal is not always to be made out until you are almost on top of it. Shoals of this kind are almost an invariable accompaniment of the points in Pensacola Bay, seldom, however, extending more than 400 yards out.

The next point beyond Town Point, and a little over two miles away, bearing S. E. by S. is Deer Point. The Quarantine flag is displayed here during the summer, and all vessels from outside are examined by the surgeon in charge of the station. The wind had been so light that we did not sound the long sand spit which makes out from this point until noon. Santa Rosa Sound now opened before us, and with a fair wind over the starboard quarter we were at last well off on our journey. For the first thirty odd miles the course is about E. N. E., or if the wind will admit, keep about midway of the sound, and you will go clear of all shoals. There are no oyster reefs or rocks in this sound, so if by chance you do get too near the land, and get aground, there is little danger of damage. The land upon the main-land side is held for several miles as a live oak reservation by the U. S. Government, and no settlements are met until about 25 miles from Pensacola.

About 35 miles up the Sound, what is locally known as the "Narrows," begin, and here the channel is so tortuous, constantly shifting from the main land to the island, and

then back again, that I cannot give directions which will be of service. Five feet can be taken through in the channel at low tide. I was favored with a high tide, and went over all the shoals without the slightest difficulty. It is seldom over two or three hundred yards across the Narrows and the settlements on the main-land side are very close together, as there is some excellent hammock land extending along the shore. There is a fine spring of water at a place called the "Mound" about half way through the Narrows. The island side is entirely without settlements, and and is the most barren and desolate looking country I ever set foot upon. I thought I had seen white sand before, but some of the dunes bore such a striking resemblance to snow drifts, that I must yield the palm to Santa Rosa Island—many of them reaching from the beach to a height of twenty-five or thirty feet, without the slightest particle of vegetation, and combing over the top in true snow drift style. It needed but little imagination to take one back to the frozen north, in the midst of such surroundings. Just before the end of the Narrows is reached, the land seems to close in completely ahead, and now the channel is close in on the main-land side. At one place so close that a pine tree is often guilty of taking off a topmast. When this tree is passed, Choctahatchie Bay, or as it is called on the old charts Santa Rosa Bay, will begin to open. Just here are two or three fine farms which have the most promising looking crops of corn I have seen. After rounding a point, which makes out from the island, the channel passes over to the island side, and holds within a hundred yards or less of it until the East Pass channel is reached. As the sand flats here are very light colored, and the channel almost black, there is no difficulty in keeping in deep water. We came to anchor on the edge of the channel about 8 o'clock in the evening, very well pleased with the day's run of 55 miles.

May 2d.—Went ashore in the skiff at daylight to consult Capt. Lynn Destin, or as he is usually called, Capt. Lynn, about the condition of the pass. Capt. L. was originally from Connecticut, and as he settled here in 1836, while the Indians still roamed over the country, has lived a life of considerable vicissitude. He can spin a very interesting anecdote, either of land or sea. During the last rebellion he performed valuable service as a pilot to the gun boats. Many a starving refugee was put across by him on to Santa Rosa Island, on a straight road for Fort Pickens, and with a full stomach and haversack. His place is the pleasantest location I have met with. He has always devoted most of his attention to fishing, but has a fine lot of orange trees and raises plenty of vegetables, to say nothing of an immense crop of peanuts. He is probably better acquainted with the coast than any one else about here. The voyager will find him hospitable, and always ready to assist in any way in his power, and any information he gives, can be depended upon as trustworthy, which is more than I can say of some others I met on the coast. Indeed, I found it hard to find two men who would agree in their directions for sailing to any one place, and was obliged finally to depend entirely upon myself.

Capt. Lynn said that although it had been blowing pretty fresh from the S. W. all night, and there was quite a heavy sea on outside, still it was not breaking quite all the way across the pass, and I could run out in safety. It is called 60 miles from East Pass to the buoy off St. Andrews Bay, and there is no harbor that can be made in an emergency, in all that distance, so it may be called rather a risky run for a small boat. My chart, and all others that I have seen, show an inlet about half way between two places. Capt. L. said it was known on the coast as Phillip's Inlet. He had been in there many times when on his fishing trips, once in a boat drawing three feet of water, and yet at other times he had been there when the sand beach was solid all the way across. Inside there is a lagoon four or five miles long, by two or three broad, and when much rain has fallen, back in the country, this is raised so high that it breaks a passage through the beach, which will keep open until the next heavy easterly storm. He thought it was open at the present time, but as the wind then was, advised

me not to try to enter it. He said there were several other smaller inlets scattered along the coast, but none of them could be depended upon, and should never be attempted unless the wind was off shore and no sea running. He said I should recognize Phillip's Inlet, by first passing two or three miles of high bluffs, near the beach, which are known as the "High Hills," and were called half way between East Pass and St. Andrews, then would come a low country, with the pine trees apparently well back from the beach. A hammock was on a little hill just at the west of the Inlet, and if I was close in shore, I would be able to see up the inlet, a fishing shanty, about a quarter of a mile from the beach. The only settler in this strip of country, lives some two miles back from this inlet, in a country which is just alive with deer, bear, and turkeys, and with no one to hunt them, except occasional parties from the neighborhood of Tallahassee, or the smaller cities of West and Middle Florida.

Capt. Lynn thought I might find it too rough to enter St. Andrews if the wind held; if so, he advised me to keep on four miles further, to the north end of Crooked Island, where there was a good harbor of easy access. Thanking him for the information, and declining an invitation to bring my family ashore to breakfast, as the wind being fair, I was in a big hurry, I returned on board the "Idle Hour." Breakfast was ready when I got there, but a boat put out from the smack "Hope," which was at anchor near by, bringing us three fine red-snappers, all alive and kicking. This welcome addition to our meal, delayed us a little, and it was not until after 7 o'clock that we hoisted anchor to run down the channel two miles to the pass. The tide was running out very strong, as it usually is here, for all the water from this large bay, with its many sizeable rivers, finds its way to the sea through this one small pass. The channel is nearly all the way on the main land, or eastern side, but the deep water of the channel at the bar itself changes from side to side with the prevailing winds.

As for several weeks past we had been having strong easterly winds, it was now over on the west side and a long shoal hooked out from the eastern shore. As Capt. Lynn had said, it was rough at the bar, but it did not break all the way across, and I boldly headed for the smooth water. After a few minutes' pitching and tossing, during which, perhaps, I wished myself back at the anchorage, we were safely over, and out among the long smooth swells of the Gulf of Mexico. Here let me remark that if ever I sail over this route again I will leave the Pass just before dark, with a fair wind, and do my running in the night. One advantage of starting at night is, that in the darkness you haven't that long and seemingly endless strip of sand beach ever before your eyes, and another and greater is, that after making your night's run you have plenty of daylight before you to enter harbor with, and none of the passes on this coast are safe to enter after dark. Once in a while a man does it in a case of extreme emergency, but he simply takes the chances between a certainty of losing his vessel outside, and the bare possibility of a safe run in. Many coasting schooners have been lost both at East Pass and at St. Andrews in trying it, and several lives lost with them. There are but seven feet of water on the bar at East Pass. After getting well outside I laid my course E. by S. This took me about a mile from land for the first half of the way, when the coast gradually sweeps around until you are steering S. E., when about eight or ten miles from St. Andrews. I found the wind quite fresh from the S. W., and we swung along at a good rate, but the heavy seas gave us so much of a roll that my crew were soon all seasick. Mrs. X. soon braced up, however. I think, perhaps as she had seen but little boating in the past seven years, she might have been a little alarmed at the situation, and there is no better remedy for seasickness than a little fear.

Towards noon it came off calm, and as the heavy sea was still running, we rolled and pitched finely. I was towing my skiff with a ten-foot painter, and as there was no headway on the sloop one of the rollers picked up the skiff and sent it into the stern with such a force as to split the stern-board from the port side to the tiller hole. Before I could get out a line to rig another painter with, slam it came into the other quarter, making a complete wreck of the stern-board. This was not a serious damage, however, as the breakage was all above deck; but still it wasn't a nice thing to happen.

Three precious hours were lost for want of wind, and it began to look doubtful about reaching St. Andrews before dark. A little after 3 o'clock the breeze again sprang up from the southwest, and freshened rapidly. It was soon a whole sail breeze. While rushing along, and only about a mile from the beach, a kingfish struck at the knot which was in the painter of the skiff, and had quite a struggle with it before he got loose. Had not my crew been disabled I would have rigged a trolling line, and might have had some good sport, as they are often caught on this part of the coast. We made out the high hills without difficulty, but I am not positive that I saw the exact location of Phillip's Inlet, although we made out the location of the lagoon inside. It was sunset when the first of the landmarks for St. Andrews came in sight. These are two miles and a half west of the Saddle Hills, and are the first cabbage palmetto trees that are met with on the journey. The Saddle Hills are in plain sight, and look like one green hill if you are close in shore. Half-way between this cluster of palmettos and the Hills are a collection of tall dead pines. The Saddle Hills had always been represented to me as being right at St. Andrews, and as being the principal landmark. There used to be an entrance just west from them. This has been closed for several years, but is still shown on the Coast Survey charts. There is now but one entrance to St. Andrews, and I will give my experience in finding my way into it on the return trip in due time.

At the present time it was just dark when the Saddle Hills were abeam. I could hear the breakers roaring down to leeward just beyond them, and was not long in deciding not to try them or get very close to them in the darkness. I held my course about S. E. by S., and about four miles further on passed within thirty yards of a black buoy. This proved afterward to be the outside St. Andrews buoy. I knew I was now off the north end of Crooked Island, but as I could make out no break in the sand beach there was nothing to do but keep on for St. Joseph's Bay. As the entrance to this is eight miles wide, I thought I ought to hit it even in the dark. It was now blowing so fresh that I was obliged to stow my jib and double reef the mainsail. There had been a good deal of water shipped by the skiff, and this had to be bailed out, which was not

a pleasant job with such a sea on; but it had to be done, and was done. After making everything snug we bore away again, going much easier when under the shortened sail.

After sailing until near midnight I began to get a little uneasy at not seeing some signs of a harbor; thought I had not kept close enough to land, and this proved to be the fact afterwards; but to be on the safe side I hove to until about 2 o'clock, then, finding that I had but four or five fathoms of water, I decided to anchor for a while and see how things would look at daylight. It was a rough place to anchor in, as about every tenth sea was breaking, and I didn't know whether my holding ground was good, or if good, that it might not pull my bow under. I was not as well acquainted with the boat as I wished to be, and didn't know how much she would stand. Everything worked well, however, and although we rolled and pitched very lively, as was to be expected, no seas were shipped, and except when one broke at just the right moment we were not even splattered. Not so with the skiff, however, as it was swamped in no time, and as I knew it would fill again in five minutes, if I bailed her out, I let her go as she was until morning. It seemed as though morning never would come; but it did at last, though very slowly, with much haze. I had a good opportunity then to see what kind of seas we had been riding during the night, and when the first one of the old "he," ones came, and I saw the end of the bowsprit dip into it, I grabbed the rail and held my breath, thinking surely we were going to be washed. But not a bit of it; the "Idle Hour" rose to it as gracefully as a bird, and not a drop of water came on board. I have never doubted her ability to ride seas since then, and with the heavy ground tackle which I carry always feel perfectly safe when bottom can be reached.

As morning broke I was very glad that I had come to anchor when I did, for with the course I was holding I should have either gone outside of the point of St. Joseph, or have got into the breakers on the point itself. Very likely the latter, as the last mile or more of the point has no trees on it, and lies so low I could not have seen it in the darkness until close in. After leaving Crooked Island the coast trends off to the eastward for a few miles, and I ought to have kept closer to it. It is safe to keep a mile or mile and a half out, and by so doing avoid both inner and outer breakers; or if very dark, and steering by compass, after passing half-way down Crooked Island hold S. E. by E. until the light at Cape San Blas can be seen over the woods, and bearing about S. by W. When this light can be seen from the deck of a small craft you can be pretty sure that you are either inside, or just off the "Hook" of St. Josephs.

As soon as it was well light and I could make out my position accurately I began preparations for a start. First the skiff must be got alongside and emptied. This was rather difficult, owing to the high seas which were running, but by taking advantage of them, and Mrs. X's assistance it was hauled on board, and the water allowed to run out. I anticipated trouble in getting up anchor, after the strain which had been on it all night; but here again I made the heavy seas of use in helping to break ground, and we were soon under way, heading for the point of St. Josephs. There are 24 feet of water at the shoalest part of this channel, and the entrance is perfectly open and easy to any vessel of ordinary draft, even in rough weather, as on the "middle ground"—as the only shoal in the mouth of the bay is called—there is 18 feet of water. It was breaking continuously across this middle ground; so with my limited knowledge of the entrance, there was nothing for me to do, coming from the quarter I did, but run the breakers, trusting to the seaworthy qualities of my boat, which had already been well shown up. The skiff was swamped almost instantly, but the wind was so fresh that we pulled it along almost as well as when empty, and were soon safely around behind the point, where the water is smooth as a mill-pond.

St. Josephs was formerly quite a flourishing little city, had a railroad running back into the country, and shipped large quantities of cotton; but somewhere between 1843 and '46 the yellow fever devastated it completely. Its most prominent citizens having fallen victims to that disease, or being driven by it to other parts, the remainder became discouraged and moved with houses, stores, brick ware-houses, and in short everything, to Apalachicola, so that now it is hard to believe anyone ever lived in this wilderness. On account of its ease of access it is a favorite harbor for fishing smacks and coasters during bad weather. There seems to be from ten to fifteen fathoms of water all over the bay, even quite close in shore, and with the stiffest holding ground I ever tried to lift a thirty-pound anchor out of. It is well sheltered from every wind except east or southeasterly.

We found the smack *Gladiator*, of Pensacola, a trading sloop from Apalachicola, and a party of fishermen under Capt. Parker from St. Andrews, all in behind the hook waiting for a change in the weather. They expressed much surprise at seeing a craft so small as mine coming around the point in such weather, but I told them it was just the time I ought to come around there, if I couldn't come sooner. After getting well rested and everything made snug I took a tramp over towards the outside beach with my double-barrel, and picked up a dozen and a half of plover and beach birds of half a dozen different kinds. They were all as fat as well could be, and the stew we had that evening was royal.

May 4th.—A party came off from the smack to take a hunt for deer. I did not require a second invitation to join them, as it was understood we were to shoot nothing but bucks. There were five, all told, in the party, and our plan was to go up the bay on the inside beach of the point for about four miles, then deploy at about two hundred yards apart towards the outside beach and beat the woods back towards camp. This was all very nicely carried out, and eight deer were seen by the different members, but no one got a shot. I was greatly surprised at the large number of pairs of quail we started. In this country it is not common to find them in the wild woods, but rather in the vicinity of plantations, when they have the run of the corn and pea fields, but here the nearest field must be twenty or thirty miles away. There is a good spring of water with a barrel sunk around it near the fishing camp. This camp is only about thirty yards from the inside beach, and just in the edge of the first brush as one comes from the point—just about half-way between the first pine trees and the landing.

MAJOR SARASOTA.

[To be continued.]

A FINISHING SCHOOL.—The halter.

MY friend and I left here on the 11th July, and took the Intercolonial railway from River Du Loup for Dalhousie, in New Brunswick; time from Point Levis to Dalhousie, thirteen hours. We found the trip over the Intercolonial very pleasant, the cars comfortable, and the sea breeze from River Du Loup to St. Flavian most delightful, after enduring the heat of Montreal and Quebec. The portion of the line from the St. Lawrence to the Restigouche and along the Metapedia is very wild and alpine in its appearance.

After the summit level is passed, the train descends at the rate of forty miles an hour down the valley of the Metapedia, and along the banks of that beautiful river. As the train flies along down the valley, we are in a constant fear that we are just likely to get upset into the river along side of us, but the road bed is good, and the steel rails make the road like a billiard table, and the quick curves are turned with perfect safety. So we are landed at the Metapedia station, opposite our friend Daniel Fraser's hospitable door before we realize that we are on the borders of New Brunswick. The valley of the Metapedia contains some of the finest scenery in the Dominion; and as the air is cool, and good fishing is to be had here, I would advise tourists and invalids to take a trip here by the cars, and they would not be disappointed. From this point we got to Dalhousie at 10 p. m., where we met a fishing party from St. John's and New York en route for fishing quarters on the other side of the Bay of Chaleurs. They had a steamer hired to take them over, and offered us a passage with them, which would take us to near the mouth of our river the little Cascapedia, but when the time for departure arrived, and no steamer making its appearance, my friend and I took the opportunity of a fair wind and tide, and the offer of a good boat, and in three and a-half hours arrived (with a reef in our sails) at our destination, after a glorious sail down the Bay, thirty-five miles.

We landed on Saturday at the mouth of our river, where we had good quarters at a farmer's house; and on Monday morning we had our two Birch canoes and four men ready to ascend the river thirty miles. We had also, another canoe to take our baggage and provisions for fourteen days, and so we started at 6 a. m., up the river toward the Chick Choik mountains, and at 6 p. m., arrived at our camp, where we had previously erected a substantial and comfortable shanty 30x40 feet, after a hard day's poling on the part of the men.

Some of the rapids on the river look very ugly to a person not accustomed to the mode of travel, and the fact of its taking us ten hours to go up 20 miles to our shanty, and that we can make the run down in three hours, will give a fair idea of the rapidity of the current. However, the sensation of going down some of these rapids at the rate of fifteen miles an hour, and that in quick bends of the river, with the spray at times dashing in your face makes the position exciting, and had you not perfect confidence in your men, would make you feel rather nervous. For my own part I enjoyed it very much, and with the men who handled my canoe, I would have no fear of lying down to have a sound sleep, if I felt so disposed.

We arrived at our shanty at 6 p. m., and soon found ourselves at home in this wild mountainous region, with Red Pine Mountain towering almost perpendicularly in front of us—some 5,000 or 6,000 feet above the bank of the river, and twenty miles from the nearest settlement. The air here is bracing and the river water as clear as crystal, and as cold as ice.

Next morning, after a bath in the river, which made our teeth chatter, we started to fish, and went up ten miles to the forks of the river, where the breeding beds of the salmon are. We had very fine sea trout and salmon fishing for the rest of the week—the trout in this section of the river weighing on an average, six pounds by our steel yard, and the salmon twenty pounds—and both giving excellent sport in landing them.

On Saturday I started down the river for civilization, leaving my friend, with his two men, in the camp; and on the way down landed three twenty pound salmon, and forty-three trout, of five pounds average weight.

On the following Monday, the day being very wet and cold, I got nothing for my pains, but on Tuesday I had a glorious day's fishing, netting three salmon and fifty fine trout in a few hours in the afternoon. I may mention for the information of anglers that I had on one occasion, two salmon rise to my fly at one cast, and one of them a thirty-six pounder, I had the pleasure of hooking. Six times running I landed two five pound trout with two flies on my casting line, and my stern boatman who had the landing and unhooking of them, was so tickled that he declared he had never seen such fishing before.

This evening I decided to camp out as we were to late to go to the shanty, after selecting a site on the bend of the river in front of some rapids, I set the men to work and in a couple of hours had a place fit for the Governor General to sleep in. The camp is made as follows:—Two trees within convenient distance are selected, and a wedge-like pin driven into each, and on this is laid a long pole strong enough to support the bark intended for the roof. Upright and cross bars are then laid and attached to this with cord made from the inner bark, and on this is laid the birch and cedar bark taken from the adjoining trees. It is interesting to see the rapidity with which the large trees are deprived of their coats; the axeman cuts a circle with his axe around the tree, some eight or nine feet from the ground, and another near the ground, and having made a slit from one circle to another, he then takes a stick flattened at one end like a chisel, and inserting the sharp point between the bark and the tree, the coat of bark is off in a trice, and laid on the frame of the shanty. The sides are also covered in the same way, and then two feet deep of cedar boughs laid for a bed with one foot more for a pillow, and then a huge fire of logs is made right at your feet. Having spread your top coat underneath, taken off your boots and coat, which you put over you, and then your water-proof coat over all, with a square yard of thin birch bark under your feet, you can bid defiance to flies, wind, or weather, and get up at 4 a. m. delighted with your temporary residence, and having taken a good sponge bath in the river in front, you are quite ready for your breakfast of trout or salmon fried in salt pork, and washed down with a good cup of tea.

On our way up the river we saw a very large eagle rising from off an island in front of us, and on landing we found the remains of a rabbit on which the monarch of birds was making his dinner. We also saw the fresh track of moose deer opposite our camp.

One of our Indians (Black John), one evening went from the camp a short distance, in search of birch bark to make a canoe, when he came to a large tree nearly stripped of its outer bark by a bear to get at the inner bark, of which it is very fond.

On our way down the river our men told us of a beaver dam a short distance from the river, so being anxious to see it we took the things out of our canoe, and in no time the men had them on their shoulders, and on their way to the dam. We soon arrived at a sheet of water about three-fourths of a mile in length, and from six to ten feet in depth, formed by the beavers felling large trees, some fourteen to eighteen inches in diameter across the lower end, and then smaller timber laid at an angle of forty-five degrees into the ground, with their upper ends resting on the cross beam; they then fill up between with clay and small sticks till the dam is as tight as a drum. Near the upper end they have two houses, one of twelve feet in diameter, and the other eight feet, which I presume is the baby-house or nursery. The entrance to these houses is from below water, and the shape conical, or very like a haycock. The bottom of the dam is covered with a beautiful green carpet of moss, and as the water is very clear you can see ridges along the bottom, and holes in them where the beaver makes himself at home when he is afraid of man or gets tired of his two storied castle. On examining the chips which the creatures cut from the trees they had felled, I found some of them from four to five inches long, and cut as though done with a woodman's axe.

Having engaged our schooner to come back for us on Saturday to the mouth of the river, we arrived there that evening dripping with wet, but in excellent health and with good appetites. We had killed fourteen salmon, and from eight hundred to one thousand pounds of sea trout, and very well pleased with our sport; and took two barrels of pickled fish home with us, having given the rest away to our friends of New Richmond.

We could have killed a great many more salmon, but as we had no ice to pack them in, we thought it would be wrong to let them spoil, having used all our salt. I have given instructions to the Guardian of our river to make an ice-house for us next winter, so that we can then keep all we catch and pack them fresh, and take them with us by Intercolonial railway.

We found our skipper just arrived and ready for us, at 5 a. m., next morning we hoisted sail, and with a fair wind and very pleasant sail, arrived at Dalhousie the same afternoon, where my friend got on board the cars for Montreal to attend to his duties of cashier of the G. T. R., and sorry that his time was up, while I took the cars next day to Daniel Fraser's on the Matapedia, and the following day had the pleasure of landing two salmon from that river, and the next day after, made tracks for home just as the hot spell was over.

D. DAVIDSON.

For Forest and Stream.

REMINISCENCES OF SPORT IN TEXAS.

THE word "Texas" in Indian signification means "plenty," referring to the game; but "plenty," as applied to Texas, should include less desirable things, such as cut-throats and horse thieves of every grade. While camped near Denison waiting for some friends, horses were stolen and murders and other outrages committed in all directions. In all our hunting experiences we have never felt so safe as when out of the reach of *white* Indians.

Early in October we started for the West via Gainesville, Montaigne and Henrietta. On the seventh day we reached and crossed the Big Whitechita river. Following up the valley of the river, in another day's march, we crossed and camped on a tributary, when the departure of two of our party reduced us to three—M., myself, and Ben, our cook and teamster. By the time we had finished a substantial supper and smoked our pipes, the moon rose and we strolled down the creek to look for turkeys. These we soon found, and brought in all we could carry. There is not much sport in this sort of shooting, still it often requires experience to be successful, and sometimes is attended with much fun. I once posted four friends under a tree with their guns pointed at what they supposed to be turkeys, but I knew to be mistletoe. In breathless silence they waited for the word from me, and then to their disgust, only produced a shower of leaves. During the night we were disturbed by a great noise and rushed out of the tent expecting Indians, but it was only a buffalo, which came up a path from the creek into camp, and was attacked by our dogs.

In the morning we had an excellent breakfast of devilled turkey, ham, coffee and hot biscuits, and went out with shot guns for more turkeys. M. soon came in with six on his horse, and I killed four; we could have filled the wagon on this creek. We now went out for deer. M. brought in a fine antelope, and I shot a buck near camp, which I dragged in tied to my horse's tail, a common way on the frontier. By taking a clove hitch with the middle part of your lariat over the tail, and attaching the end to anything you want to drag, you have a most convenient method for camp service. The turkeys and deer made the camp look cheerful, and that night we made a hunter's pot-pie—venison, turkey's breasts and livers, well seasoned, placed in a large pie dish lined with pastry, and baked in a Dutch oven.

In the morning we started early to look for buffaloes. A short ride brought us to an elevated plateau from which we had a fine view of the country. To the south the broad valley of the Whitechita, and on all other sides a rough, broken and undulating country of great extent, intersected by numerous small creeks, but best of all abounding with game. Herds of buffalo in various directions, deer and turkeys in the valleys, and a fine herd of antelope on a distant ridge. Here was a hunter's paradise, and as we gazed enraptured with the view our hearts ached to think that but a few years must elapse ere the country would be overrun by ruthless butchers, and this game a thing of the past. All true sportsmen will sympathize with us. Thousands of buffalo have been killed within the last few years whose hides have only realized from one to two dollars for the mercenary hunters who killed them.

Selecting the nearest herd of buffalo we got as close as possible without being discovered and then rode at them, cutting out the two we wanted. Our horses were well trained and we soon killed these, getting furious charges from them. Cutting out the best meat and tongues we returned to camp. In the evening we went out to look for deer. While stalking some buffalo I found in the creek I got within ten yards of some turkeys and they had evidently never seen a man in such a position before, for they

made no attempt to run until I had shot at the buffalo. Soon after this I jumped a fine buck in a thicket. I got a snap shot and dropped him. On my return M. came in with a panther which he shot while stalking a deer; it was lying in the grass waiting for the same deer. We now had a variety of game in camp including some ducks I killed in a pond, and busied ourselves salting and smoking meat. Around the camp-fire at night M. related some of his adventures. On one occasion he left camp on Republican river, Kansas, to ride to Fort Kearney for butter and other things. The next morning while preparing his breakfast he saw two Indians across the creek looking at him. He had taken a Spencer carbine with him and found that the ammunition was worthless. He had shot several buffalo the day before and not one in ten of these cartridges were good, and he threw them away. Now he only had three cartridges in and no confidence in them. With great presence of mind he invited the Indians to join him, which they did. He then made them sit down while he finished his breakfast, pointing the carbine at them whenever they attempted to rise, and never turning his face away. They were anxious for him to pay their camp a visit, but he did not accept their kind invitation. His horse was ready saddled and breakfast over he sent them off, and got a good start before they got to their camp, which was a war party of Sioux; he got into the fort safely. The next morning a party of Texas stock hunters, called cow-boys, came into camp and reported some hunters driven in by the Indians. These fellows are greasy looking little men principally composed of boots, spurs and broad-brimmed hats. They are excellent riders, and especially so when Indians appear, for they are great cowards as a rule.

We had so much game in camp now that we hunted very little for some days there, shooting deer occasionally, preserving the hams by smoking and salting and preparing for a move farther west.

FITZ.

AUTUMN LEAVES.—We are often requested to give some information as to the best way of preserving our beautifully colored leaves so that they can be used to decorate our houses, and, in the cold, snowy winters, bring back the glorious October days.

This fall we have tried waxing the leaves, both when freshly gathered and when half dried, and are greatly pleased with the result. Those half dried do not look as well or keep the color as perfectly as those waxed when first gathered. Common yellow wax is preferable to the white.

Lay several thicknesses of thick, firm wrapping paper on the ironing table. Fold up paper, or old cloth, into a pad on which to put a cake of yellow wax. Lay the leaves smooth, and, if a spray or branch, pick out those leaves which overlap on the branch and hide a good part of the leaf; pass a warm flat-iron over the wax quickly and then over the leaf or spray, on the upper side first; then turn over and do the same with the under side, and remove to the paper in which it is to be pressed. When the sheet is full, cover with two or three thicknesses of paper and proceed the same way with more leaves till all are waxed. This done, put all under an even but heavy pressure, and change them to dry papers every two or three days till the leaves are perfectly cured.

We find the leaves that have been thus treated in good color, soft and nearly as flexible as if fresh from the tree. But this year, although leaves on the mountains and in high latitudes have turned very beautifully, they do not appear to have the firm texture and strength usually found in autumn leaves, and do not keep their color under any process as formerly. We hear it attributed to the intense heat of the summer, which seems to have burned all strength and vitality out of the leaves, as well as out of mankind generally. It seems a very natural explanation.

In pressing leaves it is a good plan to get a smooth, flat board, a little larger than the papers in which they are to be laid. Then put the papers smooth on this, and place the leaves in order as fast as ready. Cover with more papers; add more leaves, till all are done. When all are finished, put another board of the same size on top, and on that pile large, heavy books, making an equal pressure all over, or instead of the books, take off the marble top from a table or stand, and put that on top. This gives the most even pressure, and is sufficiently heavy.

We have been told that after leaves have been pressed a day or two, if they are dipped into a weak solution of sulphuric acid, shaken free from drops, and again put in press, it will restore the color perfectly. When well dried from the wash they can then be waxed. We have never tried this.

When leaves have been cured they can then be made very ornamental, mingled with any kind of ferns. The Hartford creeping fern is very beautiful to use in wreaths and festoons over doors, pictures, or around window and door-cases. By linking the vines together with a spray of rich leaves the effect is very pretty. Very tasteful vines or wreaths can be arranged around pictures, brackets or lamprequis. White curtains may be prettily looped up or festooned in the centre by these vines or a bunch or spray of richly-colored leaves.—*Christian Union*.

QUAIL RAISING.—Mr. David Taggart, in the *Fanciers' Journal*, describes his experience in raising quail. He says: "I have eleven, nearly four weeks old, hatched by a game bantam, and carefully nursed by her. I kept them in one of my hen houses—10x14—with ground floor and southeast windows. I give them, besides other food proper for gallinaceous birds, a dog's fill of house flies once a day. They gobble them more greedily than any other food. It takes twenty-two and a half days to hatch the eggs. I have had bantam eggs in midsummer hatch in eighteen and a half days, and brown leghorns from eighteen days eighteen and a half hours to nineteen days ten hours, after being transported from Freehold, N. J. I am satisfied that quail can be raised with great certainty, if they can be kept from running away. To avoid this, it is necessary to plug or putty all nail or worm holes.

—When swimming a horse never touch the bridle, as a horse is easily drowned when checked up or otherwise interfered with about the head. Sit well back and guide the horse with the hand, gently slapping him on either side as required; thus a horse will swim a mile or more with a full-grown man on his back, and suffer but little. Or better still, throw yourself from the horse on the down stream side, and with the right hand grasping the mane at the withers, aid the progress of the horse with the other and feet as in swimming.

Fish Culture.

—Mr. C. F. Orvis, the well known maker of beautiful fly rods, is building a trout hatching house at Manchester, Vermont. He says he is tired waiting for the State to do the work, and so the plucky little man goes it alone. Right!

MEACHAM LAKE.—Mr. A. R. Fuller writes us that on the 14th inst., he took 30,000 salmon trout eggs and placed them in his boxes. He now has about 80,000, all of which will go into the lake when able to shift for themselves.

TRANSPORTING TROUT.—A correspondent of the *London Field* says: "Considering the progress which the breeding of fish, and especially of salmon and trout has made, it will not be without interest to state that a new, very practical, and simple apparatus has been invented, by means of which live trout may be easily and safely removed from place to place. Their transport, as is known, entailed hitherto a great deal of trouble, trout requiring for their existence a water in constant motion, thereby continually absorbing fresh supplies of air. This was effected but inefficiently and slowly during the transport, by air being injected into the water. M. Jean Richard, of Lorraine, has now invented an ingenious yet simple apparatus, by means of which, even during the transport, the air contained in the water is constantly being renewed, in the same manner as it is effected in nature by the leaping and purring of the water of mountain streams over their rocky beds. The apparatus consists of a tin case, divided by a perforated partition into two sections, both being half filled with water. The trout are put into one division, while in the other a kind of mill-wheel with small paddles is placed, which is kept in rotation by a clockwork, wound up as soon as the trout are placed into the case. Thus the water is continually brought into contact with fresh supplies of air, and the trout make the railway journey under similar conditions as if they were gaily sporting in their native mountain streams."

FOOD FOR YOUNG TROUT.—Any food of an animal nature which can be minutely and uniformly divided, will serve as food for the young trout. Liver can be boiled and grated, or raw liver can be chopped up with an old razor very fine and then fed to the young fish drop by drop. The yolk of an egg boiled hard and grated makes a good food; but in our experience the best food is thick milk or bonny clabber, which can easily be strained through a coarse cloth and thus reduced to atoms. It is not material about removing all the whey, as the water will wash it off, and it does not hurt the fish; dilute with one-half or two-thirds water. A half teacupful of this mixture will feed a hundred thousand fish when they first begin to feed. The best way to feed them is to take a case-knife, dip it in the feed and *skirt* off the food which adheres in to the troughs; a very simple way, but one answering all practical purposes. Care should be taken not to feed too much, else the surplus food will remain on the bottom, and decaying there foul the trough. The reason of the difficulty in raising young fish appears to be that they are literally starved to death. The food which we can give them is not natural to them, and it is often given in such coarse pieces that they cannot take it, and sometimes, through the carelessness of a hired hand, they are neglected two or three days at a time. The question will very naturally be asked, "Is it not possible to obtain their natural food?" We answer, yes, in small quantities. The moss and weeds in every stream are full of it, and by placing in the troughs fresh moss and weeds gathered from the stream every day, the young fish may be fed. But this is not practicable. With a large number of fish it makes too much work. It would soon foul the troughs and cause the fish to die, and then, if the young fish are fed on this at first, they will not take the artificial food afterward. Trout, of any age, learn to eat that food which is most abundant around them. Anglers know this by experience, and use the flies which they see on the stream on which they are fishing. It is commonly supposed that a trout is very fond of grasshoppers, but the trout in one of our ponds, which we have fed for a long time with lights, will not look at a grasshopper, and, strangest of all, will turn up their noses at the fattest and juiciest worms, while the trout fresh caught out of the streams, which we have put in a pond by themselves to educate, will for weeks refuse the daintiest bits of lights and liver. Hunger will after a time drive them to change their food; but with the young ones we cannot wait for this, as they will die off before they learn. As the fish grow older and stronger more food must be given to them; still, when six months old, a bowl full of curd, diluted with water, will answer for a thousand. While the fish are young, feed often; three or four times a day for the first two or three months, and the oftener the better; twice a day will do after three months until they are a year old.

A word just here about thick milk or curd. If milk stands a short time in hot weather, or a longer time in cold weather, it sours and becomes thick; this thick milk is called, we believe, bonny clabber. The process may be hastened by heating the milk, or by the addition of rennet. In that case the product is called curd. The milk naturally turned is best for the young fish, as it is softer and more easily picked to pieces. We have often seen the young trout, one after another, take and reject small pieces of curd which had been turned by heating, while they would bite to pieces and consume a lump of the naturally turned bonny clabber. When the fish are three or four months old it may be made fine enough by stirring with a spoon, and if there are a few large lumps they will not go to waste, as the fish will pull them to pieces. Curd is best for the larger fish, as it is more compact, and holds together in lumps. The bonny clabber may be given to the fish until they are a year old, but after that it is generally more economical to feed them upon liver or fish. A change of food is good for fish, as well as for all other animals. But as this whole question is yet unsettled, or more properly the art yet in its infancy, we give only our practice.

A feeding platform in the ponds may be used with advantage. This is simply a platform of boards, two feet by four, placed in the middle of the pond, and raised a few inches above the bottom; it will also serve incidentally as a cover for the young fish. If you throw the food over this platform, all, if not taken before it reaches the bottom,

will fall upon the platform, and as this can more easily be cleaned than the bottom of the pond, there is less liability of fouling the water; the fish will also take food better from a clean bottom than when the food lodges in the mud or weeds.

There will be a great difference in the growth of the fish noticeable after the first few weeks of their existence. Some, of course, will be larger and more vigorous than others from their birth; but of those apparently of the same size and health when one month old, some at six months will be four times the size of others; this, too, when grown in the same pond and under the same circumstances. They will begin to eat each other when very young. A trout only a few weeks old begins to show symptoms of fight, and will kill his weaker brethren when they get in his way by biting a piece out of their tails. In two or three months, when some of them get to be double the size of others, they will swallow each other whole. We have taken a trout one inch long out of another only two inches long. It would seem to be advantageous, therefore, to sort them out every little while, and put the same size by themselves; but in practice this is very difficult, and the less a trout of any size is handled, the better; besides, if they are fed well, they lose their disposition to eat each other. Therefore the trout of each year may be left by themselves with very little probability of losing more by cannibalism than would be killed in sorting out and removing.

The covers should be kept on the first pond at night, and in dark, cloudy weather until September, at least, when the trout will be from two to five inches long and able to take care of themselves. Even then it is as well to have the covers at hand and put them on in case of a rain storm, since we often find after a storm numbers of young fish dead in an exposed pond; therefore, we conclude, although we do not know the philosophy of the thing, that they need a cover in rainy weather. After September there is no difficulty in raising the fish—they all appear hardy and strong; perhaps it is because all the weak ones have died off, and none are left but those "able to stand the pressure."

SETH GREEN.

Natural History.

THE ARCTIC FOX—*Vulpes lagopus*.

THE term *lagopus*—"hare-footed"—has been given to the Arctic fox from the fact that the soles of the feet are densely covered with woolly hair, causing a resemblance to the foot of the hare. Cuvier remarks that other foxes acquire this hair on the pads of the feet when taken to northern lands. The Arctic fox inhabits the countries bordering on the Frozen Sea: Kamschatka, the isles between it and America, Alaska and northern British America, Greenland, Iceland, Spitzbergen, Novaja Zemla and Lapland, and rarely specimens are found as far south as Newfoundland. Those of Asia and Lapland are very migratory, owing to their pursuit of the lemming which is very unstable in its habitat, and furnishes their principal food. Sometimes these foxes will desert a country for three or four years for this reason.

The fur of this inoffensive and pretty creature is peculiarly fine and thick, and as in winter it is closer, longer and more mixed with wool than in summer, the intense cold of these regions inhabited is easily resisted. When sleeping it is rolled up like a ball, with its little black muzzle buried in the long hair of the tail, so that there is no portion of the body but is protected from the cold, the shaggy hairs of the breast acting as a respirator or boa for the mouth and a muff for the paws. All Arctic travelers remark that this fox is a peculiarly cleanly animal, and that its vigilance is extreme. It is almost impossible to come upon it unawares, for even when appearing to be soundly asleep it opens its eyes on the occasion of the slightest noise. During the day it appears to be listless, but no sooner has night set in than it is in motion and continues extremely active until early dawn. The young migrate to the south in the autumn, and frequently collect in vast numbers on the shores of Hudson's Bay. They are met with in like numbers at this season on the banks of the Obi, arriving in November and leaving in April. The Arctic fox lives in underground burrows, forming holes many feet in length, the bottoms of which are strewn with moss. In Greenland and Spitzbergen it lives in the clefts of rocks, not being able to burrow by reason of the frost; two or three pairs inhabit the same hole. Sir James Ross found one of these burrows on the sandy margin of a lake in the latter part of July, and took pains to examine it. He described it as having several passages, each opening into a common cell, beyond which was an inner nest in which the young, six in number, were found. These had the dusky lead-colored livery worn by the adults in summer, and though four of them were kept alive until the following winter they never acquired the pure white coat of the old fox, but retained the dusky color on the face and sides of the body. The parents had kept a good larder for their progeny, as the outer cell and the several passages leading to it contained many lemmings, ermines, and the bones of fish, ducks, and hares in great quantities. Sir John Richardson observed them to live in villages, twenty or thirty burrows being constructed close to each other. A pair were kept by Sir James Ross for the express purpose of watching the changes which take place in the color of the fur. He informs us that they throw off their winter dress during the first week in June, and that the change takes place a few days earlier in the female than in the male. About the end of September the brown fur of summer gradually became of an ash color, and by the middle of October was perfectly white. It continued to increase in thickness until the end of November. A blackish-brown variety is occasionally met with, but this is rare; such specimens, Ross remarks, must have extreme difficulty in surprising their

prey in a country whose surface is of an unvaried white, and must also be much more exposed to the attacks of their enemies. Some have thought this variety to be a cross between the Arctic fox and the black fox.

The food of the fox is various, but seems to consist principally of lemmings, and of birds and their eggs. He eats, too, the berries of the *Empetrum nigrum* or black crowberry—a plant common to the hills of New York and New England as well as Arctic lands—and goes to the sea shore for mussels and other shell fish. Otho Fabricius, in his "Fauna Greenlandica," says that the fox catches the Arctic salmon as that fish approaches the shore to spawn, and also seizes the haddock, having enticed it within reach by beating the water. Crantz, in his "History of Greenland," evidently alludes to this example of cunning when he observes: "They plash with their feet in the water to excite the curiosity of some kinds of fishes to come and see what is going forward, and then they snap them up; and the Greenland women have learned this piece of art from them." Capt. Lyon noticed a fox prowling on a hill side, and heard him some hours afterwards in the neighborhood imitating the cry of the brant goose. In another part of his "Journal" he mentions that the fox is a ventriloquist, for he has heard the bark so modulated as to give an idea that it proceeded from a distance; though at the time the fox laid at his feet. It struck him that the creature was thus gifted that it might deceive its prey as to his remoteness. It sometimes catches the ptarmigan, and though it does not swim manages occasionally to procure oceanic birds—in fact nothing alive which it can master seems to come amiss, and failing to make a meal from that which it has caught and killed, the Arctic fox, like foxes of more favored lands, is fain to satisfy his appetite with carrion. Martens says in his "Spitzbergen" that some of the ship's crew informed him that the fox, when hungry, lies down as if he was dead until the birds fly to him to eat him, by which trick he catches and eats them. This author believed it a fable, but it may nevertheless be one of the many expedients used by a species of a group whose name is proverbial for craftiness and cunning.

The flesh of the fox is occasionally used as food by the Esquimaux. Capt. Lyon writes in his "Private Journal" that at first all of his party were horrified at the idea of eating foxes, "but very soon many got the better of their fastidiousness, and found them good eating. Not being myself very nice, I soon made the experiment, and found the flesh much resembling that of kid, and afterwards frequently had a supper of it." Sir James Clarke Ross, during his five years' imprisonment in Boothia Felix and the adjoining seas, had ample means of judging of its flavor. He tells us that some of his party, who were the first to taste them, named them "lamb" from their fancied resemblance in flavor to the young of sheep when only a few days old. But he adds that the flesh of the old fox is by no means so palatable. During that disastrous expedition the flesh of this animal formed one of the principal luxuries of their table, and it was always "reserved for holidays and great occasions. We ate them boiled, or more frequently after being parboiled, roasted in a pitch kettle."

When the Arctic expedition in search of Sir John Franklin wintered in Leopold Harbor, in 1848 and 1849, the commander, Sir J. C. Ross, made use of the Arctic fox as a messenger, as the fox is known to travel great distances in seeking food. Having caught a number of these animals by means of traps, a collar with information for the missing parties was put around the neck of each before liberation. On Capt. Austin's subsequent expedition, in 1850 and 1851, the same plan was carried out, but equally without result. Commander Osborne thus facetiously describes the circumstance in his "Stray Leaves from an Arctic Journal": "Several animals thus intrusted with dispatches or records were liberated by different ships; but as the truth must be told, I fear in many cases the next night saw the poor 'footman,' as Jack termed him, in another trap, out of which he would be taken killed, and the skin taken off and packed away to ornament, at some future day, the neck of some fair dulcinea. As a 'cub' I was admitted into this secret mystery; or otherwise, I, with others, might have accounted for the disappearance of the collared foxes by believing them on their honored mission. In order that the crime of killing the postman may be recognized in its true light, it is but fair to say that the brutes, having partaken once of the good cheer on board or around the ships, seldom seemed satisfied with the mere empty honor of a copper collar, and returned to be caught over and over again. Strict laws were laid down for their safety, such as, that no fox taken alive in a trap was to be killed; of course no fox was after this taken alive; they were all unaccountably dead, unless it was some fortunate wight whose brush and coat were worthless. In such case he lived either to drag about a quantity of information in a copper collar, for the rest of his days, or else to die a slow death, as being intended for Lord Derby's menagerie. The departure of a 'postman' was a scene of no small merriment. All hands, from the captain to the cook, were out to chase the fox, who, half frightened out of his wits, seemed to doubt which way to run, whilst loud shouts and roars of laughter, breaking the cold frosty air, were heard from ship to ship, as the fox hunters swelled in numbers from all sides, and those that could not run mounted some neighboring hummock of ice and gave a loud halloo, which said far more for robust health than tuneful melody."

The Arctic fox as a captive has often amused Arctic voyagers, and accounts of it are to be met with in most of their narratives. Capt. Lyon made a pet of one he captured, and confined it on deck in a small kennel with a piece of chain. The little creature astonished all hands very much by his extraordinary sagacity, for on the very first day, having been repeatedly drawn out by his chain, he at length drew it in after him whenever he retreated to his hut, and took it within his mouth so completely that no one who valued his fingers would venture afterwards to take hold of the end attached to the staple. Sir J. C. Ross, in Boothia Felix, observed a good deal of difference in the disposition of individuals, some being easily tamed, while others would continue savage and untractable under the kindest of treatment. He believes the females were generally much more vicious than the males. One of the latter sex captured by his party lived with them several months, and became so tame in a short time that he regularly attended the dinner table like a dog, and was always allowed to go at large about the cabin. When newly caught their rage is quite ungovernable, and yet when two

are put together they seldom quarrel, and soon become reconciled to confinement.

Capt. Lyon, in his "Journal," notices that their first impulse on getting food is to hide it as soon as possible, and this, he observed, they did even when hungry and by themselves; when there was snow on the ground they piled it over their stores, and pressed it down forcibly with their nose. When no snow was to be obtained he noticed his pet fox gather the chain in his mouth, and then carefully coil it so as to cover the meat. Having gone through this process and drawn his chain after him on moving away, he frequently repeated his useless labor five or six times until disgusted, apparently, at making the morsel a greater luxury by previous concealment, he has been forced to eat it. Snow is used as a substitute for water by these little quadrupeds, they breaking the large lumps with their feet and rolling on the pieces with evident delight. When the snow lay lightly on the decks they did not lick it up as the dogs do, but by pressing it repeatedly with their nose, collecting a small lump which they drew into their mouth.

They are in heat about the middle of March, and during that time they continue in the open air; but after the season is over betake themselves to their burrows. The period of gestation is nine weeks; the number of young vary from five to nine, and are cared for in the same manner as those of foxes of other species.

As a marketable product the skins bearing the fall coat are much more esteemed than those of the winter or spring.

ADDITIONAL BIRDS OF CENTRAL NEW YORK.

THE following is furnished by the author as an appendix of species overlooked in his List of the Birds of Central New York which had been published serially in these columns:—

Turdus pallasi. Hermit thrush. Abundant as a spring and autumn migrant, arriving from the south as early as the first week in April and returning from the north the first week in October.

Anorthura troglodytes. Winter wren. Common spring and autumn migrant.

Helminthophaga ruficapilla. Nashville Warbler. Not a common migrant, but perhaps breeds.

Dendroica cerulea. Cerulean warbler. I have a female in my cabinet taken May 27th, 1876, the only instance on record of its capture in this locality.

Dendroica castanea. Bay-breasted warbler. Not an uncommon spring and autumn migrant, arriving the second week in May and returns from the north the second week in September.

Dendroica pennsylvanica. Chestnut-sided warbler. Not an uncommon summer resident, and breeds. It arrives the second week in May and departs in September.

Dendroica palmarum. Yellow red-poll warbler. Not a common spring and autumn migrant.

Scotus aurocapillus. Golden-crowned thrush. A common summer resident from the second week in May to the middle of September.

Geothlypis philadelphia. Mourning warbler. A somewhat rare summer resident, but breeds. Mr. T. F. Wilson of Auburn, found them breeding on Howland's Island, Seneca river, June 27th, 1876. It arrives the second week in May and departs in September.

Myiodytes pusillus. Green black-capped flycatcher. Spring and autumn migrant, but not common.

Myiodytes canadensis. Canadian flycatcher. Common spring and autumn migrant, arriving the second week in May.

Lachyrceta bicolor. White-bellied swallow. Abundant summer resident.

Vireo olivaceus. Red-eyed vireo. Abundant in summer.

Vireo flavifrons. Yellow-throated vireo. Common summer resident.

Vireo solitarius. Blue-headed vireo. Not an uncommon migrant, passing through the first week in May.

Catherinicus passerinus. Yellow-winged sparrow. A summer resident but not common.

Zonotrichia albicollis. White-throated sparrow. An abundant spring and autumn migrant.

Zonotrichia leucophrys. White-crowned sparrow. Abundant in spring and autumn.

Passerella iliaca. Fox sparrow. Common during the migrations.

CALIFORNIA QUAIL.—A number of efforts have been made at various times to introduce the California quail into the States east of the Rocky Mountains. As a rule these efforts have failed, the birds usually disappearing, killed, it is supposed, by our severe winters. The Hon. J. A. J. Crosswell, however, has been more successful in Maryland. The Elkton *Whig* says that some years ago he received from the Pacific coast quite a number of California quail. They at once disappeared when liberated, and for three or four years had not been seen. Everyone supposed that the cold winter had annihilated them, until a few days ago quite a large covey of them was discovered by a gentleman not far from town.

LAST WEEK'S SNOW STORM AND THE BIRDS.—"Saw-bones," a Boston correspondent, noticing that the snow storm of Sunday, the 15th inst., had the effect to greatly frighten certain birds, appends the following memoranda:

"A full-grown water rail was taken in the hand unharmed on Everett street, four adult quail on the Common, the same day and in the same manner, a yellow wren, or willow warbler, in my office. They all, after a rest and quiet, strongly flew away, showing no sign of actual injury. As I have always studied birds and other natural objects with great interest, this incident caused a doubt in my mind as to the cause. Can you explain it? In practice I suggest for the common complaint of *vis inertiae* your paper every week, with very satisfactory results."

[It would appear that the sudden change of temperature produced a chill, numbness and torpidity, such as most men would suffer in like case, if caught with scanty, mid-summer clothing.—ED.]

EAGLES FIGHTING FOR AN EEL.—A fight between two eagles occurred at Masonboro Sound a short time ago, says the Wilmington *Star*. A large number of persons were at the different landings along the sound at the time, when their attention was attracted to the combatants by a pierc-

ing cry, often repeated at short intervals. One of the birds held pendant from his talons an enormous eel, which the other bird was endeavoring to gain possession of. The bird possessing the eel was taken at a great disadvantage, as it required the use of his talons to hold his prey, which left him but his beak with which to ward off the assaults of his foe. The attacking bird, realizing his advantage, swooped upon his enemy, tearing the feathers and flesh from the back and breast of his opponent. Long and fierce the struggle waged. Each of the birds was of enormous size, yet one of them, taken at so great a disadvantage, at last perceived that resistance was in vain, and after one despairing wail, released its prey. As the eel descended and had nearly reached the water, the triumphant bird, with victorious cry, swooped upon it, and firmly closing it in his talons, bore it away to the distant sand shoals. The struggle lasted about fifteen minutes.

If it is true that both of these were bald eagles the occurrence is a noteworthy one, for it is very unusual for them to attempt highway robbery upon each other in this fashion. If, on the other hand, the one with the eel was a fish hawk, it loses a portion of its interest, since it is a common practice for the eagle to follow the osprey and rob it of the prey which the eagle is not adroit enough, or too indolent, to catch for himself.—ED. F. & S.

ON TOADS.—The Irishman's definition of a toad was "a round-shouldered, square-sided bug, who sits down behind and stands up before, and when he walks he goes with a tam jerk." Toads are a regular marketable commodity in England, not for table purpose, but for keeping gardens free from insects. Market gardeners pay as high as a shilling or eighteen pence for a fine imported specimen. Of the uses to which they are put, and regarding toads in general, the *Practical Farmer* has the following:—

"There is a very common prejudice against the toad. By many he is looked on with loathing and disgust. He is regarded as an ugly, uncouth and worthless nuisance, that should be abated at sight. But this prejudice is ill-founded and unjust, as the toad is not only harmless but quite useful to farmers and gardeners. They should therefore be regarded as friends instead of being treated as enemies. The eggs of the toad are usually laid in the water, but at times, when this is not accessible, they are laid in damp dark places, and in such cases they do not pass through the tadpole state. While in the tadpole state they live on vegetable food, but as toads they live on insects, spiders, etc. They are exceedingly well adapted to catching insects, having a tongue of marvelous construction. It is quite long, and may be projected six or eight inches, the tip of it being so directed as to just reach the object, and being covered with a viscid, gummy substance, that causes the insect to adhere to it, it is thus quickly conveyed to the mouth of the toad and buried alive. The movements of the tongue in thus taking in a fly or a bug are so rapid that they cannot be followed by the eye. The number of insects that a toad will eat is almost incredible. A few of them in a garden will keep it well rid of bugs, plant-lice, etc. They generally spend the day in some dark, secluded spot, often a hole under a sod or clod or the side of a rock, and in the evening they come out and hop about in search of a supper of live insects. They may be induced to take up their residence in the garden by confining them for two or three days to the place, when they will become quite well contented. A board laid about two inches from the ground is just the kind of hiding place that suits them. They are long lived, being often known 12 to 16 years old, and it is said that one lived to be 36 years old. On account of their propensity for destroying insects, toads should be encouraged to become permanent residents of our fields and gardens.

TRAINING CANARIES.—A gentleman named Wall, residing at Phoenixville, says the *Reading Eagle*, Queensland, has several very fine canary birds, to which he has given much attention. One of the birds he has taught to sing "Home, Sweet Home" clearly and distinctly. His mode of instruction is as follows: He placed the canary in a room where it could not hear the singing of other birds, suspending its cage from the ceiling, so that the bird could see its reflection in a mirror. Beneath the glass he placed a musical box that was regulated to play no other tune but "Home, Sweet Home." Hearing no other sounds but this, and believing the music proceeded from the bird it saw in the mirror, the young canary soon began to catch the notes, and finally accomplished what its owner had been laboring to attain, that of singing the song perfectly. Mr. Wall has been offered and refused \$20 for this yellow-throated soprano.

—Fifty thousand elephants are killed every year to furnish the ivory worked up in England alone. The best ivory comes from Zanzibar, the silver gray from regions south of the equator, and the favorite ornamental material from Siam.

THE BARNACLE GOOSE.—A city correspondent writes, Oct. 20th, saying:—

"Yesterday a very fine specimen of the barnacle goose was discovered by Mr. J. K. Kendall in the city, represented to have been shot on Long Island. It was immediately purchased by him and sent to a taxidermist for setting up. Audubon states that he never saw a specimen of this bird in the flesh, but that he had seen a number of fine mounted skins. Further, that he had no knowledge of their habits. Nuttall says that they are 'mere stragglers' in the United States. As a great advance has been made in ornithology since the days of Nuttall and Audubon, you will confer a favor on some of your readers by printing any further facts that may have been gathered relative to this fine bird within the past quarter century. The skin can be seen for a few days at Con-way's, 55 Carmine street, city. C. G. KENDALL.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS OCT. 17TH.—Two Virginia deer (*Cervus virginianus*), presented by Dr. Givin, Philadelphia; one red fox (*Vulpes fulvus*), presented by Andrew Rudolph, Philadelphia; one macaque monkey (*Macacus cynomolgus*); four beavers (*Castor canadensis*); one alligator (*Alligator mississippiensis*); two tree boas (*Epicrates*), from Cuba; two common boas (*Boa constrictor*), purchased; one striped snake (*Eutania* —), presented by Jas. P. Stabler, Sandy Spring, Montgomery County, Pa.; one Javan porcupine (*Hystrix javanica*), and two Fourmiller's capromys (*Capromys pilorides*), born in the garden; one brown capuchin (*Cebus fuscus*), presented by John W. Beebe, Philadelphia; two copperhead snakes (*Agkistrodon contortrix*), presented by Kirk Brown, Pleasant Grove, Pa.; one great horned owl (*Bubo virginianus*), presented by Philip Hohl, Philadelphia; one large water snake (*Nerodia fuscata*), presented by Theo. Roberts, Philadelphia; three alligators (*A. mississippiensis*), presented by Wm. Yewdall, Philadelphia. ARTHUR E. BROWN, General Superintendent.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

Black Bass, *Micropterus salmoides*; Weakfish, *Cynoscion regalis*.
M. nigricans. Bluefish, *Pomatomus saltatrix*.
Mascalonge, *Esox nobilior*. Spanish Mackerel, *Cybbium maculatum*.
Pike or Pickerel, *Esox lucius*.
Yellow Perch, *Perca flavescens*.
Sea Bass, *Sciaenops ocellatus*.
Striped Bass, *Roccus lineatus*.
White Perch, *Morone americana*.
Cero, *Cybbium regale*.
Bonito, *Sarda pelamys*.
Kingfish, *Menticirrhus nebulosus*.

FISH IN MARKET.—The mild weather of the past week has enabled fishermen to pursue their avocation without interruption, and the result is a more abundant supply, with correspondingly low prices. We quote:—Striped bass, 20 cents per pound; smelts, 20 cents; bluefish, 10 cents; salmon, 40 cents; mackerel, 12½ to 25 cents each; weakfish, 15 cents per pound; white perch, 15 cents; green turtle, 10 cents; terrapin, \$12 per dozen; frost fish, 10 cents per pound; halibut, 18 cents; haddock, 8 cents; kingfish, 25 cents; codfish, 10 cents; blackfish, 15 cents; flounders, 12½ cents; sea bass, 18 cents; eels, 18 cents; lobsters, 10 cents; sheephead, 20 cents; scollops, \$1.50 per gallon; soft clams, 40 to 60 cents per hundred; whitefish, 15 cents per pound; pickerel, 15 cents; yellow perch, 10 cents; salmon trout, 20 cents; hard-shell crabs, \$3.00 per 100; bill fish, 10 cents.

PORPOISES IN THE GREAT SOUTH BAY.—A lady passenger once asked a fastidious second mate what those creatures were called who were gamboling so joyously under the vessel's bow. "Well Marm," said he, "sailors call them porpoises, but we matrs call them porporpoises." A school of the afore mentioned porporpoises on Friday last came into the Great South Bay near Babylon. According to the *World*, Edward Udall, while looking after his oyster-beds near Oak Island, discovered that a number of porpoises had come in on a full tide and were locked in between the island and the beach. A crew was organized in the village, consisting of Supervisor Charles A. Duryea, acting captain; Arden Weeks, harpoonist; Walker Smith, musketeer; Alanson Weeks, boat-steerer; Andrew J. Sammis, mate; Edward Udall, pilot, and John Baylis, general director, with the purpose of inspecting the visitors more closely. Upon arrival at the cove the sport at once began and continued several hours. The iron was quickly driven into one big fellow, and a charge of buckshot from the musketeer rolled him over. He measured eight feet in length, weighed 330 pounds and yielded eight gallons of oil.

A COCKNEY TRICK.—Nothing so delights the heart of the average John Bull as the detection of what he terms a "Yankee trick." The "cuteness" of Brother Jonathan is a bye-word with him, and he cautions his friends to beware of the "smartness" of his trans-Atlantic cousins. And yet John himself is not always so virtuous as he would have the world believe. Of course one looks for trickery in a Tyne sculler, but one would suppose that among fishermen, if anywhere, one could look for honesty and candor. And yet, if the story we find in the *London Field* be true, even a Cockney Waltonian is not above reproach. In London there are a number of angling clubs, the members of which meet one evening in the week to compare and show their catches, and to award prizes for the best. They take unto themselves euphonious names, such as the "Amicable Brothers," "Waltonians," "Reform Anglers," etc. This is the latest piece of "cuteness" practiced on one of them.

Some suspicion having existed for a length of time that a very successful prize-holder of fish at one of the local clubs used the "silver hook" in his captures, and that such hook was perfectly guiltless of having entered anything more fishy than a fisherman's pocket, the crucial test of the microscope was applied the other night to the mouths of a tray of handsome roach laid upon the table for competition. The result was that no orifice could be seen by the most acute observer, while all the other catches more or less exhibited the laceration of the hook, mostly to the naked eye, and invariably under the glass. It is to be hoped that it will not be necessary to resort to such extraordinary research in future, particularly after this warning of the tell-tale nature of scientific apparatus; and that all such exponents will not prick their fish before weighing in and set the examiners to use other devices to determine whether a fish had been caught by net or line.—G. F.

—The close season for salmon expires in California on the 31st of October. Probably there is no land on earth where this noble fish exists in greater perfection than in the northern part of the State. And the farther north the ardent angler travels to indulge in the exciting sport of taking this king of fishes, either with the fly, the spoon, or the roe bait, the better is the catch. In the swift streams of the Oregon, and even in the far northern shores of Alaska, the estuaries and courses of those rivers which pour into the Pacific, can boast not only of the true salmon (*Salmo gairdneri*), but of several, nay many fine distinct varieties. And now the adventurers on the Pacific coast, as well as the dwellers of the Atlantic and even the European cities, make their trips to the salmon rivers of the Pacific with less trouble and in less time than it took their European forefathers to visit Scotland, or their American sturdy Dutch sires to visit Albany in the State of New York. The *Pacific Life* says:—

"In nearly all the rivers of our coast and, in those most convenient to us from this city, and in Mendocino county in this State, several species of the salmon family run into the mouths and up the rivers from the sea, some early in the spring, some in the fall, and some in winter. In the spring or late in the winter a few, no doubt, with proper skill can be taken with the fly, but most persons know, as has occurred for the last two seasons in our bay at Oakland, Long Wharf, and other places there, that they are caught with mussel, worms, and small fishes or pieces of fish; and in the more northern rivers with the spoon bait, trolling from a boat, and also from the banks in the swift waters of McCloud, Sacramento, Pitt, and other streams, with roe bait. It is true that most of the anglers of our coast, both white lumbermen for the most part, and agricultural settlers, and even some of our most skillful sports-

men, resort to this roe bait, the only method by which, in the autumn, at any rate, much success can be expected or obtained, and about which more anon. Of course to take trout or salmon with the fly is the *ne plus ultra* of the science, and few comparatively have thoroughly attained to it, and that may probably be one of the causes, and perhaps the chief one, that so few salmon are caught by that method on this slope. Yet we have seen a friend of ours (to be sure, a first-rate caster) with that off-time tempting lure at the junction of the Butano and Pescadero creeks near the ocean, basket as many as seventy-eight grilse, ranging from one-half to four and a-half pounds in weight, in seven days. Frank Forester says:—"In order to become a fly-fisher, I think that something of an especial genius is necessary—I mean a fly-fisher in the highest sense of the word, and regarded in the same light as the sportsman whom we can deservedly term a crack shot."

"The spoon-bait with a piece of red flannel or small red feather near the triangle of hooks, and a rather stiffer rod than that used for fly-fishing, is often very effective in the mouth of rivers near the sea. We have caught in the Noyo river in this way by the use of a boat seventy-three salmon averaging eight pounds and a quarter each, in eight days, two persons fishing and rowing alternately. When neither the fly nor the spoon-bait are successful with fresh-run salmon, although rather unsportsmanlike and inartistic, when parties have come a long distance for the recreation, it does not appear to us that we are such 'Gothic savages' as some would have us, should we resort to the worm or roe-paste to make a respectable creel of fish for the table, or for sport either. This will be found as effective for brook trout as for salmon; and it may not be unworthy of remark that some anglers have said that the roe of the melter will most surely take the female, and that of the spawner of the male fish. Lastly, the minnow, the shiner, the smelt, and above all, the young parr, are very killing baits—especially when there is a freshet in the stream—for the salmon, upon spinning tackle. A powerful rod, especially in a strong current, should be used for this mode of fishing; the line and reel of course, and a small funnel-shaped piece of lead.

With any of these baits, with the art to boot, and a clear eye, a steady nerve and true hand, almost anywhere in California where salmon abound, the adventurous fisherman is certain of such sport, as, once tried, makes all other fishing forever stale, weary, flat and unprofitable."

FISHERMEN IN TROUBLE.—Our coast fishermen are in considerable trouble and perplexity just now on account of the fact that the beach was so badly torn up by the great September storm that they are unable to find a suitable locality for hauling their seines. They say that by the violent commotion into which the sea was thrown the beach all along the coast has been washed into holes and gullies to such an extent as to render the catching of fish, by means of seines, almost an impossibility. This is a great drawback to the fishermen, who, at this particular season of the year, have been doing quite an extensive business at seining on our immediate coast.—*Wilmington (N. C.) Star*.

—A London journal, in noticing the voracity of the pike, vouches for the statement that in a certain instance the same fish simultaneously took the hooks of two gentlemen who were fishing together. On another occasion, as some boys were bathing in one of the ponds in Windsor Park, a jack seized hold of the arm of one of them and bit him severely. The late Prince Consort had the pond dragged, and all they found was about twenty large jack and nothing else—they had eaten up everything.

MOVEMENTS OF THE FISHING FLEET.—The week had shown a little more activity in fishing circles, the number of arrivals being 61, against 12 last week. Six have returned from the Banks, 51 from Georges, 1 from the Bay of St. Lawrence, and 3 from mackereling trips to the southern shores of the State. The receipts have been about 220,000 pounds Bank cod, 714,000 pounds Georges cod, 75,000 pounds halibut, and 900 barrels mackerel.—*Cape Ann Advertiser*, Oct. 20th.

—The red fish of Wallows Lake, Cal., is described as being blood red in color, very fat, and weighing about eight pounds, and are preferred, when taken, to salmon. It is said there are only four lakes known in which this fish is found, Payette in Idaho, a lake in Maine, one in Scotland, and Wallows Lake. A company engaged in commercial fishery on the latter frequently bring in a ten of red fish at a haul, with a seine of medium length. Lake Wallows is 2,000 feet deep, and the fish suddenly appear on the surface in August and disappear in December.—*Exchange*.

Theodore Morris Brown, a fine musician and eminent chess player and problemist, died at his home, in Penn Yan, N. Y., on Monday, Sept. 25th, after a long and painful illness. He was an old and much-esteemed contributor to chess literature. He has passed from among us, and we have lost a strong player, a brilliant problemist, a musician of mark, and a wholesouled gentleman, whose presence will be sadly missed.

—Quite a funny thing happened at Jerry Thomas's pool room the other night. It appears that some person in the room had lost a pocketbook containing about \$400, and the loser went to the auctioneer to state his case. The auctioneer (George) at once responded in his usual bland style: "Gentlemen, there has been a pocketbook lost in this place containing \$400," and then turning to the loser he asked: "How much reward?" "One hundred dollars," says the loser. "Gentlemen, the owner offers a reward of \$100."

"One hundred and ten!" shouted an enthusiastic buyer at the lower end of the room, and the thing being appreciated by all present, the laugh "went around."

—The Inter-collegiate contest this year will attract competitors from Princeton, Hamilton, the University of New York, Cornell, Lafayette, Williams, Syracuse University, St. John's New York College, Rutgers, and the Northwestern University. Mrs. Astor has contributed \$500 toward the prize fund. Examination will commence December 6th in mathematics, Greek, Latin and mental science. The oratorical contest will be held at the Academy of Music on January 3d. In oratory there will be two prizes of \$76 and \$50; for essays two prizes of \$150, and in all other branches prizes of \$300 and \$100.

—In the Black Hills, or what is known as Castle creek is a large pyramid of elk horns, some seventy or eighty feet in height, and probably a hundred feet in diameter. And must have been there for many years as none of the Indians in that section of the country know who put them there.

The Kennel.

THE KENNEL REGISTER.—Where a man, particularly if he occupy the position of Editor of a paper, is unprincipled enough to make deliberate misstatements, it is somewhat difficult at times to refute, and always impossible to argue with him. In the last issue of the *Chicago Field* there is an exceedingly silly and childish editorial regarding this paper, which contains one or two assertions so erroneous as to require some remark. The first is with regard to the representation of this paper at the primary meeting of the Kennel Club. The *Field* states that the Editor of this paper failed to attend or acknowledge the compliment of an invitation. The fact is that this paper was represented by its Kennel Editor at the meeting. To go into the matter a little further we would say that our Kennel Editor, Mr. Horace Smith, was proposed on one of the committees, but was opposed by Dr. Rowe, then acting for *Rod and Gun*, now Editor of the *Chicago Field*, and President of the Kennel Club, and was left off of the committee through his efforts. The motive in the case is so apparent as to require no remark. With regard to the statement that "this paper had nothing to do with inaugurating field trials, but that through its then Kennel Editor they were established and the interest awakened in the dog which is manifest to-day" is too puerile to be noticed. If a paper is not to have credit for what its paid editors write in its columns, how is it to get it? As for the unnecessary slur upon our present Kennel Editor, a veteran of fifty years with dog and gun, the recognized authority on such topics in this country, and who has forgotten more than the Editor of the *Field* will ever know, it is only in keeping with the whole article, and characteristic of the jealous writer, who, with but the merest superficial knowledge himself, seeks to be the great dictator on all kennel subjects. He pays a very poor compliment to the intelligence of his readers in writing for them such articles. As our contemporary states that the Kennel Club is to have the valuable services of Mr. Burges in compiling their register, we can only hope for their sakes that his next effort will be more free from errors than his last.

We desire to call the attention of those readers of our paper who may also read the *Chicago Field*, and also those who are members of the Kennel Club, to the fact that the article which we are noticing was written by the President of the Kennel Club. We will also quote a paragraph from our editorial which appears to have called forth so much bluster:—

"We recognize the importance of there being but one Register and also that that one would be much better in the hands of some corporate body in which the country at large had confidence, than in the office of a newspaper, and shall be ready at any time to surrender our work to such. We do not know when Mr. Burges, if ever, proposes to publish a second volume of his work, and if he does not, we claim that the proper place for the Register, if it is to be kept in a newspaper office, is in our own," (where it originated).

—Mr. S. K. Jefferson writes us from West Troy, that his 'liver and white bitch Flora, (registered in the *FOREST AND STREAM* Kennel Stud Book, No. 46, page 16, Book A.) on the 19th inst visited J. H. Fitchett's Mack. Mack is from Raymond's Pride of the Border, and Kirby a black tan and white bitch imported by Mohawk."

—Mr. J. L. Woodbridge's (of North Manchester, Conn.) fine black pointer bitch Nell, from imported stock, visited Mr. Strong's champion dog Pete, just after his return from the Centennial show. She is getting quite "big" and bids fair to have a fine litter.

MEMPHIS FIELD TRIALS.—We learn from Mr. D. Bryson, Secretary of the Tennessee State Sportsmen's Association, that at the request of many persons interested who have not been able to give their dogs work enough on quail to tell how they will perform, the committee have decided to keep the entries open until Nov. 11th for pups, and Nov. 13th for the others.

SAGACITY OF A SHIP'S DOG.

THE following anecdote relative to dogs may not be uninteresting to the readers of your valuable paper, and tend to prove to those who are not dog fanciers the value and sagacity of the canine race:—

"Fond of dogs from boyhood, and reared in the country, a dog was always my companion in my rambles. An uncle of mine who was in Spain at the close of the Peninsula War brought home a splendid pointer named Diamond. He was a most sagacious animal, and became my constant companion until I left home to go to a public school in the vicinity of London (England). I was absent five years, and on my return, which was on Christmas morning, I took a short cut by a foot-path through the fields to reach my grandfather's house, situated in a valley. On approaching the old homestead, being on a slight eminence, I was agreeably surprised to see my old friend Diamond. Whistling, and calling him by name, though several acres apart, the faithful animal recognized me at once, and ran to meet me as fast as his legs could carry him. He jumped up, licked my face, ran round me, and was so overjoyed that I had some trouble to keep his demonstrations of affection within bounds. His remembrance of me after a lapse of five years was evidently as fresh as the day we parted. Some years later I went to sea, and going to Gibraltar I became acquainted with the Governor's secretary, a Mr. Macdonald, who had a fine Newfoundland dog named Prince. He was a great favorite with all the inmates of the house, played with the children, and was apparently an inoffensive brute; but he had a dislike to soldiers, and had bitten several, having probably been ill-

used by some of the redcoats. This was a source of annoyance to Mr. Macdonald, and he reluctantly decided on parting with Prince, as his post of Military Secretary caused orderlies and others to call at the house daily. I took a great fancy to the dog, and we became warm friends at first sight, which induced Mr. Macdonald to propose that Prince should be transferred to the good brig *Suwarow* as the ship's dog. He was some days before he got reconciled to his new quarters, growling and snarling at all hands, captain included, except the writer, whom he considered as his master, and when I retired to the cabin for the night he laid down on the mat at the companion entrance, which became his resting place at night, ever after when the vessel was in port. He would not allow any of the crew near the companion at night, or anyone to go to the cabin unless accompanied by one of its occupants. In fact we could all have left the vessel with the cabin doors open without fear of any of the sailors being allowed to intrude. Strangers coming on board were watched, and not allowed to touch any article likely to be carried off. In a word he was the *ne plus ultra* of watch dogs. From Gibraltar we proceeded to Messina to load oranges and lemons for St. Petersburg. On our return from the Baltic we experienced some rough weather in the North Sea. And one dark night when under close-reefed topsails, being the officer of the watch, about 11 o'clock I had a strange presentiment of approaching danger, which I communicated to the man at the helm, and challenged the watch to keep a sharp look-out. This was no sooner done than the dog suddenly left my side, ran forward to the bow and barked with all his might. Charging the man at the helm to be careful, I ran forward and asked the men if they saw anything. No. "Ring the bell, and shout, boys, there must be a sail ahead!" Prince was still barking. It then occurred to me, most providentially, to kneel on the deck close to the dog, who had his fore paws on the rail. In an instant I distinguished the foam under the bows of a large ship. "Starboard your helm! hard down!" In another instant we saw the dark hull of a frigate, which shaved us so close that her bowsprit end just grazed the leach of our fore-and-aft mainsail. Thus were the lives of fourteen human beings mercifully preserved from a watery grave by the watchful instinct of a noble dog. We hear of people's hair standing on end. If such can be the case, mine must have been like hog's bristles, for though not by any means a nervous man, I doubt if I have ever felt such an "all-overness," as Matthews, the celebrated actor, termed it, before or since.

A question which I have often heard debated is: "To what particular sense are we to attribute the extraordinary watchfulness of the canine family—sight, hearing, or scent? The three are doubtless brought into play, but the latter, I think, is the most important. I have often seen a ship's dog, when nearing land after a long voyage, get on the quarter-deck or fore-castle, and sniff the wind for some time, then look in the direction of the land, which could not be seen from the deck, and having satisfied himself that land was near, he would run and skip about like a mad creature."

Perce, Gappie, Quebec, Sept. 20th.

RABIES.—We noticed recently the destruction of a whole pack of fox-hounds in England, owing to rabies having appeared among them. We find further particulars in *Land and Water* which may be of interest to our readers, as follows:—

"Mr. Fleming, of the Royal Engineers, Chatham, one of the most experienced practical authorities on rabies, has kindly forwarded to us some further particulars of the recent outbreak of this dire malady among the Essex Hunt fox-hounds at Harlow. It appears that several draughts of young hounds from the Grove pack at Nottingham were received at Harlow this year, the last consisting of two, a dog and bitch, about twelve months old. These arrived on April 21st, and were put among the other young hounds. In two or three days afterwards the bitch became very quarrelsome, fighting the other hounds in the kennel, and causing a continual uproar, notwithstanding chastisement. After severely wounding a hound (Duster), one of the whips, thinking that the animal's ill-nature would be dispelled if correction was bestowed by older hounds, imprudently introduced the creature into the kennel of the bitch pack. But here it assumed the aggressive, and fought the old bitches, these being apparently afraid of it. Soon after it manifested peculiar symptoms of disease which led to its destruction. About the middle of May one of the old bitches (Harpy) became seriously affected, and in its fits of fury worried, among others, another bitch (Caroline). This bitch (Harpy) was destroyed; and in a few days another, being seized with the same unaccountable symptoms, was likewise shot; while another, affected with paralysis of the lower jaw and general helplessness ("dumb madness") was allowed to die. It was at this time that the veterinary surgeon, Mr. Harris, was called in; and from the examination of the body of the last hound, and the symptoms presented by another which was killed on May 26th, he had no difficulty in concluding that the malady was rabies. A bitch hound was shot on June 4th, another on the 8th, another on the 10th, two on the 12th, Duster—the young dog, and the first bitten by the bitch which brought the disease—on the 16th, one on the 17th, another on the 19th, and another on the 28th. Then a pause in the sad work of destruction occurred, the remainder of the pack not exhibiting any indications of illness until towards the middle of August, when Caroline, which had been severely wounded by Harpy—the first of the old bitches affected and destroyed—showed unequivocal symptoms of rabies, and was killed on the 16th of that month. Then another, and another had to be destroyed, and it was now obvious that the disease had taken a strong hold upon the pack. Cases occurred almost every day, and considering that they were all inoculated with the poison, what remained—amounting to eighteen and a half couples—were shot on the 29th of August.

"No cases have occurred among the other young hounds with which the Grove bitch first cohabited for a very short time after its arrival, except Duster, its companion; and the dog pack—a very fine one, separated from the bitch kennel by a brick wall between four and five feet high, with an iron railing at top—has also escaped, no actual contact between the dogs and bitches having taken place, so far as is known. Nevertheless, they could smell at each other through the iron bars; though whether the transmission of rabies can be effected without actual inoculation with the virus, is far from being demonstrated.

"As to the origin of the disease in the pack, Mr. Flem-

ing considers that there can be no doubt that the young bitch in the Grove draught introduced it, she most probably having contracted it somewhere in Nottingham or its vicinity, where rabid dogs have been very prevalent for a long time. The extension of rabies, which has now become a very serious matter in this country, is, Mr. Fleming says, largely due to the absence of legislative measures, and to the general ignorance prevailing with regard to its symptoms and the precaution to be adopted for its prevention or suppression. It has been repeatedly and urgently insisted on that great necessity exists for making everyone who has to deal with dogs, or who is likely to come in contact with them, acquainted with so much of this subject as would diminish accidents to minimum.

SETTERS KILLING FOWLS.—J. Sawyer, an octogenarian, writes to *Land and Water* as follows:—

"In a late issue of your paper, in reference to pointers and setters killing and eating fowls, it is set forth that many young pointers and setters are ruined by not giving them meat. From my experience of more than fifty years, being now nearer eighty than otherwise, I say it is a mistake that flesh is required. Meal is the best food for all dogs (unless when greyhounds are in training), and there never yet was a good bred pointer or setter puppy that would not catch and kill a fowl if left alone."

—THE TERRIER "JOKER."—A lady correspondent in New Jersey writes as follows:—

"I own the little English terrier Joker, whose exploits sometimes appear in your columns. He is quite a hunter, taking everything from a hornet to a muskrat. He brought a rabbit from the grove a few days ago, and frequently comes in putting his muddy nose in my hand to tell me he has caught another turtle. Your's is the first sporting paper I ever read, and I am pleased to observe, is one in which a lady might find many interesting and instructive articles, and none of a low, vulgar type."

Mr. Greener's (Boston) bitch Fannie, born September 23d, 1872, from a bitch (said to be from Cale Loring's Cora and George Linder's Don), whelped a litter of six pups October 11th, 1876, to Copeland's Shot. One died, leaving four dogs and one gyp.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

TRENTON YACHT CLUB.—The closing regatta of the Trenton Yacht Club took place on the Delaware river from Trenton to Bordentown, a distance of eight miles, on the 23 inst. The Nellie, Centennial, Ripple, Ellis and Spray were the competing craft. The prize was a silver cup. The race was very exciting between the Ellis, Nellie and Centennial. The result was as follows: Nellie, Capt. Wise, first; Ellis, Capt. Wilson, second, and Centennial, Capt. Ferry, third. The Ripple and Spray did not go around the stake boat. The Nellie beat the Ellis fourteen minutes, and the latter beat Centennial fifteen minutes.

THE LARGEST SAILING YACHT IN THE WORLD.—The large three-masted schooner which Messrs. Cooper & Nicholson are building for the Baroness Rothschild is in a very forward state, being nearly planked up from garboards to covering board. We believe this will be the largest sailing yacht in the world, and with 7 ft. 6 in. head room below from stem to stern, she will have a wonderful lot of accommodation. Besides dining-room, drawing-room, and kitchen and officers' mess room, she will have twelve sleeping berths aft and a large house on deck fitted up as a lounge. The fittings below will be very choice, of walnut, sycamore, wainscot oak, teak, Hungarian ash, and other hard woods. In the after dead wood an aperture has been made, so that at any time a screw propeller could be fitted. Her principal dimensions are as under:—Length between perpendiculars, 151 ft.; ditto for tonnage, 148 ft.; beam extreme, 28 ft. 9 in.; beam moulded, 28 ft.; draught aft, 13 ft. 3 in.; depth of hold, 15 ft. 2 in.; tonnage, 575 tons.—*British Mail*, September 30th.

THE LARGEST SAIL VESSEL.—The clipper *Three Brothers*, of San Francisco, (formerly the side-wheel ocean steamer *Vanderbilt*) is the largest sail vessel afloat on any waters. She can carry 4,000 tons dead weight, is 348 ft. long breadth, 48 ft. 6 in.; depth of hold 31 ft. 4 in.; mainmast 100 ft. long and is 48 inches in diameter. She is said to be the fastest sailing vessel afloat, having made 17 knots an hour.

COLUMBIA COLLEGE.—The opening of the new Columbia boat house on the Harlem river was made the occasion on Friday last of some very interesting racing. Four races in all were rowed, the distance in each being one mile. Mr. Lindsay Watson, of the Nassau Boat Club, was referee, and Mr. Henry Mills timekeeper. The first event was a four-oared shell race, with the following entries: Blue and white—P. Seeley, bow; R. Colgate, No. 2; C. S. Boyd, No. 3; E. E. Sage, stroke. Graduates—I. A. Sprague, bow; J. Griswold, No. 2; P. Simpson, No. 3; J. T. Goodwin, stroke. Seniors—F. D. Weeks, bow; M. Mitchell, No. 2; M. Ward, No. 3; H. P. Brown, stroke. Goodwin took the lead on the start, Brown following in second place, lapped by Sage, who finally won in 5m. 34s. The Graduates second, and the Seniors third. The second race was also for four-oared shells, with crews as follows: P. Simpson, bow; R. Colgate, No. 2; J. G. Murphy, No. 3; P. Seeley, stroke, E. E. Sage, bow; J. Griswold, No. 2; C. S. Boyd, No. 3, J. T. Goodwin, stroke. F. D. Weeks, bow; M. Mitchell, No. 2; M. Ward, No. 3; H. P. Brown, stroke. Goodwin's crew—the Centennial crew—gave the other two crews ten seconds start. Seeley took the lead closely followed by Brown. Goodwin was unable to catch Seeley, although he passed Brown. Seeley won in 5m. 24½; Goodwin, 5m. 29½; Brown, 5m. 38s. The third race was for single sculls. The contestants were E. H. Snyder, Class of '80; W. H. Brown, '79, and H. Cushman, '78. Brown led from the start, and made the mile in 7m. 51s., Snyder following eleven seconds afterward. Cush-

BOOKS RECEIVED.

A GUIDE TO CHURCH FURNISHING AND DECORATION: A. H. Andrews & Co., Chicago. Price, 50 cents.

This little work is unique. The publishers, who are manufacturers of church furniture, have prepared a series of articles which give, in a concise and readable form, a summary of the information most valuable to those engaged in building, furnishing or decorating churches. An opening article on "The Canon of Taste in Church Architecture and Furnishing," occupies 45 pages. In it, the author says that church architecture, to be in good taste, must be new, useful, and not inappropriate; must be approved by the usage of the Apostles or the Primitive Church; must be connected with other time honored and hallowed associations; or it must be an appropriate symbol of some article of Christian Faith. The article on Gothic Architecture comprises a concise summary—including vocabularies of architectural terms—of the history of the development of the arch and of the architectural styles which culminated in the Gothic. Following this is a series of special articles on Wood Work, Stained Glass, Fresco Painting, Decoration in Wall Papers, Encaustic Tiles, Metal Work, Steam Heating, Hot Air Furnaces, Organs, Bell and Tower Clocks. These articles bear evidence of careful preparation, and comprise the theories and general information and suggestions with which all persons ought to be familiar before undertaking to expend money for goods or work in those departments.

To avoid any possible suspicion of making their articles to suit their own work rather than the requirements of true Art, the publishers have caused the articles to be written by disinterested and competent persons. A large portion of the book is devoted to advertisements of church goods, and it will be sent free on application, to members of any congregation which desires to purchase any work described.

Prof. J. D. Whitney has another one of his interesting articles on physical geography as the leader in the October *American Naturalist*, this number being entitled "Plain, Prairie and Forest, Part I." He discusses the reasons why some portions of the country are well wooded and others free from trees, but confesses that he has to offer no explanation of the formation of the prairies. Prof. W. J. Bead gives a short general account of carnivorous plants, Dr. Packard (the editor) traces a century's progress in American zoology, and concludes that its future progress "will in part depend upon the attention paid to it by medical students, to whom we may look for treatises on history and embryology. When professorships of zoology alone are established at our colleges (at present mineralogy, botany, zoology and geology are often taught by a single person) competent science teachers will arise for our higher schools, and the science we may hope, will be cultivated with something of the thoroughness of the German methods. At present we are not so greatly behind France and England as we were 20 years ago. There is, however, danger that Russia will outstrip us, and we are about on a level with Scandinavia and the Dutch." Dr. Packard thinks that hereafter we may hope even to compete with Germany, but says our need is of specialists, the tendency in this country being towards mediocrity. Other articles of especial interest to our readers are "The Missing Link between the Vertebrates and Invertebrates," sketching the views of Dr. Anton Dohrn; and "Aquaria: Their Past, Present and Future," by Wm. A. Lloyd of the Manchester Aquarium, England, which should be carefully read by everyone interested in the subject.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

RICHMOND DESPATCH and WHIG, of Virginia, will please accept our grateful recognition of their repeated courtesies extended to this journal and its editor.

G. W. S., Boston.—In the Philadelphia awards was any notice taken of articles exhibited in your Hunter's Camp, individually? Ans. Alas! no. The poor Hunter's luck is much like the Fisherman's.

G. A. W., Bristol, N. H.—Please give me the price of a work published by you entitled "Camp Life in Florida." Ans. Price \$1.50 pp. 350, postpaid by mail.

T. S. R., Minneapolis, Minn.—Will you please tell me through your paper where and at what price I can obtain a copy of the second part of Vol. VI of the "Proceedings and Contributions of the Essex Institute?" Ans. Address Editor *Essex Bulletin*, Salem, Mass.

G. C. P., New York.—Please advise me in the next issue of your paper if No. 7 grain of Curtis & Harvey powder is too large for a 32-inch, 10-gauge barrel (breach-loader), and also the best quantity to use. The gun weighing eleven pounds. Ans. No. 7 Curtis & Harvey's powder will answer well for your gun. Use 5½ drachms powder, 1½ oz. shot.

A. C. B., Marysville, Cal.—Why do you not publish the list of winning dogs at the Centennial Bench Show? Ans. They were printed in our issues of September 14th and October 15th. As your papers of those dates must have miscarried we send you duplicate copies.

C. C. H. W.—Will you please favor me with information where I can procure the right kind of paper for making gun wads? Ans. The paper for Ely's chemically prepared wads, we think cannot be procured here. For common cut wads old pasteboard boxes are as good as anything.

GEO. H., Grantville, Mass.—I have a full-blood Gordon setter fourteen months old, weighing about 45 pounds. He seems to be afflicted with a humor taking the form of quite large pimples. I would say that I have applied sulphur ointment made from a formula spoken of in one of your former issues, and it seems to effect a cure in the places applied, but breaks out anew. Ans. In addition to using the compound sulphur ointment give him some flour of sulphur; enough to move his bowels, feed little or no meat, give plenty of exercise, and wash him occasionally with carbolic soap.

CAR, Rockland.—1. What do you think of the following target for a No. 12 breach-loading, 7½ pound 1 oz., 30-inch barrel. No. 7 shot, 3 drs. powder, 40 yards, 30-inch circle: Right barrel, 90; left, 118? 2. What charge for a 10-gauge, 9-pound, breach-loading gun for sea shooting? 3. What effect would two wads over the shot have? Ans. 1. Very good for the charge of shot. 2. 5 drachms powder 1½ oz. No. 4 shot. 3. Very bad effect, but very effective over the powder.

T. E. D., Hartford.—1. I have a young setter, and around his mouth and eyes are sores, and the hair comes off. Can you give me a cure? 2. Also can you tell me of a way to break an old dog of mouthing birds when he retrieves? Ans. 1. See answer to "Geo. H." in this column. 2. It is a very difficult thing to break an old dog from mouthing birds. The best remedy is to pass through a dead bird three or four wires sharpened at both ends, projecting about a fourth of an inch, and compel him to retrieve it.

TRO, New York.—In the article "Early Days in Pennsylvania" in the last number of your paper, your contributor mentions Nock, Patrick & Manton as being among the best makers of guns forty or fifty years ago. Having recently become possessed of a double gun, muzzle-loader, modern make and finish, marked S. Nock, Regent Circus, London, please tell me how said Nock's guns are regarded by sportsmen, if known at all now, and oblige. Ans. Yours being of modern make and finish cannot be a Nock gun. It is not an unusual thing for gun makers to have the name of celebrated makers engraved on their guns.

E. P. L., Quebec.—Would you kindly through your valuable columns answer the following: 1. What is the proper charge for a Lefauchaux pin-fire, single barrel, duck gun? length of barrel 45 inches, weight 14 lbs., bore 8. I want to kill wild geese, which are plentiful here now. 2. What number of shot do you think would be more advisable to use? Ans. The proper way to load a gun is to use just as much

powder as the shoulder will comfortably bear, about five drachms for such a gun as yours. 2. Use B. B. shot.

L. W. L., North La Crosse.—1. I have a dog, and one of his ears has been running for about a month, will you be kind enough to tell me what I can do for him? 2. Also would you please inform me what kind of a breach-loading shot gun Remington makes? Ans. 1. Make a solution of sulphate of copper, 8 grains to 1 oz. water—after washing the ear on with Castile soap and tepid water, pour some of the solution well into the ear, twice a day for two days, keeping the ear well cleansed. Feed little or no meat and give the dog exercise. 2. The Remington breech-loaders have a good reputation and deserve it.

X. Y. Z., Lynn, Mass.—"Triangle," in his excellent communication, "Dressing and Packing Deer," says: "After having seen that your deer is well bled, next, cut entirely round the arms, working your knife carefully well inward, until the intestines are clear of all connection with the flesh through the hams." I do not understand this part of the performance, which he tells us to do, before he has hung the carcass up, or skinned the forelegs, or cut the skin down through the belly. Will he please explain? Ans. We did not clearly comprehend this part of his instructions, either.

AN OLD UN, Danbury, Mass.—A and B are beating for quail. A's dog finds a covey; the birds rise; A has his shot, and they go to cover in a neighboring wood. B follows them up, but A claims that the game is his exclusively, and that B has no right to meddle with them. Judgment requested. Ans. If A and B were shooting in company we cannot understand how such a difficulty could arise, as it is the duty of every sportsman to divide the shooting with his companion equally. But if A and B accidentally met in the field, not intending to shoot together, and A's dog found a covey of birds, it would not be sportsmanlike for B to follow and shoot in the covey thus found by A.

JONES, Syracuse, N. Y.—In the letter of John H. Fitchet, on the use of the "Acrea Nut for Puppies," (page 149) he says "I have always given it when the first symptoms were shown." Now, what I want to know is, what are the first symptoms of worms? My dog is sick quite often, will not eat then, wants to curl up in a warm place, keeps swallowing and sometimes after a good deal of an effort throws up froth? Ans. Your dog has evident symptoms of worms. Sometimes dogs afflicted with worms are ravenous for food, yet keep low in flesh, hair rusty, nose hot and dry.

W. C., Blossburg.—I write to you, as I am a subscriber to your paper. I am about buying a W. C. Scott breech-loading shot gun, double barrel. 1. What weight of gun? 2. What length of barrel? 3. What calibre? 4. Is it best to have a modified choke-bore or not? 5. What is the proper charge? Ans. 1. About 8½ pounds weight. 2. 30-inch barrels. 3. 12 calibre. 4. Not choke-bored, but use Kay's concentrating cartridges for long shots. 5. Use ¾ drachms powder, 1½ oz. shot; for ducks, 4 drachms powder, same weight of shot. Rebounding locks are generally preferred.

D. W., Ithaca.—Gun, muzzle-loader, 32 inch, 12 gauge, 8½ pounds; distance, 40 yards, 30 inch circle; 3 drachms Hazard powder, 1½ oz. No. 6 shot. Before choke-boring—average, left barrel, 100; right, 77. Left gun with Edwin D. Harris, 177 Broadway, N. Y., to be choke-bored; on return—average, left, 105; right, 88. Sent gun back for improvement and again on return—average, left, 93; right, 109. What do you advise in the matter, and will the present reaming out near the muzzle preclude the operations of any other gunsmith? Ans. Unless there is sufficient metal in the barrels to permit of an entire re-boring of the gun, we fear you will have to be content. But we would advise you to take your gun to some practical gunsmith; say Lefever, of Syracuse, and ask his opinion.

A. B. C., New York.—1. What do you consider the best charge for ducking for use in a 12-gauge breach-loader (7½ pound, 30 inches) including size of shot and also number of powder (Curtis & Harvey's)? Would you advise using a concentrator, and if so, what would be the charge? The gun is not a choke-bore in the sense that Greener uses it. 2. It is made by Charles Schilling, of Luhl. Prussia. Do you know the make, and what is your opinion of it? What is the best manual for duck and upland shooting for the instruction of a novice? Ans. 1. Your gun is too light for ducking, yet with ¾ drachms of No. — Curtis & Harvey's powder and 1 oz. No. 5 shot, ducks within 50 yards could be killed. Kay's concentrating cartridges would be effective with such a gun. 2. The reputation of the maker is good. 3. Long's "Wild Fowl Shooting" Capt. Bogardus's "Field, Cover and Trap Shooting," and Dinks, Hutchinson & Mayhew can supply you with those works.

JACO, Turner Junction, Ill.—1. Will you please to inform me through the columns of your paper if there is a breed of dogs without tails. I have a small fawn-colored female, and supposed that she had been deprived of her caudal appendage until she had a litter of pups, one of which also lacked that expressive member. 2. Sores have recently appeared on various parts of her body; one on the inside of her fore-leg near second joint, and one on the side of her mouth. There is first a swelling, then the hair drops off and the flesh becomes raw and bleeds. Her diet has been principally meat. Ans. 1. There is no breed of tail-less dogs. Yet from a freak of nature pups of all breeds of dogs are occasionally born without tails. Many years ago, at Trenton, N. J., we saw two of three of a litter of very fine high bred white pointer pups which were born without tails. At Princeton, N. J., now, Mr. James Lyons has a thoroughbred setter bitch born with only an apology for a tail. 2. Dogs fed principally upon meat, and having little exercise, are liable to skin diseases. Give yours a gentle purgative, feed little or no meat, washing him occasionally with carbolic soap, and give him exercise.

W. H. S., Bart, Lancaster Co., Pa.—I take the liberty of asking you a few questions about Florida, trusting that you will kindly reply. 1. Can good land in healthy districts be bought or rented low? 2. Will orange or sugar culture pay, or even general farming? 3. Can a person unacquainted with the manner of growing the different products of Florida succeed? 4. Must a man have plenty of money to succeed there? 5. Could I (being a fair shot) make any part of the expenses of a trip to Florida this winter by disposing of game killed? 6. What is the probable cost of a trip there, of say two weeks, and the best month to go? I would like to settle there provided I could do so with some certainty of laying up something for a rainy day. Ans. We would advise you to address the publishers of the "Florida New Yorker," at 34 Park Row, this city. They are agents for Florida lands, and we believe can be depended upon. Orange culture and syrup manufacture do pay, and can be made to pay handsomely. There is no syrup to compare with the Florida syrup, which, if once introduced into market, would supersede all others. But you must first learn to cultivate the land before you can expect to succeed, as the soil requires different treatment from western and eastern soils. A man with not less than \$1,000 can do very well. You can always sell game, especially venison, to the hotels, some of which employ regular hunters to supply them. Make your trip in December or January. It will cost about \$95 if you rough it, and \$20 more if you board in good style.

DARTMOUTH ATHLETIC SPORTS.—The athletic sports of Dartmouth College were held on the 11th and 12th insts. The following list gives the events and winners:—

FIRST DAY.

Throwing a 17½-Pound Hammer.—C. W. Stevens; distance, 61 feet 4 inches.
Quarter of a Mile Race.—F. W. Farnsworth, Milford, in 59½ seconds.
Best Three Jumps.—C. W. Stevens, 30 feet 3½ inches.
One Hundred Yards Dash.—C. H. Cogswell, in 11½ seconds.
Putting 18½-Pounds of Shot.—O. S. Pfeiffer, 27 feet 7½ inches.
Throwing Base Ball.—C. W. Spring, 323 feet 5 inches.
One Mile Walk.—Louis Parkhurst, in 7 minutes 7½ seconds.
One Mile Run.—E. M. Vittum, in 5 minutes 5½ seconds.
Professor Taylor, of Woodstock, ran ten miles in 58 minutes 55 seconds on a wager. He had sixty minutes in which to do it.

SECOND DAY.

Running Long Jump.—C. W. Stevens, 16½ feet.
Standing Long Jump.—C. W. Stevens, 14 feet.
Running High Jump.—Dana, 4 feet 8 inches.

man's time was 8m. 15s. The last race was between six-oared shells, the crews being selected from the college and the School of Mines as follows: College—Sprague, bow; Eldridge, No. 2; Brown, No. 3; Colgate, No. 4; Griswold, No. 5; Goodwin, stroke. School of Mines—Seeley, bow; Newberry, No. 2; Murphy, No. 3; Ward, No. 4; Boyd, No. 5; E. E. Sage, stroke. From the start the race belonged to the college six, who rowed in much better form and swing than their opponents. They led all the way and won by three lengths in 5m. 20s., the six from the School of Mines crossing the finish eleven seconds later.

BOATING AT HARVARD.—The students of this university are working with a will this autumn to perpetuate the boating traditions and to regain, if possible, Harvard's laurels of victories scored in past years. Bancroft '78, the present captain of the university, is making every effort to secure able men to fill the vacancies in the eight-oared boat, which have been made by graduation and desertion. Besides the "variety" crews there are four club crews in regular practice for the approaching fall races and conjectures as to the respective chances of each club of winning are now the order of the day. The Freshmen, as yet, have not taken any decided steps toward the formation of a class crew.

On Saturday last the regular fall scratch races took place. The entries were numerous, the men in tolerable condition, and the water all that a boating man could desire. The crews were drawn by lot, and after a few minutes practice were called into line and sent off over a course about a mile in length. The first race was for pair-oars and was easily won by LeMoine, '78, and Jacobs, '79, the second place was taken by Sheafe, '79, and Weld '79; Morgen, '78, and Shillito, '79, dropping out. The next race was for sixes, with the following crews, Weld—Page, captain and stroke; Trimble, '80; Taylor, '77; Tuckerman, '78; Hastings, '78; Bull, '77, bow. *Holworthy*—Hitchcock, '77, stroke; Morgan, '78; Weld, '79; Brown, '77; Hooper, '80; Brownlow, L. S., bow. *Holyoke*—LeMoine, '78, Captain, stroke; Denton, L. S. S., Parker, '78; Donaldson, '78; Stiles, '77; Miller, '78. *Mathews*—Keyes, stroke, '78; Harwood, '77; Shillito, '79; Corey, '80; Sloane, '77; Griswold, bow. After a hotly contested struggle between the first three boats the crews crossed the line in the order named above. The last race was for four-oars, with the following entries: First crew, Jacobs, '79; Denton, L. S. S.; Sloane, '77; Miller, '78. Second crew, Keyes, '78; Bull, '77; Taylor, '77; Townsend, '80. Third boat, LeMoine, '78; Morgan, '78; Parker, '78; Miller, '79. Fourth boat, Shillito, '79; Trimble, '80; Hooper, '80; Brownlow, L. S. It was anybody's race until the boats were a hundred yards from the finish when the Jacob's crew and the Keyes crew had an exciting tussle and drew away from the others. The Jacobs crew won by half a length. This closed the races for the day. On the 28th prox., the regular fall races for the Beacon cup takes place on the Charles river course, when some good sport may be anticipated. The prizes in these races were pewter tankards.

—The single scull race between Brayley and Wallace Ross came off on the Kennebecassis at St. Johns, on the 19th inst. The distance was two miles and turn, and the stakes \$1,000. Brayley took the lead and held it until near the turning point, when Ross passed him and made the turn first. He gradually drew away, beating Brayley with ease by five lengths. Time, 28m. 30s. There was very little betting here on the result.

THE SINGLE SCULL CHAMPIONSHIP.—The single scull race between W. Scharff and E. Morris, for the championship and \$2,000, was rowed at Pittsburgh on the 21st. The race was closely contested throughout, Scharff getting the lead at the start, but each leading alternately until the turning stake, which Scharff turned first, and not being again lead won by a length, doing the five-mile course in 35m. 35s. The course selected was on the Monongehela river. They started opposite Salt Forks Station, went two miles and a half up the river to the turning boat opposite Miller's Landing and then returned. This course is nearly three-eighths of a mile longer than the Brown-Coulter one, and is 300 yards further up the river. The referee and judges accompanied the men over the course.

THE BOND BOAT.

CLEVELAND, Ohio, October 15th, 1876.

EDITOR FOREST AND STREAM:—

In the letter of John J. Palmer, in FOREST AND STREAM October 12th, there is a part which might lead to mistake. The sentence, "The advantage it (my boat) has over all other canvas folding boats," etc., is wrong. Canvas is not used in the construction of my boats at all. In addition to the very flattering acknowledgements of E. O. Daw, I will say, that for all shallow water uses my new model has repeatedly beaten the best wooden boats that could be produced. I must disagree with you in regard to the substitution of iron for wood in the bottom of my boats. The plan adopted by experienced sportsmen of hauling their boats out of water and turning over when not in use will stop the "Teredo." And my late plan of using harder wood than white pine or cedar, and making it still tougher by immersion in an oil cement, together with a little care on the part of the users, will greatly prevent injury from coon oysters. I have built light iron bottom boats and see objections to their use, but want of space prevents explanation here.

Very Respectfully, W. E. BOND.

—It is calculated, we are told, says the *London News*, that every time the 81 ton gun is discharged, something like 25 or 30 pounds sterling vanishes in smoke, and when complicated shell and delicate fuzes are employed, instead of simply an iron bolt of 1,750 pounds, which usually does duty as a cannon ball, the cost of every round is greater still.

—The carpet bug which has lately wrought great havoc with carpets and woollen clothing (and is even said, though this is doubtful, to attack cotton fabrics) in Schenectady and Utica, is the larvæ (or worm stage of a small beetle, prettily variegated with brown, red and white, the *anthrenus scrophularia*, familiar in Europe, but hitherto unknown in this country. It is much more destructive than the carpet moth, and no effectual exterminator of it has been discovered. The larvæ is about 1-8 inches long, egg-shaped, covered with fine bristles and hard to catch.

We have seen some exquisite specimens of bills for out-of-door posting from Samuel Booth, pictorial printer, 199 Centre street, which almost rival the primitive chromos. They are almost too fine to put out in the wet.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION OF MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[Post Office Box 2332.]

Terms, Four Dollars a Year, Strictly in Advance.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 20 cents per line; outside page, 30 cents. Special rates for three, six, and twelve months. Notices in editorial columns, 50 cents per line.

NEW YORK, THURSDAY, OCTOBER 26, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

Trade supplied by American News Company.

CHARLES HALLOCK,

Editor and Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, October 26th.—Racing: Baltimore, Md. Trotting: Washington, D. C.; Rittersville, Pa.: Fleetwood Park, N. Y. American Rifle Association meeting, Glen Drake. Base Ball: Our Boys vs. Crystal, at Brooklyn; Quickstep vs. Resolute, at Brooklyn.

FRIDAY, October 27th.—Racing: Baltimore, Md. Trotting: Rittersville, Pa.; Fleetwood Park, N. Y.

SATURDAY, October 28th.—Trotting: Fleetwood Park, N. Y. Rifle: Marksman's badge, 7th Regiment shells and Sharpes prize at Creedmoor; Competition for T. Steele & Son cap at Hartford. Fall practice of the Coaching Club, N. Y. S. Base Ball: Witoka vs. Osceola, at Brooklyn, N. Y.; Arlington vs. Eagle, at Stapleton Flats, S. I.; Quickstep vs. Fly-away, at Brooklyn.

TUESDAY, October 31st.—Annual meeting Virginia Riding Club, Richmond. Rifle: Marksman's Badge, Conin's Gallery.

WEDNESDAY, November 1st.—Trotting: Hartford, Conn.

MR GREENER'S NEW WORK.—We have received many inquiries as to when Mr. Greener's new work would appear. We are happy to announce that it is now out, and can be had of Messrs. Cassell, Pelter & Galpin, No. 596 Broadway; the price is \$3 50. The title of the book is "Choke-Bore Guns, and How to Load for all Kinds of Game." From a hurried glance through the pages we judge it to be comprehensive and valuable. A review will appear in our next issue. We can also supply the book from this office.

AN ERROR CORRECTED.—By a process of what Mr. Richard Grant White would term "heterophemy" we stated in our last issue that Mr. B. DeForrest was the victim of a gunning accident in Connecticut. The gentleman whose misfortune we intended to record was Mr. Ernest Staples, and the mistake arose from the fact that our informant mentioned in the same connection Mr. DeForrest's trip to Minnesota, upon which he is at present absent. The events became mixed in our mind, and hence the error.

We regret to announce that Dr. Thebaud died at 4 a. m., on the 20th.

A GAME SUPPER.—We acknowledge with thanks an invitation to attend the annual game supper of the Salisbury (Connecticut) Bird and Fish Protection Society, held at Lakeville on Saturday last. But alas! cares and onerous duties compelled us to forgo the pleasure, and the toothsome quail and succulent woodcock "passed by with impunity" as far as we were concerned. Mr. C. S. Kelsey is President of this flourishing society.

—If your feet blister in walking, soap your boots inside.

SHOOTING IN ENGLAND.

THE Maharajah Duleep Singh is one of those Indian princes who having surrendered his authority and revenues to the British Government and accepted in lieu a princely income, has settled down to the life of a country gentleman in England. A very fine and courteous gentleman he is, too, with a penchant for outdoor sports, which is more characteristic of his adopted country than it is oriental. But the Maharajah, being a prince, must do things in princely style, and in this respect ranks with the most advanced of advanced British sportsmen. His estate of Elvedon Hall is noted as a game preserve, and it is reported that during the first fortnight in September he killed in nine days 2,350 partridges to his own gun, or rather guns, for it must have required more than one, particularly on one memorable day, when no less than 780 birds were, according to the *Field*, brought to bag. Now, if the Maharajah is a moderately early riser, and did not linger too long over *tiffin*, he may have shot incessantly for eight hours, or four hundred and eighty minutes, which would give him the handsome average of a little over a bird and a half a minute. Western sportsmen who consider their bag of fifty or sixty prairie chickens a day something remarkable, or even our friend of the "Snipery" in Louisiana, who reports killing two hundred or more snipe per diem, will hereafter consider their bags as insignificant. But let us see how the Maharajah accomplishes this wonderful shooting, aside from the question of endurance, which we admit is inexplicable. The partridges are all hand-reared, their eggs being placed under common fowls, and the young birds afterwards carefully reared and protected. One of those irrepressible Britains who invariably want to get at bottom facts, and are continually writing letters to the *Times* over the signature of "Paterfamilias," etc., asks the *Field* where all the eggs required to produce this prodigious number of hand-reared birds come from. An inquiry which carries with it an insinuation that an immense number of nests must have been robbed to procure them. The noble sportsman would, no doubt, repel with scorn any such insinuation, but the fact remains to be cleared up. The birds were killed by the battue or drive, a method which not only reduces the sport to mere slaughter, but as eggs must be procured at any cost to supply the birds required on an aristocratic estate, offers inducements to poaching. Pheasants are reared and killed in the same manner, and the mode is thus described in an English paper:

"Battue shooting, if the truth is to be told, differs very little indeed from netting a field. There are points in the periphery of the covert at which the pheasant always breaks. At one of these so-called 'warm corners' the guns are posted, and meantime the beaters enter the covert from the opposite side, and—to use the expression applied by Herodotus to the massacres committed in Samos by the Persians—'net' it. The terrified birds cannot turn back on the line of the beaters. Slowly and inch by inch they are driven toward the fatal corner. As they break forth, the earliest and boldest are picked out and brought down, and at first the shooting is fair enough. The great bulk of the birds, however, are headed back by the sound of the guns, and hang on the edge of the cover until the beaters are within a yard or two of them. Then, in their last despair, they dash forward *en masse*, and for a minute or two comes a rush of pheasants thick enough almost to darken the air. There is no need to aim. The sportsman loads and fires and loads and fires, or—if he be *en grand seigneur*—has attendant keepers to load for him; and when the brief ten or twenty minutes over the bag is reckoned. 'Sport,' in the true acceptance of the term, this kind of shooting can hardly be termed—unless, indeed, it be sport to gather barn-door fowl together by scattering barley, and then to bring a *mitrailleuse* to bear on them."

Of course dogs are useless in such shooting, and the breeding of them is discouraged. Not only is the battue adopted by the country gentleman who wishes to show as good head of game as his neighbor, but it is being adopted in grouse shooting on the moors. Whether the same amount of enjoyment is to be derived from it as from the old mode of shooting over dogs is a question any sportsman can answer for himself. There are none in this country who would not be happier when evening came with their fifteen or twenty quail, half a dozen woodcock, and, perhaps, two or three brace of ruffed grouse, earned by hard work and straight shooting, than the Maharajah with his seven hundred head of hand bred partridges.

Referring to this enormous slaughter, the *News* says:—

"It must be pleasant for the sportsman to wander among his hen-coops on a fine spring morning, and watch the hens sitting on the partridge eggs which are soon to produce cheepers for his ennobling amusement. Still one cannot help wishing that the same sort of adventure might now and then befall the Maharajah, as once occurred to an English preserver. This gentleman's keeper had reared some hundred pheasants, and the day came for those pheasants to die. But the covers were beaten in vain, only a chance wild bird was found, and that got away untouched. When the gallant sportsmen had gone home disgusted after their bloodless foray, the keeper's bride, a young and tender-hearted woman, opened her bed-room door and let the birds forth in safety. She had called in the poor creatures that she was used to feed, which knew and loved her, and had 'hidden them by fifties,' as Obadiah once concealed the prophets. Women will never understand sport, and we trust it may be long before men understand it in the form which the Maharajah pursues."

—It has been agreed by the Commissioners of Fairmount Park to allow the main Exhibition building at Philadelphia to remain in the park.

—Fur dealers from the Upper Ottawa report the supply of furs plentiful, but prices very low.

PROTECTING WILD PIGEONS.

A FEW weeks since we printed an article pointing to the fact that unless wild pigeons were afforded some measure of protection they would soon be exterminated, and the trap-shooter be deprived of the means of pursuing his sport. Not only the trap-shooter, however, would be the sufferer, but the sportsman, who prefers to shoot his pigeons *au naturel*. Our contemporary, the *Red and Gun*, in reviewing our article considers that we are in error in attributing the destruction of wild pigeons to trap-shooting, and is of the opinion that "if among the scores of millions of wild birds a few thousands have been used for the trap, it would hardly have affected the whole mass." We think our contemporary is in error. His "few thousands" should have read "hundreds of thousands annually." For we believe that not less than a million birds are netted for trap shooting each year. At the last State Sportsman's Convention held in this State, 12,000 birds were trapped, and our neighbor must remember how they were procured; how the Convention was postponed from week to week, until the news came from away up in Northern Michigan that the birds had been found and netted. It is also to be remembered that these birds are netted when on their nests, when in the very act of reproducing their species. Now we are not opposed to trap-shooting. We think that when properly conducted, and in moderation, it is a very proper amusement for gentlemen during the non-shooting season, and the means of bringing about much good feeling and jollity among sportsmen. But we do think that if wild birds are necessary for its prosecution that measures should be taken for procuring those birds at some other than the breeding season. What would be thought of the man who would throw a net over a hen quail while on her nest and then shoot her out of a trap? And yet no argument can be advanced why a wild pigeon is not just as much entitled to protection as a quail. Trap shooters will discover too late that they have overdone the thing. We mentioned that 12,000 birds were netted for the last State Convention. At the same time there were 7,000 in the coops of the Syracuse clubs to be shot a week or two later. When we take into account all the clubs, large and small, we are well within the limit when we say that one hundred thousand wild pigeons are annually shot from traps in this State. There are at times as many as fifteen or twenty thousand birds in the Chicago coops alone. Our estimate of one million birds netted annually in the United States is well within the limit.

Our contemporary thinks that the "greatest destruction is carried on for the market," and considers that this is the ultimate destination of all trap-killed birds. With the latter proposition we agree, and it is one of the redeeming features of trap-shooting, that no waste follows the slaughter; but that the birds are taken from their nests and their necks wrung for the market, at least to any great extent, we do not believe. The quantity of wild pigeons exposed for sale in our markets will not warrant the assertion. While we do not agree with the writer of the following letter in his wholesale denunciation of the trap-shooter, we print it as representing the sentiments of a large class of people who look with dismay upon the near and utter annihilation of one of our most beautiful wild birds:—

POUGHKEEPSIE, N. Y.

EDITOR FOREST AND STREAM:—

You deserve the thanks of every man, woman, and child, in the country for the article in your paper of September 21st on the protection of the wild pigeon. I hope you will continue to write on the subject till not a pigeon is left from the Atlantic to the Mississippi. I never could understand how gentlemen connected with the different sportsman's Associations all over our country organized for the protection of game could conscientiously countenance the wholesale destruction of the wild pigeon. There is not a member of these organizations where he stands in front of the traps, that should not wear a badge labeled in gold letters, "Guilty of destroying instead of protecting our game." All sportsmen's association that countenance the trap shooting of the wild pigeon should be shunned by every honorable and high-minded sportsman, who is in favor of protecting, instead of destroying entirely these birds, which will be the case in a very few years, unless steps are taken to stop them. In this section of the country it is a rare sight to see the pigeon, when before trap shooting was carried to the extent it now is, one could have all the sport they wanted during the fall with the gun. Any where through Ulster county they were numerous during the season, but you may now travel the county over and rarely see or hear of a flock—and why? because the moment a flight alights in the spring and commence to nest, the sharks are around with their nets and the work of destruction commences. It is a burning shame that these creatures should be allowed to carry on their work, they could not do so if it was not for the patronage of the so-called sportsman's clubs about the country. I hope Mr. Editor you will not let this matter drop till there is not a net left in the land. J. G. F.

LAW BREAKERS IN NEW JERSEY.—It is refreshing to hear occasionally of the detection and punishment of some willful violator of the game laws, but such instances are by far too rare. To the credit of New Jersey, be it said, that by far the greatest number of such cases which are brought under our observation occur within the limits of that State. In the instance to which we now call attention the advantages possessed by a large and powerful organization such as the West Jersey Game Protective Society, are shown. It can employ detectives to track suspected parties, and able counsel to secure their conviction. The *Vineland Daily Journal* of the 12th inst., says:—

"Last night a detective employed by the West Jersey Game Protective Society arrived in town. This morning he seized at the 6:15 train on the W. J. R. R. a box, which the investigation before Esquire Loughran showed to contain 25 quails, killed out of season in violation of the law, and turned over by David Irish to the railroad company to ship to Philadelphia. As the penalty for this offense against the State is \$15 for each quail had in his possession, the amount exceeded the jurisdiction of the Justice, and Irish, in default of bail, was committed to the county jail to await the action of the court in January."

Such prompt action and the prospect of so severe a penalty might be a warning to all poachers, and the West Jersey Game Protective Society deserve all credit for their enterprise. It is their intention to prosecute not only this case, but all others coming within their jurisdiction to the fullest extent.

QUAILS IN OHIO.—We have received from the Forrester Shooting Club a placard offering a reward for the conviction of any persons detected in shooting quail before the 15th of November, 1877, as prohibited by the Legislature April 11th, 1876.

PROTECTION AGAINST INSECTS IN EUROPE.—The small birds, especially the black-bird and starling, are kept as a constant protection against the ravages of insects in France and the other European States, and the killing of them is a criminal offence. The vineyards of France and Germany are inestimably indebted to them. In Egypt the people consider the ibis a sacred messenger sent to destroy locusts and other noxious insects and reptiles; the law protecting them is thus scarcely needed. The birds sheltered in the Calabrian mountains are efficient in keeping the Neapolitan plains free from locusts. About Temesvar, Hungary, locusts were once got rid of by driving into the fields 15,000 swine, which devoured the grasshoppers with great rapidity. In Austria, in 1828, upon the arrival of flights of locusts the people resorted to firearms, and kept up such an explosion of gunpowder that the first and second flights were driven forward, but when the main army arrived the noise was disregarded, and, although the inhabitants destroyed 20,000 bushels, the crops were all devastated. When the air is so densely filled as to darken the sun it has been found that neither cannon nor any other stratagem will succeed in driving them onward. In Asia Minor and Arabia noise and smoke is resorted to to drive away the pests, but in Morocco the remedy is mainly wet ditches about the fields. In the year 1855, in the district of Leoff, Russia, the inhabitants are said to have expended 22,953 days' labor collecting and destroying locusts. The Bulgarian colony expended 23,000 days of labor. In Tartarhuna 20,000 days' labor were expended. In Alonesh 6,000 days' labor. In other districts 80,000 men were employed, besides innumerable animals, vehicles, etc. Nevertheless the locusts left behind in various places, having acquired wings, spread themselves over all the fields in such multitudes that their former diminution, which seemed so monstrous while their destruction was going on, became imperceptible. Each day they alighted in new places, and everywhere produced devastation; consequently all the labors described were only so much time and labor thrown away. In China, where the population is exceedingly dense, there is every year republished an old edict, commanding the local authorities to call out the inhabitants and utterly exterminate locusts wherever they may appear. In many of these countries a regular fund is provided for payment for eggs and young. In South America Darwin saw them in dense clouds, and says "the poor cottagers in vain attempted, by lighting fires, by shouts, and waving branches, to arrest the attack."

It would seem evident that, except where the population is densely compact, it is impossible to collect and destroy them; that in damp, well-shaded countries, they are never destructive; that where birds are most numerous the grasshopper plague is least to be apprehended. The planting of groves would shelter the birds, and the birds will take care of the insects. This is a great argument for tree cultivation in our West. In the Isle of Bourbon, the grasshoppers becoming destructive, the Governor imported grackles (black-birds). As the birds increased the locusts disappeared. The inhabitants then destroyed the grackles. The grasshopper plague returned; birds were again introduced, when the evil subsided, after which the people preserved the birds. The value of these facts and suggestions might be urged by argument and illustration at great length.

A NEW BRACE FOR OUR NERVES.—The use of coca as a stimulus to the nerves, which does not leave behind it any ill effects, is becoming more extended. Travelers in the Cordilleras have long used it with marked benefit to counteract the enervating effects consequent upon breathing the rarified air of great heights. Sportsmen, also, are beginning to find that it enables them to withstand fatigue and steadies their nerves, although there is no testimony to prove that it is a cure of the "buck ague." A correspondent of *Land and Water*, who could not hit half his birds on account of nervousness, drank two ounces of the tincture before starting in the morning on a shooting expedition, as an experiment. Of the result he writes:—

"The effect produced was in a direction altogether new and unexpected. As soon as the dogs pointed I expected the usual inward commotion with its usual results; but, to my surprise, nothing of the kind happened, and down went the birds right and left. 'Eureka!' I said to myself; 'the coca has made me a steady shot.' So, in fact, it subsequently proved, to the wonder and pleasure of my host, who is more gratified at seeing his friends enjoy good sport than in having the sport himself. I tried chewing the leaves also with effect. From what I know of the strength of the tincture I am inclined to think that the drug is more active when simply chewed. Unfortunately, however, my power of chewing the leaves is limited by a nauseating effect of the process."

Judged by the effects described, coca would seem to be inhibitory as regards the action of the heart. Whether this result is produced by indirect action through the mental functions upon which the drug is said to act remains to be proved. The hints afforded in the meantime may prove

of great value. Coca in sufficient doses would seem to be a powerful nervine tonic; and as its effects appear to be entirely harmless its use will be hailed as a boon by many a sportsman.

FLORIDA.—We have received the second number of the "Florida New Yorker," published monthly at 34 Park Row, this city, under the auspices of the Florida Land and Immigration Company, an association which we believe to be wholly reliable and responsible, and to whom it has been our pleasure to refer several inquirers who have applied to us for information. This publication aims to answer all such questions as an intending settler would naturally ask, and we can therefore reasonably urge all who desire to learn of the climate and physical character of the State to obtain and read it. Its correspondence is varied, and is derived from all sections of Florida, its chief editor, Col. J. B. Oliver, having been connected with the Jacksonville *Agriculturist*, and well acquainted with the men and material resources of the State. Accompanying the present number of the paper is a supplement that contains a map which shows 650,000 acres of land owned and controlled by the "Florida Land and Immigration Company," and valuable instructions how to reach Florida, and what to do when one gets there.

With regard to the climate of Charlotte Harbor, Dr. Kenworthy has written the following letter which he has requested us to publish:—

EDITOR FOREST AND STREAM:—

In one of my communications published in the *FOREST AND STREAM* and republished in "Camp Life in Florida," I referred to the climatological advantages of Southwest Coast of Florida—more especially that portion known as Charlotte Harbor, as a winter resort for the invalid and sportsman. I gave the thermometric range for three years, and maintained that the difference between the minimum and maximum markings was less than that of Indian river. I have before me the returns of the War Department, office of Chief Signal Officer, "showing readings of the exposed thermometer at Punta Rassa, Fla., for the year 1875." And for the information of tourists, invalids, sportsmen, and intending settlers, I shall copy a few figures giving the maximum marking for each month, with the highest and lowest ranges of the instrument for the hottest and coldest months of the year 1875:—

1875.	Maximum.	Minimum.	1875.	Maximum.	Minimum.
January.....	80.0	51.2	July.....	91.1	69.0
February.....	81.5	43.0	August.....	91.0	70.5
March.....	83.5	50.0	September.....	89.5	69.5
April.....	82.0	54.0	October.....	89.0	55.5
May.....	86.0	75.5	November.....	83.0	51.5
June.....	89.0	69.0	December.....	81.0	42.0

Maximum and minimum range of thermometer for the months of July and December, 1875:—

Maximum.	Minimum.	Maximum.	Minimum.		
July 1.....	83.0	71.0	Dec. 1.....	79.5	67.9
" 2.....	82.0	71.5	" 2.....	78.5	68.0
" 3.....	83.0	72.5	" 3.....	77.5	67.0
" 4.....	87.1	69.0	" 4.....	76.0	67.0
" 5.....	85.0	73.0	" 5.....	79.0	65.0
" 6.....	84.0	73.0	" 6.....	80.0	72.0
" 7.....	84.0	74.0	" 7.....	76.0	69.0
" 8.....	86.0	70.0	" 8.....	70.5	65.0
" 9.....	86.0	72.5	" 9.....	67.5	54.0
" 10.....	88.0	75.0	" 10.....	65.0	49.0
" 11.....	89.0	76.0	" 11.....	71.0	58.0
" 12.....	87.5	76.0	" 12.....	70.0	55.0
" 13.....	88.0	77.0	" 13.....	62.5	48.0
" 14.....	88.0	77.0	" 14.....	68.0	55.5
" 15.....	88.0	77.5	" 15.....	61.5	45.5
" 16.....	85.0	78.0	" 16.....	69.2	47.0
" 17.....	88.5	80.5	" 17.....	72.0	57.0
" 18.....	91.1	75.0	" 18.....	64.0	45.0
" 19.....	90.0	76.0	" 19.....	66.0	42.0
" 20.....	89.0	75.0	" 20.....	73.0	54.0
" 21.....	88.5	74.0	" 21.....	77.0	61.0
" 22.....	90.0	75.0	" 22.....	78.0	61.5
" 23.....	90.5	76.0	" 23.....	74.5	60.5
" 24.....	90.6	76.0	" 24.....	76.5	61.0
" 25.....	90.0	76.5	" 25.....	76.0	63.0
" 26.....	91.0	76.0	" 26.....	77.0	65.0
" 27.....	90.0	71.0	" 27.....	80.5	67.0
" 28.....	88.0	74.0	" 28.....	79.5	66.0
" 29.....	90.0	73.0	" 29.....	79.5	67.0
" 30.....	88.1	76.0	" 30.....	81.0	66.0
" 31.....	88.0	75.0	" 31.....	81.0	66.5

During the year the thermometer marked 90 deg. and upwards on 14 days; 9 in July; 3 in August, and 1 in September. During the same period the instrument registered 50 deg. and below on 11 days; 5 in December; 5 in July, and 1 in March. Maximum, on July 18th, 91.1; minimum, on December 19th, 42.0; extreme variation for the year, 49.1-10 degs. During the winter month the rain fall is trifling, easterly winds are modified in their passage across the peninsula; westerly winds become soft and balmy during their progress across the Gulf of Mexico; the water of the gulf and inlets maintains a high temperature, admitting of bathing at all times. Taking climate and sporting advantages into consideration, we earnestly recommend the neighborhood of Charlotte Harbor to the sportsman or invalid who is anxious to try "Camp Life in Florida."

In former communications I recommended sportsmen to take steamer to Punta Rassa, but the Post Master General, has left this point out in the cold, and the mail steamer from Cedar Key goes direct to Key West. To reach Charlotte Harbor, visitors must take sailing yachts from Cedar Keys or Tampa or Manatee. Or take semi-weekly steamer from Cedar Keys to Manatee, and small boat to Sarasota bay; then the outside route to Gasparilla inlet; or proceed to head of Sarasota bay and have boat hauled over-land to the Myakka river or the head of Charlotte Harbor, a distance of 12 or 15 miles.

AL FRESCO.

MAJOR SARASOTA.—The series of articles which we begin this week over the signature of "Major Sarasota," although not containing a vast amount of incident or narrative, are especially valuable to the coasting trade of the west coast of Florida, as they contain the only accurate sailing directions extant for that locality, giving bearings, courses, distances, soundings, etc., not given on any chart, and correcting the most recent charts of the United States Coast Survey. This series of papers is prepared by a U. S. Customs officer, who has been familiar with the south and southwest Florida coast for thirteen years or more, both during and since the war. It will be comprised in eight chapters, the latter being rich with startling incident and valuable information for sportsmen. When it is completed, a new series by "Al Fresco" will be begun. These letters will make the *FOREST AND STREAM* very desirable upon the library table of all persons in any way interested in Florida, whether sailors, sportsmen, settlers, cattle rangers, speculators, invalids, or sight-seers; for the reason that they devote some thought to each, indicating localities for grazing, orange culture, settlement and commercial fishing.

DISRAELI'S DRESS.—The idiosyncrasies of some of England's most prominent literary men, as displayed in their dress, are very striking. Benjamin Disraeli, late the British Premier and now the Earl of Beaconsfield, is thus described as making his debut in the House of Commons: "He was very showily attired, being dressed in a bottle green frock coat and a waistcoat of white, of the Dick Swiveller pattern, the front of which exhibited a network of glittering chains; large fancy-pattern trousers, and a black tie, above which no shirt collar was visible, completed the outward man. A countenance lividly pale, set out by a pair of intensely black eyes and a broad but not very high forehead, overhung by clustering ringlets of coal-black hair, which, combed away from the right temple, fell in a bunch of well-oiled small ringlets over his left cheek." Charles Dickens was another example of this remarkable passion for showy dress. His bright figured vests covered with "glittering chains," coats with velvet facings, and huge button-hole bouquets will be remembered by all who heard him lecture in this country. The late Lord Lytton was another "dressy" man, but "Pelham" was more of the Brummel in his get-up, elaborate but not loud.

WILD RICE CULTURE.—We thank our Syracuse correspondent for the data he has given. Any similar facts from other sources will be thankfully received, and enable us to prosecute the labor we have in hand of distributing the wild rice throughout the inland waters of the country where it does not now grow. The writer says:—

SYRACUSE, Oct. 10th.

EDITOR FOREST AND STREAM:—

In the fall of 1875 some seed was procured from Henry Meriam, of Rice Lake, and sown at the head of Skaneateles Lake, N. Y., and also in a deserted marsh of Cayuga Lake. It came up in from two to four feet of water in both localities. In Skaneateles Lake tame geese stripped the stem while the seed was yet green, so if it will not sprout from the root another year it may prove a failure there. Mr. F. Rumsey, of Seneca Falls, however, tells me that it has done well in Cayuga Lake, away from incursions of tame water fowl. I also put in some seed at Otisco Lake a few weeks since. The fact is thus established that it will thrive in this part of the country. A devoted sportsman of Cortland, A. Mahan, Esq., has sown it in some out-of-the-way lakes of this county. There seems to be no good reason why the annual flight of ducks should not be directed to their favorite food, if sown in this section. Many of our lakes and streams are favorable to its growth, and a small expense and enthusiasm by the different sportsmen's clubs will give good duck shooting here as well as in the Western States. Large spring and fall flights of ducks pass over here, and will doubtless stay and return, if they can find wild rice.

E. R. WILSON.

COACHING CLUB PARADE.—The autumn parade of the Coaching Club will take place on Saturday next, 28th inst. The coaches will assemble at their usual place of rendezvous, the east side of Madison square, at half past two o'clock, and will proceed thence through Twenty-sixth street to Fifth avenue, and along Fifth avenue to the Central Park. They will then drive along the eastern road to Stetson's, and returning will go down Fifth avenue to Washington square, and thence back again along Fifth avenue to Madison square. It is expected that eight or nine coaches will take part in the parade, belonging to the following gentlemen, members of the Coaching Club:—Messrs. Bennett, Bronson, Jerome, Kane, Neilson, Rice and Whiting.

THE BOY OF THE PERIOD.—Nothing that the small boy of the present day does astonishes us. His latest performance, however, as chronicled by an exchange, takes the lead. He was a Boston boy this time, and his father took him to a dentist to have a tooth extracted from his nose. He had fallen down, and the tooth had been driven through its socket into the right nostril, where it could be seen. But what gives this boy the premium, for the time being at least, is that only a few days before he had swallowed a tin whistle, and thereby endangered his life. What tune he played on the whistle our exchange sayeth not, but with a whistle in his stomach and a tooth in his nose he ought to be a success as a concertina.

A FINE GUN.—We had the pleasure yesterday of inspecting one of the most elaborate guns, in point of general finish, that we have ever handled. It was a "Daly" gun, built to order for Mr. R. H. Allen, of this city, by Messrs. Schoverling & Daly. The barrels were of the finest Damascus, the pattern being brought out so strongly in curious waves as to be rough to the touch. The locks, triggers, guard, etc., were very handsomely ornamented with birds in relief and most exquisitely engraved. The gun is a 12 bore, but weighs only 6½ pounds, with 28-inch barrels, Mr. Allen, being a naturalist as well as a sportsman, designing it for procuring specimens as well as for field work.

FOR THE WEST!—We mean the Far Away West, not the west of fifty years ago, which is reached now in a day and night, but the land beyond, where the sportsman finds game of every kind in abundance. To reach this happy land the Chicago and Northwestern Railroad is the route to take, even as far west as Omaha. This is a first class road in every particular and one on which the sportsman will find that himself, and dogs are well taken care of.

THE PARKER GUN.—We desire to call the attention of our readers to the advertisement in another column of Messrs. Parker Bro's., of West Meriden, Conn. The "Parker" gun is so well and universally known throughout the country that it seems almost supererogatory to call attention to its merits. The guns may be said to "speak for themselves," and are found everywhere in the hands of American sportsmen.

PERSONAL.—We lose this week the aid of Mr. Ernest Ingersoll, who for several months has been conducting our Department of Natural History, and who now returns to the *Tribune* staff.

Game Bag and Gun.

GAME NOW IN SEASON.

Moose, *Alces malchis*. Pinnated grouse or prairie chicken, *Cupidonia cupido*.
Caribou, *Tarandus rangifer*. Ruffed grouse or pheasant, *Bonasa umbellus*.
Elk or wapiti, *Cervus canadensis*. Quail or partridge, *Ortyx virginiana*.
Red or Virginia deer, *C. virginianus*. Hares, brown and gray.
Squirrels, red, black and gray. Wild turkey, *Meleagris gallopavo*. Woodcock, *Philohela minor*.

"Bay-birds" generally, including various species of plover, sand-pipers, snipe, curlews, oyster-catchers, surf-birds, phalaropes, avocets, etc., coming under the group *Limicola* or Shore Birds.

A NEAT CONTRIVANCE.—One of the neatest and handiest implements which go to make up a sportsman's kit has been handed to us by Mr. E. D. McCrackland, of Tenaflly, N. J. It is nothing more or less than a box containing a series of India-rubber stamps, with pad and ink, for marking the No. of the shot with which cartridges are loaded. After the shell is loaded and turned it takes but an instant to stamp the No. on the shot wad in neat and distinct figures. The apparatus is manufactured by Messrs. Scott & Co., No. 291 Broadway.

THE GAME OF NEWFOUNDLAND.—We find in the Toronto *Globe* the following capital account of the game of Newfoundland:—

"The 15th of September is the date at which legalized partridge shooting commences; and as the weather is very favorable, a strong force of sportsmen are at present in the field. Our partridge are very fine birds, quite equal to the Scotch grouse, and indeed resembling them so closely that it is difficult to make out any specific difference between the red grouse, gorcock, or moorcock of Scotland, and those of Newfoundland. On the table they are a most delicious article of food, whether roasted, stewed, or in white soups. All visitors to our shores admit that the flavor of a plump partridge, well cooked, is unsurpassed in richness and delicacy. They are also of respectable proportions, a brace of them, in season, weighing from three to three and a half pounds. In certain localities, at a distance from settlements, they are very abundant, and sportsmen frequently bag from twenty to thirty brace in a day. Nothing can be finer than a day's partridge shooting over our breezy hills and dales in the fine autumn weather. The balmy air, the bright skies, the wild and sometimes grand scenery, the countless lakelets that form a feature of the landscape, the woods assuming everywhere the golden tints of autumn, the wild flowers still abundant, the gracefully rounded hills—all these, with the excitement of the sport, furnish to a lover of nature a day of rapturous enjoyment. And then the sportsman's supper, after the day's tramp, with roasted or stewed partridge as the staple, and possibly a glass or two of the famous Newfoundland port (the genuine article from Lisbon, ripened and mellowed by the sea voyage and residence in a cool climate) to wash down the good things, will wind up a day which will long remain a green spot in memory's waste.

"Our ptarmigan or partridge are of a reddish brown color, with red about the eyes, and a few white feathers in summer. In winter the brown color gradually disappears, as in the Alpine hare, and the bird becomes almost pure white. They are to be found in all parts of the island, but the bare highlands, where they are covered with berry-bearing plants, are their favorite localities. In clear weather they are found about the skirts of the woods and in the tucking bushes, and are then very wild and difficult to reach. When the weather is foggy, however, they come out on the barrens and marshes, and are then very tame, merely flying a few yards even when shot at before they alight again. It is quite customary here to despatch a box of partridges in a frozen state to friends in Scotland and England about Christmas; and a most acceptable present they prove. Owing to the great number of sportsmen who go in pursuit of the partridges they are becoming every year scarcer in the neighborhood of St. John's and to get a thoroughly good day's shooting it is necessary to travel many miles.

"In addition to the ptarmigan, the sportsman meets with the wild goose, which breeds in the most secluded ponds, and brings its young ones down the brooks, well grown, by the end of June or beginning of July. It is a remarkably fine bird, easily domesticated, but does not breed when tamed. It is about the size of the common goose, but with a more swan-like form, and has a black ring round its neck, being a variety of the *Anser canadensis*. The black duck is also found in fresh water during the summer. Its plumage is a dark sombre brown; it is shy, but abundant in some spots, and is a most delicate table bird. The real epicure, however, prefers the curlew to all others. They arrive at this time from Labrador, where they migrate to breed, and are in prime condition after feeding for months on the ripe berries. These, with the snipe and plover, to say nothing of the noble deer that are to be met with in countless thousands in the interior, furnish abundant employment for the enthusiastic sportsman."

A COON HUNT.—Our Albany correspondent sends us the following account of a coon hunt in which he recently participated:—"A week ago yesterday I with a friend who lives at Larrabee's Point, on Lake Champlain, where I was visiting, went out for some sport with the grey squirrels. We shot fifteen. While shooting we heard a couple of hounds set up a cry in a swamp about half a mile from us, and upon investigation found Mr. 'Coon' hanging himself up a tree to keep away from the trouble below. We both fired a charge of No. 4 into him, which released his grip on the tree. When we reached him, which we did with difficulty through a heavy growth of 'button brush,' the dogs were guarding him, and we took Mr. Raccoon in charge, and found he weighed 20 pounds 8 ounces, which we thought a very large one. It is the only one I ever shot and am not posted as to their average weight. Please give me your idea of it. I forgot to mention that the hounds belonged to a gentleman living in the vicinity, and were out on a private hunt, in which we uninvited, interfered."

—Our old friend, Maj. H. W. Merrill, writes to put in a good word for the Deer Park region in Garrett county, Md., which he says: "Is not as I had supposed it, a mere hunter's lodge and grounds in the wilderness, but in fact a

fashionable, popular place or summer resort. Its elevation is 2,700 feet above the sea. It lies on the Baltimore and Ohio Railroad, about 230 miles from Baltimore and Cincinnati. It is reached just as the cars, after climbing the eastern slope of the Alleghany Mountains, arrive at the summit level. Here the road for a few miles gently winds along through the centre of an open and quiet valley, half a mile in breadth, which is bordered and overlooked on either side by one of the most beautiful and enchanting of open park oaklands imaginable, nearly all in a natural state. Both valley and woodland, fed by the perpetual showers and dews of the mountains, remains fresh and green the summer round. The hotel stands upon the northern slope of this valley, and a southern view from its piazza commands both the valley and the mountain's side. The house is in every sense what may be termed first-class. It accommodates about 200. A fountain is kept playing in front, and the grounds, which are beautiful by nature, are well laid out into romantic walks and drives. The whole 100 acres are exclusively for the guests. Deer Park opens right into the forests, and hence is the most convenient for sportsmen. The game found comprises the bear, deer, turkey, partridge, rabbits, and quail. The three former are to be found by hard work in the mountains, but the three latter, especially partridges and rabbits, are found right at hand, and are abundant. This is a celebrated place for wild pigeons."

MASSACHUSETTS—New Bedford, Oct. 19th.—Game birds are more abundant than for many years. G. A. White shot 44 quails, and 1 partridge (grouse) with 3 woodcock in one day this week. Shore birds, snipe, plover, etc., are quite plenty. Hundreds of partridges are snared and brought to town daily. A countryman who offered some for sale last week was complained of, but on examination it was discovered that our wise Legislature in perfecting the game law had nullified the whole ordinance, and so the criminal was permitted to go scot free. CONCHA.

Cohasset Oct. 23d.—Gunning has been very fair this week; too heavy fog for good sport. The cold weather has started the brant, and large bags have been taken at the Brant Rock, Marshfield, within sight of Daniel Webster's old house; also a few geese and black ducks. A pelican was shot at North Scituate this week, a rare bird for this country. S. K. JR.

Salem, Oct. 21st.—The quail season opened rather poorly for weather, but the craft turned out pretty well in this vicinity: 3 quail to two guns at Danvers; 7 quail, 2 partridges to one gun at Danvers; 12 quail, 5 partridges, 8 woodcock to D. P. W. and party; 2 quail, 1 woodchuck—not woodcock—to our colored Nimrod friend C. F. Weather—very high winds and cold, with snow on the ground, and birds flying badly. I have also to say the coot fusillade still holds out, though fluctuating. Snow birds are not all gone. A friend brought home last Monday from near here 28 birds, including grass birds, beetle head, 3 Wilson snipe and 1 wood duck. TEAL.

CONNECTICUT—I have just returned from Willimantic, Connecticut, and it is just as I said, it would be last year, when I found the whole county lined with snares. This year, though a good one, there are no birds. I hunted through the best ground carefully, and found three birds in two days! Vive la snare! W. HOLBERTON.

NEW YORK—Hornellsville, Oct. 16th.—Grouse shooting is improving. Fair bags were made all last week; the best was nine grouse and two cocks; also some good bags of quail and snipe. JOHN.

Meacham Lake, Oct. 15th.—Our fall hunting is at its best. A member of the First Brigade Staff shot a buck yesterday weighing 230 pounds—five prongs on each horn; the head goes to New York. Thermometer 21° at 6 a. m. Snow enough to make the ground look white. Geese, ducks, yellow-legs and plover flying south. Very few of the summer birds with us. A. R. F.

Hornellsville, Oct. 23d.—We are having splendid weather here just now but the leaves are too dry for grouse shooting; good bags of grouse and quail were made last week. Rabbits are very plentiful. "JOHN."

NORTH CAROLINA—Currituck, Oct. 15th.—Ducks and geese are becoming numerous in our waters and the prospects are bright for good shooting. Sportsmen who are not members of clubs can find good accommodations, with board, for \$2 per day at Poplar Branch, by writing to D. W. Linsey. Charges for gunner, \$3.

Davis's Hotel—Kittrell's, Oct. 18th.—This place I find is quite a resort for sportsmen, principally from Boston and neighboring towns. It is a real pleasure to stop at a place like this. A good "square meal," a comfortable room and bed (hair mattresses and springs on every bed) are quite a desideratum to the tired sportsman. Col. Davis, the proprietor, was formerly proprietor of the Winthrop House, Boston, which is sufficient recommendation for any one. Quail are in abundance, in fact, I have never found birds so plenty any where, except in Texas. The farmers or planters do not object to shooting on their plantations. They are anxious to have sportsmen come as the birds being so plenty, are very destructive to their corn, peas, and all small grain. In fifteen minutes walk from the hotel good shooting can be found. Horses and wagons are kept by the Col. for the use of his boarders. Good shooting during the next three or four months. Reached in 30 hours from New York via. Baltimore; steamer to Portsmouth; Seaboard and Roanoke Railroad to Weldon; Raleigh and Gascon Railroad to Kittrells. This was at one time quite a noted southern summer resort. A fine chalybeate spring but a short walk from the hotel. The piazzas are large and enclosed with glass, face directly east makes a fine promenade for ladies or invalids. T. B. R.

WISCONSIN—Janesville, Oct. 10th.—The duck shooting at Lake Koshkonong is better this fall than ever before. The enforcement of the law prohibiting sneak boats and batteries undoubtedly accounts for this. The first canvas-back was killed last Tuesday, and hundreds have been bagged since. R. V.

TEXAS—Galveston, Oct. 12th.—Game is beginning to be plentiful here now. Snipe of several species in large flocks; curlews by the thousands; killdeer are also very plentiful. There is any quantity of ducks in West Bay awaiting a norther and rain, as the ponds are pretty near all dried out. They consist of the following varieties: Mallard, blue and green-winged teal, gray ducks, big and little blue-bill, the red head, canvas-back, golden eye, top-knots, and various other kinds. Geese and brant have made an appearance in large numbers. I and another bagged last week 14 pair

of teals, 8 pair wild ducks, and lots of smaller game. Prairie chickens, and partridges in large numbers about twelve or fourteen miles from here. We have any amount of sport here. Fishing is very good. Two or three young sportsmen went down about five miles fourteen days ago, and caught thirty fine trout and nineteen young redfish, besides lots of smaller fish.

All we ask is, sportsmen, come pay us a visit, and they will not regret it. I believe we have the finest beach here in the world. SUBSCRIBER.

NEW BRUNSWICK.—Arrangements are being made for a grand battue hunt about the 10th of October over the Douglass Mountains, Queens county, 25 miles from St. John, N. B., where it is understood game is plenty. It was proposed that sixty sportsmen can make the trip to Welsford Station, where teams would be in readiness to take one part up the Nerepis road about six miles, and the other up the Douglass Valley the same distance, where they will join, and drive the game before them towards the base of the mountains in sight of Welsford, where will be the grand finale.

Shooting is reported as being very good at Mace's Bay, Charlotte county, 21 miles from St. John, plover, duck, etc., it is said, being very plentiful just now. Sportsmen will find excellent accommodations, good boats, reliable guides, reasonable charges, etc., at Mr. Albert Craft's, who is a good sportsman and a genial companion.—*Telegraph*.

RULES FOR TRAP SHOOTING.

VIRGINIA, Nev., Oct. 10th, 1876.

EDITOR FOREST AND STREAM:—

Our club here has a proposition on the table to amend the shooting rules so as to abolish the boundaries of 80 and 100 yards, and in their place allow three minutes' time to retrieve (single) birds; this time being the only boundary. In its favor we hear the old plea of making trap shooting to resemble shooting in the field as nearly as may be, etc., and that many old clubs east and newly formed ones have adopted the time plan to the exclusion of the boundary lines. Is this latter assertion true, and what is your opinion of this proposition?

Another important question: When our birds fail to fly (that is, "droppers") from plunge traps, we are accustomed to endeavor to flush them, if the shooter does not call for another bird, and often the bird walks a few yards away from the trap. Now, if the shooter pleases, he can call for another bird at any time before the bird flies, which of course he does, if the bird goes away from him. Now, such being his privilege by custom, (only) does it not follow that his opponent should have the privilege of objecting to the bird being taken in the event of its appearing to be a too easy bird? For instance, when it walks towards the shooter, say from one to eight yards. Your reply will much oblige our Virginia Shooting Club. BENJ. ROBINSON.

With regard to the first question of our correspondent, we would say that we highly approve of the time limit for recovering a bird over the old fashion boundaries. Although it has not yet come into general use, we are confident that it will, and it has already been adopted by some leading clubs. Among these we might mention the Philadelphia Sportsmen's Club, who now shoot under the three minute time limit. They have found it to work admirably, and to the exclusion of all wrangling and misunderstanding. As regards the second question, we think that it should be left to the discretion of the referee. With some clubs the rule is that when a bird drops close to the trap and walks three feet in any direction it is then "no bird," and we think the rule a good one.

GUNNING ACCIDENTS.

BALTIMORE, Oct. 20th.

EDITOR FOREST AND STREAM:—

In your last issue I notice the serious accident that happened to Dr. Thebaud while loading shells. There is no reason why such an accident should occur, if persons filling shells would adopt my plan—i. e., charge your shells first, and cap after loading. By following this plan such accidents would be impossible. I would be glad if you would call the attention of your sporting friends to this matter, as it will doubtless save the maiming of some one of your many readers. P. P. P.

All very well, but is not the force required to press the cap into place after the cartridge is loaded just as likely to explode the shell as the slight tap necessary to force the wad into place? We apprehend that if sportsmen will, one and all, recognize the fact that hard ramming is not only unnecessary, but that it breaks up the grains of powder, accidents of this nature would be uncommon.

OIL FOR GUNS.

NEW YORK, October 11th, 1876.

MESSRS. HOLBERTON & BEEMER:—

Dear Sirs—I have given your new oil a fair trial. I keep two guns on board of a yacht on the salt water. I have never been able to keep them free from rust until I used your "Rust Preventer," and I find that it is the best lubricator for breech-loading guns and rifles I have ever used, and will cheerfully recommend the oil to all sportsmen, for it will stand the test for all you claim for it. T. E. BROADWAY.

Rifle.

—The *Pacific Life* expresses the belief that the California National Guard can find in its ranks a team of marksmen able to cope successfully with any thus far figuring at Creedmoor, and hopes next year to see a California team at Creedmoor making a fight in the Inter-State match. We should certainly rejoice at such an event.

WHAT THE ENGLISH PRESS SAY OF THE INTERNATIONAL MATCH.—We must do our English cousins the credit of being unstinting in their praises of the shooting in the late matches. Indeed, as we have before remarked, in rifle shooting there appears to be much less of the feeling of jealousy and recrimination which attends other international contests; perhaps the difference in the nature and value of the prizes, or the absence of the pernicious accompaniment of the pool box may in a measure account for it. Or, again, because there is nothing "professional" in rifle shooting, and hence no desire to emulate the performances of the professional. Our English contemporary, the *Volunteer Service Gazette*, devotes much of its space to the details of the match, and prints the scores in full. It

characterizes the shooting as "simply marvelous," and says that nothing like it has ever been done before. With regard to rifle shooting on this side of the water it says:—

"We prophesied long ago that when our ingenious cousins on the other side of the Atlantic—the originators of rifle shooting—chose to take the art up in its modern form, they would be hard to beat, and our prediction has been amply verified. Nevertheless, we must hope that the American trophy may one of these years be won by a team for the old country. If it is so won, we observe that the subsequent contest is to take place in the country of the winning team. We venture to suggest, though it is against British interests to do so, that this rule is a mistake, and that if possible it will be well to have it altered. The great American trophy ought always to be shot for at Creedmoor, as the Elcho Shield is always shot for at Wimbledon. On the whole, it appears to us that the balance of convenience is in favor of the locality for such great contests being permanent, and we strongly recommend the body who may have the disposal of the American trophy to modify, if possible, their existing rules."

With the latter suggestion we can hardly agree, as it would be rather too much for the holders, in case it should be a British team, to have to cross the water to shoot at Creedmoor.

The Dublin *Times* is rather severe upon the English riflemen, who it asserts were ready to challenge the winners until the scores appeared. The article from which we quote is as follows:—

"The American Rifle team may be credited with a double victory. According to reliable authority it was the intention of the English eight, whose fine display of shooting at Wimbledon won the Elcho Shield from the Scotch and Irish, to challenge the Yankees should they prevail against the foreigners at Creedmoor. It is said that, the gauntlet was absolutely prepared for casting, and the men had signified their willingness to put the victors to the proof. When, however, the Centennial scores reached here a change came over the spirit of the Englishman's dream. The totals scored so far above any winning performance ever achieved at this side of the Atlantic that the ambitious "tiroons" were fairly appalled, and wisely concluded to hold their peace. One of the London morning papers commenting on the match at Creedmoor, expressed regret that England was not represented, as in that event even the Yankee colors would surely have been lowered. The experts themselves know better, and have withdrawn from their intention. Unqualified admiration of the scores obtained has been the tone among marksmen here, and it will be gratifying to the friends of the Irish team to learn that the phenomenal totals piled up by Johnson and Milner have formed the topic of conversation among the proficients."

CREEDMOOR.—Saturday was regular match day at Creedmoor, but the miserable weather detained even the most constant of the regular *habitués* from putting in an appearance. The first match was the sixth competition for the Geiger bullseye badge, for which there were four competitors. This match is shot at long range, 20 shots being fired at 1,000 yards, 15 at 900, and 10 at 800. Col. Farwell was the winner, as will be seen from the following score:—

Name.	1000 Yds.	900 Yds.	800 Yds.	Total.	Bulls-eyes.
W. B. Farwell.....	88	71	47	206	34
R. Rathbone.....	87	65	47	199	26
Homer Fisher.....	84	61	48	193	28
G. L. Morse.....	60	59	41	160	16

The second match was for the Schuyler Hartley and Graham badge for rapidity and accuracy. This match is shot at 200 yards, each competitor to have two chances of thirty seconds each. Following are some of the scores:—

Name.	1st chance— No. of Shots.	No. of Hits.	T'l.	2nd chance— No. of Shots.	No. of Hits.	T'l.	Grand.
J. E. Stetson.....	11	9	33	14	13	40	73
T. G. Bennett.....	9	9	31	11	8	29	60
A. B. Van Heusen.....	8	8	27	8	8	22	49
T. E. Addis.....	8	6	17	9	9	28	45
W. Robertson.....	9	7	24	10	4	10	34

CONLIN'S GALLERY.—The second competition for the eight elegant "Marksmen's badges," offered at Conlin's shooting gallery, took place last Tuesday evening, October 17th. The increasing interest taken in the matches, and the large number of competitors, is a good sign of the popularity of the competitions. The following are the names, with the scores, of the winners of the badge for the second contest:—

Name.	Total.	Name.	Total.
J. B. Blydenburgh.....	45	T. C. Banks.....	40
L. V. Sone.....	44	F. C. Dominick.....	39
Frederick Kessler.....	42	Chas. E. Blydenburgh.....	38
H. D. Blydenburgh.....	41	W. H. Hastings.....	37

Each contestant was furnished with an improved score card and diagram, invented by Mr. James S. Conlin, giving their score with exact copy of target. Until further notice the competitions will take place every Tuesday, commencing at 4 p. m., and continuing till 12 m. Open to all comers.

JOURNEY & BURNHAM VS. ARNOLD, CONSTABLE & Co.—For some time past the gentlemen of the two noted dry goods firms, Journey & Burnham, of Brooklyn, and Arnold, Constable & Co., of this city, have been selecting their best marksmen, forming their respective teams, electing their captains, etc. Last Saturday evening (October 21st) they met at Conlin's gallery, No. 930 Broadway, and after a very cordial greeting between the "Reds" (Arnold, Constable & Co.) and the "Whites" (Journey & Burnham), the friendly battle took place. The following were the conditions: The teams to contain eight men each, to be connected with the "house." One target of ten shots per man; rifle, .22 calibre, off-hand; distance, 110 feet, 200-yard Creedmoor target reduced in exact proportion for the range, Creedmoor rules to govern the match. The scores were good considering that many of the men had never shot before commencing their practice for the contest. The following are the names and the scores of both teams:—

JOURNEY AND BURNHAM—Captain J. N. Bruyn.			
Name.	Total.	Name.	Total.
D. McQuillan.....	38	W. R. Jarmin.....	23
W. H. McKune.....	35	J. Danne.....	21
H. J. Gallaher.....	34	D. Regan.....	19
W. A. Lockwood.....	32		
J. N. Bruyn.....	32	Grand total.....	235

ARNOLD AND CONSTABLE—Captain B. S. Brown.			
Name.	Total.	Name.	Total.
T. Long.....	40	J. P. Murch.....	26
B. S. Brown.....	36	P. Edmunds.....	22
J. L. La Forge.....	31	D. Bryant.....	20
A. Oats.....	31		
C. G. Nicholson.....	24	Grand total.....	232

The Brooklyn men winning by three points. The match was very close, sometimes one side would be ahead, and on the next round the other side would lead, making the entire contest very exciting and interesting. When the result was announced a cheer was given for the winning team, and the beaten party was the first to congratulate them. It is reported that Lord & Taylor's men have challenged the victors.

MORSEMER.—An off hand match, open to all comers, at 200 yards, for the gold medal, was shot again Tuesday of last week, resulting in a victory for Mr. William Hayes, who recently joined the association. The best scores were as follows:—

Name.	Total.	Name.	Total.
W. Hayes.....	63	H. Maynard.....	54
G. L. Morse.....	57	C. A. Hodgman.....	51
H. J. Quinn.....	55		

The other scores were below 50. The match at 500 yards, open only to members of the association, could not be shot owing to the targets being occupied by members of the Sixteenth Battalion.

GLEN DRAKE.—Best scores made in matches of October 19th at Glen Drake:—

HOLDEN RIFLE.			
Name.	Total.	Name.	Total.
D. F. Davids.....	27	George Smith.....	23
D. Felt.....	26	Sergt. Madden.....	21

J. R. Grohman.....	20	Capt. Thompson.....	17
D. Felt.....	19	Geo. Peters.....	16
H. Homs.....	19		

The required number of entries in the De Peyster badge match not being made, the match was not shot. Next matches will be held to-day. Shooting begins at 1 o'clock p. m. Open to all comers. Distance, 600 yards. Position, any; rifle, any. No restriction regarding entry.

MASSACHUSETTS.—On Thursday last a match was shot between teams of the Holyoke and Springfield Rifle Clubs. The day was everything that could be desired, but the scores for some reason were not first class. The conditions were 10 shots each at 200 yards off-hand, and the following are the scores:—

HOLYOKE.		SPRINGFIELD.	
Name.	Total.	Name.	Total.
H. White.....	40	J. B. Squires.....	42
R. McDonald.....	38	L. H. Mayott.....	38
S. Snover.....	38	S. S. Bumstead.....	36
E. C. Smith.....	38	W. S. Gompf.....	35
D. H. Smith.....	37	B. H. Smith.....	34
E. A. Whiting.....	35	L. Clark.....	34

Grand total.....221 Grand total.....219

The contest was one of considerable interest to the large number of spectators present. The return match will take place at Holyoke, probably this week or next, and will be decided on the best combined score at 200 and 400 yards.

RIFLE NOTES.—The Sharp's Rifle Company have offered a prize of the value of \$250 in gold, which has been accepted by the N. R. A., and the first competition for the trophy is ordered to take place on Saturday, October 28th. The conditions governing the contest will be as follows: Distances, 800, 900 and 1,000 yards; fifteen shots without sighting shots; no "coaching" to be allowed, the object being to make the match a strict test of individual shooting. The winner must lead all the other competitors at each of the three distances; entrance fee, \$1, one-quarter of the entrance money go to the highest competitor unless he wins the prize, in which case it will go to the maker of the second highest score; one-quarter of the entrance money will be added to the principal prize until finally won. The protest entered against the team of the Forty-eighth Regiment, of Oswego, in the military matches during the fall prize meeting at Creedmoor has been reopened, and the matter referred to the Board of Directors of the N. R. A. for consideration at their next meeting. The reason of this action is owing to the fact that the Oswego team have made affidavits relieving themselves from all responsibility in the alteration of the sights of their guns. Mr. Carl Dittmar, who is an expert at long-range shooting, thinks that there should be more off hand shooting at Creedmoor and at long range. He says: "I consider that the only art I have. Great champions on the back position make mighty poor scores at 200 yards. It is not so difficult to shoot off-hand at long range, and at 500 yards I shoot often better than at 200 yards." The "Creedmoor Guards," composed of the workmen and other employes at Creedmoor, had their match day on the 17th. The contestants numbered about thirty. They were allowed ten shots each at 200 yards, and there were 28 prizes, nearly one for every man. The shooting was not so bad for novices. The first annual prize meeting of the Bay View Rifle Association, Eighth Division, N. G. S. N. Y. commenced on the rifle range at Bay View, Erie county, N. Y., on Tuesday, the 24th inst.

Rational Pastimes.

HARE AND HOUNDS.—This journal has repeatedly urged upon students of our various educational institutions the pleasure and benefit to be derived from paper hunting, or as it is generally called in England when followed on foot, "hare and hounds." Not only is it one of the most exciting of out door sports, but a most excellent school for the athlete. Some of the most noted amateur runners in England have gained their distinctions through the results of their Eton, Rugby, or Harrow experience with "hare and hounds." We are glad to note that an attempt has at last been made to introduce the sport into this country. An exchange says, that: "A very exciting game of hare and hounds was played by the students of the Princeton Preparatory school on Wednesday afternoon. The hares led the hounds over a course between sixteen and seventeen miles over a rough and rocky country, and were not caught. The hares were Messrs. Archer and Long of Maryland. The winning hound was Edward Bell, of New York city, having run over the course in two hours and eighteen minutes. This, we believe, is the only game of hare and hounds ever played in any school in New Jersey. It presents a little variety amid the sports of pupils and college students, and was attended by unusual pleasure and success."

BASE BALL—THE PROFESSIONAL ARENA OF 1876.

Practically the League season of 1876—the inaugural year of its existence—ended Oct. 21st, when the Boston Club played its last League game, that club being the only one of the eight to play out its full complement of games. The record up to the close shows the contesting nines occupying the following relative positions:—

Club.	Games Won.	Games Lost.	Games Drawn.	Games Played.
Chicago.....	52	14	0	66
Hartford.....	47	21	1	69
St. Louis.....	45	19	0	64
Boston.....	39	31	0	70
Louisville.....	30	36	3	69
Mutual.....	21	35	1	57
Athletic.....	14	45	1	60
Cincinnati.....	9	56	0	65
Total.....	257	257	6	520

It will be seen that Chicago wins the pennant; Hartford carries off the honors of being second, and St. Louis stands third, the present champions—the Boston Red Stockings—this season being fourth on the list, while Cincinnati brings up the rear. The season in many respects has been a failure, especially in a pecuniary respect, but two of the League clubs having paid actual expenses, while one is bankrupt, and all the others close with empty treasuries if not in debt. Never before did so many base balls clubs exist; and not in the previous history of the game were so many games played as in 1876. Besides which the record is replete with scores of games unequalled for the masterly display of skill exhibited. The League have realized by experience that they made three grand mistakes during the past year of their existence. The first was in charging half a dollar admission to their games; the second in taking into their employ suspected players; and the third was in introducing a rule admitting of engagements being made with players for another year's service before the close of the season. The League meets in convention at Cleveland Dec. 7th, and it remains to be seen whether their legislation will be that of the season just closed, or whether they will profit by the lessons they have been taught in 1876.

—Among the model games in the professional arena since our last may be named the following:—

Oct. 16th.—Cricket vs. Hartford, at Binghampton (5 ins).....	6 to 0
Oct. 16th.—Louisville vs. Reds, at Memphis.....	8 to 8
Oct. 16th.—Quickstep vs. Fly Away, at Brooklyn.....	6 to 3
Oct. 17th.—Hartford vs. Mutual, at Brooklyn.....	3 to 0
Oct. 18th.—Boston vs. Our Boys, at Boston.....	8 to 1
Oct. 20th.—Hartford vs. Boston, at Boston.....	5 to 0

CRICKET.

The Giles benefit match at Hoboken on Oct. 19th, consisted of a game between the St. George eleven, and an eleven composed of members of the Staten Island and Manhattan clubs. The Young America Club being unable to assist the city on the occasion. The weather was fine but the attendance was small. Among those present was Mr. Chas. Vinter, it being his first appearance on the grounds since his accident and illness. The score of the one inning game played is appended:—

STATEN ISLAND AND MANHATTAN.

TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMPANY

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTER PARKS and RACING COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of The Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to KANE, RENOVIA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEECH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for WALT WATER SPORT AFTER FIN AND FEATHER.

D. M. BOYD, JR., Gen'l Pass. Agent.

FRANK THOMPSON, Gen'l Manager. feb17 1t

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over two thousand miles of road, radiating from Chicago. Like the fingers in a man's hand, its lines reach in all directions, and cover about all the country north, northwest, and west of Chicago. With one branch it reaches Racine, Kenosha, Milwaukee, and the country north thereof; with another line it pushes through Janesville, Watertown, Oshkosh, Fond du Lac, Green Bay, Escanaba, to Necedah and Marquette; with another line it passes through Madison, Elroy, and for St. Paul and Minneapolis; branching westward from Elroy, it runs to and through Winona, Owatonna, St. Peter, Mankato, New Ulm, and stops not until Lake Kameska, Dakota, is reached; another line starts from Chicago and runs through Elgin and Rockford to Freeport, and, via the Illinois Central, reaches Warren, Galena and Dubuque, and the country beyond. Still another line runs almost due westward, and passes through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar Rapids, Marshalltown, Grand Junction, to Council Bluffs and Omaha. This last named is the "GREAT TRANS-CONTINENTAL ROUTE," and the pioneer overland line for Nebraska, Colorado, Utah, Idaho, Montana, Nevada, California, and the Pacific Coast. It runs through the Garden of Illinois and Iowa, and is the safest, shortest, and best route to Omaha, Lincoln, and other points in Nebraska, and for Cheyenne, Denver, Salt Lake City, Virginia City, Carson, Sacramento, San Francisco, and all other points west of the Missouri River.

TO SPORTSMEN:

THIS LINE PRESENTS PECULIAR ADVANTAGES—FOR PRAIRIE CHICKEN, DUCK, GEESE, AND BRANT SHOOTING. THE IOWA LINE TO-DAY OFFERS MORE FAVORABLE POINTS

than any other road in the country, while for Deer and Bear Hunting, and for Brook Trout, Lake Salmon, Pike, Pickerel, and Bass Fishing a hundred points on the Northern and Northwestern lines of this company will be found unsurpassed by any in the West.

MARVIN HUGHITT, W. H. STENNETT, Gen. Supt., Chicago. Gen. Pass. Agt., Chicago. ap16

Thomson's
Oil Finished Grain Leather Shoe-
Pack or Moccasin.

With Sole, Price, \$7.50. Without Sole, \$5.50.

Made with heavy sole for land use; also without
sole for snow and canoe purposes. All hand sewed
and strongly made. Laced in front with hooks (over
English style of water-tight tongue), thereby securing
PERFECT FIT around ankle, thus preventing all
slipping at the heel. Made with broad soles and on
scientific principles.
Fills the want long felt by sportsmen for an easy
fitting and durable shoe.

In ordering, state size of boot worn. Sent by mail
on receipt of price, with 40 cents additional for post-
age, or by express C. O. D. everywhere. Manufactured
by THOMSON & SON, 338 Broadway, New
York. ju27-1f

H. L. DUNKLEE, PATENT CAMPING and MINING

STOVE.

PATENTED JUNE 22, 1875.

Outside dimensions, packed, 12x12x20 inches.
Weighing only 35 pounds, very durable, will cook
for ten persons, and is especially adapted for camping
purposes. The ware consists of 8 qt. kettle, 6 qt. tea
kettle, 2 qt. coffee pot, fry pan, round tin pan, 2
square pans, dipper, gridiron, tent collar, 8 ft. funnel,
and an oven that will roast 15 pounds beef.

The ware is so constructed that it nests and packs
in the oven, and the oven and funnel pack inside the
stove, as represented in cut 2, leaving room for pack-
ing half a dozen plates, knives, forks, spoons, and
drinking cups. Price complete, \$15.

McBride Flies,

The Standard Flies for American Waters

These flies are imitations of American insects, or
combination of colors, that an experience of forty
years has proved most successful. Parties sup-
plied with casting lines and artificial flies for
Pennsylvania trout streams, Adirondacks, the Maine
Woods, Lake Superior, Thousand Islands, Canadian,
and other waters. Anglers not acquainted with the
nomenclature of these flies, by mentioning the local-
ity where they intend fishing, will have the varieties
best suited to those waters sent to them. Flies copied
from any natural insect or pattern desired. SARA

ADIRONDACK GUIDE.

NEW EDITION, WITH MAPS.

BY E. R. WALLACE.

Gives all possible information relative to
Routes, Hotels, Resorts, Outfits, Guides,
Distances, &c., with amended railway
schedules, &c.

The only Complete Guide to the North Woods.

The instructions embrace everything that can be de-
sired. Taking it all in all it is the most complete
book that has been published on the Adirondacks,
not excepting even my own—Hon. J. T. Headley.

I regard your "Descriptive Guide" and the "Appendix"
as a most useful—nay, indispensable, manual for tour-
ists to that wonderful Wilderness. A tour in that
region is eminently a practical matter, and for that
reason I regard your "Guide" as an important, useful,
and timely publication.—Benon J. Lossing.

It is the only thing of the kind that has yet been pub-
lished—the very thing that has been so long wanted
and waited for.—Alfred B. Street, Author of "Woods
and Waters."

Sent by mail on receipt of price, \$2.
FOREST AND STREAM PUB. CO.,
(by whom the copyright is now held.)
Aug 10 17 17 Chatham street, N. Y. City.

The Hazard Powder Co., MANUFACTURERS OF Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 8 (coarse). In 1 lb. canisters and 3½ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short gun.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12½, and 6½ lbs. and cans of 5 lbs. FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office

88 Wall Street, New York.

GUNPOWDER.

Dupont's

SPORTING, SHIPPING AND MINING

POWDER.

DUPONT'S GUNPOWDER MILLS

Have maintained their great reputation for 75 years Manufacture the Celebrated

EAGLE DUCKING, EAGLE RIFLE, AND DIAMOND GRAIN POWDER.

The most Popular Powder in Use. Also,

Sporting, Mining, Shipping and Blasting Powder

Of all kinds and descriptions.

For sale in all parts of the country. Represented by

F. L. Kneeland,

Feb 10-1y 70 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6½ lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.G., FFG, FFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs., and 6½ lbs., and in canisters of 1 lb. and ½ lb. All of the above give high velocities and less resistance than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS. SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFIN & RAND POWDER Co.,

26 Murray St., N. Y.

Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

CHALLENGE.

The undersigned is prepared to prove all the superior qualities he claims for his powder.

Safety, Cleanliness, Strength, Little Recoil, Little Smoke, Small Report, Less Heating of the Barrel in Rapid Firing, and its Regularity in Shooting.

He challenges all riflemen to shoot against him with black powder, 200 rounds, without wiping; 100 rounds off-hand, at 200, 500 and 1,000 yards respectively, and 100 rounds in any position at same distances; the 200 rounds equally divided at the three ranges; sighting shots extra.

Will shoot for money if desired. The powder is also well adapted for shot guns. Inquire for the "Dittmar Powder" of your dealer address the

Paper and Metallic Shells

FOR

Breech Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers. dec23 tf

New Paper Shell Conical Base. WILLIAMS' PATENT.

WILLIAMS' PAT. CONICAL BASE PAPER SHELL. ST. LOUIS SHELL MFG CO.

Manufactured by the ST. LOUIS PATENT SHELL MFG CO., office 209 North Fourth street. The advantages claimed for these shells are: Cheapness, a saving of 25 per cent. in the use of powder, less recoil. These shells are equal to the best English, and 3½ drachms of powder will do the work of 5 drachms in any other shells. The sizes made are No. 10, 2½ inches; No. 12, 2¼ inches. Longer shells made to order at extra cost. Ask your gunmakers for them and use no others. Shells are not mailable. Sample 100 will be sent by express on receipt of \$1.30 for 10s or \$1.15 for 12s ang24 9t

REMINGTON

MILITARY, SPORTING, HUNTING AND TARGET

BREECH-LOADING RIFLES.

DON'T BE DECEIVED BY THE "AVERAGE TRICK" OF 1 TO 7. In the first International match (1874), three Remington and three other rifles were used; in the second (1875) they stood four Remingtons to two others; the third, seven Remingtons to one other; the fourth and last, all Remingtons. Highest score for Remington in the Centennial matches, 402; the other, 394. Aggregate in all the international matches (not confined to Remington rifles): Remington, 742; the other, 720. Remington still ahead 22 points (not counting the last match with Ireland, when none but Remingtons were used). See official record in "American Rifles and Riflemen." Price, 12 cents. Illustrated Catalogue free. Address

NUMBER 2.

Being Notes of a Family Cruise of Five Hundred Miles and Return, in a Sloop-Yacht twenty three feet long, by Major Sarasota and his Family.

MAY 5th. The weather was still unfavorable for a start, and I amused myself in shooting shore birds, which were very plenty. I astonished the fishermen by shooting some doves that came flying by the camp. They had never seen any wing shooting done before, at single birds, and having always understood that Northerners were not handy with firearms, they were doubly astonished.

The weather moderated during the day so much that the fishermen made a haul with their seine in the afternoon and caught several hundred pompano. They are one of the nicest, if not absolutely the nicest fish caught in these waters, and when just from the deep water, as they were, are delicious. Early in the season they even command a dollar each, in Pensacola, and I see they are seldom quoted at less than a dollar a pound in New York. Birds of all kinds seemed abundant at St. Josephs, and had I felt like work I might have put up some fine specimens, but I was too near down sick to attempt anything of the kind. Three or four days could be passed very pleasantly here, especially during the quail season. There would be good fishing at that time for red fish and sheepshead from the shore, and the country is well adapted for fire hunting or driving deer with dogs.

While here we spent most of our days on shore, taking everything on board at dark, and sleeping on the sloop, so as to be ready to start if the wind should haul favorably in the night. Capt. Parker, who had had much experience on this part of the coast, advised me to leave in the night with a northerly wind, as, if I waited until sunrise before starting, I might not be able to get around Cape San Blas before the wind hauled around into the southward for the day; in which case there would be such a current sweeping around the cape as would prevent my beating around it, and I would have to put back, or stand ten or fifteen miles out to sea, as large vessels do when caught with a head wind to the northward of this point. His advice was good.

May 6th. About three o'clock in the morning, as I put my head up through the hatch to take my usual observation, I was made happy by finding a moderate breeze from the N. E. We were soon under way; a long stretch on one tack and a short one on the other took us around the point before day began to break, and we were half-way on the fifteen miles from the point of St. Josephs to Cape San Blas light when the sun rose. This light is hidden by the woods until one is within seven miles of it, unless over two miles out to sea. As the sun came up the north wind went down, and at nine o'clock we were three miles from the light, when the wind came out of the S. E. strong. We pounded away at it, sometimes making a little on one tack only to lose it, and perhaps more, too, on the other, until about three o'clock, when, finding that I had lost nearly a mile on the last stretch out and back, and seeing no possible chance of getting around the cape before dark, I decided to give it up as a bad job, and so put the helm up and stood for St. Josephs again. Came back to the old camp ground only to find it vacated. Smack and fisherman had all left St. Josephs alone in its glory, and we quietly took possession.

Sunday, May 7th was made a day of rest whether we would or no, for the wind still held very fresh from the S. E. As there was a pretty good sea on I made everything snug and took all hands, together with food and cooking utensils, on shore. Did not hunt any, but spent the day in reading and wandering about with the children picking blackberries. There are many small ponds scattered around through the woods on this point, which I have

since been informed are resorted to by ducks and geese in large numbers during the winter months, and as this section is rather out of the usual route of sportsmen they become very tame and afford excellent sport. Late in the afternoon I noticed over the sand hills the masts of a schooner which was evidently at anchor in the main channel outside, or to the north of the point. Took a walk over the outside beach and recognized her as the smack "Isabella," of Noank, Ct., which had been fishing during the past winter for the Pensacola market. Two boats were out dragging for an anchor which had been lost some months before.

May 8th. Soon after midnight I found the wind was back in the N. E. again and got under way at once, but just as I laid my course it began to blow in the regular "norther" style, and as I much prefer being in a safe harbor when one of those is beginning, came to anchor. About four o'clock it had moderated so much that I decided to

SILVER TROPHY PRESENTED TO THE CONNECTICUT RIFLE ASSOCIATION BY MESSRS. T. STEELE & SON, OF HARTFORD, CONN., AND SHOT FOR AT THE WILLOWBROOK RANGE FOR THE FIRST TIME ON SATURDAY, OCTOBER 28TH.

try it again, and so we worked around the point. What should I see but a schooner high and dry on the beach! In the dim light of the early daybreak she looked large, and I feared it was the Isabella, but although it had blown quite fresh during the night I couldn't conceive by what mismanagement a vessel of that size, and with her large crew, had been allowed to go ashore. As it grew rapidly lighter I was relieved on that point, for although the Isabella was nowhere in sight, I made out the one on the beach to be a small affair of about ten or twelve tons. There were no signs of life about her, but when I hailed, a forlorn looking object raised itself from behind a sand hill and came towards us. The waves made so much noise that we couldn't understand one another, and I went to him in the skiff. He wanted to give me his sails, rigging and everything else if I would only take him off. I advised him not to strip his vessel, but let me take him to the lighthouse or to Apalach, where he could get assistance to launch her again. He finally decided to take my advice, as my force was not strong enough to help him in the least, so I took him on board and headed for the light once more. My shipwrecked sailor said his name was Ross; that he owned the schooner, and hailed from Cedar Keys. He said that he had been taking northern tourists down the coast from there during the past winter, and was now on his way to visit a brother in Pensacola. He told me the biggest and longest string of lies that it has ever been my lot to have offered by any one person so far as I know, and told them in such a way that I am sorry to say that I took them in for good corn. Now, I don't like to be imposed upon, any more than the rest of the human race. Here was a man, and a fellow boatman too, in trouble. Of course I would have done all I could to help him, even if he had given me no account of himself at all. The situation he was in appealed to me as strongly as anything could, for I have been in a similar scrape myself before now. He told me that when the "norther" began during the night he was at anchor on the outside where he felt the full force of it, and his anchor began to drag. He attempted to get under way, and while so doing the traveler to the mainsail was carried away, and before he could secure the sheet and haul it aboard, his head sails had piled him up on the beach. I think this was the only truth he told me, and if any of your readers should happen to fall into his hands all I can say is, look out for him. The schooner which he claimed as his own had been stolen from a gentleman up the Suwannee river.

I had spent so much time with Ross that I again lost my run around Cape San Blas, for just before we reached there the wind had hauled back to the southward. I didn't waste any time in trying to beat around, but put back to St. Josephs at once. As we came to anchor off the wreck, in what was now smooth water, the Isabella hove in sight from up the bay, where she had run when the "norther" began. She also came to anchor near by, and soon some of the crew came ashore to see what was going on. As it was too rough for them to fish all hands went to work with a will to haul out and block up the little schooner so that Ross could calk the bottom. She had been badly thumped, but by dark it was decided that she could be kept afloat by lively pumping, and the master of the Isabella agreed to anchor close in shore in the morning and haul her off with the smack's windlass. Glad to see Ross getting into such good condition again, and pretty well tired with my long day's work, I went on board and turned in.

May 9th. Soon after midnight I found the wind was again from the northward, and believing I could be of no farther benefit to Ross, and that the smack could take better care of him than I could, I made another start for the cape. This time the wind held in the north, and not only held, but freshened to such an extent that I had to stow my jib and double reef my mainsail before passing the light. I held my course close to the land all the way, never over half a mile out, until near the point, when I bore out to avoid a shoal which makes out from the point. The light at San Blas used to be some two miles south of its present location, and dry land extended even beyond

that. Now there is a dangerous shoal for the whole distance, and this particular morning I was obliged to run along the edge of it for two miles and a half before I came to a place where the surf was not breaking. In behind this shoal, close up to the lighthouse, is said to be a good anchorage, in eighteen feet of water, and well sheltered from westerly or northerly winds. We had barely crossed the shoal when a very severe squall came out of the N. W., raining and blowing so hard that I lowered sail and came to anchor. It lasted about an hour, when we got under way again, headed for what is known on the coast as Indian Pass, but is called on the Coast Survey charts West Pass. From the point where I crossed the shoal of San Blas, this pass lies nearly due east, and opens up broad and plain, the land on the north or St. Vincent's Island side being quite high. Further north a few miles the woods get so thin that it looks as though there ought to be a pass there, and for a while I was in doubt which place to steer for, but finally decided on the sure thing. Have since learned that the low place referred to is called the "Haulover," and that the beach is so narrow that boats are often hauled over from St. Vincent's Sound, which is the western arm of St. George's Sound or Apalachicola bay, into both the Gulf of Mexico or the upper end of St. Joseph's bay. The "Haulover," and the country around, is a great resort for ducks and geese during the winter, and the oysters are splendid and only too abundant, for they make the navigation inside the sound very difficult. Outside, of course, there are none. We held a straight course for Indian Pass, and fortunately found it smooth enough to enter. It is so shoal, only somewhere from five to seven feet on the outer bar, that even in moderate weather, when the wind and tide are in opposite directions, it breaks badly clear across, and, as a natural consequence, the pass has a rather bad name among the coasters, and even when inside the navigation is difficult for the next three or four miles, from the numerous oyster bars. I had been warned by every one I met to keep a sharp lookout; some even doubted as to whether I could get through at all. Another great trouble was that no two would give me the same sailing directions. I suppose the reason of this is, no two of us see things just alike. I found the deepest water in the pass rather towards the north side, but after you get well inside haul over to the south side, and run along quite near the land for about three-quarters of a mile until you have left two oyster bars (the first quite short) on your starboard hand, then hold near the middle of the bay. There is a good channel from here, which, as I found it, is crooked in but one place, although one must keep a sharp lookout for the ripple which is usual on top of the bars, and which a little experience with will soon make one a good judge of the depth of the water. There are splendid oysters on the top of these reefs which can be readily picked up by hand, and even at this season of the year they were in capital order, as far as could be. Of course we had to stop and pick up some, but they were of such size and so plenty that it did not delay us long to get a skiff load, and we feasted royally the rest of the day. It was quite a relief to find myself inside the pass, for I now considered that we had passed over the most difficult and dangerous part of the whole route, as the balance of it would be either inside of reefs or islands, or if outside, where good harbors were never over ten miles apart, and often less. After running to the eastward about three miles inside Indian Pass I saw the last of the oyster reefs, but we were here favored by high tide, and there may be some further on which we did not see. Held my course through the middle of the sound until we made out the chimneys and roofs of Apalach over the woods. Had been advised to give the point below Apalach, called Green Point, a wide berth, and did so. Found three feet of water about two miles from land. Have been assured that this shoal is as level as a floor all over until close in shore, and so if one is in a light draught boat it will not be necessary to make the long detour to the channel which I did. There are two or three wrecks and many trees stranded on this flat, and the latter are constantly being added to by the Apalach river bringing them down in quantities. The current in the channel is almost always running out, even with a rising tide, and the water is so fresh that vessels lying in the stream fill their casks from alongside.

After once getting into the channel I found it well staked, and if approaching from the south or west as I was, leave all grassy islands on the right and steer for the saw-mill. As we approached the latter the wind began to die away, and just after getting alongside found I could make no headway against the current and came to anchor. Mrs. "X." couldn't help but remark upon the calm and peaceful entrance we were making into this city, and what a change there had been from our stormy morning off San Blas. The contrast was strongly marked certainly, for it was one of those perfect evenings which I have never seen outside of Florida, and which, I believe, are claimed for no other country except Italy.

As my crew had been "roughing it" very thoroughly and very patiently, too, for over a week, I decided to reward them with a short rest on shore. Accordingly went up town to look out a boarding-house. There is no regular hotel here, so trusting myself to the guidance of a brother boatman I had the good fortune to find my way to Mrs. Hancock's. The regular supper was just over, but learning what a hungry crew I had she exerted herself in good earnest for us, and by the time I had brought my party to the house a hot supper was on the table. That toothsome oyster fry will occupy a place in my memory for some time to come, as will also those raised biscuit, which are not often met with in the southern boarding-house, and are such a palatable contrast to the regulation "square toed" kind which one always has to content himself with. If any of my readers are ever tempted to land at Apalach, and to try "shore living" for a while, I can recommend them to Mrs. Hancock's, feeling sure that they will find the food well cooked, and the beds neat and clean. After seeing my tired crew in a fair way to do some heavy sleeping, I returned on board the yacht, for, not knowing that the "wharf rats" at Apalach never steal, I did not trust my property unguarded. I tried to raise anchor for the purpose of hauling up alongside the wharf, but couldn't do it, and so turned in. About midnight I was aroused by a noise alongside, and thinking I might be having a caller I carefully unslung one of my guns, and peeped out through the hatch. Couldn't see anyone, but there was a good deal of motion to the boat, which I was not the cause of, as well as the noise. I soon found out the trouble. A large palmetto tree 50 or 75 feet long had drifted against me. It had evidently been washed out by the river somewhere up stream, as it was complete, with roots and head all there.

Fortunately for me it did not strike my cable or bows so as to hang, for had it balanced itself upon either, I fear immense size in such a strong current would have caused me serious trouble, even if it had not pulled me under. Bearing this in mind, I would advise no one to anchor right in the channel. There is another danger too, from the fact that near the saw mill the bottom is full of old logs and slabs, and should an anchor get caught under one of them, raising it would be very difficult, unless one is in the habit of attaching a buoy line to the flukes. The people here claim that one can leave his craft at the wharf with perfect security from theft, and I know of nothing to the contrary.

May 10th.—Went ashore in the morning for help to raise my anchor. The mud at the bottom must be powerful sticky, for it took the united efforts of two of us to break ground. Apalach is a very pretty, but quiet place, and "befo' the war" (a good while I guess) did an immense business in cotton and lumber. Now I am sorry to say the mills are all idle, the warehouses that are still standing, are empty, and grass grows in all the streets. Perhaps the great cause of this is the shoalness of the river. Where it debouches into the bay, it has shoaled gradually until now vessels drawing over seven feet cannot get up to the wharf. Only a few years ago the place was visited by a terrific gale, all the brick warehouses on the water front, some of which would hold thousands of bales of cotton, have been blown down and the ruins never having been cleared away, this front presents a very desolate appearance. Traces of the gale are to be seen all over town, in the piles of ruins and the braced up buildings. It is the dearest place I ever saw, and the only redeeming feature to the desolation, is the fact, that it was not caused by the war. In spite of all these drawbacks, I think one could live here quite pleasantly. The oranges are celebrated through the Gulf States for the fineness of their flavor. The fish and oysters are hard to beat, and very cheap. Oysters, such as would command \$1.25 or \$1.50 per quart in New York or Boston, are here but 40 cents per gallon, or 50 cents per barrel, and it seems to be the custom of the country to go into the oyster houses on the wharf, open and eat your fill, say "thank you," if you have good manners, and leave. Perhaps some might find fault because the oyster man does not find crackers and vinegar. Not being aware of the above custom I offered some scrip in payment for what my mate and myself had eaten, when it was refused with some show of indignation.

I had been advised before leaving Pensacola, by an old resident of Apalach to take a trip up the river from here, to a point known as the "Slough," or in the vernacular "slew," and was assured of good hunting of all kinds and splendid fresh water fishing. The steamers which ply on the river up into Georgia, will take boats in tow for this point at very reasonable rates. About \$2 I was told was the regular price, but as now the two lines are cutting under one another's prices, it might be even less. The current is too swift to make the 50 or 60 miles in any other way. The accounts I received here of the abundance of game of all kinds was very alluring, but I had to postpone the pleasure. There are no settlements up in that region, and the country is thus given up to the game. Was told that the white curlew, which has a black tip to its wings, was now breeding there in countless numbers. I used to meet with these birds occasionally in South Florida, but have never been able to learn their correct name. The tip of each wing for about two inches, is an intense purple black, while all the remainder of the plumage is pure white. The bill is curved, and the body about the size of the Spanish curlew.

There is a section of the river called the Dead Lakes, where the duck shooting is said to be perfectly wonderful in the season. The waters abound with black bass, or as the natives call them, trout, and the fisherman is seldom troubled with one under two pounds in weight. Cut bait is usually used, but live bait, if it can be procured, is the most killing. Soft shell turtle are very plenty. I have never noticed any account of these in the letters of northern sportsmen. Perhaps they are not game in the strict sense of the word, but they are a most invaluable ingredient for a stew or soup, going far ahead of the now celebrated green turtle in the estimation of those who have tried both.

But it wouldn't do to spend all our time at Apalach pleasant as we found it, so we gave Mrs. Hancock directions to have breakfast ready at daylight, and soon after sunrise, May 11th, we cast off from the wharf, and dropped down the channel before a light northerly wind. A schooner of some 30 or 40 tons loaded with old brick, had got under way about 15 minutes before, bound for Tampa. I decided to follow in her course, for a while at least, for as she drew over five feet, I should be sure to find where the deep water was. After passing the outer channel stakes on the bar, which are distinguished by having a cross piece nailed on, we headed nearly S. E. for a point on St. George's Island where there are no trees, and which looks in the distance as though there were an opening out into the Gulf. But there is no opening, although the island is so low and narrow that the seas break over during severe gales. Run down to within about two miles of this low beach, and then bear up the sound, steering N. E. by E. It is necessary to run down across the bay in this way to avoid the oyster bars which make out from the point opposite Apalach. There is a channel among them suitable for boats of light draught, but strangers are not advised to attempt it except under favorable circumstances, or when in want of oysters. As we had a barrel of fine ones towing astern in the skiff, of course we did not care to get among them.

The wind hauled around into the S. W. for the day, just before we changed our course up the sound, and we bawled along finely, the schooner keeping about the same distance ahead. Perhaps we could have overhauled her, had it not been for the heavy load in the skiff, but I was well satisfied. There seemed to be plenty of water in every direction through the middle of the sound, and a lookout for shoals doesn't seem to be necessary. Before noon we were off the south end of Dog Island. The charts show a light-house here, but it was swept away a few years ago, and there is no immediate prospect of its being rebuilt. The two keepers had a hard time of it to save their lives, but succeeded in making their boat fast to a pine tree in the middle of the island until the gale abated.

As an illustration of the inaccuracy of the information which one picks up along the coast, I will say that three different persons that told me that I had better not try going inside of Dog Island, as the channel was very shoal and crooked, and the space between the island and main

full of rocks and oyster reefs. Among others, Ross had told me what a hard time he had getting through, although drawing but 18 inches. Before starting I asked the master of the schooner that was bound for Tampa about it, and he laughed at the idea of any trouble there from rocks or oyster bars. Told me to follow him, and he would show me water enough, and he did. As I found it, the sound is from six to eight miles wide off Dog Island, and I don't think vessels drawing seven feet or less ever find any difficulty in getting through. The shoals are not rocks or oyster reefs, but soft mud or sand. After passing Dog Island, there is a point to be seen about ten miles ahead, known among the coasters as South Cape and as Southwest Cape, but called on the charts Light-house Point, perhaps because no light-house is there. A hook of land four or five miles long makes out on the south side and crooks sharply around to the westward, forming a good harbor if needed. On the main-land a mile or more to the west of the end of the hook, is a new summer resort, called St. Theresa, from the daughter of one of the residents of Tallahassee who was prominent in founding the little sea-side paradise. We saw a steam launch running into the harbor and a large schooner lying at anchor close in shore, but the wind was so fair that we kept on in the wake of our pilot. Just before sunset, she changed her course more to the eastward and after awhile we followed suit. I proposed to steer all night, and with that end in view, made a large pot of strong coffee, to keep me awake. I can usually do this with the help of strong coffee, but this time the wind fell so much, and baffled around from one point of the compass to another in such a lazy kind of way, that there wasn't enough pull on the rudder to keep me up to my work, and between 12 and 1 o'clock, I had to ask Mrs. "X." to give me a spell. I had previously given her some instructions in steering by compass, but she did not take the helm with much confidence in her abilities. I gave her the course to steer due east, and lying down with my head at the hatchway, was soon asleep. Waking in about two hours, I shook myself together and called for the report of the officer of the deck. Everything had been very quiet with but little wind. Had she been steering east all the time? "No. The wind or something had changed, and the sail wouldn't stay out if headed east. Had asked me what to do about it, and been told to steer anyway she had a mind to. Thought she had steered south most of the time." I didn't think it made very much difference with such a light wind which way the boat was headed. There seemed to be a strong current setting towards the S. E. I took the tiller again, and about 3 o'clock a little breeze came out of the north which lasted a couple of hours. During this time I steered east, but at sunrise, May 12th, there was no land in sight. There was nothing alarming about this, for the weather looked very promising, and this bay we were in, called on some charts Apalache Bay, bears a very good reputation. It certainly is shoal enough, for although we were out of sight of dry land, the bottom was visible in about three fathoms. The wind died away entirely after sunrise, and for some five or six hours we were entirely becalmed. During this rest we devoted some attention to oysters, and the throwing over of the shells or some unknown cause, drew a countless number of snappers about us. I soon had a line among them, and let the children amuse themselves. The average weight was from five to eight pounds. I suppose a thousand could have been taken if needed, but we stopped with half a dozen; but is it not hard to stop fishing when they seem so anxious to bite? At various times during this calm the whole surface of the water for miles around was covered with schools of a small fish, about the size of a sardine. They were apparently feeding upon something at the surface of the water, and when we were drifting among them paid but little attention to us. After 1 o'clock, a little wind came out of the S. W., and soon increased to the regular sea breeze, which is to be expected every day in pleasant weather on this coast. It was very late to day, as it is usually on hand before 10 o'clock. I held my course for the east until sundown and still no land in sight. Climbed the mast, and took a good long look from astride the jaws of the gaff, with no better luck. Sounded and found nearly six fathoms. Kept on my course until 10 o'clock, sounding every half hour. I knew there must be land somewhere east of us, unless Florida had sunk, and if that had happened, what a good thing it was for us, that we had started on this trip. By 10 o'clock the water had shoaled to two fathoms and a half and I decided to anchor. I had been advised, in running down the coast from St. Marks to Cedar Keys, to keep never less than two fathoms of water under me. At that depth you are never more than six miles from land. If you run in nearer shore there is danger from rocks and oyster reefs. I was also cautioned that if I did any running at night, to keep still further out, and to keep a very sharp lookout for the tripods which the officers of the Coast Survey have put out, as far as eight and even ten miles from shore along here. All the above advice is good, and the tripods in particular are dangerous in a dark night. They were erected during the survey made last winter, and string along the coast only a mile or two apart. They wont withstand the worms and the gales for more than a year or two, unless some of the piles are of iron, but while they do last, are a bad thing to run into with a small craft. I had just made everything snug for the night, and got into the skiff to take a good night bait of oysters, as the moon rose. With the moon, the wind came very fresh from the S. E. and as a strong current held us broad side on to it we rolled very lively nearly all night.

[To be continued.]

For Forest and Stream.

DEER HUNTING AND TROUT FISHING AMONG THE REDWOODS IN MEN- DICINO COUNTY, CAL.

TO those who possess a natural inclination for field or river sports, and who have followed up that penchant by sufficient and successful practice to make them an enjoyment and most pleasing habit, and more especially if such persons have to follow a monotonous or brain-wearing business nearly the whole of the year in a city, what recreation can be more delightful than to go forth for a time, furnished with a good gun, rifle and fly rod, and all the etceteras, into the fresh romantic beauty of the field or forest to pursue the wild deer in his native haunts, or beguile the nimble trout in his favorite waters? And such it was the happy lot of the writer and his nephew to indulge a short time since, when they boarded the good and fast

steamer Donahue, bound for the landing of the same name, to take the cars through the beautiful and rich valley of Sanoma to Cloverdale, and from thence by stage to the North Forks of the Navarro river, in Mendocino county, about ninety miles northwest of San Francisco. We think there can hardly be any scenery of the same quiet and mild character more lovely than that which prevails in the journey from the beautifully situated town of Cloverdale, till the solemn and majestic redwoods are reached, about some eight or ten miles from the North Fork House, on one of the fine branches of the Navarro. Anderson's Valley is certainly one of the most enchanting, in both its natural and cultivated beauty, in the State.

The rounded and variously formed hills, and the mountains on both sides are clothed most handsomely in oaks and a variety of other trees and shrubs, and their tops are crowned with the graceful and spirally shaped redwoods. The vegetation at this season is of course more parti-colored than at any other, and the autumn woods are very charming, with their brown or yellow foliage, and some of their stems adorned with crimson-colored creepers, and at their feet the pretty, brilliant, pink-tinted shrubs of the poison oak. At about 11 p. m. we reached our point of destination, thirty-five miles from Cloverdale, having performed the journey in seventeen hours from San Francisco. The North Fork House is situated in the middle of the redwoods. It is but a small clearing, and at a small distance from it nearly all around rise the monstrous burnt stumps and tall timber trees of these redwoods, (*Sequoia sempervirens*) a species of the cedar. A capital supper, with well-cooked venison and other viands and various accessories, was made ready for us by our kind, pleasant, and active hostess, Mrs. Averill, to which our long and rather fatiguing stage travel caused us to do ample justice. The next morning we made preparations for a raid on the deer and trout, my nephew going for the former and your more than three-score years and ten correspondent aiming for the latter sport. The deer abound in large numbers in this vicinity, which is densely wooded, with much cover and underbrush, and very mountainous, the scenery from the elevations appearing much like that in the Pennsylvania mountains; but on a considerably larger scale. "Here," as the famous Frank Forester observed, when speaking of deer hunting, "there is no work for the feather-bed city hunter—the curled darling of soft dames. Here the true foot, the stout arm, the keen eye, and the instinctive prescience of the forester and mountaineer are needed; here it will be seen who is and who is not the woodsman by the surest test of all—the only real test of true sportsmanship and venerie—who can best set afoot the wild deer of the hills, who bring him to bay or to soil most speedily, who ring aloud his death halloo, and bear the spoils in triumph to his camp or shanty, to feast on the rich loin, while weakly and unskilful rivals slink supperless to bed. No written instructions can give this love to the tyro; nothing but long practice and the closest experience can give to the eye of man the ability to follow the path of the devious and pasturing deer through every variety of soil and surface, with a certainty as unerring as that attained by the nose of the bloodhound."

And so, indeed, our deer hunters (and there were several good ones at the North Fork) found it in this vicinage, for the range is immense, various in features, and fatiguing and difficult for the pedestrian. However, in about eight days twelve good deer, young and old, chiefly does, were killed by the hunters, my nephew and a friend of his together. About two miles from our inn, and in sight of it, are several "bald hills," and in the forest bordering these the hunters had a delightful camp just inside the forest on the ridge, and which commanded a splendid and most extensive view of many tiers of hills and mountains for a great many miles, covered with immense redwood forests. The writer, who was chiefly engaged in trout fishing in the North Fork of the Navarro (the best fishing being either two miles up or two down that wild and romantic stream), visited with his worthy landlady this beautifully situated camp, and was most hospitably entertained by the sportsmen, nice ribs of venison being roasted *a la* huntsman's mode, over the camp fire. There were some very good hunters in this camp (besides my nephew, who made a capital beginning in this department of sporting, his great forte, however, being casting the fly for salmon and trout, and for which delicate art there can hardly be his superior), namely, the two Rectors, McCall and Sweet, the last of Messrs. Bancroft's firm in the city. Before we left for San Francisco these gentlemen changed their camp to two miles up the main Navarro river, about six miles from the North Fork House, where they expected to find the deer feeding on the acorns that abound there.

As to the brook trout fishing in the neighborhood of the North Fork House, they abound in goodly and sufficient numbers a short distance from that point up and down the stream. The water is very clear, and in the bright sunlight they do not take the fly very readily, except in the hands of the most skillful fly-fisher; but in the early morning and late in the evening he can have excellent sport. The writer found the best mode of taking them in plenty, if he desired a full basket for the table, or for his friends, was to obtain a few earth worms, catch some small chubs, cut them in small pieces, place them on his fly hook, and cast with his fly rod as far as he could into the deepest pools, allowing his line to sink gradually to the bottom, give sufficient time for the fish to swallow the bait, which they did most ravenously, and he was rewarded handsomely for what he confesses to be not the most artistic or sportsmanlike mode of capturing the game coveted beauties. The writer found the flavor of the trout in these streams remarkably fine, the flesh being rather firm, but very sweet, and somewhat similar, he thought, in richness of taste, to young salmon. I could enlarge on the gratifying subject of this trip to a great length, but space forbids, and I will merely add to what I have said that the journey to this place, of only one day, is reasonably cheap; that the board at the North Fork House is but \$2 per day, the fare good, of great variety, and well prepared; and that mine hostess, Mrs. Averill, is most attentive, diligent in business, and kind to her visitors; also that the hire for carriage and horseback travel is quite moderate.

E. J. HOOPER.

—A London paper says, when the Prince of Wales landed at Portsmouth on his return from India, there was so much eagerness on the part of the people to see him that his carriage could make no progress. Suddenly a happy thought struck a bandmaster. He told his men to strike up "Tommy, Make Room for Your Uncle." The people laughed, cheered and straightway took the hint,

Fish Culture.

THE HAMBURG AQUARIUM.

BY DR. H. DORNER, LATE SUPERINTENDENT OF THE ZOOLOGICAL GARDEN OF CINCINNATI.

THE opening of the New York Aquarium reminds me of the time of my being Secretary to the Hamburg Zoological Society, when it belonged to my duties to superintend the well-known Aquarium forming an interesting part of the Zoological Garden. Before I became connected with this institution the builder and inventor of modern aquaria on a large and improved scale, Mr. W. A. Lloyd, was still Superintendent of the Aquarium, and it is with great pleasure I think of the many hours I used to observe his ingenious methods in feeding and treating all the different forms of aquatic life. In September, 1870, Mr. Lloyd left Hamburg to return to his native country, and to build there the Crystal Palace Aquarium in Sydenham, near London, on a larger scale, though after the same principles which he had found to be successful in Hamburg. During the four years which I spent in the Hamburg Zoological Garden, observing and describing the different forms of almost every class of animals, I had occasion to see many interesting features of animal life. Hoping that you will kindly allow me to occupy some place of your valuable paper, I shall try to describe a few things that were to be seen there.

The Hamburg Aquarium can scarcely be compared with the new one in New York. There is no great hall for visitors, no rustic work, no whale nor sea lion, no music, no library, no reading nor smoking-room; there is nothing worth mentioning besides the tanks and the animals. The whole building is only 94 by 39 feet. The floor is ten feet deeper than the surface of the neighboring garden space, and the roof is so low as to become nearly concealed by common shrubbery of six to eight feet high. This was done to protect the animals against the high temperature of the summer, it having been found by experience that the animals of the northern seas, which almost exclusively are kept in the European Aquaria, do not live in water the temperature of which exceeds 65°. The main hall of the Hamburg Aquarium is 53 feet long, 16 feet wide and 16 feet high in the center. Each of the long sides are lined by five tanks, the two larger ones being each 12 feet 2 inches long, the eight smaller ones each 5 feet 10 inches. Three small adjoining rooms contain tanks of smaller size, the first one six tanks of 5 cubic feet each, the second six flat tanks, the surface of which can be seen by the visitors, and the third holds a large basin for a gigantic Japanese salamander.

The construction of the tanks is essentially the same as in the New York Aquarium; so is the system of aerating and circulating the water. As it is my chief purpose to tell something of the animals exhibited in Hamburg, I shall not dwell lengthily on the exteriors, as the building or the construction of the tanks and so forth. The less so as the New York Aquarium is far superior in everything of this line. To have some plan and order in my recollections I shall begin with animals of the higher classes and proceed as the system indicates. There having never been exhibited mammals or birds in the Hamburg Aquarium, the first objects of my remarks are the turtles, some species of which have been kept there.

Everybody is familiar with the grotesque form of the turtles, and whoever has seen a land tortoise slowly crawling on its elephantous feet may well be inclined to take these animals for neglected step-children of nature. Slender and agile movements as they are exhibited by animals with a flexible spine are totally denied to these apparently miserable creatures, and they fall an easily captured booty to anybody who is able to heave the weight of their clumsy body. Their only protection against the assailant claws, beaks, or teeth of their ravaging enemies, is the partly bony, partly horny, shield which surrounds the body on all sides. But now look at the terrapins and turtles in their fluid elements. How easy does the water carry their ponderous mass, how quickly does the animal divide the dense element, and how suitably does the form of their body seem to be adapted to the movements of swimming! The tortoises of the land and the turtles of the sea are very dissimilar brothers; indeed, unlike in faculties and manners, in mode of diving, and in mastering or utilizing the surrounding creation. It is easily to comprehend that the slowly-moving land tortoises can get their living only by applying to the vegetables, while their roving relatives feed on animals; that the former are scarce and of large size, while the latter abound in rivers and seas, and occur in all dimensions from the size of a dollar up to the bulk of four hundred weight. Gray, in his catalogues of the British Museum, enumerates only thirty different species of land tortoises, against 227 of those in rivers and seas.

Nowhere the perfect adaptation of the turtle's form to the medium is better to be studied than in an aquarium. The large, flat ovary forelegs, situated just at the heaviest part of the body, which is tapering towards the hind part, are the chief motors, and the flat body, resembling in its form that of water beetles, rays, or flatfish, glides by their means easily and continuously through the water.

The Hamburg Aquarium exhibited usually three marine turtles—one common green one (*Chelonia viridis*), the loggerhead (*Ch. caouana*) and the caret (*Ch. caretta*), sometimes also the rarer Carey (*Ch. virgata*). The greater number of these animals never took food, and lived only a comparatively short time, the loggerhead alone quickly acclimatizing, and moving around with the greatest ease and apparent satisfaction. The latter used to feed on shrimps, and would occasionally take small pieces of cut fish, but gradually it became dull, and I never succeeded in keeping it alive for more than three months. Fresh water turtles, lizards and crocodiles being kept in large terraria in other places of the Zoological Garden, I proceed in mentioning some interesting amphibians.

The first among them is the gigantic salamander (*Sieboldia maxima*). It was presented to the aquarium by a wealthy merchant, who himself captured the animal in Japan, and sent it to Hamburg. There it lives since 1864, now being of the length of more than 4½ feet. It is kept

in a small fresh water pond, the front of which is a large plate glass, thus facilitating the view.

The managers of the New York Aquarium having made arrangements to procure some of these very interesting animals, it will hardly be necessary to give a description of them. Imagine a common salamander swollen to the gigantic size of four or five feet, with a flat and broad head, an extremely wide mouth, eyes not larger than a pea, with four short paddling feet and a high, compressed tail, and you will get an adequate idea of the *Ticobolia*. There it lays in its clumsy majesty, close to the transparent front in a selfmade groove at the bottom of its tank, totally immovable, hardly changing the direction of its puny eyes. You might think its being dead, for even the movements of breathing are wanting. But you remember that salamanders are lung-breathing animals and that they must come to the surface to get their provision of air from the atmosphere, and you have patience enough to await their ascending. But you might watch for hours, for the salamander will occasionally lay for two hours and more before changing its position. Like frogs in winter, it takes air out of the water through the soft skin, and therefore needs a minimum of exertion to get a sufficient quantity of it.

One day the strange animal occasioned my particular attention. I happened to come to the Aquarium on an unusually rainy and stormy day and was astonished to hear the doorkeeper, whose station was nearly to the salamander, utter with a certain emphasis: "I was thinking already that we should get bad weather, the salamander was stirring all forenoon yesterday." Curious what might cause this remark. I examined the man closely and heard the following: "Usually the gigantic salamander is moving very little. Sometimes it will lay for eight days, sometimes for a fortnight in the selfmade groove near the glassfront, only ascending in intervals of two or three hours to draw breath or opening its enormous mouth with a sudden jerk to swallow one of the fish that came too near to its head. But on single days its behavior is totally changed. It begins to crawl around, rows with its short thick paddles, moves its large tail, endeavors to keep itself on the surface continually, in short, shows excitement by all possible means. These movements are continued for three to five hours before the animal falls back to its usual dullness, which will be kept up for a longer or shorter time. It is remarkable that these excitements do not return in regular periods, but occur frequently in one month, seldom in another. Not believing them to be utterances of bodily suffering and pain the animal being in perfect health, it did not seem unreasonable to take sudden changes of the atmosphere as the cause of these remarkable movements. To come to a positive result I instructed the doorkeeper to watch the animal on purpose and report to me every day how many hours it stirred in the above mentioned manner. After having continued these observations for a whole year I went to the Directors of the Hamburg "Seewarte," where all meteorological events are scientifically recorded. The Director, Herr von Freeden, ordered an extract of the average daily character of the weather to be made for the same time, and now I have carefully compared the two series of observations. I then found the following: The salamander had stirred 52 times in the year; 34 times the weather changed to worse on the second or third day afterwards; 12 hours there was no extraordinary change and six times remained dubious. To test also the reverse of the medal, I noticed also the average character of the weather on those days for which our animals had made no indication, and thus it was found that of 183 of these days 104 were pointed out as fair, 15 as bad and 64 as undetermined. Taking nothing but the results of the observations, I was right to say: if the salamander is stirring about for several hours, there is greater probability for our soon having bad weather than fair one.

I beg leave to add a few words to the foregoing assertion. The belief that some animals are able to perceive earlier than we the coming of bad or fair weather is widely spread among the people. Tree frogs, mudfish (*Cobitis*) and spiders demonstrate, so it is the popular saying, either by uneasy movements, or the latter, by altering their webs, that there will soon be a change in the weather. The birds of passage return early in good years, and they leave us rather early if heavy frosts are expected in fall. To notice only one instance, in the year 1872, which was distinguished in Europe by an exceedingly warm and beautiful spring, eighteen species of birds of passage arrived in average twelve days (some of them three or four weeks) before the average time of the foregoing twenty years. Certainly no thinking man will ever believe that the birds or lower animals are enabled to what commonly is called prediction or prophesy, but at the same time well established facts cannot simply be denied. If we repeatedly observe that certain animals accommodate their behavior to the weather fully setting in at a future time, there is no escape from the conclusion that they must have perceived certain foretokens which were totally lost on ourselves. But is it probable that these foretokens exist? Is it probable that, for instance, a heavy and long-lasting rain may be perceived twenty-four hours ago by a peculiar electric condition of the air, or by something else? I concede that the facts collected at meteorological stations rather prove against than for the adoption of this opinion. In single instances in may be positively impossible that a change coming twenty-four hours afterwards can be indicated by any local foretoken. But it being indisputable that every natural event, consequently every change in the weather is perceived by a continuous chain of causes, and as these causes sometimes may occur at the place itself, or in its immediate neighborhood, it is not impossible that certain animals may be impressed by these casual conditions. It is a fact that some animals get distinct impressions from exceedingly trifling incitements totally inexistant for our senses. We only refer to the power of smelling in dogs and the power of feeling in bats. Should it be impossible that animals possessing a very soft, pliant body, as, for instance, our gigantic salamander, have a very acute sensibility for all electric conditions of the air which certainly precede many changes of the weather.

In conclusion I would say the following: The foretokens of a change in the weather do not always exist at the place itself where the change will occur afterward, and, therefore, no animal whatever is able to trace the same infallibly; but many observations teach that certain animals are impressed by foretokens of a coming change at a time when our senses are not yet sufficiently incited by them.

To be continued.

AN ATTRACTIVE FISH FARM.—B. B. Porter, of Oakland, Bergen County, New Jersey, has a very pleasant fish farm, in the Ramapo Valley; where the scenery, historical reminiscences and healthfulness is unsurpassed. From New York City it is thirty-one miles, via the New Jersey Midland Railroad to Oakland Station. From Paterson, New Jersey, by wagon road eight miles. The spring is located in a beautiful grove, one mile from Oakland, and is one of the largest and finest springs in the United States. It has an immense flow of water, from 1,500 to 2,000 gallons per minute. A severe drouth does not diminish it, or a very wet season increase it. The temperature does not vary but one degree, viz: 53 degrees in winter, and 52 in summer. All the natural advantages are combined in and about this remarkable spring for the propagation and raising of brook out, viz: 1st. A large and constant flow of pure water. 2d. Uniformity of temperature during the whole year. 3d. A fall of nearly 40 feet in 600, a gradual descent. 4th. No liability of being washed out by floods. 5th. By having been a natural stream for trout. 6th. By being located in a fine grove of trees from two one-half feet in diameter down to the smallest shrub. In June, 1873, Mr. B. B. Porter commenced operations at this spring, for the purpose of fish culture, and making the grove a permanent and attractive place of public resort. Since then the place has been visited by thousands of persons from nearly every State, besides many from foreign countries, who so far have pronounced it the most perfect establishment of the kind they had ever visited, and the most beautiful. A circular which Mr. Porter has sent us says:

"We beg leave to inform the public that we open the grounds as a place of resort, believing there is no place of the kind now open to the public during the whole year, where they can see all the *modus operandi* of fish culture, during all the stages of propagation, taking the spawn, watching the development of the embryo in the egg, seeing the fish hatch, how they look after they are hatched, how soon and how large they are when they begin to feed, etc., etc. All of which can be seen and will be explained to visitors in a few hours for the nominal sum of twenty-five cents.

At present there are twenty-five ponds of all sizes, with several more in process of construction, stocked with all sizes of fish, from those of an inch to 18 inches in length, comprising salt water salmon (*salmo salar*) salmon trout (*salmo fontinalis*) and brook trout (*salmo fontinalis*) native, and species from different parts of the country, to the number at present of seventy-five thousand large and small, in ponds where the fish can be clearly seen, (not in ponds where you cannot see where they are). The grove in which the ponds and springs are located, comprises between five and six acres of ground. Our buildings are sufficient to shelter a thousand people, in case of storm during their visit."

FISH CULTURE IN KENTUCKY.—A short time since the Executive Committee of the "Fish Commissioners of Kentucky" met, and resolved to build a hatching-house near Louisville to commence artificial propagation of fish in that State.

A neat frame building, 22 by 25 feet, has been erected upon the handsome farm of Mr. Allen Polk, three miles from the city, to whose generous liberality the commission are indebted for the free use of ground and spring.

It is expected that the young fry will begin to come out from the 5th to 15th of November. As soon as the sac is absorbed they are ready for planting in the various streams of the State. The commission will probably put down a few thousand trout and land locked salmon as an experiment, and it is believed will succeed in many Kentucky streams.

The new enterprise is of no little importance to our people, and it is earnestly hoped that the fish law enacted by the last Legislature will be faithfully observed by every citizen of the State, otherwise the most earnest endeavors of the Fish Commission will amount to nothing.—*Kentucky Paper*.

Natural History.

For Forest and Stream.

FIELD NOTES ON THE NATURAL HISTORY OF THE BIG HORN MOUNTAINS.

THE larger mammals peculiar to the Rocky mountain region are all found here in abundance. The Big Horn (*Ovis montana*), is found in large flocks throughout the range, and is here more common than in any other part of the United States. The great northern buffalo herd lives here, and as it is only molested by the Indians, will undoubtedly last much longer than the southern herd of Colorado and Kansas, which is being rapidly exterminated by white hunters who kill them solely for their hides. During the battle of the Rose Bud river, July 17th, 1876, a herd of buffalo ran through the Sioux line of battle, and after remaining for some time between the lines, apparently much bewildered by the heavy firing, finally charged down upon us, and passed within one hundred yards of our left flank. The elk range throughout the mountains in immense numbers. A band of from five hundred to twelve hundred is not uncommon in the winter. A party of six recently went out for a five days hunt, and bagged two mountain sheep, two buffalo, four black-tailed deer, and sixteen elk. It took forty pack-mules to pack out our game bag, which was enough to feed twelve hundred hungry soldiers several days.

The black-tailed deer (*Cervus macrotis*) abounds in the mountains, while in the foot hills and eastern plains it is replaced by the white-tailed deer (*Cervus leucurus*). The antelope is quite rare near the mountains. Beaver, otter, and mink are as common as the fur bearing animals appear to be in any region, Tongue river is an especially good otter

range. The grey wolf and coyote are numerous; and the foxes, including the valuable silver grey, are to be found. The panther occasionally makes his presence known at night by a dismal moaning; the wild cat, and two species of lynx also occur. The black, cinnamon, and grizzly bear are found here, the latter unusually abundant and ferocious.

The ornithology of this region does not appear to present any remarkable variation from the avi-fauna of the range north and south. It might be interesting to some to mention that the ptarmigan was not observed here. I do not say that it does not occur in the mountains, but that I several times looked for it closely at an elevation of twelve thousand feet, and could never find the slightest trace of its existence. Its neighbors, the tit-lark, and a species of *Leucosticte* (*L. australis*?) which always accompany it in Colorado, were here present, but quite rare and very shy. The dusky grouse (*Tetrao obscurus*) occurs scatteringly; while *Tetrao richardsonii* is abundant in the pine timber in the elevated regions, being replaced by the southern sharp-tailed grouse on the streams below their *debochure* from the mountains. The sage cock is quite common in the surrounding plains wherever its favorite food, the *Artemisia*, is to be found. The water fowl and waders are extremely rare in the mountains, and even on the adjacent plains an occasional kill-deer and up land plover were all that could be seen, with the exception of the long-billed curlew which nests here in some numbers.

The insect-fauna bears a close resemblance to that of the Colorado mountains. Every species of butterfly, moth, and bee observed, also occurs in the Alpine insect-fauna of the southern mountains; the flowers and lichens are also identical. The swarming grasshopper (*Caloptenus spretus*) was hatched out here in June, grew to maturity early in August, and moved southeast in swarms which obscured the sun. During this period they covered the earth and floated down the streams in immense numbers affording abundance of food for the fish which were gorged to the gullet with them.

The Big Horn, Little Horn, and Tongue rivers, are full of splendid trout, and also contain a small species of white fish which rises to a fly and affords good sport. The trout in Tongue river is as fine as this continent affords. One who should see the mouth of Tongue river where it empties into the Missouri, would scarcely believe that such a muddy, sluggish stream could be the home of a trout. Yet a visit to the head waters where it is known as Goose Creek, would certainly surprise anyone not familiar with the facts. Here it is a large, swift, cold mountain stream, filled with trout which range from half to two and a half pounds. It is seldom that a small one is caught as they do not appear to take the hook, or perhaps are driven away by the larger ones. They take a fly tolerably well for "uneducated fish," but if rations are short and one is fishing for the frying pan, a grasshopper is the thing. It is no unusual feat for one to catch in five or six hours fishing, from sixty to one hundred pounds of trout.

The general aspect of the fauna of this region is similar to that of Wyoming and Northern Colorado, with an unusual abundance of some species which we would naturally expect to find common in a region of such wilderness. The mountains are densely timbered with pine and spruce. Their elevation is about thirteen thousand feet above the level of the sea, and they are covered with snow in summer. They contain innumerable beautiful lakes, one of which was covered with a foot of ice on the fourth day of July, and present a view of rugged grandeur unsurpassed by any other part of the Rocky Mountain chain.

Fort Laramie, Wyoming Terr., Oct. 6th.

W. L. C.

THE MAMMALS OF SCANDINAVIA AND NORTH AMERICA.

THE same similarity which we have noticed to exist between the fishes of Norway and those of our Northwestern States, is also found between the mammals of these countries.

The elk of Norway (*Cervus alces*) is believed to be the same animal as the moose of North America (*Alces americana*); and the reindeer of Norway (*C. tarandus*) the same as the caribou of America (*Rangifer caribou*); also the red deer of Europe (*C. elaphus*) is found to be identical in structure with our elk or wapiti (*Cervus canadensis*). This has hitherto been generally believed by naturalists, and Judge Caton of Illinois, in a late work on Scandinavia, has confirmed the opinion as the result of his investigations of the cervideæ of both countries. According to Judge Caton the American forms are larger than the European, but the difference is not so great as that between the Virginia deer of our Northern and Southern States.

A common error among sporting writers is to call our Virginia deer a red deer, which name belongs to the European stag and hind (*Cervus elaphus*). The male of the American deer is properly a buck and the female a doe. If our elk or wapiti is the same as the red deer of Europe, then the sexes should be distinguished as the stag and hind. Among American hunters the male moose is known as a "bull" and the female as a "cow." The black bear, the wolf, the lynx, the badger, the red fox, the glutton, or wolverine, the hare, weasel, squirrel, and beaver also occur in Norway analogous to those forms in America.

If the birds of both countries are not specifically alike, the forms are analogous, and in the case of the geese and ducks appear to be the same. Judge Caton gives an interesting account of the eider duck, and the method of taking its down from the nest, but does not mention the fact that this bird is also found in North America, both on the sea coast and on the great lakes.

Of the salmon fishing of Norway this writer says that it is the finest in the world; yet he goes on to tell us that the summer he was there (that of 1874) he only heard of four fish being taken with the fly among the host of English anglers on those rivers, and estimates that they cost \$10,000 each. If he had said "formerly afforded the finest fishing," he would have been nearer the fact. For some years past, owing to overfishing in Norway, much larger

takes have been made in the Canadian rivers than those of the former country.

S. C. C.

[Two English gentlemen sportsmen, of wealth and leisure, now at our elbow, confirm the high praise given to the salmon streams of Norway, which they prefer to such waters of Canada as they had opportunity to visit last summer.—Ed. F. AND S.]

PET PRAIRIE-DOGS.—Those who have read with interest our contributions of late to the history of the prairie-dog, will be glad to see the following letter from Julia S. Gillis, of Cheyenne Depot, W. T., dated August 14th, which we take from *Rod and Gun*.—

This morning we had a great frolic with our little prairie-dogs. One village, which was started by the introduction of six or eight in our front yard, now consists of more than twenty funny little creatures, whose antics and gambols are equal to those of our household pet, the kitten. They still fear strangers, and always seem to keep out a picket guard to warn of the approach of a foe. This guard changes, but is always one of the old dogs. He remains upright, watching while the others are playing or feeding, and sounds his note of warning by the utterance of a succession of rapid squeaks or barks. At the first sound the others immediately scamper like mice down their holes, where they remain until the barking ceases, when they timidly venture forth again. Having habitually fed them, they regard me as a constant friend, and my approach is the signal for the rallying of their forces around my feet. They climb in my lap, up on my shoulder, impudently nibble my buttons or fingers, while their inquisitive little noses are sniffing vigorously for the cake or cracker which they know I have somewhere concealed for them. The latter they are very fond of, and one of the liveliest frolics was caused by giving them some ginger schnaps, which they ate eagerly at first, but were quite disgusted at the burning sensation produced by the ginger. They scolded and chattered, struck at their noses with the hands which they use so cleverly, and utterly refused to eat any more, though they were very hungry. One of them has been named Billy, and will always come when called, even from the depths of his hole; consequently he gets the first bite, and is at once attacked by all the others to take it from him. They scramble and tumble over and over, five or six after the same morsel, chattering all the time like so many monkeys. The younger ones are generally driven off first by a sharp cuff on the ear from one of the old ones. They are indefatigable in their efforts to keep the holes open, and have been a source of annoyance by this persistence. One opening, which they made near the hitching post, was considered dangerous for the horse's feet. Numerous efforts have been made to close it up, but without success. Water was turned in, and a steady stream maintained all day. In the evening a load of stones, gravel and sand was put in, and thoroughly packed by the water. Next morning a heap surrounded the hole in which the victorious dogs were still working like beavers at the last few stones. Next we took heavy wires, bent in various shapes and coils, which were fitted in first, and then sand and gravel pounded in; but with the same result. The following morning revealed the dogs at the mouth of the already cleared-out hole, practicing calisthenics with the wires. A third attempt was made with jagged tin cans and blocks of wood, but all to no purpose. They still rule supreme, and so far have proved the futility of intelligence against instinct. Even in the winter they work with the same industry to clear away the snow from their doors, and very few days were sufficiently stormy to keep them in, thus proving the fallacy of the belief (at least in their tamed condition) that they are hibernating animals.

A NOVEL FISH.—Yesterday one of the oddest and ugliest specimens we have even seen was caught in the trap of Wm. Weaver, off Taylor's Point, Canonicut Island. It is about three and a half feet in length, by about one and a half feet in breadth in its widest part, with skin like that of a shark; an ugly mouth, with four rows of teeth, and its shape is something like that of a bellows fish. Its mouth is on the head extremity, and not at all underneath, while its side fins are more like the clipped wings of a fowl. It was very savage, and when an attempt was made to take it from the trap with a large iron-rimmed scoop net, it sprang forward like a snapping turtle and seized the rim of the net, and hung to it until it was placed in the boat. One of the fishermen afterward attempted to poke him with a short stick, and the fish seemingly contracted his body, and then sprang savagely forward, seizing the man's finger, and lacerating it severely. The nondescript weighs over thirty pounds, and is now packed in ice awaiting the arrival of Hon. Samuel Powell, who takes charge of all novelties taken from the waters of our part of Narragansett Bay. None of our fishermen have even seen anything like it.—*Providence Journal*.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS OCT. 25TH.—One macaque monkey (*Macacus cynomolgus*), presented by Gen. A. T. Torbet, Milford, Del.; two young prong-horn antelopes (*Antilocapra americana*), purchased; one short-eared owl (*Brachyotus palustris*?) presented by John Pearsall, Philadelphia; two blue headed ground doves (*Starnoenas cyanocephala*), one Key West pigeon (*Columba martinica*), two Carolina doves, from Cuba, (*Zenaidura macroura*), two Zenaida doves (*Zenaidura macroura*), one ground dove (—), two Cuban quails (*Ortyx cubanensis*), presented by E. F. Cabada, Esq., Philadelphia; one bittern (*Ardetta exilis*), presented by Geo. DeHaven, Jr., Philadelphia; one ring dove (*Turtur resoritur*), presented by Dr. Noah Martin, Philadelphia; one rhesus monkey (*Macacus erythraeus*), presented by Moses Johnson, Yardleyville, Mercer county, N. J.

ARTHUR E. BROWN, Gen'l Supt.

ARRIVALS AT THE CENTRAL PARK MENAGERIE OCT. 21 TO OCT. 23.—One grey squirrel (*Sciurus carolinensis*), presented by Master Edward Bacon, two by Master Lee Clements, New York City; one deer (*Cervus virginianus*), presented by Rev. M. J. Kirwan, Guttentberg, N. J.; one oryx (*Oryx leucoryx*), one short-eared owl (*Otus brachyotus*), presented by Mr. Joseph H. Batty, New Utrecht, N. Y.; ten eider ducks (*Somateria mollissima*), bred on Grand Menan Island last May; two Passerine parakeets (*Psittacula passerina*), presented by Mr. I. B. Brice, New York City; one red and yellow macaw (*Ara chloroptera*) presented by Mrs. E. H. Woolton, New York City; one alligator (*Alligator mississippiensis*).

W. A. CONKLIN, Director.

—When fowls appear out of order and lose appetite, the food should be mixed with a little linseed meal and small quantity of pepper and a small piece of copperas dissolved in their drinking water would be useful.

Furs and Trapping.

TRAPPING IN VIRGINIA.—Those enterprising purveyors of information, known as daily newspapers, have just discovered that beavers are abundant in many counties of Virginia, causing much annoyance by their depredations; and a paragraph like this is going the rounds:—

"Many years ago beavers were very numerous, but of recent years they have almost disappeared. Their re-appearance on the old feeding grounds causes much surprise."

Meanwhile some of the readers of FOREST AND STREAM, which is usually several months or weeks ahead of any of its contemporaries in such matters as come within its special scope and province, have been trapping beavers for two years past in Dinwiddie, Nottoway, Brunswick, Cumberland and other counties, and a few of them have realized quite profitable returns. For instance, there is the veteran trap-maker, Mr. Newhouse, who made his headquarters in Greenville county last winter; he realized some \$900 by his expedition, besides selling several hundred dollars' worth of steel traps. And two of our subscribers from Connecticut, and others from Central New York, went down to Brunswick and Nottoway, and when they had harvested their packs of pelts and were ready to leave, taught the native young "chincopins" and negroes to set traps, so that they, too, might add to their scanty earnings. More than one small farmer has had occasion to bless the strangers who came among them and showed them how to catch fur. For fur is worth money, and not only are beavers caught, but otters, mink, and muskrats in considerable abundance. Prime otter skins are usually quoted in the market at \$8 to \$10; mink, \$1.25; muskrat, 25 cents; beaver, \$1.00. Last fall we had numerous inquiries, which have now begun again, as to where to go, how to go, and what it will cost to live on the line. To give prompt information, and answer once for all, we will say here that if our trapping friends will fix their local habitations on any of the streams in the counties named, they will not fail of success. The cost of getting there by the Old Dominion steamers is only \$10 or \$12. Take a complete camping outfit, with dog and gun, blankets, Dunklee's stove with cooking utensils, some flour, meal, salt, sugar, pickles, tea and bacon, and either get leave to occupy some cabin, or extemporize a shelter that will shed rain. Your gun will supply you with all the fresh meat you can eat—venison, quail, rabbits, and squirrels, and whatever eggs or milk is wanted can be obtained from the neighboring farmers. By this method of managing it will not cost \$10 in money to keep you all through the winter until the trapping season ends. Mr. Newhouse says that it only cost him \$10, and he lived right royally. He is 70 years of age, and he ought not to be able to stand rougher usage than younger men. Take a bag of assorted traps, including one bear trap.

Besides putting money in his own purse, the trapper in Virginia will do the residents a great service by killing off the "vermin" that destroy their crops, and thereby save, as well as earn. We have ourselves seen acres of corn totally destroyed by the beavers down there, and we know that the havoc they make with the grain causes a serious loss to needy and struggling people.

FASHIONS FOR LADIES' FURS.

THERE have been decided changes in the fashions of furs within a few years. Formerly a muff with collar or boa satisfied the longings of a woman's heart in this direction. If she were rich, a set of sable was the object of desire; if her means were limited, a mink set would satisfy her. Now there are a number of fur garments. There are sacques and Dolmans of seal-skin, cloaks with luxurious fur linings, seal-skin hats and turbans, and fur borders for trimming her costumes, her wraps, and even her bonnets, and the variety from which she is to select has increased with the demand, until the list of fashionable furs contains the names of almost all the fur-bearing animals in the world.

Russian sable is still chosen by people who want the best things of its kind. \$800 buys a superb dark set, with boa two yards long and a muff with five stripes. Lower-priced lighter shades now begin as low as \$100 for sets that formerly brought \$200. Hudson Bay sables are still prized for their durability and warmth. The finest sets are made of the sable tails, and are nearly altogether of the darkest shades. These cost \$300, and have five stripes on the muff. Lighter sets begin as low as \$60.

Muffs are of the medium size worn last year. Boas are longer, measuring two yards, and are round, with the exception of seal boas, which are made flat on account of their short fleece.

Fisher-tail sets rank next the sable, which they resemble in their dark blackish-brown hues and long, soft fur. They are much worn with garments trimmed with a border of the same. Their prices range from \$80 to \$150 the set. A handsome muff to wear with a wrap trimmed with fisher-tail bands costs about \$75. Sets made of the backs of the fisher-skins are not nearly as dark as the tail sets, and cost about \$50 to \$60.

It is said the velvet-like shaded gray chinchilla will be the most fashionable fancy fur for sets, for trimmings, and also for cloak linings. Africa chinchilla is the choicest, and is of finest gray shades. The muffs are made of the backs of the skins, showing their dark stripes. Bolivian chinchilla is of more brownish-gray, and is similarly shaded. The muff and boa cost from \$40 to \$80.

The long gray fleece of the silver-fox is as light as marabout feathers, and is tipped with silver points that look like thistle down. But beautiful as this fur is, it does not repay the money spent on it. Candid furriers acknowledge that it has little warmth of itself, and is so fragile that it will not wear well during a single season; the silver points wear off, no matter how carefully it is used. Handsome muffs of this delicate fur are \$100; the boa, very thickly tipped with silver, is the same price. Other very beautiful

muffs of the fur, with the dark stripe of the back of the animals passing around the middle, and lighter fur on the ends, are \$65; the boa to match will be the same price. The dark parts of the silver-fox are made up into expensive sets that ladies call black fox, though dealers say there is no such thing as black fox fur, strictly speaking. These dark sets are very expensive.

Blue fox is one of the prettiest and most fashionable of the inexpensive furs, and makes the best show for the money; but unfortunately it is not durable, and seldom lasts more than a season's wear. It has long, thick, fine fleece in natural shades, and costs from \$20 to \$30 a set.

Ladies who choose their furs for use and comfort, and want tasteful things that are not pretentious, buy a neat set of seal-skin; this is also the best choice for those young girls who do not want anything so dressy and so frail as chinchilla. All seal-skin is dyed, as the natural color is a dull brown. The rain does not affect good English-dyed seal-skin, but some very dark American-dyed skins will rub off, and will mat together after having been wet. The reader is advised that seal-skins when damp should not be hung near the fire to dry, but should be well shaken and dried by the natural heat of the room. Alaska seal sets are chosen for their durability, and Shetland seal for fineness. The long flat boa is fastened at the throat by the head of the animal and an elastic cord; passementerie tassels trim the ends of the boa and muff.

Mink sets are very little used in the cities, but are liked for long drives in the country, and by ladies who wear what they know is good and substantial, without regard to novelties. The best dark sets look like Hudson Bay sable, and it is said these are coming back into fashion. The set of muff and boa costs from \$16 to \$90.

Seal skin sacques remain the most popular fur wraps, notwithstanding the introduction of seal Dolmans and long cloaks. Many ladies who have worn plain sacques for two or three winters are now having a border of different fur put on, not merely for its beauty, but to add greater length. The strong Alaska seal sacques without trimming cost from \$50 to \$200; \$125 buys a very good durable Alaska sacque. Shetland seal sacques, untrimmed, are from \$75 to \$300. Trimmed seal sacques are usually longer than plain ones. The fur borders are wider than last year, measuring six inches if the purchaser can afford it. The most inexpensive trimmed sacques are those that have black marten borders, and cost from \$100 to \$150. Seal Dolmans have been introduced, and will be worn to some extent, but they are too heavy and clumsy for comfort, and will not be generally used.

Fur trimmings will be used more than ever this winter. Feather bands with fur trimming on each edge are novelties at the furriers'. Those with natural gray ostrich feathers in the middle and chinchilla on each edge are among the handsomest, and cost \$6 for pieces twenty-six inches long. Chinchilla bands with blue peacock centres are \$12 for pieces measuring thirty-nine inches. Golden peacock centres with black beaver fur edges are \$12 a yard. Black cocks' plumes with chinchilla borders are \$12 a metre.—*Harper's Bazar*.

THE NEW REGATTA COURSE.

We append herewith, a number of letters from some of the most prominent oarsmen of the country, relative to the capabilities of Greenwood Lake as a regatta course. It will be observed that one and all speak of it in the highest terms, and we can safely predict that this beautiful sheet of water is destined to be the scene of some of the most important future aquatic contests. The only objection made is the want of increased hotel facilities, and this we are authorized to say will be provided before next season. Two new hotels are to be built, and the present ones enlarged if necessary. Not the least interesting feature of the newly awakened interest in Greenwood Lake, was the recent excursion of some forty clergymen, who visited the lake and selected the site for the erection of a church, which would be the Sabbath gathering place for church people from New York and the country around. Rev. Dr. Deems, of this city, was chosen Chairman, and a resolution was passed appointing a committee of seven, for the purpose of organizing a company for the building of a church, to be called the Church of the Strangers of Greenwood Lake. A most beautiful and original design has been adopted, and the site selected is on the hillside, about half way down the lake, where it would be in clear view from any point on the lake.

NEW YORK, Oct. 20th.

EDITOR FOREST AND STREAM:—

As I have not been at the boat house since last Saturday, did not receive yours of 19th until to-day. You ask what I think of Greenwood Lake as a regatta course. I do not think you could find a better one. The crew and myself think it the "boss place," we having won our first race there.

DAVID ROACH,
Stroke of Dauntless Crew.
NEW YORK, Oct. 19th.

EDITOR FOREST AND STREAM:—

In response to your letter of 17th inst., asking my opinion of Greenwood Lake as a regatta course, I beg to say that I was very agreeably impressed with that sheet of water, notwithstanding the unfavorable (but I believe exceptional) circumstances under which I saw it. During the boating season, protected as the lake is from all but due northerly or southerly winds, I should judge it to be one of the finest courses in America, while its proximity to New York city, combined with the admirable views of the races to be obtained from the west shore, and from the finish on the east bank, should render it very popular to lovers of aquatic sports, and insure what every oarsman covets, viz: a big crowd to look at him.

Of the course itself, I have no doubt, and if the energetic gentlemen who had charge of the late regatta will provide ample boat house accommodation, guarantee rapid transit, and increased hotel accommodation, I can see no reason why Greenwood Lake should not at once jump into the rank of a first class regatta course.

E. R. CRAFT.

NEWARK, N. J., Oct. 19th.

EDITOR FOREST AND STREAM:—

In regard to Greenwood Lake as a national regatta course I express my candid opinion that it cannot be surpassed. In the late regatta there were many expressions of dissatisfaction with the accommodation afforded visitors for viewing the races. On future occasions all difficulties of that kind will be obviated by a new and novel arrangement, namely: a moving grand stand. This is a project of the Railroad Company, who propose to erect seats on platform cars, and therein accompany the "contestants" along the entire course. There is one fact that should be impressed on the managers of future regattas, that the season for this sport does not extend into the season of frosts, two of our crew contracted such heavy colds that they are not rid of them yet.

Besides the excellence of the course it is more convenient for the greater part of our rowing clubs, and taking everything in consideration I heartily approve of it as the future regatta course. Hoping that your New York clubs will be of the same mind, I remain

P. YOUNG,
Secretary Eureka Boat Club.

EDITOR FOREST AND STREAM:—

You write to ask me my opinion of Greenwood Lake for a race course. I don't think there is any better race course in the country if they take the right time of year. The only fault there could be is when the wind blows as it does everywhere in the fall. The water is deep enough up to the shore, and the lake broad enough to give room for as many boats as ever enter any race, and plenty of room for all to have fair play. If everybody feels as the Neptunes did about their accommodations, and the easy way of getting boats, etc., back and forward to the lake I should think a big regatta might be just the thing for New York people. It won't do for me to say much about the races, for as I have rowed in all but two I might not be a good judge, but I know we all had a good time, and had to thank Mr. Vernam and the gentlemen for a great deal. Hoping to row on the same course often again, and with as fine prizes as we received for our victories I say success to Greenwood Lake and the Sportsman's Club.

JAS. H. RILEY.

NEW YORK, October 19th, 1876.

EDITOR FOREST AND STREAM:—

In response to your inquiry I freely give my endorsement of Greenwood Lake as containing all the requirements of an A. No. 1 piece of water for racing. I do not see how, at a suitable season of the year, a better place could be found for holding regattas. The water at such seasons, and when men, too, can best leave their business, is sure to be perfectly smooth, the only wind which can ruffle it does not prevail until later. There seems to be no advantage of one station over the other by reason of current, as at Saratoga or Philadelphia, while a perfect straightaway course can be had for any distance from one to five miles, for as many boats as there are boat clubs in this country. But more important still than all this to men in training is the pure bracing air, which serves to exhilarate and bolster you up continually. A crooked, short and narrow course can be endured, but foul water and an enervating atmosphere are evils that cannot be grappled with without suffering the consequences as was so lamentably proved at Philadelphia the past season. So much for the natural advantages. The accommodations for crews, and the number of spectators who annually visit the college and amateur regattas are entirely inadequate, and were they to attempt to hold either regatta there, with the present limited hotel arrangement, the result would be most unfortunate to both parties.

LINDSEY WATSON.

WASHINGTON, D. C., Oct. 26th, 1876.

EDITOR FOREST AND STREAM:—

In a note received from you yesterday you ask me "to give you my opinion of Greenwood Lake for a regatta course." So much has been written on the subject lately that one has necessarily to repeat opinions already given. When I first visited Greenwood Lake this fall with the gentlemen who formed the party invited by the Sportsman's Club, I was both surprised and delighted with the beauty of the surroundings and the extent of the lake, and at a proper season I have no hesitation in saying the course is excellent, the only drawback possible being the roughness of the water during the high fall winds. Wishing every success to the gentlemen who rendered the Greenwood Lake regatta so pleasant, I remain yours respectfully,

T. R. KEATOR,

Neptune Rowing Club.

NAUTILUS BOAT CLUB,
NEW YORK, October, 25th, 1876.

EDITOR FOREST AND STREAM:—

In reply to your communication desiring to know what I thought of Greenwood Lake as a regatta course I wish to say that so far as I have seen it is one of the best in the country, and a course which, under proper control, management and direction, may be made the most popular of all. It has many features to recommend it. It is connected to New York, the Greenwood Lake and Montclair Railway bringing contestants and spectators from Jersey City to the margin of the race course; the water is well sheltered by the wooded hills surrounding it, and the natural eminences of such a character as enables lookers-on to see a regatta from start to finish. I think boating men will regard it as I do—an excellent course.

RICHARD L. NEVILLE.

HARVARD FALL RACES.—The regular fall races took place on Saturday, October 28th, over the Charles River course, a distance of two miles. Raw weather and a small number of entries diminished considerably the number and interest of the spectators, but the proportionally large number of ladies present somewhat compensated for other defects, and the races passed off pleasantly and successfully. The crews rowed in barges and carried coxswains, and hence were very little incommoded by the choppy condition of the water.

The first race was for four-oars, and was rowed by only two crews, the Weld and Holworthy crews being obliged to withdraw. The word was given to the Holyoke crew, composed of Le Moyne, '78, stroke; Crocker, '79; Parker, '79; Le Moyne, '77; Brewster, '80; Donaldson, '79, bow; Wiley, '77, coxswain. Mathews—Jacobs, '79, stroke; Brigham, '79; Preston, '79; Harriman, '77; Keyes, '79; Kessler, '79; Jennison, '77, coxswain. Weld—Sloane, '77 stroke; Brownlow, L. S.; Burr, '79; Trimble, '79; Ward, '80; Tuckerman, '78, bow; Coolidge, '79, coxswain. The boats got off with an even start, Weld soon drawing ahead; with the other crews about even. These relative positions were kept to the stakeboats, when Weld fell off a little; Holyoke made a good turn and gained a clear length. On the home stretch Mathew's braced up, but were unable to overtake Holyoke, who crossed the line winners in 14m. 36s. Mathews being eleven, and Weld twenty seconds behind. The judges at the stakeboats were Messrs. Perkins and Duff. Starters, Messrs. Danforth and Brady. Referee, W. T. Weld.

THE KENNEL REGISTER.—We print in this issue an abstract of the second one hundred pedigrees entered in the Kennel Register. There are doubtless errors as well as omissions in it, and our object in publishing the list is that these can be the more easily corrected. If such of our readers as may discover errors will kindly send us the corrections we will be indebted. There is no charge for registering pedigrees, and we furnish blanks without charge upon application.

AS TO DACHSHUNDS (*Cast Iron*).—Our contemporary, the *Rod and Gun*, has no generosity—no manhood. We say it boldly. The light of its kindly nature is tetotally extinguished; its tenderness of the sensibility of its neighbors has become indurated and callous. No? Why not? Does it not unmistakably intimate, if not actually assert, that the Chicago *Field's* representations of Dr. Twaddell's dachshunds were photographed from cast iron statues at Mott & Co.'s Iron Works? What is truth, if it be misapplied? If these be not facts, where does verity hide itself? We have no desire for any acrimonious or anathematic controversy with the *Rod and Gun* in this matter. The subject is tender—especially where it touches upon the tails of the dachshunds—referred to as "levers to work a bark mill." All dogs are sensitive at this point. We feel constrained to protest; to say that great injustice has been done by this cold-blooded attempt at disparagement. Common irony would have been severe enough. Cast irony is worse—a projected and "outrageous sling!" We shall walk over to the side of the art editor of the Chicago *Field*. Our own opinion is that the engravings referred to are very pretty—very striking in a group, as they stand; but how much more so if all in a Rowe? Metaphorically roses may fade, but cast iron dachshunds never! These same will stand as long as the eternal hills, a monument to illustrated art and illuminated enterprise, unless perchance grim visaged war shall let slip the dogs, and mould them into cannon balls. We do not think that Dr. Twaddell

need feel that these engravings reflect seriously upon himself or the breed of dogs he cultivates. Did we apprehend serious results or danger, we would warn him of the fate of Anteus, so that he might escape.

We take the opportunity to explain here that while we unequivocally condemn the strictures of our contemporary the *Rod and Gun*, we wish to wholly acquit the Chicago *Field* of having had anything to do with what the other paper is pleased to treat as a caricature. The *Field* itself is innocent. It is the *Editor* alone who is responsible. He is the only man on the staff of that paper who knows anything about Dogs. The other fellows are all very well on HORSE, "and all that sort of thing"—but when it comes to competency to speak on matters that relate to Kennels, Mange, and Distemper, let none but Sir Oracle oraculate!

MEMPHIS FIELD TRIALS.—In addition to the already published premiums, Mr. E. O. Greenwood, of Cincinnati, Ohio, has donated a most elegant and valuable gold water pitcher, bowl and two goblets, to be competed for by imported Irish setters at the coming field trials. This magnificent trophy is well worth the attention of those owning this splendid breed of dogs. The judges to be the same, and governed by the same rules as the other trials, except three to enter and two to start. An unfortunate attack of illness prevented Mr. Greenwood from giving earlier notice of the donation.

—Blarney and Creena, a brace of red Irish setters, dog and bitch, nine months, from the kennel of J. M. Niall, Esq., reached here last week per steamer City of Chester from Queenstown, consigned to Horace Smith, of this office. The setters were for Mr. Wm. Jarvis, of Claremont, N. H., and have been forwarded to him. They are a brace of those that won first prize at the recent Cork Bench Show. The youngsters are of a good color, and have the appearance of thoroughbred Irish setters, and we trust they will prove, in the hands of such a skillful sportsman as Mr.

Jarvis, something extra for field and stock purposes. They are by Champion Basto out of Capt. Lampier's Sal, half sister to Lilly II.

LOST.—Mr. Geo. W. Boras, of Titusville, Pa., has lost his valuable gyp Spot, and offers a reward for her recovery. She is white, with black spots; is three and a half years old, very affectionate in disposition, and has a sharp, quick bark. We presume that she is a pointer, but Mr. Boras neglects to state her breed.

A CORRECTION.—In our notice last week of a litter of puppies, whelped by Mr. C. Greener's "Fannie," we should have said that Fannie was from a bitch (said to be from Cale Loring's Cora) to George Linder's Dora. Fannie was whelped in 1871, instead of 1872 as printed.

KENNEL PRODUCE.—Harris Allen, Esq., of Monmouth County, N. J., informs us that his setter bitch Queen of Monmouth, on the 8th of October, whelped fourteen pups by J. Forman Taylor's famous One Eyed Sancho.

CURES FOR CANKER AND MANGE.—Mr. J. Cutler, of Ashtabula, Ohio, gives us the following receipts, which we would suggest to our readers to try and report upon:

For canker in the ear wash the ears out with warm water and Castile soap; take some common corn starch and burn it brown on the top of the stove; then pulverize it to powder and dust it in the ears while warm, twice a day. In four or five days it will effect a cure, and the dog can be hunted every day while being treated.

For cataract in the eye take a common slate pencil, one that is soft and makes a dust; then drop some honey in the dust, and drop one or two drops in the eye twice a day, morning and night, and in a very short time the white scum will be eaten off the eye. Twice a day, morning and night, I cured a dog three weeks blind in one week.

For the mange, take one-half pint of whisky, put two drachms of nitrate of silver in the whisky; wash the sores with warm water and Castile soap; then take a sponge and wash the sores with the liquor; be careful not to get it on the hands, as it will stain anything it touches; the mange I speak of, shows itself in running sores.

New Publications.

BOOKS RECEIVED.

THE COMPLETE AMERICAN TRAPPER.—By Wm. H. Gibson, New York: James Miller, publisher.

There has long been quite an extensive inquiry for a more complete and reliable repository of information concerning traps and trapping than existing publications afforded. Mr. Gibson seems to have entered with enthusiasm upon the preparation of a volume that should meet this demand; for he has not only presented a vast fund of practical information, but he has devoted much taste and expense to the embellishment of his ideas. The book is a handsome volume of 300 pages, and contains nearly one hundred and fifty illustrations, many of which are highly artistic, and convey the cleverest idea of the snares, trap, nets and devices to which the text of the work is devoted. A vast number of ingenious designs are presented, many of them entirely new, and for the first time here given to the public. The author has not only had in view the guidance and instruction of sportsmen and those who wish to become adepts in trapping as a business, but presents many devices of utility in capturing pests which infest all premises, and more especially for the instruction and amusement of youth in the country. The haunts and habits of large game and fur-bearing animals are fully described, with the most effective tricks and devices for trailing, luring and taking them, and for saving their skins and preserving them for market. The closing chapters are devoted to suggestions for establishing a trapper's camp, including plans of huts, tents, and all the needed impedimenta for a campaign through forest and stream. It is a timely volume, and appears to be very complete and reliable.

MAGAZINES.

We find in *Scribners* for November the usual variety of entertaining and well selected matter, which the proprietors always lay before their readers. The opening article is an illustrated sketch of "The Charter Oak City," depicting the various places of interest in Hartford, notably the residences of Col. Colt and Mark Twain. A series of articles by Mr. Charles Barnard on Co-operation in Great Britain are commenced, and in the first the workings of "A Scottish Loaf Factory" were described. The series will be of interest to our own economists. Mr. Hale's story describing incidents immediately preceding and connected with the acquisition of Louisiana by this Government, is continued, but will probably be concluded in another month. The other serial—Mrs. Burnett's "That Lass o' Lowrie's," a picture of life among the miners—increases in romantic interest. Mr. Clarence Cook's interesting talks about furniture are continued, and the minor miscellany is all up to the standard. Dr. Holland, in the editorial department, discourses of "American Art Industries and Country Homes."

St. Nicholas is brimful of good things. Little boys and girls who are already thinking of Christmas will be immensely pleased with the opening story, which tells how the King of Greedyland had a tart made which was as large as the capitol. Who ate it, or what became of it we will not know until next month. Mrs. (we believe) Coolidge supplies the historical in a sketch of Queen Matilda of England; Mr. Preston tells "About Lead Pencil," and Mrs. Carter about "A Little Boston Girl of 1776." But we cannot enumerate all the articles in *St. Nicholas*; the quantity is large and the quality first class. Jack in the Pulpit has his usual talk with his friends, and even the little toddlers can find amusement in a department prepared for them.

We are at last reconciled to the change in *Appleton's Journal* from a weekly to a monthly, and we will venture to say that the current issue is equal in the variety and value of its contents to any periodical published. If we have one fault to find with it, it is in the fact of there being too many continued articles—no less than five—but of these, two are only in two parts. Helen B. Mather's romantic story with the queer title "As He Comes up the Stairs," is finished satisfactorily by the restoration of the husband supposed to be drowned. Mr. Julian Hawthorne, in his "Out of London" papers, is very severe upon the idiosyncrasies of John Bull, whom he thinks is himself wanting in many of what are usually considered English traits. In fact, even with "American Notes" in our mind, we think that he is almost to severe, and in drawing the balance scarcely carries enough to the credit side. One would almost imagine that the writer was "out in London." Washington Irving is brought to mind by an engraving of Katrina Van Tassel, from the painting by Benjamin F. Reinhart; but we do not like the face. One of the most interesting articles is "A California Wheat Harvest," by Albert F. Webster. Those who have not seen a California wheat field can scarcely realize the vast expanse of grain, and the operation of cutting and thrashing; the latter by steam on so large a scale is really wonderful. The ladies will read with interest Mrs. Hooper's paper on "The Servant Question in Paris," where they manage things so much better. In the Editor's Table we find a criticism of Prof. Huxley's lectures, and a very excellent article on oysters.

In *Lippincott's* for November Lady Barker's very entertaining description of domestic life (under difficulties, we should say,) in South Africa are continued, and a new serial by George MacDonald, entitled "The Marquis of Lossie," is commenced. Anything from MacDonald's pen can scarcely fail of being interesting, and his present story promises to sustain his deserved high reputation. The illustrated articles comprise another of "The Century" series, descriptive of the agricultural and horticultural features of the great Exhibition, and "Walks and Visits in Wadsworth's Country," by Ellis Yarrell. Mr. Hart discourses of "Higher Education" and Mrs. Hooper on the "Curiosities of the Parisian Post Office." The serial story is Ellen W. Olney's, "Love in Idleness."

In the *Galaxy* for November the place of honor is given to Mr. Wm. Black's story, "Madcap Violet," which promises to end, as do most novels, in a happy marriage. A very interesting article is that on "Burgoyne's General Order Book," in which are transcribed the general orders to the British Army in days preceding the summer at Saratoga. The haughty spirit of the British chieftain and the stern royalist breathes in every line. The article on "Recent English Fiction," by W. C. Bronnall, will be read with much interest. In the works of Black, Blackmore, and Hardy are dissected and contrasted. Joaquin Miller contributes a characteristic and strong poem in "Como." Gen. Custer's "War Memoirs" are continued, this last paper being one found among his effects. Mr. Albert Rhodes contributes an article on "What We Shall Eat," and Mr. Olney a very pretty story entitled "Miss Rath." Phillip Quilbert gathers his "Drift Wood" as usual, Current Literature is discussed as usual, and there is a goodly assortment of Scientific Miscellany.

The *Eclectic* as usual contains a well selected list of papers from contemporaneous Reviews and Magazines. The frontispiece is a fine steel engraving, Dr. Phillip Schaff, the venerable biblical scholar, of whose life a brief sketch is given. For lighter reading we have the concluding part of Mrs. Alexander's "Her Dearest Foe," and for the substantial an elaborate paper from the *Quarterly Review* entitled "Modern Philosophers on the Probable Age of the World." The other papers are "South-Sea Island Mythology," "Russia in Europe," by Arthur Arnold; "Society in Italy in the Last Days of the Roman Republic," by James Anthony Froude; "A Forsaken Garden," by Algernon Charles Swinburne; "Sketch of a Journey Across Africa," by Lieutenant Cameron, Part III.; "A Pontificate of Thirty Years," "Wordsworth's Ethics," by Leslie Stephen; "Zulu Witches and Witch-Finders," by Lady Barker; "Mr. Vanneau," by William Allingham; "Excursion in Formosa," "Natural Magic," "The Brigands of Bulgarian Song," "Modern Politicians," and "The Child Violinist," by Austin Dobson.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

Biz, East Liverpool.—Can you give me the pedigree of Mr. Charles Lovett's setter dog Shot, Allegany City, Pa.? Ans. We can not.

S. T., Philadelphia.—Please send me the name of the best treatise on the breeding and rearing of dogs. Ans. Dinks, Mayhew & Hutchinson; price, \$3. We can send it.

TEGEMSEE, Bavaria.—Will you please inform me through your paper, if in a jumping match one is allowed to run off the obstacle at an angle of less than 45 degrees, and go over it sideways? Ans. Certainly not.

E. K., New York.—Is the \$50 or \$60 Parker Brother's gun a safe breech-loader? and where can I get a pair of barrels for a Parker muzzle loader, 10-bore, for about \$12? Ans. Yes; perfectly safe. Do not know where you can get barrels for that money.

C. S. McC., Englewood, N. J.—Be so kind as to inform me if there is such a place on the Passaic river as the "Parcippany Swamps," for duck shooting, and if so, where it is, and whether it is a good place to go for ducks? Ans. There is such a place, near Boonton, very little duck shooting we should say, unless it is a few black and wood ducks.

N. C. P., Philadelphia.—Having learned, during my sojourn here, that better penetration can be obtained by using the English chilled shot than from our own manufacture, I beg you to advise me in the next issue of your paper where I may obtain the same? Ans. From H. C. Squires, No. 1 Courtland street, this city.

A. S. C., Philadelphia.—Please inform me through your paper if Christmas is a good season for duck shooting on Barnegat Bay? also in what manner they are shot there, and what are the accommodations? Ans. Yes. Shot from points and sneak boat; numerous hotels at Barnegat village, Waretown, &c.

L. W. B., Randolph, Mass.—Can you accommodate a constant reader by informing me of some reliable correspondent in Southern California, to whom I could write for information. Ans. Address H. M. Mitchell, Los Angeles, Cal.

M. P. McK., Franklin, N. Y.—I see in this week's *FOREST AND STREAM* a short piece on the harmless nerve quieting effects of "coca." Where can I obtain it? Ans. You can obtain either the powdered leaves or fluid extract from Fraser & Lee, wholesale druggists, No. 20 Beekman street, this city.

W. H. W., Lakeville.—Please inform me where I can procure live quail to turn loose next spring for breeding, and also the probable cost of the same per pair or per dozen. Ans. By writing to Whiteley & Morris, Washington market, New York. The price varies from \$4 to \$5 1/2 per dozen.

TUDOR, Ipswich.—Can you tell me if woodcock and English snipe are found in New Brunswick and Nova Scotia in any quantity? How is the shooting near Quaro, some sixty miles, I believe, east of St. John? Ans. There is good English snipe and duck shooting at Quaro, with a few woodcock. Snipe are common in many parts of New Brunswick and Nova Scotia, and breed there. Quaro is a favorite resort for sportsmen.

A. P., Quebec.—Could you inform me what price fresh frozen trout from seven to ten inches would be likely to bring in New York per pound (wholesale), in the months of February and March. Please also furnish names of parties who would deal for the same. Ans. Trout in our market previous to the 15th of March would be in violation of the law and subject the possessor to a heavy penalty. We are happy to say that we know of no party who would deal in the same prior to that date.

J. O. W., New Braunfels, Texas.—Will you please inform me to what make of breech-loading shot guns was given the highest award for durability and shooting qualities, and best breech fastening. Ans. We presume you mean at the Centennial. Guns there shared the same fate as all other exhibits, and as far as we know all received medals and diplomas without distinction.

S. L. F., New York.—1. Where can I go for good quail shooting on the 3d and 4th, or the 10th and 11th of November, within three or four hours rail from New York? 2. Are there any woodcock, (or other small feathered game) around the Fulton Chain Lakes (Adirondacks), to be had during the month of July? 3. Do the guides furnish pointers or setters, or not? 4. Which is most useful in that locality, rifle or shot gun? Ans. 1st. Replied to by letter. 2. A few woodcock. 3. They do not. 4. Breech-loading shot gun.

F. J. McM., Newburgh, N. Y.—I have a small fox-hound that had the distemper last summer pretty bad, but he came around all right. Lately he has not been well; he will eat hardly anything; is very thin; nose dry; eyes run, and his coat is very rough. He is not near as playful as he used to be. Is it possible that he has worms? Please tell me what you think is the matter, and what medicine shall I give him. Ans. Your dog is in all probability afflicted with worms. Have mailed to you some powdered area nut, which will relieve him if given as directed.

S. C. H., Washington.—Be good enough to inform me where I can get a young cocker spaniel for ruffed grouse and woodcock (a good barker), and at what price. Would prefer one already broken, though that is not indispensable. Will he make a good watch dog? Ans. We do not know where you can procure cocker spaniels. Perhaps some of our readers can inform us. Such dogs are generally very watchful.

PETER, Fulton, N. Y.—To whom can I consign venison in your city, and what can I get per pound? Ans. Venison in the carcass, now sells at 11 and 12 cents per pound in the New York markets; short saddles 13 cents. The supply is in general fully up to the demand. E. & A. Robbins, Fulton market are the heaviest dealers. You might get 10 cents per pound.

SPORTSMAN, New York.—Will you be kind enough to inform me when the game laws are up in New Jersey and New York. Also what birds you cannot shoot when the game laws are up. Ans. In New Jersey ruffed grouse, quail and rabbits November 1st; woodcock July 4th, and ducks September 1st. In New York ruffed grouse September 1st; quail October 1st; woodcock July 3d; duck September 1st, except in Suffolk County, where the law expires October 1st. See "Fur, Fin and Feather."

H. C. R., Darby, Pa.—I have a pointer (young); he will find and stand quail, but thinks he must fetch when the birds run ahead of him. What must I do with him? Correct him in what way, or will he grow out of it? Ans. The only way to prevent your dog from chasing birds is to punish him for the fault by whip or check cord. If he is suffered to have his own way he will become worse instead of better.

D. J. L., Boston.—My setter dog is four years old, and about two years ago he had distemper very hard, and ever since has had a sore ear, which is constantly running, and when lying down in the house his head throbs, and once in every hour or so he will jump and shake his head. Ans. Your dog has canker. Make a solution of sulphate of copper, eight grains to the ounce of water. After cleansing the ear with Castile soap and tepid water, pour well into the ear some of the liquid twice a day for two or three days, always washing out the ear before using the liquid. Feed little or no meat for a while. See other recipes in kennel column.

F. E. L. B., Ames, Iowa.—1. I want to get a gun of all-work, something with which I can shoot prairie chickens, quail, snipe, mallard ducks, and also one to shoot smaller birds for stuffing. Please advise me as to gauge, weight, length of barrel? 2. If the finest quality of English guns cost \$350, can a gun that costs only \$75 be called a really good gun? If I were to pay, say, \$100 for a gun had I better buy an English or an American make? Ans. 1. A gun of 12-gauge 30 inch barrels, weight from 8 to 8 1/2 pounds, varying the charge according to the game. 2. For from \$75 to \$100 you can purchase a good safe lasting gun, of either American or foreign make, one which will shoot as well as any gun.

E. W., Philadelphia.—I am interested in a dog of the "Board-yard" breed, as it is called here. He is of little market value. He is a good soul, (if dogs have souls) a good "watch dog," and the faithful companion of a watchman. Well, he is sick, and has been for some weeks, is weak and feeble, but not from old age, being not over six years old. His symptoms are: extreme weakness, "with all that that implies;" poor appetite; preferring crackers and refusing meat; puffs and blows like a horse badly struck with the "heaves;" seems to avoid laying down, and will sleep standing up and then fall to the floor, &c. Perhaps from this you can guess what is the matter, and prescribe something for him. If you can suggest a remedy for him you will be doing a kindness. You do advise about other dogs of value, but none more highly prized or deeply loved by his master than this wretched faithful beast, whose days can be but few in this world, unless something is done for him? Ans. Try the condition powders which have been mailed to you and see that he is regularly exercised.

S. A. C., Lacorna, N. H.—1. Please inform me the best kind of dog for treeing partridge, that has the strongest scent, &c.? 2. Is there any work printed that will inform a man how to train a tree dog thoroughly, if so where can I find it, and at about what would it cost? 1. Ans. A cocker spaniel is the best dog for treeing ruffed grouse, called partridges in some sections of the country, but Scotch and English terriers will answer well for that purpose. 2. There is no work published upon the subject of breaking dogs to tree birds. Almost any of the smaller varieties of dogs, will do it if used for the purpose.

E. J., New York.—1. What are the game laws of the State of New Jersey? 2. Underneath you will find bore of my shot gun, muzzle loader. What size is it, and also what would be the average charge of powder and shot? 3. Please inform me what is good to take rust off a gun and not injure the polish? Ans. 1. The game laws of New Jersey make a close season for ruffed grouse, quail, and rabbits, to November 1st; woodcock, July 4th, and wood duck, September 1st; squirrels, July 1st. 2. The gauge of your gun is No. 12; the charge would be determined by the weight; try 3 drs. powder and 1 1/2 oz. shot. 3. Try a raw potatoe on the rust spots, or kerosene oil.

C. A. Ward, St. Johns, N. B.—I shot a wild pigeon near Tuaco on the 13th October. We do not have them here now in any quantity. Do they ever winter here? Ans. There is nothing on record to show that the wild pigeon ever winters as far north as Tuaco.

C. W., New York.—1. I shot two fish hawks on Staten Island in the early part of September, the largest measuring (from tip to tip) five feet ten inches, the smallest five feet four inches; were they not unusually large? 2. Of what class of birds are clape, and is there any law protecting them? Ans. 1. Your birds were unusually large; they do not often measure more than five feet. 2. The clape, *Colaptes auratus picidae*, or woodpeckers. It is protected by law in some States, coming under the head of insectivorous birds. It is locally known as flicker, yellow hammer, and highholder.

A. B. D., New York.—Can you tell me if there is any shooting or fishing in Bermuda during the winter season, and what are the laws in regard to the same on that island? Can you give me the address of any party in the Western or Southern States of whom I can procure some wild turkey and mallard feathers? Ans. There is no hunting of any kind in Bermuda, but the fishing is excellent. The principal varieties are the angel fish, gray snapper, yellow, or red-fish, rockfish, grouper, butterfish, hind, chub, bream, headshead, squirrel fish, bonits, mackerel, round robin, gogger, buffalo jack, shad, hogfish, cowfish, barracuda, sennet, mullet, anchovy, and pilchard. See *FOREST AND STREAM* March 16th, 1876. For wild turkey feathers, write to Dr. Rawlings Young, Corinth, Mississippi; and for mallards to Fred Pond, Montello, Wisconsin.

T. C. E., Ithaca, N. Y.—Can you tell me where and when our common silver or fresh water eel spawns? I have caught them at all seasons of the year and have not yet been able to detect any sign of spawn. I have been told that they are a hybrid, but this idea seems improbable to me. Ans. Scarcely anything is known at present of the breeding of the eel. Investigations on this subject are in progress, but as yet nothing definite has been published. The question as to whether the eel is hermaphrodite or not has been recently discussed in European journals. Yarrell claims that eels are both unisexual and bisexual. Specimens containing ovarian eggs have been taken at about this season of the year. It is not known positively where the eggs are deposited. Wood's Natural History says they spawn in the gravel. In May, 1875, Wm. J. Wilson, of Warsaw, New York, enclosed to us a small quantity of eel spawn taken from an eel weighing about four pounds. For intelligent article on "Generation of Eels," see *FOREST AND STREAM*, June 13th, 1875.

T. W., Leesburg, Va.—Can you tell me how to prevent drop flies getting entangled with the leader? to make the entanglement the exception and not the rule? How are Sproat hooks numbered as to size? Do tackle dealers ever have illustrated circulars so that one could know by what name to order flies? Ans. We cannot imagine how droppers can be attached to a leader in such a way as to become entangled unless they are too long? The snell of the stretcher should not be over six inches long, the middle dropper four inches, and the upper one five inches. In making a leader, join the gut-lengths by the "water knot," and insert the knotted end of the dropper into the loop provided, and draw the lengths together tight. The only objection to this method is that it wears the gut in changing flies. With a snell hook, pass a bight of the leader into the loop, and the end of the dropper through the bight, and draw all parts to place. Drops are also fastened to the casting line by a half hitch. You can be taught all kinds of knots in a few minutes, but the instruction is difficult to impart in writing. Sproat hooks are numbered from 20, the smallest, down to 1, and up to 10.0, the largest. We have mailed you samples of 12, 9, 3, and 5.0. Hooks smaller than No. 12 are seldom used. It is very minute, as you will see. Tackle dealers have no circulars, such as you speak of. Accompany your order with information as to the localities to be fished and the fish to be caught, and any intelligent dealer can fill it properly.

J. M. J., Philadelphia.—I wish to get your advice in regard to stocking a lake in Sullivan county, Pa., 300 acres in area. What is the best game fish to put in? The water is the purest spring, but is supplied by some inlet into the lake itself, and by little or no water from the surrounding country. At present trout, sunfish, and catfish, are the only fish in it. The trout are old residents and do not seem to breed very fast. Can you suggest any means of keeping up the supply by assisting the trout to spawn? Would land-locked salmon breed in such water, and would salmon trout or black bass thrive harmoniously with the trout? and would they be valuable fish to stock with? Ans. In a pond of the kind you describe, it will be impossible to keep up the supply of trout, as they must have running water to breed in, and cool water for the young to retreat to (until they have attained two years growth) in order to protect themselves from larger fish. Land-locked salmon can live in water of warmer temperature than trout but require running water and a clean coarse, gravelly bottom for spawning; therefore black bass seem to be the only suitable game fish for your purpose, as they will spawn in the lake and protect their young.

LAST OF THE MODocs.—After the execution of Captain Jack and several other Modoc chiefs, the tribe to the number of one hundred and fifty-three, were removed to a reservation in the Indian Territory on the border of Missouri. Climatic influences have proved very unfavorable, and in three years fifty-eight have died. There is no physician upon the reservation, and light diseases like whooping cough prove fatal.

—A "down East" paper says there is a fog-bell on that coast that is "no more use than a boiled carrot hung in a boot-leg."

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOOR AND OUTDOOR INTERESTS OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[Post Office Box 2832.]

Terms, Four Dollars a Year, Strictly in Advance.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 20 cents per line; outside page, 30 cents. Special rates for three, six, and twelve months. Notices in editorial columns, 40 cents per line.

NEW YORK, THURSDAY, NOVEMBER 2, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible. Trade supplied by American News Company.

CHARLES HALLOCK,

Editor and Business Manager.

INTERNATIONAL POULTRY SHOW.—The exhibition of poultry, which opened last Monday at Pomological Hall, in Philadelphia, is claimed to be the largest and finest of the kind ever held in this country. Over 5,000 domestic birds are entered by exhibitors from the United States, and over 400 coops of domestic birds have arrived from England. There are in addition 600 specimens from Canada. Pigeons are largely represented, their department containing carriers, fan tails, Jacobins, turbits, tumblers, Antwerps, archangels, trumpeters, Suabians, Mahomets, Quakers, fairies, nuns, Moreheads, priests and runts. All kinds of domestic fowl, game chickens, turkeys, geese, ducks, and ornamental birds are represented. The show, however, will not be complete without the old Centennial "cock that crowed in the morn," so celebrated in the nursery rhymes of our great-grandfathers. How much some of the children of the new born generation would like to see the historical old chap whose praises are piped and sung even to this day!

REMOVAL.—Messrs. Thompson & Son, the well known manufacturers of and dealers in shooting and fishing suits, boots, hats, gun cases and sportsmen's paraphernalia generally have removed from their old quarters at 338 Broadway to new ones at 301 Broadway, where they will be happy to see all who are interested in waterproof goods. Messrs. Thompson & Son's advertisements will be found in another column.

A NEW GAUGE.—We are indebted to Messrs. John Rigby & Co., of Dublin, for a cut and description of the Allport patent tube gauge, an instrument for measuring very minutely the internal diameter of gun barrels or other tubes. Our space will not permit a detailed description of it, but it appears to be an indispensable tool for gunmakers, particularly in these days of choke-bores. With one a variation of 1-2000th of an inch can be detected with ease. Messrs. J. C. Grubb & Son, of Philadelphia, are Messrs. Rigby & Co.'s agents in this country.

A NEW JACKET.—Mess G. W. Simmons & Son, of Boston, are making a new garment, which sportsmen will find a great addition to their kit. It is a vest and jacket made of soft pliable leather and lined with flannel, making them perfectly impervious to wind. We have a sample of the leather, which we should be glad to show our friends.

—The President appoints November 30th as Thanksgiving Day.

A NEW USE FOR PARTRIDGES.

THAT "they manage these things better in France" is now so universally conceded that nothing from that country, which from another source might seem startling and strange, surprises us. And yet the latest instance of inventive genius on the part of a mercurial Gaul is so wonderfully original as to be worth recording. Sportsmen have heretofore found but two uses for game birds; first in shooting and afterwards in eating them. But it has been left for the Frenchman in question to supply another purpose to which the results of a day's sport can be applied, although we question whether the probability of its being brought into general use outside of his own country is sufficiently great to warrant him in asking for a patent. To make the story short: it seems that a Frenchman is now under indictment for the murder of his wife under the following peculiar circumstances: Suspecting her infidelity with an individual rejoicing in the euphonious name of Partridge, and finally receiving ocular demonstration of the correctness of his surmises, he philosophically contented himself with administering a castigation to the destroyer of his domestic happiness and allowed the weight of his vengeance to fall upon his wife. Visiting the market he provided six of the plumpest partridges he could find, and after cooking them to a turn invited his wife to a repast of her favorite bird, adding a pistol to his own persuasive eloquence. Compelled to obey, the poor woman managed to eat two of the birds and begged for mercy. The husband, however, was inexorable and declared that she should have her fill of partridge, and with the pistol to back him compelled her to pick the bones of the entire half dozen. Eight hours afterwards the woman died of a surfeit or from dyspepsia, or whatever the result might be which would follow such a meal. The husband might have rested secure in his revenge had he not boasted of what he had done, and an indictment for murder followed.

Thinking the matter over the startling thought occurs that perhaps, after all, the hints upon which he acted might have come from this country. Numberless have been the wagers as to the possibility of a man eating one quail a day for thirty days, and a report of some fatal attempt may have reached the Frenchman. His argument then would be that if one quail a day for thirty days would kill a man, seven partridges in one day would surely kill a woman. To be sure our quails are not partridges, although Col. Skinner insists that they are, and they are so called in Virginia. We apprehend that they were the common red-legged variety of France, which are rather tough at the best, and will not lie well to the dog. Hereafter let wives who have jealous husbands beware how they accept invitations to game suppers. A dish of woodcocks may be but a substitute for arsenic, and a larded grouse work all the mischief of corrosive sublimate.

DR. COUES' COLORADO EXPEDITION.

A private letter from Dr. Elliott Coues, U. S. A., operating for the Smithsonian Institution, says that the Zoological party under his charge returned on October 12th to Cheyenne, Wyoming Territory, where it fitted out on the 19th of last August for a season's work in the mountains of Colorado. The party first traveled west about fifty miles, to a point on the Laramie River, near the city of the same name, whence a road available for wagons led into North Park, where most of its observing and collecting was done. The Doctor selected this portion of Colorado as the one least frequented, and therefore likely to offer the greatest attractions to the naturalist and hunter. Since the massacre of some white men by Indians a few years since—we believe in 1873—North Park has had a bad name, and few persons have entered it. The Doctor says:

"I found it entirely uninhabited, except by a few miners who had gulch claims at the southern extremity. Large game was more abundant than I have seen it elsewhere in the west; the Park was fairly filled with antelope, which furnished the principal subsistence of my party during the whole season; while bear, elk, black-tailed deer and mountain sheep were numerous in the surrounding mountains. As a matter of special interest, I may note that a few of the woodland buffalo, known to the hunters as "mountain bison," and apparently constituting a variety of the species, still survive. Wild geese, several different kinds of ducks, and no less than four species of grouse, were found in abundance.

From North Park, I entered without difficulty into Middle Park, through a pass at the head of Muddy Creek, still scarcely known to be available for wagons, yet offering no obstacle whatever—in fact, the crossing of the Divide between the Atlantic and Pacific watersheds was decidedly easier traveling than some of the journeys made inside the Park itself. I spent some further time in Middle and Egeria Parks, and finally left the mountains by way of Berthoude's Pass, and so on to Cheyenne. I was unexpectedly embarrassed by sickness in camp on several occasions, but no serious mishap occurred. The results of the field work will be duly elaborated in the usual reports of the survey."

Dr. Coues closes with a gratifying allusion to the zealous and efficient services rendered by his assistants, especially Mr. L. M. Cuthbert, of Washington, and Mr. W. W. Karr, of Memphis.

—When Governor Chamberlain called on the Rock Hill (S. C.) Rifle Club to give up their arms, they shipped him an old horse pistol, a flint-lock rifle and an army musket, marked "C. O. D."

—An ancient horn was lately dug up near Cambridge. It is supposed to have belonged to one of the old tooters of the college.

MIGRATION OF THE DEER.

THIS is a subject which invites more careful observations than have been made. If we know that we have but one species of deer in North America that is strictly migratory in its habit—that its members entirely change their habitat with the changing seasons—we have reason to believe that several, if not all of the other members of this family, are more or less migratory in their habits, but to what extent we may consider at present an undetermined question. May we not with propriety ask of those whose opportunities have enabled them to gather facts bearing on this subject to lay them before the public? We think we may safely say that the Barren-ground caribou is the only American species which is strictly migratory. They occupy the district of country between the Atlantic coast and the Rocky Mountains north of the sixtieth parallel of latitude. They move to the north in the spring, the females in advance, to the shores and islands of the Arctic Ocean, where they drop their young, and in the fall return south and spend the winter in the lower latitudes, individuals passing sometimes south of the sixtieth parallel.

The woodland caribou is undoubtedly migratory, but to a less extent. Sir John Richardson informs us that contrary to the general rule, they migrate north in winter to about the sixtieth degree of north latitude, and south in the summer, yet we think it certain that this migration is not unusual as with their smaller congeners of the north, for many individuals at least remain near their southern limits throughout the winter. The great body of those occupying the Islands of Newfoundland spend their lives upon the island, though they change their range at different seasons of the year, while some cross the straits on the ice to Labrador.

If our moose or elk are to any considerable extent migratory, the evidence to establish the fact is wanting, although it is well established that the moose seek the elevated ridges in winter, and the low marshy grounds and water courses in summer. We lack the data which would enable us to speak with any assurance of the habits of the mule and the Columbia black-tailed deer in this regard.

The common or Virginia deer, originally occupied every portion of the United States. It has been more carefully observed than any of the other species. The weight of evidence is, we think, that these deer are partially migratory, though their migrations are limited in extent and in numbers. They do not entirely desert any district which they occupy at any season of the year, yet in the northern portion of their range numbers seem to change their abode from the north to the south in September and October, for a few hundred miles at least. We shall not stop now to detail the evidence tending to this conclusion, but will remain content with having called the attention of sportsmen and hunters and other observers to the subject and ask them to furnish us with such facts as have fallen within their observations, of any of our species, bearing upon this question. We have found the testimony of all our Indians to be in favor of a general migration of the deer. If those who have observed facts would lay them before the public when judiciously compared they might go far to settle the whole question. It is a subject on which little has been written by naturalists or sportsmen. J. D. CATON.

—Our Cohasset correspondent is doing good service in his part of Massachusetts. He says:

"I have caused the arrest of parties for snaring grouse, and there is a law in this State they find when I get a clue to who they are. The trouble is not in the law, but in the want of some spirit to report people. My man was fined \$125. One such case will do for a year in one town. I send a poster, defining the close seasons, which I have had put up in all the stores in these parts, and I know that I have saved hundreds of necks from the noose of the spring-up snare."

—The Easton (Pa.) Free Press of Oct. 25th says.—

"The Game Protective Societies mean business in their warning to violators of the law. The Philadelphia Society prosecuted Rob Sherwood and Dr. Hazzard, of Bristol, Bucks county, for shooting rail birds one day before the opening of the season. But two birds were sworn to, which cost the parties about \$40. A man named Ireland, of Vineland, N. J., consigned to a Philadelphia dealer 25 quail and one pheasant a few days ago. For this he was prosecuted by the West Jersey Game Society, and a verdict obtained of \$15 for each bird and costs, amounting in all to \$390. In default of payment, Ireland was committed to jail. This society has agents stationed throughout the State, who will cause the arrest of every one violating the game laws. The citizens of Delaware county, Pa., have given public notice that they will enforce the Act of Assembly for the protection of insectivorous birds against all persons engaged in gunning or hunting game on their premises. The different societies are taking such measures as to enforce the game laws that in another year it will be hazardous to violate them."

—Those who are curious to know what underlies Long Island may be gratified in part by the disclosures which the boring for water on the site of the Queens county poor house has revealed. The borer, which has reached a depth of 367 feet, passed through various layers of black clay, beach sand, creek mud, and, at a depth of 300 feet, solid wood, black in color, was encountered. After passing through this different-colored sand, gravel, clay, and mud were again met, and from the remarkable depth of 367 feet sedge meadow and green sedge roots are brought up. Heretofore the water has been saltish or brackish in taste, but now it seems to be fresh.

RAVINE REVERIES.

II.

THE slanting rays of an afternoon sun glance athwart the ravine and illumine the camp. They brighten and glorify the trees which yet retain their foliage—the brown-leaved beech; oak, with leaves of russet and red; walnut, with a foliage half yellow and green, and maple with its flaming foliage of red and golden. The withered and fallen leaves, which the gusts of late October have hurried hither and thither, have reduced the trees on the surrounding hillsides to their winter nakedness, and through them I can see various objects that indicate the proximity of the great Exposition—the dome of Memorial Hall, the towers of the Main Building, and the various bazars and buildings which constitute the side-show of our grand Exhibition.

As I doze on my couch of bear-skins, my mind recalls some of the incidents of my stay here, and the murmur of the water secures a continuity of thought even while the camp is thronged with visitors. Visitors—that should be the theme of this letter, for to them mainly am I indebted to what measure of pleasure or provocation has been afforded to me here.

But I grope wildly among the multitude that has been here for individuals worthy of description. From the thousands who have been here I must select a few representing peculiar types, and dismiss the majority with a benedictory blessing for their presence. Among those who stand out with greater prominence than others, is the man from Po'keepsie. Not that there are no great number of men from Po'keepsie, but he has indelibly registered himself in every mind as *the man from Po'keepsie*.

He came in early one afternoon, while I was conversing with two very estimable gentlemen—one from Ottawa, and the other from Virginia City—who were thorough sportsmen, and were interesting me mightily. One of them happened to mention a steamer he had seen with four engines, when this man from Po'keepsie broke in with the assertion that he had seen one with eight. Then he gathered himself and made more astounding statements than I ever heard made in one afternoon, by one man, in my life. He mentioned one Pete Gullem, a Norwegian, in Minnesota, who had killed five deer at one shot, and told how he did it. He said he was a machinist by trade, and some day, when he felt like it, was going to build an engine and steamer that would discount the Mary Powell a half-hour from New York to Po'keepsie.

This will be sad news for our friend Captain Anderson. He said he could drink more water than any man in the Centennial grounds—and Philadelphia water at that—and to prove this, went out to our spring and drank six cups of unadulterated water. Refreshed by this, he declared himself the limberest-jointed man in America, and then postured himself in various positions in front of the camp, standing on his toes, on one hand, and finally walking off on both hands with his legs in the air.

But he came back, and settled himself down for a story. As it details a rather peculiar experience, I give it to your readers.

Said he: "You think I can talk, but I met a man once that took the wind all out of my sails. I always think of him as

THAT BIBLE MAN.

He wan't a bible man, as we generally understand it—not one of them good old patriarchs, Abraham, Jacob and Beget—but a man who went about selling bibles. I was getting subscriptions for a new book, and was making money, too, when this fellow interfered with my plans for making a fortune. You see, I would always be sure to get 'em, for I could out-talk anybody I ever met, and I would stay to dinner, and stay to supper, and stay all night—for time was no object—till I got the subscription of the head of the family. As I said, I was sailing along swimmingly, till I first heard of this bible man, in the house of a friend. As I knew my friend was rather close-fisted, I launched at him with half an hour of reasoning, enough to convince a mule, when he broke in with, 'oh, yes, I know it; splendid, but we have a bible.'

"Yes, of course you have—so's everybody."

"Ah! but mine is such a lovely one—cost twenty dollars—and, and you know, I can't afford two such nice books."

"Into every house after that, I found that bible man had entered, and more, had sold a bible in every one. I called on an old friend whom I had reserved as a last resort. He wept."

"I am the most sold man you ever saw. A chap came here the other day and begun to talk about the benefits of religion. It was near dinner time, and I invited him to dine. After dinner he brought out a bible. He explained that he always read a few verses from that good book to give him strength. I thought it very strange he should carry such a large book with him, but said nothing. After he had got a little strength he went into us to buy a bible. We didn't want one. I had one which my mother-in-law gave me at the time of our marriage. I had never looked into that, and didn't see the necessity for another. But why detail the conflict. We bought the bible, and now find that we could have bought the same thing at the stores for fifteen dollars less."

"Before he went away he showed twenty silver dollars, which had been given him by an old lady who had been waiting all these long and weary years for just such a bible as he had brought her."

"I s'pose," said I, "you didn't undertake to convince her that yours was the bible she wanted?"

"Well," replied the old hypocrite, "I merely labored with her and prayed with her that she might be guided aright. I called upon a minister for his subscription."

"Ah, my friend, this is what I want, but I cannot purchase. Every year I lay aside a small sum for the purchase of new books. Yesterday I was waited upon by a most worthy gentleman from Medford, who was indeed a devout Christian, and I was convinced that I could do no better than devote my savings to the cause and buy a bible, although I had a nice one, presented to me by my parishoners. This gentleman will address my Sunday-school to-morrow."

"After my experience with the parson I caved and went into something else. I am looking for that bible man though; he is a tall, lean, dark-complexioned man, with black eyes and whiskers, and a hooked nose."

"Say, do you see that watch; I can take it to pieces and put it together again with my jack-knife."

And he did, and then commenced another story, which, promising to be a continued story, though complete in one volume, we vacated the camp—my friends and myself—and took up a new position on the hillside, where we waited impatiently for the man from Po'keepsie to draw off his forces. He didn't notice our absence for some time, and we could hear him explaining his theories to some unfortunate whom he had button-holed. At last he came out and looked around. He came up to us and bade us good-by, departing with the comforting assurance that he would come again to-morrow when he felt better, as he didn't feel like himself at all. If he had felt like somebody else I know of he would have been well nigh exhausted.

Cautiously, like a panther creeping upon his prey, a long, lean man navigates in our direction. He peers around a tree, creeps warily along the bridge, quickens his pace as he ascends the hill, stops, pauses a moment, and then turns around and beckons with his long forefinger to a portly female in black, who has followed doubtfully in his wake, and halts on the bridge.

"Come right along, Matildy; jes come right over, this here's the place, sure as guns. Hold on, I'll assist yer."

Did you ever notice the manner in which a man "assists", a woman—across a bridge, for instance? The idea that she always needs assistance, and must look up to man for help seems implanted in every female breast.

Here was a woman weighing one hundred and eighty, leaning upon a man weighing scarce a hundred. The way he assisted her was only that of a hundred others. Remember I am describing typical specimens. Crossing half-way over our narrow bridge he extended to her his bony hand, which she eagerly grasped. Timidly placing one foot on the logs she clung to his shaking arm, while he reversed his engines and backed towards camp. Striking his heel on one of the cross-pieces he stumbled and would have fallen had not her firm hand held him up. When he had recovered himself she became frightened and firmly refused to advance another step. The old man was in despair. "Here you, Mister, jest help this lady, will you, from behind?" The man addressed obligingly assented and kindly took the lady by the arms, administering several punches in the back, trod on her skirts, and otherwise assisted her, while her husband danced in front retreating toward the camp with hands extended, expostulating and entreating. After they were seated inside the camp the old man mildly reproached her for her timidity, and asked her reproachfully what she would have done had she come alone.

"Lord, mother! if yer had a set out to cross that air bridge alone you'd have fell into the drink."

"Pears to me, young man," said the old lady settling herself, "pears to me you look sickly," addressing the hunter. "Did you ever try boneset tea? 'tis mighty help-in' if you have a sore throat, and lung trouble,—an' that seems to be your complaint. Here, here's a little that I brought with me thinkin' maybe I might find somebody needed." And the kind old soul drew from a capacious pocket a small package of the herb alluded to and presented it to me. Thanking her, I laughingly accepted it, and soon bade adieu to the kind-hearted couple.

The buckskin dress, which is supposed to indicate the true hunter from the West, I was compelled to adopt, and this often led to many amusing experiences.

"What tribe do you belong to, young man," said a granger from the West, as he pointed at me with his forefinger, well loaded beneath the nail with samples of virgin soil. "Stuntosh," said I in Seminole, wishing to puzzle him, as I saw he intended to quiz me.

"He is an Injun, sure enough," said this man of bucolic proclivities. "Say, what's the name of this accordin' to your ideas?" Having thus obtained the name of everything in camp, "accordin' to my ideas" of the Seminole language, he departed satisfied, expressing loudly to everyone within hearing that "there was Injuns on the ground, sure as preachin'," notwithstanding apparently trustworthy information to the contrary.

One day there came to camp a bulky old gentleman with a smile on his face and something in his coat pocket that distended it wonderfully. It was that old gentleman from Westchester, and the smile on his face came straight from his heart, I know, for, from his pocket he drew a bottle of cider,—that veritable bottle of cider—which reposed peacefully in his cellar in Westchester when he informed me to that effect a month ago. He had snatched it from its cool retreat in that cellar in Westchester and brought it all the way to the "Hunter's Camp," to cheer the heart of the lonely hunter, who has no cider in his cellar mildly working itself into maturity—in fact, he has no cellar, either. Then our friend sat down and ruthlessly attacked

the contents of a capacious basket loaded with good things from Westchester, and in this good work the hunter gladly assisted, for the old gentleman was grievously wearied with his burden and it would have vexed him sorely to have carried that basket home with its weight undiminished—and it would have vexed the hunter, also, to see this valued friend depart with such a valuable stock of provender.

After the repast had been finished I shook hands with this whole souled man who had put himself to so much trouble to do me a kindness, and promised him, as I had a hundred others, in response to his earnest invitation to visit him, that sometime, some year in the future, I would, perhaps, meet him again. And he went away, leaving behind a pleasant memory.

If there is pleasure in making so many and varied acquaintances, there is also pain in the reflection that they are only the acquaintances of a day, and that the future will contain nothing but the pleasure of reminiscence—except by accident, we shall never, probably, meet again. As the season draws to a close, the visitors to camp are more hurried and their stays there are shorter as the days grow colder.

Now and then we have indications that camp and hunter are not wholly forgotten, for the mail carrier brings us a missive from some visitor who was pleased to appreciate the homely attractions of our camp, and retained a mental picture of the natural beauties of the ravine. That there is an innate love for camp life in every heart, is conclusively proven by the number who come here and indulge in recollection of their forest adventures. If there is anything a man retains the memory of fresh and vivid, it is his youthful field or forest life. Delightfully it recalls the days of his boyhood and awakens his tenderest sympathies, to meet with an *exposition* of camp life. If the building of the "Hunter's Camp" is productive of no other result, it, at least, has afforded rest and food for refreshing thought to thousands who, in this immense display of man's creative genius—the Exposition—were likely to forget the field in which man's tent is pitched—"all out of doors."

The next camp I shall occupy, a camp of my own, will be 'neath the sun of the Tropics, but then, though surrounded by scenery attractive and the objects most dear to a hunter's heart, my thoughts will constantly wander to the camp in Lansdowne Ravine, and to the friends I have made there.

FRED BEVERLY.

Rifle.

NEW YORK.—The fall meeting of the Sixth Division (N. G. S. N. Y.) Rifle Association was held on the ranges at East Syracuse on Tuesday and Wednesday of last week. The attendance was large, and the shooting exceptionally good. The meeting opened with the Director's match, five shots at 100 and 200 yards, for which there were four entries with the following scores:—

Names.	Yards.		T ^l	Names.	Yards.		T ^l
	100	200			100	200	
Capt. Birchmeyer.....	20	17	37	Capt. McAuer.....	18	13	31
A. C. Chase.....	20	12	32	Col. Hawley.....	14	5	19

The short range match at 200 yards, 7 shots off-hand, had 29 entries. Charles Talladay of Auburn took first prize, \$20, with a score of 31; O. G. Jones of Syracuse second, \$10, score 30; George White of Oswego third, \$5, score 29; P. O. Wright, Oswego, fourth, \$3, score 28.

The Division match, open to teams of five from any company in the division, was not completed until the second day. There were nine teams entered, the conditions being five shots each at 200 and 500 yards, making a possible 250 points per team. The scores were as follows:—

Team.	Total.	Team.	Total.
Co. A, 45th, Oswego 1st team.....	187	Co. B, 49th, Auburn, team.....	166
Yates Drag., Syracuse, 2d team.....	179	Co. B, 44th, Binghamton, team.....	163
Co. A, 49th, Auburn, team.....	174	Co. A, 48th, Oswego, 3d team.....	135
Co. A, 48th, Oswego, 2d team.....	171	Battery, Syracuse, 3d team.....	84
Yates Drag., Syracuse, 1st team.....	166		

The first prize was a silver plated water pitcher, donated by the State, and valued at \$100.

The Duncan badge match, shot at 200 and 500 yards, 5 shots at each range, had twelve entries and the following scores:—

Names.	200 Yards.	500 Yards.	Total.
George White.....	31	19	40
James Rowley.....	18	19	37
L. L. Barnes.....	18	18	36
P. T. Perkins.....	19	17	36
Col. C. V. Houghton.....	17	15	32
Capt. M. Auer.....	15	16	31
P. H. Stafford.....	18	13	31
H. A. Van Guilder.....	18	10	28
Col. Houtz.....	15	12	27
Capt. Olmstead.....	1	20	19
P. O. Wright.....	17	0	17
Capt. Paul Birchmeyer.....	15	0	15

The officers' match had eleven entries, and was shot at 200 yards, 7 rounds. The following are the scores:—

Names.	Total.	Names.	Total.
Capt. Olmstead.....	27	Capt. Jennings.....	23
Capt. Birchmeyer.....	27	Col. Houghton.....	23
Lieut. Robinson.....	25	Col. Storke.....	21
Col. Houtz.....	25	Col. Clarke.....	20
Capt. Auer.....	24	Lieut. McCartin.....	16
Capt. Nichols.....	23		

The mid-range match was open to all comers; military rifles shot at 500 yards, mid-range rifles at 600 yards, and long-range guns 700 yards. The first prize was secured by Mr. A. Butler Smith of Geneva, shooting at 600 yards, by the fine score of 24 out of a possible 25; the second by Jas. Rowley of Auburn, score 21; the third by P. H. Stafford of Auburn, score 20; the fourth by Lieut. J. McCartin of Auburn, score 20.

The scores made in the special competition by members of the Sixth Division for the second prize in the Inter-State match at Creedmoor are reported elsewhere. The long-range match was abandoned. The meeting was a success financially and in every other respect.

CREEDMOOR.—Saturday was a busy day at Creedmoor in spite of the wretched drizzling rain, which made "dimmed moist uncomfortable bodies" of everybody. There were four matches on the card, and a large number of riflemen were on hand, many being attracted by the first competition for a purse of \$500 in gold. This amount has

been presented by the Sharp's Rifle Company, but under such conditions as makes it appear probable that some time will elapse before the double eagles find their way into the pockets of any aspirant. The match is shot at 800, 900 and 1,000 yards, 15 shots each, but the winner must lead all other competitors at all three of the ranges, and coaching or practice on the day of the match is strictly forbidden. The winner in this instance was Mr. C. E. Blydenburgh, who was obliged to content himself with one fourth of the entrance money. Mr. B. is one of Mr. Conlin's pupils, and it is astonishing how many of the rising generation of long-range marksmen have graduated from that popular resort. The following are the scores of those who shot through:

Names.	800 Yards.	900 Yards.	1000 Yards.	Total.
C. E. Blydenburgh.....	65	65	68	198
E. H. Sanford.....	66	69	63	198
Maj. H. S. Jewell.....	64	68	63	195
L. Weber.....	66	67	62	195
A. V. Canfield, Jr.....	72	66	55	193
H. A. Gildersleeve.....	57	65	63	185
William Hayes.....	66	66	53	184
C. E. Overbaugh.....	64	61	55	180
H. G. Baldwin.....	62	61	55	178
G. L. Morse.....	52	62	40	154

The second match was for the marksmen's badge, for which there were 18 entries. This match is shot at 200 and 500 yards, 5 shots at each distance. The following are the scores:—

Names.	Total.	Names.	Total.
J. L. Price.....	41	J. E. Willard.....	38
James Harrison.....	40	W. Robertson.....	38
George Waterman.....	40	C. H. Eagle.....	26
A. B. Van Heusen.....	37	J. W. Gardner.....	25
D. Chauncey, Jr.....	34	J. W. Price.....	23
G. D. Scott.....	35	W. H. Cochrane, Jr.....	20
N. D. Wood.....	35	H. M. Burdett.....	19
J. A. Gee.....	33	G. H. Poole.....	12
L. Cass.....	32		

The third event was the contest among the individual members of the winning team in the late Inter-State match for the second prize in that match. It was won, it will be remembered, by N. Y. State team. The conditions were 10 shots each at 200 and 500 yards. Capt. Price of the Seventh Regiment, was again a winner. The following are the scores:—

Names.	200 Yards.	500 Yards.	Total.
Capt. J. L. Price.....	45	40	85
Lieut. T. R. Murphy.....	42	39	81
A. B. Van Heusen.....	36	41	77

Lieut. McCartin, of the Forty-ninth Regiment, shot at Syracuse, making an aggregate of 80 points, and Sergt. Barton, of the Forty-eighth Regiment, put his score on record at Oswego, accomplishing an aggregate of 78 points. The badge is a handsome gold medal worth \$100, the gift of Messrs. Baker & McKinney.

The last match was for the badge presented by the citizens of Nevada, of the value of \$1,000, to be shot for by companies of the National Guard of this State with military rifles at 200 and 500 yards, each company to bring at least 46 men to the firing point. There were four entries.

On Friday last the men of the Forty-eighth Regiment shot at their own ranges, near Oswego, Gen. Woodward, Col. Scott, and Capt. Treslaw being present to represent the New York and Brooklyn regiments. On Saturday the companies belonging to the Seventh and Twenty-third Regiments shot at Creedmoor, and that coming from the Seventy-first on Monday. The following are the company total aggregate scores that have been made:—

Team.	Total.	Team.	Total.
Forty-eighth Regiment.....	1,169	Twenty-third Regiment.....	956
Seventh Regiment.....	1,042	Seventy-first Regiment.....	864

The Forty-eighth won this valuable trophy last year.

GLEN DRAKE.—Report of best scores made during the matches of the American Rifle Association at Glen Drake, range October 26th, 1876, 600 yards. Association, R. Rathbone (winner), 5 5 5 5 5 5 5 5—50. Subscription, 5 shots, R. Rathbone, 25; H. Alton, 24; M. Ransome, 23; J. W. Todd, 21; D. F. Davids, 20. West Bergen match day, Saturday, November 4th. Distance, 200 yards, off-hand.

CONNECTICUT.—The first competition by members of the Connecticut Rifle Association for the handsome silver trophy, presented by Messrs. T. Steele & Son, of Hartford, of which we give on our first page an engraving by J. MacDonald, of 33 Park Row, this city, was shot on the Willowbrook range, near Hartford, on Saturday last. The conditions of the match required 10 shots each, at 500, 800 and 1,000 yards. The day was unfavorable for good shooting, being cloudy and raw. Teams from Middletown, New Britain and Hartford, contested. The following was the result:

MIDDLETOWN TEAM.				
Names.	500 Yards.	800 Yards.	1,000 Yards.	Total.
Orange Judd.....	46	39	36	121
O. V. Coffin.....	42	44	37	123
Dr. A. M. Shaw.....	47	29	35	111
C. O. Judd.....	48	46	33	127
Total.....				480

NEW BRITAIN TEAM.				
Names.	500 Yards.	800 Yards.	1,000 Yards.	Total.
C. O. Case.....	48	46	36	130
T. Wessel.....	39	31	33	103
Wm. Parker.....	50	41	40	131
H. P. King.....	46	34	6	86
Total.....				450

HARTFORD TEAM.				
Names.	500 Yards.	800 Yards.	1,000 Yards.	Total.
Geo. W. Yale.....	48	38	30	116
C. S. Davidson.....	49	30	30	109
N. Washburn.....	47	45	39	131
F. T. Studley.....	37	18	36	91
Total.....				447

At the conclusion of the shooting a resolution of thanks to Messrs. T. Steele & Son, for the elegant prize, was passed unanimously. Cheers were given for the winning team, to which Dr. Shaw, of Middletown, felicitously responded.

The annual shoot of the Association will be held at Willowbrook on Saturday, November 11th. A variety of prizes will be offered for competition, including a bull's-eye badge presented by the Middletown Rifle Club for the greatest number of bull's-eyes in ten shots at 1,000 yards.

THE INTER STATE MATCH.—We are indebted to Messrs. E. Remington & Sons, for diagrams of the targets made by the Crescent City Rifle Club Team, winners of the late Inter-State match, and who used the Remington Rifle. We should like to publish these diagrams, but the crowded state of our columns prevents.

CONLIN'S GALLERY.—The third competition for the marksmen's badges, and a side match for a neat scarf pin, took place at Conlin's Shooting Gallery, 930 Broadway, last Tuesday evening, Oct. 24th, 1876. The winners of the badges for the third contest are:—

No.	Name.	Total.	No.	Name.	Total.
1.	C. E. Blydenburgh.....	48	5.	C. E. DeForrest.....	40
2.	J. B. Blydenburgh.....	42	6.	A. B. Dodge.....	39
3.	T. C. Banks.....	41	7.	Col. J. B. Loomis.....	39
4.	P. Lorillard.....	40	8.	S. S. Brown.....	39

The pin was closely contested for, and finally won by C. E. Blydenburgh; score 48 out of a possible 50. The conditions for it were: ten shots, rifle, off-hand, 75 feet, 200 yards Wimbledon reduced for the range. The competitions take place Tuesday evenings of each week, commencing at 4 p. m.

THE MARKSMAN'S BADGES.—We present herewith, cuts of the Marksman's Badges, which were shot for at Conlin's Gallery, 930 Broadway, every Tuesday evening. These badges are for the highest eight scores made in the weekly competition, each to be won three times before becoming the property of the winners. The conditions are 10 shots each, at 110 feet, target reduced to correspond with Creedmoor, 200 yards target. The competitions are open to all comers.

—The following scores were made by Mr. John M. Crane, of the Jamaica Rod and Rifle Association, at a practice shoot Oct. 24th, 200 yards off-hand, standing, possible 50:—

Score.	Total.	Score.	Total.
5 4 4 4 4 5 5 4 5 4	44	5 5 4 5 5 5 5 4 5 5	48
4 4 5 4 5 5 4 4 5 5	45	5 5 4 5 4 5 4 5 4 5	45
5 5 4 4 5 5 5 4 4 4	45		

This, I believe, is the best score ever made on a 200-yard snipe off-hand.

SAML. S. AYMAR, Secretary.

Game Bag and Gun.

GAME NOW IN SEASON.

Moose, *Alces malchis*. Pinnated grouse or prairie chicken, *Cupidonius cupido*. Caribou, *Tarandus rangifer*. Elk or wapiti, *Cervus canadensis*. Ruffed grouse or pheasant, *Bonasa umbellus*. Red or Virginia deer, *C. virginianus*. Quail or partridge, *Ortyx virginianus*. Squirrels, red, black and gray. Hares, brown and gray. Wild turkey, *Meleagris gallopavo*. Woodcock, *Philohela minor*.

“Bay-birds” generally, including various species of plover, sand-pipers, snipe, curlews, oyster-catchers, surf-birds, phalaropes, avocets, etc., coming under the group *Limicola* or Shore Birds.

—We are requested by Messrs. Holberton & Beemer, of No. 102 Nassau street, to mention that they have on exhibition a Nichols & Lefever gun, the cost of which is \$100, that they think will compare favorably with imported guns at the same price.

—The Oswego Times says the “flocks of pigeons are beginning to appear, and it is prophesied that there will be an unusually large number of them this year. This will be cheering news for sportsmen.”

—The Georgetown (Colorado) News notices the arrival at that place of a noted hunter, named Charles Utter, and two assistants, after a three months hunt. They brought in one hundred elk, one hundred and forty antelope, and three hundred and nine deer. His field of operation was the Middle Park, and his main camp on Grand River, below the cañon, at the upper end of which the hot springs are located. Besides this he has sent one thousand pounds of trout and a wagon load of ducks to Georgetown. No count was kept of the small game, such as grouse, sageshens, jack-rabbits, ducks and geese. Not a single bear was killed or seen. About the 22d of September the party was overtaken by a terrible snow storm, which caused the loss of four mules. Plenty of bison were seen, but none were killed.

ALABAMA.—At the Alabama State Grange Fair, held in Montgomery, on the 28th of October, the prizes offered by the Montgomery Shooting Club, amounting to \$2,500, were hotly contested. The silver tea service won by E. S. McClurg, of Knoxville, scoring 33 successive birds, the entire number. The diamond badge and championship of the United States, was won by W. M. DeLong, of Chattanooga, scoring 19 out of a possible 20.

PENNSYLVANIA.—A challenge having been made by Geo. Watson of the Oxford Club, to shoot any man in the 20th Ward, was taken up by Mr. Keane, who engaged to shoot for him, Wm. Glenn, the well known real estate agent. The match was shot at Echo Park, on the 23rd inst., for \$25 a side, and the loser to pay for the birds. Rhode Island rules and traps. We give the scores:—

Name.	Score.	Total.
Watson.....	0 1 0 1 0 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1	25
Glenn.....	1 1 1 1 1 0 1 0 0 1 0 1 1 1 1 1 1 1 1 1	25

The judges were Robert Oberman and Hugo Oppermann. Referee, Geo. Bartholomew. The day was all that could be desired.

LONG ISLAND SHOOTING CLUB.—The regular monthly match of the above club was shot on the grounds near Dexter's on Friday last. The strong wind and keen, chilly air, together with the good quality of the birds, prevented large scores. The conditions of the match were seven single birds each at 25 yards rise. Mr. Radin was the winner for the fourth time in the ten contests already shot. The following are the scores of those who shot at their full quota of birds:—

Names.	Total.	Names.	Total.
Radin.....	6	Paddy.....	3
Dr. Wynn.....	5	Race.....	3
Blankley.....	5	Hartshorne.....	3
Broadway.....	4	Miller.....	3
Van Wyck.....	4	Dr. Atkins.....	2
Walton.....	4	Martin.....	2
Gildersleeve.....	4		1

NEW HAMPSHIRE.—Our Sutton correspondent sends us an account of a squirrel hunt which took place in that town some days ago. The two parties engaged were led by Capt. George Chadwick and Hiram K. Davis. At night when the game was counted Chadwick's party scored 5,775 and Davis's 6,475. Included in the lot were 101 partridges, 93 grays, 14 hedgehogs and a live owl. Each party contained 16 men. The beaten party furnished an elegant supper at Putney's Hall, and the day closed with a musical entertainment and speech making.—*Manchester Mirror*.

Salem, October 30th.—Shooting for the past week has been fair. “Cooting,” owing to the cooler mornings, is getting more quiet. The wood gunning has been pretty good lately, woodcock having been found quite numerous, as also have quail and rabbits. Partridges are numerous, but very wild.

Cohasset, October 30th.—Coot shooting is nearly done, and we all haul up next week. There is now a large flight of southerly ducks, but they don't decoy well; also some shelldrakes and brant. Twenty-two geese were shot one day this week.

NEW YORK—Rainbow Pond, Adirondacks, October 19th.—“We are having a glorious time; killed four deer in three days on Rainbow, and a party of trappers killed three at the same time. There are no sportsmen here, and the neighbors all club together and have a grand hunt. It has frozen so hard that we are obliged to walk to the head of Rainbow, the creeks and rivers being frozen over. We have had about six inches of snow, and it is an easy matter to follow up the deer's tracks. Two bears have been caught near Buck Pond and Haystack. They are very plentiful this fall.

Niagara Falls, October 29th.—Quite a variety of game killed here the past week, largest bag of quail being eleven in one half day; largest bag of woodcock six, and 13 snipe by two different parties; also, there were three wild geese taken below the Falls. The quail were all found in the open fields, and pretty hard to find on account of the fine weather for the last week.

NEW JERSEY—Red Bank, Monmouth Co., October 30th.—The prospect for quail in this county is the finest for years. Woodcock scarce; killed one yesterday. Three of our young duck-shooters start for Barnegat this week. There average ages seventy-five years. “Squire,” where are you?

PENNSYLVANIA—Blooming Grove Park, October 28th.—The members here now are Messrs. Greene, Myers, Burns, Dove, Avery and Brown. Last Saturday a fine black bear was shot in Balsam Swamp; a fine buck on Monday, and a red fox. Wednesday, another bear, weighing 300 pounds was shot, and is now hanging in front of the Club House. It will be served up at John Sutherland's restaurant, on Thursday next. Birds plenty.

MARYLAND—Red Bank, N. J., October 30th.—Just returned from Maryland. Spent a most enjoyable time among the quail. The pot hunters had taken the cream. Weeds quite rank. Weather warm. No snipe. No Woodcock. Millions of wild fowl on the flats at Havre de Grace. No decoying in Spesutia Narrows. Some flying point shooting. Blinds in readiness. Prospect good after November 1st. Ducks will trade after being driven off of the flats. Some fine shooting at Carroll's Island, on the Gunpowder River. Big gunner caught at Havre de Grace. I noted D. W. Lindsay's name in your last issue. I can recommend him to all in search of the finest duck and goose shooting in America. This ground joins the old Currituck Club grounds, and are the best in the Sound.

KENTUCKY—Louisville, October 28th.—Partridges are plentiful. Our season opened on the 20th. The gunners were out in force, but owing to the dry season light bags were made. A recent rain, however, has made hunting more favorable.

ILLINOIS—Lebanon, St. Clair Co., October 23d.—Quail abundant in this vicinity; ten or twelve large coveys can easily be found a short distance from town, though some are not yet full grown. A few pinnated grouse may be found in prairies east of this place. Several flocks of mallards and teal were seen migrating lately. Wilson's snipe scarce in autumn.

TO BROWN GUN BARRELS.

CHICAGO, Ill., Oct. 23d.

EDITOR FOREST AND STREAM:—Having seen several inquiries in your paper from correspondents as to the manner of brown gun barrels, I can, if you choose to publish it give to them the desired information. First for the fluid: Tinct. of muriate of iron, 1 oz.; nitric ether, 1 oz.; sulphate of copper, 4 scruples rain water, 1 pint. Now for the *modus operandi*: First, securely plug up both ends of barrels, leaving one plug in each end of sufficient length to be used as handles; then thoroughly clean with soap and water, after which cover with a thick coat of lime slacked in water, and when that has become dry remove it with an iron wire scratch brush; this is to remove all dirt and grease from the barrels. Then apply a coat of the fluid with a rag, and let it stand for twenty-four hours, when a slight rust will have appeared; then take barrels and immerse them in a trough containing boiling hot water, after which scratch them well with the scratch brush. Repeat this until the color suits, which will be after three or four applications. When completed, let the barrels remain in lime water a short time to neutralize any acid which may have penetrated. Take great care not to handle the barrels during the operation, for the least particle of grease will make bad spots. That the above may prove satisfactory to some of the readers of FOREST AND STREAM and that those readers may increase in number each year is the wish of

HENRY FISHER.

CAUTION TO SPORTSMEN!

ALL SPORTING PAPERS PLEASE COPY.

BRIDGEPORT, Oct. 27th, 1876.

EDITOR FOREST AND STREAM:—

Your correspondent "P. P. P.," of Baltimore, in your paper of the 26th inst., writing of the unfortunate accident that happened to Dr. Thebaud while loading one of Eley's paper shells, advises "loading the shell first" and "capping after loading."

Confirming the remarks that follow the letter, allow me to state that having been engaged for ten years past in the manufacture of central-fire shells and cartridges of all kinds, from those used in small pistols to the one-inch Gatling guns, including both metal and paper shells for shot guns, and a great variety of different kinds of primers; that during the whole experience, which covers hundreds of millions of cartridges, we have never had a central-fire cartridge explode in the process of loading, after the caps or primers have been put in. But in the process of capping, which has always been done before loading, thousands of caps have exploded even when being seated with carefully-prepared machinery. All caps in which the anvils are placed upright, similar to those used in the Eley shells, are more liable to explode when being put on the shell than most other kinds. From positive knowledge on the subject I would as soon advise charging a muzzle-loading gun with the caps on the nipples and the hammers at full cock as putting the caps or primers on breech-loading shells or in any manner meddling with them after the shells are charged.

If "P. P. P." feels inclined to continue the plan he recommends, I would suggest the attendance of a surgeon and undertaker while he is loading his shells. If parties when loading shells will first see that the caps or primers are pressed well in their places, and do not project above the heads of the shells; then place the shell on a block with a hole under the cap, so deep that a stray shot or other small article will not give something for the cap to rest on. There will be no danger of an accidental discharge with any reasonable usage in loading or ramming home the charge.

A. C. H.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

Black Bass, *Micropterus salmoides*; Weakfish, *Cynoscion regalis*.
M. nigricans. Bluefish, *Pomatomus saltatrix*.
Mascalonge, *Esox nubilior*. Spanish Mackerel, *Cybius maculatus*.
Pike or Pickerel, *Esox lucius*.
Yellow Perch, *Perca flavescens*. Cero, *Cybius regale*.
Sea Bass, *Sciaenops ocellatus*. Bonito, *Sarda pelamys*.
Striped Bass, *Morone americana*. Kingfish, *Menticirrhus nebulosus*.
White Perch, *Morone americana*.

FISH IN MARKET.—Our quotations show rather an advance in prices during the past week:—Striped bass, are worth 18 to 20 cents per pound; smelts, 25 cents; bluefish, 12½ cents; salmon, (frozen) 45 cents; mackerel, 15 to 25 cents each; white perch, 15 cents per pound; Spanish mackerel, 75 cents; green turtle, 15 cents; terrapin, \$12 per dozen; halibut, 18 cents per pound; haddock, 8 cents; kingfish, 25 cents; codfish, 10 cents; blackfish, 15 cents; flounders, 10 cents; sea bass, 20 cents; eels, 18 cents; lobsters, 10 cents; sheephead, 25 cents; scollops, \$1.50 per gallon; soft clams, 30 to 60 cents per hundred; whitefish, 18 cents per pound; pickerel, 18 cents; salmon trout, 20 cents; hard-shell crabs, \$3.00 per 100.

—Striped bass, running from half a pound to two and a half, are now being caught in great numbers down the inner bay on what is known as "The Plot"—a portion of the Jersey Flats between Caven's Point and Sand Island, where the fish resort to feed upon the shrimp and small crabs. A great many anglers are constantly upon the ground, and make good catches. One day last week Mr. L. A. Abbey, of Abbey & Imbrie, took thirty in two hours. A bass rod, reel, float, and 100 yards of line, constitute the proper tackle. The fish will continue to run until the 15th of November.

—The season for fishing in northern fresh waters is now about over, and the record of the summer does not show up to advantage. The Adirondack region, to which multitudes who constitute the great mass of anglers in this section have been in the habit of resorting, has disappointed most all visitors. Sebec Lake and Grand Lake stream, in Maine, have scarcely made the fisherman happy who went there. Rangeley has held its own, we believe; but that is an exceptional locality in its fluvial and physical features; and even a portion of it has had to be set aside for a period of years, to enable it to rehabilitate itself. Magog and Megantic disappointed us, as it did many others. The salmon rivers of Canada suffered from late floods, and when the waters lowered, the fish went up with a rush. There was fair sport for a little while for the anglers who were fortunate enough to be on the ground, and then the fun ceased, leaving a hundred or more hungry expectants stranded, as it were, upon their dry banks. Restigouche never

had so many visitors of this ilk since it began to flow, as it did last season. The Cascapodiack was, however, a remarkable exception in its fruition, it has always proved itself one of the most reliable rivers in the Canadian Dominion. It rises in the Gaspé district, and empties into the Bay Chaleur. The St. Lawrence rivers, Moisie and Godbout, did not do as well as usual, and the commercial statistics of the salmon catch for the summer show a marked diminution in weight and numbers.

Bass fishing in the Peterboro lakes, Ontario, brought its reward, as it always does, the region being one of the finest fishing localities in Canada. Land-locked salmon thrive in its waters, and are taken of large size and in considerable numbers in May. Our report from the H. B. Co.'s agent at the Nepigon is a good one, and some 30 or 40 anglers were there to enjoy the sport of catching its magnificent trout, which average three pounds apiece, or more. Central New York has afforded fine sport for lake trout, bass and pickerel. In the St. Lawrence, however, the fishing was very poor. Mr. Andrew E. Hume, the proprietor of Hume's Island, near Alexandria Bay, who stays at the Thousand Islands all summer, took only five mascalonge during the whole season, the heaviest weighing 35 pounds.

He says: "I heard of only one heavier, weighing 37½ pounds taken at Clayton. The bass fishing with flies was very poor indeed, but occasionally one did a good day's still fishing with minnows. The best was 47 bass, with an average weight of nearly two pounds, the total being 89½ pounds. I think myself the bad fishing was owing to the very high water we had and the large number of grasshoppers which were nearly always to be seen on the surface of the river. I think that the shad Seth Green put into the lake are doing as well as when I was on Long Island. I continually caught small ones about two inches long in my minnow seine, which is only 20 feet long."

Rice Lake, Canada, a favorite resort for Americans, has been a closed resort this summer owing to the imposition of the \$1 per day tax upon all foreign anglers. Pennsylvania has made a fine showing especially on the Schuylkill and Delaware rivers, where the bass fishing was never so good, perhaps. We hear of no great trout stories from the wilderness counties. In Virginia, on the Potomac, at Great or Little Falls, there has been a marked improvement in bass fishing, as well as an increase of stock fish in the interior waters, through the efforts of the Fishery Commissioners. Perhaps we shall have better luck next year, all round. Meanwhile we must hang up our rods and creels, unless we go to Florida, where the products of the sea and river seem innumerable and the sources of supply never failing.

The waters of Michigan and Wisconsin which abound in trout, black bass, grayling (in the former), and pike, are rapidly coming into favor with anglers, who resort to their chosen fishing grounds in greater numbers each succeeding year, and all reports that we have received from those States, as well as from Minnesota, indicate satisfactory results for the past season. As eastern streams and lakes become depleted, these will attend in proportion, and some future day may find them as popular and as much visited as Maine and the Adirondacks.

—A Gaspé, Canada, correspondent, writing from Perce, reports the cod fishery very unsatisfactory, the catch being about two-fifths below the average, and the smallest known for thirty years.

MOVEMENTS OF THE FISHING FLEET.—The fishing arrivals at this port the past week includes 16 from the Banks, 24 from Georges, 6 from the Bay St. Lawrence, and 2 from shore mackereling trips, making a total of 48. The receipts of fish have been 1,000,000 pounds Bank codfish, 350,000 pounds Georges codfish, 185,000 pounds halibut, hake cod, haddock and pollock from off shore, and 2,800 barrels mackerel. The mackerel season is practically closed, although one or two good fares have been secured in Barnstable Bay within a week. Most of the fleet have hauled up. The Bay St. Lawrence fleet have nearly all arrived home and will not average one hundred barrels to a vessel for the entire season. The stock of mackerel on the market is light and prices are well maintained.—*Cape Ann Advertiser*, Oct. 27th.

—The Scotch poaching angler suspends by straps under his outer garments a capacious bag of coarse linen for concealing the salmon, while he carries in his hand quite innocently a string of trout. Lord Scrope once caught a poacher with a salmon in his bag, and demanded how it got there. The reply was, "How the beast got there I dinna ken. He must ha' louped into ma pocket as I war wading." His clever answer so amused Lord Scrope that he let him go scot free.—*Scribner*.

BOOKS ON FLY-MAKING.

LEESBURG, Va., Oct. 40th, 1876.

EDITOR FOREST AND STREAM:—

A gentleman inquires in one of your late issues for a work on fly-making. E. J. Hale & Bros., of New York, had a copy of "Blackie's Art of Fly-Making" last year; and there are more whence that came. "Ephemera" says of it: "I earnestly recommend this valuable little work to all who wish to become perfect fly-making adepts. It is sold by the author (a fly-maker), 54 Dean street, Soho, and by Messrs. Longmans & Co., Paternoster Row."

We have a list of English works giving more or less instruction in the art of fly dressing, which is certainly useful in a general way; but we do not recommend them to our anglers, because the patterns are for the most part different from those adapted to American waters. Quite recently a gentleman who advertises in our columns, as will be seen by reference to them, has undertaken to give lessons in fly-tying, and we would earnestly recommend all those who can avail themselves of his services, to do so. Those at a distance must content themselves with printed instructions, and the best we know of are those prepared by the veteran, Thad Norris, Esq., for the columns of this paper. They are illustrated with suitable designs, and will be found in Nos. 12, 13, 14 and 16, of Vol II., FOREST AND STREAM. They can be studied the coming winter with profit.

Rational Pastimes.

COACHING.—The fall parade of the Coaching Club on Saturday, was not in all respects a success. This consummation to be perfect requires bright skies and gaily dressed ladies, and although to be sure a few of these latter appeared on the dray roofs, they were muffled in waterproofs. Six coaches only participated, the drivers being Col. Jay, Col. Kane, Mr. Bronson, Mr. Neilson, Mr. Jerome and Mr. Bennett. The programme as to route was carried out, the parade ending at the Brunswick.

ATHLETIC.—The third meeting of the Athletic Association of the College of the City of New York, which was to have taken place Saturday on the New York Athletic Club grounds, at Mott Haven, was postponed on account of the weather and will probably take place on Tuesday, November 7th, at the same place.

FOOTBALL.—An international football match between Harvard University and the Football Association of Canada took place Saturday. When the game was called Harvard was victorious by two goals and two touch-downs; the Canadians nothing.

BASE BALL.

MODEL GAMES OF 1876.

The following is the record of the model games won by each of the League clubs during 1876. The limit is placed at five runs for the winning nines, and the order is that of the most games played:—

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to TUCKERTON, BEECH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for WALT WATER SPORT AFTER FIN AND FEATHER.

D. M. BOYD, JR., Gen'l Pass. Agent.
FRANK THOMPSON, Gen'l Manager. feb17 1t

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over two thousand miles of road, radiating from Chicago. Like the fingers in a man's hand, its lines reach in all directions, and cover about all the country north, northwest, and west of Chicago. With one branch it reaches Racine, Kenosha, Milwaukee, and the country north thereof; with another line it pushes through Janesville, Watertown, Oshkosh, Fond du Lac, Green Bay, Escanaba, to Nagaunee and Marquette; with another line it passes through Madison, Elroy, and for St. Paul and Minneapolis; branching westward from Elroy, it runs to and through Winona, Owatonna, St. Peter, Mankato, New Ulm, and stops not until Lake Kameska, Dakota, is reached; another line starts from Chicago and runs through Elgin and Rockford to Freeport, and, via the Illinois Central, reaches Warren, Galena and Dubuque, and the country beyond. Still another line runs almost due westward, and passes through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar Rapids, Marshalltown, Grand Junction, to Council Bluffs and Omaha. This last named is the "GREAT TRANS-CONTINENTAL ROUTE," and the pioneer overland line for Nebraska, Colorado, Utah, Idaho, Montana, Nevada, California, and the Pacific Coast. It runs through the Garden of Illinois and Iowa, and is the safest, shortest, and best route to Omaha, Lincoln, and other points in Nebraska, and for Cheyenne, Denver, Salt Lake City, Virginia City, Carson, Sacramento, San Francisco, and all other points west of the Missouri River.

TO SPORTSMEN:

THIS LINE PRESENTS PECULIAR ADVANTAGES—FOR PRAIRIE CHICKEN, DUCK, GEESE, AND BRANT SHOOTING. THE IOWA LINE TO-DAY OFFERS MORE FAVORABLE POINTS

than any other road in the country, while for Deer and Bear Hunting, and for Brook Trout, Lake Salmon, Pike, Pickerel, and Bass Fishing a hundred points on the Northern and Northwestern lines of this company will be found unsurpassed by any in the West.

MARVIN HUGHITT, W. H. STENNETT,
Gen. Supt., Chicago. Gen. Pass. Agt., Chicago.

Thomson's

Oil Finished Grain Leather Shoe-Pack or Moccasin.

With Sole, Price, \$7.50. Without Sole, \$5.50.

Made with heavy sole for land use; also without sole for snow and canoe purposes. All hand sewed and strongly made. Laced in front with hooks (over English style of water-tight tongue), thereby securing PERFECT FIT around ankle, thus preventing all slipping at the heel. Made with broad soles and on scientific principles.

Fills the want long felt by sportsmen for an easy fitting and durable shoe.

In ordering, state size of boot worn. Sent by mail on receipt of price, with 40 cents additional for postage, or by express C. O. D., everywhere. Manufactured by THOMSON & SON, 301 Broadway, New York. jn27-tf

Good's Oil Tanned Moccasins

The best thing ever worn by sportsmen. Not injured by wetting and drying—always soft and easy to the feet. Four different styles. Prices to suit the times. Send for illustrated circular and price list. (Successor to Frank Good). MARTIN S. IUTCHINGS, P. O. Box 368 Dover, N. H. jn27-tf

Sportsmen's Goods.

The 'Boston Shooting Suit.'

MANUFACTURED ONLY BY

G. W. SIMMONS & SON,
Boston, Mass.

SOLD everywhere in the U. S. by all first-class dealers in

SPORTSMEN'S GOODS.

EACH GARMENT DISTINCTLY MARKED

"BOSTON SHOOTING SUIT,"
made by
G. W. Simmons & Son.

This new design of WATERPROOF SHOOTING SUIT, made from extra quality duck, has attained such popularity as to be called for from all parts of the country, and even from England.

"Shipping clothing to England strikes us very much like sending 'Coals to Newcastle,' but the merits of the 'BOSTON SHOOTING SUITS' have been heard of in the Old Country, and that land of sportsmen has sent an order to Messrs. Simmons & Son, which will doubtless be followed by many others."—Boston Paper.

The design embraces the best points of the English and French Suits, combined with the necessary requirements for American service. Particular attention has been paid to color.

Each suit is water-proofed by a new patent process. The seams and pocket corners are securely fastened, and nothing neglected to render the suit perfect in every respect.

THE PRICE HAS BEEN FIXED AT \$13, TO INCLUDE HAT OR DOUBLE VISORED CAP, DETACHABLE HAVERLOCK, COAT, VEST, AND PANTALOONS.

One hundred suits will be kept ready in stock, so that we can furnish to order any size required, at a moment's notice.

In the *Golden Rule* (Rev. W. H. H. Murray's paper) the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof suit, specially adapted for sportsmen, designed and made up by Simmons & Son, of Boston, and to which we call the attention of all brethren of the out-door and shore-shooting fraternity, because it meets the demand of personal comfort and convenience beyond anything of home manufacture seen by us before. As a sportsman, we give it our unqualified endorsement, as combining the best points of the English suits, and in addition skilfully adapted to the necessities of the American service. It is a most admirable and satisfactory contrivance in color, style, water-proof quality and capacity. The coat is a marvel in this latter respect."

PERSONS ORDERING FROM A DISTANCE NEED SEND ONLY THE FOLLOWING TO BE SURE OF A PERFECT FIT: BREAST MEASURE, WAIST MEASURE, INSIDE SEAM COAT SLEEVE, INSIDE SEAM PANTALOONS; MENTION HEIGHT AND WEIGHT.

G. W. SIMMONS & SON,

"OAK HALL," BOSTON, MASS.

"THE BOSTON SHOOTING SUIT.—One of the most successful manufacturers of Waterproof Shooting Suits is the firm of G. W. Simmons & Son, Oak Hall, Boston. We had one of their suits on duty at Hunter's Camp at Philadelphia Centennial Exhibition. It has grown gray in service, but is good for use yet. This suit is known as the 'Boston Shooting Suit,' in contradistinction no doubt, from the garments which are manufactured out west and at Washington, each of which has a local demand of its own. It is said that the western prairie fowl can distinguish any sportsman who visits their domain by his clothes. 'They can tell him 'by the cut of his jib,' and the old educated birds (which no one cares to eat, by the way,) know exactly what distances to keep from the rail-shooters, the brant men, and the chicken-killers respectively, to be safe. 'They have 'got them all down fine.' This used not to be so before the waterproof shooting suits were invented. Bostonians, Hoosiers and Buckeyes all stood the same chance then. But now it is—with a shrill pipe to leeward by the old-weather cock—'here comes a Simmons; cheese it!' or, 'Ere's a 'Enning—lie low!' or, 'Look out for Holabird! Scatter! you beggars, scatter!'—FOREST AND STREAM]

WILD GOOSE

—AND—

BRANT SHOOTING

Begin this month. The Shooting Outfit which is now recognized as the best in the country, is that known as the "Boston Shooting Suit," waterproofed and made only by G. W. SIMMONS & SON, Oak Hall, Boston. Sold by dealers in Sportsmen's Goods generally throughout the country. Price complete \$13.

Our new Patent Decoy is light and compact (one dozen occupying but little space), so that a sportsman can conveniently carry a case of large-sized birds in his carpet-bag.

WIND-PROOF

Leather Vest and Jackets,
Flannel-Lined.

(Made and sold only by Messrs. G. W. SIMMONS & Co., OAK HALL, BOSTON.) are considered the most sensible protectors ever devised for winter wear. They are especially adapted to the requirements of sporting men, whose rapid walking is likely to be followed by frequent halts in the cold wind. Price, Vest \$7; Jacket \$9. Measurements required are Waist, Breast and Inside Seam of Sleeve. Mention Height and Weight.

LADIES LEATHER VESTS AND JACKETS made to order. Indispensable to all who are in any way exposed to the weather.

G. W. Simmons & Son,
32 to 38 North St., Oak Hall,
Boston, Mass.

Gunpowder.

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 3 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12 1/2, and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

70 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6 1/2 lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.g., FFG, FFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 lb.

All of the above give high velocities and less resistance than any other brands made. BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS. SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER CO.,

26 Murray St., N. Y.

Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

CHALLENGE.

The undersigned is prepared to prove all the superior qualities he claims for his powder.

Safety, Cleanliness, Strength, Little Recoil, Little Smoke, Small Report, Less Heating of the Barrel in Rapid Firing, and its Regularity in Shooting.

He challenges all riflemen to shoot against him with black powder, 200 rounds, without wiping; 100 rounds off-hand, at 200, 500 and 1,000 yards respectively, and 100 rounds in any position at same distances; the 200 rounds equally divided at the three ranges; sighting shots extra.

Will shoot for money if desired. The powder is also well adapted for shot guns. Inquire for the "Dittmar Powder" of your dealer address the

Paper and Metallic Shells

FOR

Breech Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers. dec 23 tf

New Paper Shell Conical Base. WILLIAMS' PATENT.

WILLIAMS' PAT. CONICAL BASE PAPER SHELL. ST. LOUIS SHELL MFG. CO.

Manufactured by the ST. LOUIS PATENT SHELL MFG CO., office 209 North Fourth street. The advantages claimed for these shells are: Cheapness, a saving of 25 per cent. in the use of powder, less recoil. These shells are equal to the best English, and 3 1/2 drachms of powder will do the work of 5 drachms in any other shells. The sizes made are No. 10, 2 1/2 inches; No. 12, 2 1/4 inches. Longer shells made to order at extra cost. Ask your gunmakers for them and use no others. Shells are not mailable. Sample 100 will be sent by express on receipt of \$1.30 for 10s or \$1.15 for 12s ang 24 9t

PAINTING. THE PATRONS' PAINT COMPANY are manufac-

turing the INGERSOLL READY-MIXED PAINTS, and BRUSHES, and selling them at full trade discounts, delivering them freight paid, and no money required until the goods are received—making them cheaper than even the material can be bought elsewhere. They are an absolutely pure article, possessing great endurance and brilliancy, and are giving great satisfaction all over the country. We have a Patron friend who saved enough alone on paint purchased to pay his Grange expenses for a life-time. They also sell ROOF PAINT 30 per cent. cheaper than any one else. It is to the interest of all about painting to write and have sent free their book, "Every One His Own Painter." It will save much money, whether you buy their paint or not. Address, 259 FRONT STREET, NEW YORK.—(From "The Farmers' Friend.") Nov 2-1y

ATTENTION, WATCH SPECULATORS!

We have the best Imitation Gold Watch in the Market for Trading Purposes.

The metal is a composition of other metals, so closely resembling gold that the best judges find it difficult to detect the difference, except by a chemical test, and it has the virtues requisite to make it the best substitute for gold known. GENUINE SWISS OR AMERICAN MOVEMENT. SUNK DIAL. CHRONOMETER BALANCE. BEAUTIFULLY ENGRAVED OR ENGINE TURNED HUNTING CASES, and equal in appearance to a GOLD WATCH THAT COSTS FROM \$150 TO \$200. It sells and trades readily, for from \$60 to \$100, and if you wish a watch for your own use or to make money on, try this. Owing to our large sales, we are enabled to reduce the price of them to \$12 EACH, WITH AN ELEGANT CHAIN ATTACHED.

They are used on Railroads, Steamers, and in Manufactories, and other places where accurate time is required, and gives general satisfaction. We send them by Mail or Express, on receipt of \$12, to any part of the Country, or it will be sent C. O. D. when the customer desires and remits \$3 on account. These Elegant CHAINS weigh about fifty pennyweights, and the same pattern in pure gold would cost \$100. We sell these

Chains at \$3 each. But we sell the Watch and Chain for \$12, sent by Mail in a Registered Package, post-paid, to any Post-Office in the United States.

WE SELL THE WATCH WITHOUT THE CHAIN FOR TEN DOLLARS.

AUTUMN TIME.

SELECTED.

I SING the mellowed autumn time;
The russet pears, the scarlet haws, the yellow
sheaves of autumn time.

The fading, falling autumn time;
The rustling leaves, the saddened winds, the
pallid mists of autumn time.

The scented, fragrant autumn time;
The clover balls, the moorland heath, the fresh-
ploughed earth of autumn time.

The sober, tranquil autumn time;
The chastened noons, the steadfast stars, the
purple glooms of autumn time.

The sweet, soft sounds of autumn time;
The twittering birds, the bleating flocks, the
plaining streams of autumn time.

The resting, patient autumn time;
The close reaped fields, the dew-drenched grass,
the low-streaked skies of autumn time.

The grand, prophetic autumn time;
For ripened hearts and sweetened souls called
home to God at autumn time.

For Forest and Stream.

The West Coast of Florida.

NUMBER 3.

Being Notes of a Family Cruise of Five Hundred Miles and
Return, in a Sloop-Yacht twenty three feet long, by Major
Sarasota and his Family.

MAY 18th I was up before the sun, and in the skiff opening oysters for breakfast. As I threw the shells over, my attention was attracted by a fish darting from under the skiff, as each shell fluttered down through the water. At first I took it to be a catfish, but on a more careful observation recognized an old acquaintance, which for want of a better name I am obliged to call a "sucker fish." They are usually from twelve to eighteen inches long, rather slim built, a darkish brown on top and a dirty white below. Some specimens look striped while in the water. But the chief distinguishing characteristic is a sucker of oval shape covering the top of the head. With this they attach themselves to the under side of other large fish, or to the bottoms of vessels, and allow themselves to be towed along; have often seen them attached to the bellies of string rays and sharks. The sucker itself looks like the cutters which are used by bootmakers to take pegs from the inside of boots, being crossed in the same manner by sharp ridges, and of the same oval shape, two inches long by an inch and a half wide. As none of my party had ever seen anything of the kind I baited a small hook with an oyster, and had him on board at the first attempt. It amused the children to turn him over on his back on the deck, and then try to pick him up. His sucker would attach itself so firmly that considerable strength had to be exerted to lift him. I find that one or more of them are almost invariably attached to a vessel's bottom when sailing outside, but it is seldom that one is seen, unless when becalmed or at anchor, something is thrown overboard, when they instantly let go the sucker, and dart out to examine it, returning immediately. I really can't see why they should be fitted out with this extra attachment, for they are as well provided in other respects as most fishes to get their own living.

Land was about five miles away, and as nearly as I could calculate then, or now, I was about fifteen miles northward of the mouth of the Steinhatchee river. The general trend of the coast from St. Marks to Cedar Keys is S. E. There are numerous little bays and rivers coming in, but one has to keep so far from land, on account of shoal water, that it is difficult to make out any of them. There are no settlements along the coast that I could learn of,

and to all appearances the country is an unbroken wilderness, the thick growth of forest trees reaching quite down to the water, except in some places, where I could make out long strips of grassy marsh. It appeared very monotonous, but not quite as bad as the long stretch of white sand beach between East Pass and St. Andrews. I was told of a settler living about two miles up the Steinhatchee and Ross had told me there was a store there. I never knew when I passed the mouth of the river, although at one time I felt quite certain I could make out an opening of sufficient size in the dense woods. We had no need to go on shore, and as the wind had gone around with the moon to the west, we made a very pleasant run along the coast. A new point would be constantly rising from the horizon ahead of us to prove to be no point at all when we reached it, and it was not until afternoon that there occurred any break in the sameness of the coast. This object seemed to stand out in the water beyond the last visible point, and when the glass was brought to bear looked first like a new form of tripod or survey mark. After awhile it resolved itself into a sail, but there was no perceptible motion, and the shape wasn't just right. Finally I made it out to be a tent. But what could a tent be doing out there in the water? I could just distinguish a flag staff at one end of it, but no flag flying. I headed a little more in shore, as I had ten feet of water at least, and it was very clear, so as to take a closer look. As we drew near we made out our tent to be a small frame building erected upon a low, sandy key, on which were also a few small trees and brush. Have since been informed that this building was put up by the Coast Survey last winter as a chart house, where instruments, etc., could be sheltered from the weather when working at a distance from the vessel, as they often are obliged to do on this shoal coast. The island it is upon is called Pepper Key, and the region to the eastward and southward is known as the Pepper Pot. I had been cautioned to give this place in particular a wide berth. Ross especially had dilated upon its terrors. I ran in towards the chart house, to within a mile at least. The water was shoal, only about five feet, but the bottom seemed to be of soft mud and as level as a floor, sloping to eastward very gradually, for although it was now evidently high tide, I had found only ten or twelve feet of water when six miles out. There may be many rocks and reefs here, but though the water was very clear I saw none.

As near as I can judge Pepper Key is thirty-five or forty miles from Cedar Keys; have heard no one else make a statement on that point, and have seen no chart upon which I can locate it properly, but having sailed over the course twice think I have made a tolerable close estimate. This time we thought we were much nearer Cedar Keys than we actually were. About five or six miles beyond Pepper Key I observed some houses on the shore, and with my glass could make out three settlements scattered along for a mile or more with cultivated fields. I think I made out an oyster reef close in shore, and a large black tripod upon the end of it. Late in the afternoon I made a large schooner ahead lying at anchor. Headed for her, and as night closed in expected every minute to see the Cedar Keys light flash out through the darkness; but it didn't flash, look as anxiously as we would. Held on in the direction of the schooner until I felt we were dragging on the bottom, when I stood out to sea again until I found six feet of water, then came to anchor. The wind was so light that I thought it would not pay to run, for the little we might make would not balance what we might lose in case we got hard and fast aground. Shoal water extends so far out all along this section of the coast that it is perfectly safe anchoring anywhere, as even when blowing quite fresh there is little or no sea, unless you happen to anchor in some river channel.

May 14th—It was a dead calm at daybreak. Noticed several large flocks of small birds coming from a south and southwesterly direction. As there is no land off there nearer than Cuba or Mexico, they must have made a long flight, and they now were twittering away in the happiest

of spirits at finding themselves once more so near land. There was not a ripple on the water, and no prospect of wind before 9 o'clock, so I decided to pull in to the schooner while breakfast was cooking, and find out where we were. She was about two miles away, but as the skiff was now empty of oysters and pulled very easy I was soon alongside. She proved to be the U. S. Coast Survey schooner Ready, then at work on this station. It was Sunday morning, and too early for any of the officers to be on deck. The crew were busy washing down the decks, and from the mate in charge I learned that we were anchored in the channel of the west mouth of the Suwannee river. I was rather disappointed to find I was so far away from Cedar Keys. He called it fifteen or twenty miles to North Key, and I think it is every inch of the latter distance. He called my attention to the wreck of a steamer which was lying in the channel closer in on the reef. It has been there for several years, and all that shows above water now in the boiler. All along the front of the Suwannee river for more than twelve miles there is a series of oyster reefs. There are many openings or breaks in them from twenty to fifty feet wide, and when one once gets the hang of them form splendid chances for making a harbor.

I returned on board the Idle Hour, and about 9 o'clock a little wind sprang up from the S. W. I could lay my course very nicely with this wind, but it was so very light that the strong incoming tide soon carried me in behind one of the lines of reef. Here I was out of the current, but the frequency of the lumps of oysters made the navigation so difficult that I came about on the other tack and worked out through the reef into deep water again. The wind freshened later in the day, and by the middle of the afternoon I could make out North Key. This Key has two high shell mounds upon it, and is covered with a heavy growth of live oak and palmetto. In approaching from the north these two mounds are the first things seen, and spring up out in the water at some distance to the right of the last land you have been seeing. As you draw nearer the mounds unite, and Sea Horse Key forms itself on the right, apparently being one Key. The Lighthouse which is upon Sea Horse can be made out among the trees, but looks to be on North Key. From here I was I steered S. E. by S. until I was opposite the north end of North Key and a mile and a half out, then stood in for the end of the Key, steering E. by N. for a while and then E. The bank on each side of the channel is clearly marked, the one on the south side being bare at low water for over a mile out. I sounded carefully all the way in, never finding less than eleven feet of water. A dark, threatening squall had been rising for some time over the southeast of the Keys, and just as I got closer in to the point of North Key it broke upon us, and I came to anchor under the lee of the land. I was disappointed that we couldn't quite get up to the village that night; but I knew it was of no use to try beating through that strange and tortuous channel, seven or eight miles in the dark, to say nothing of the tide being against us, and running like a mill race.

Just after having made everything snug I noticed several flocks of small birds arriving from seaward, and one poor, little exhausted voyager, after flitting about for a moment, alighted upon the jib down haul just outside the rail. I ran forward quickly and picked him up in my hand. The children were delighted, of course, and when I relinquished him to their care there was a great time in feeding and watering the little creature. It evidently belonged to the sparrow tribe, but I could not identify it. After drinking freely, but eating sparingly, he was taken below, and found a perch for himself for the night up forward.

May 15th.—Was under way as soon as I could see, intending to run up to the wharf to land, and take breakfast at the hotel. The children brought out their bird guest as soon as we were inside, and kissing him good-bye, tossed him up in the air. He seemed in doubt at first which way to steer, but finally went off to the north, although the land was much nearer the other way, and fluttered along so close to the water that we soon lost sight

of him. The wind was ahead and light, and from where we had anchored the channel first runs easterly over a mile, then makes a sharp elbow to the south, until the main channel coming down between Depot Key and Way Key towards Sea Horse Key is reached. A number of grassy Keys, called on the charts Middle Keys, will be left on the right. There are a few settlers on North Key, but Way Key and Depot Key contain most of the inhabitants. As we came up the channel the New Orleans steamer was also coming up. I went on shore first to reconnoiter. I found my way to a hotel, with a table being poorly provided for persons who required a liberal allowance of substantial. We found the regulation hominy, some tolerable "square-toed" biscuits, and some ham and eggs. Not a vegetable of any kind, and not enough ham to have answered the demands of either of us. The eggs came on as though they were being cooked one at a time. Cedar Keys, which is crowded all winter with northern visitors, is a far better place for a sportsman to make his headquarters than Jacksonville, which supports several first-class hotels. It should have far better accommodations. Just back from Cedar Keys is a tract of country known as the "Gulf Hammock," in which there is excellent deer and turkey hunting. The waters around the Keys abound with fish, as well as the finest of oysters, while I have never yet seen a nice oyster on the Atlantic coast of the State. Those at Fernandina, mouth of the St. Johns, or St. Augustine, certainly cannot compare with those on the Gulf coast; and if there is any good hunting or fishing within twenty-five miles of Jacksonville, I have never been able to find it, although I have spent over a year there and in the vicinity.

The wind held in the eastward all day, which was so nearly ahead, that we decided to take a rest and stop on shore. After writing a few letters and getting a fresh supply of water and provisions on board, there was nothing to be done. I found very good water at a drove well, around the point, in a cove on the west side of the harbor. It is a few hundred yards north of the old cedar mill, and quite near the beach. The cottage of the woman who owned the well was completely covered with flowering vines. After supper, Mrs. "X" decided that she preferred sleeping on board to passing the night among the doubtful comforts of the hotel (?), and as that agreed with my notions we went on board.

May 16th.—About three o'clock I took an observation, and finding the wind well to the northward, got under way, going out on the east side of Depot Key. The channel runs up pretty well towards Dog Island, and then turns sharp to the south, leaving the end of Cardigan's Reef on the port hand. This reef makes well out towards the mouth of Waccasassa Bay, and has numerous openings, which form handy harbors in case of a blow, and it is upon this reef that some of the finest oysters are found. In leaving Cedar Keys, bound to the southward, there is a choice of courses to steer. If one is going through to Clearwater Harbor, or beyond, not caring to stop on the way, I advise leaving Cedar Keys in the evening. If the wind is fair steer to S. by E., and if your boat is fast enough you will find Anclote Keys a little off the starboard bow, or just ahead at daybreak. These Keys lie about six miles out from the mainland, and are properly the beginning of Clearwater Harbor. It is called eighty miles from Cedar Key to Anclote, and the course I have given will take one well outside of all the rocks and nigger heads, which are found for some ten miles along the coast off Bayport. This section is known amongst the coasters and spongers as the "Devil's Ten Acres," but why they cut it down from miles to acres, is more than I can tell. There is seldom more than three fathoms of water throughout the whole distance, and should we find less than two and a half, it is well to consider that a current is setting in to the land, and so stand out to sea a little until deeper water is found. If one desires to see all of the country he can, and time is no object, it is possible to coast along inside of reefs and islands for more than half the way, but the water is so badly cut up with oyster bars and blind channels, that the navigation is quite difficult for an expert, and I do not recommend it, and never adopt it except for some special reason. To take this water, however, on getting well out from Depot Key, steer E. S. E., and after running some sixteen miles you will be off the mouth of the Withlacoochee river. The channel is well staked out, and just inside the water reef on the port side, in three feet of water, are plenty of fine oysters to be had for the taking. If you intend taking the inside route, follow the channel stakes nearly up to the mill, at the mouth of the river, and then bear to the southward as best you can. Make up your mind to hang up on oyster bars every half hour, or oftener, and to have any number of narrow escapes. Unless one wishes to land at the Withlacoochee or Crystal rivers, I recommend that they keep along a few hundred yards outside the outer reefs, until St. Martin's Keys and Reef are reached off the mouth of the Homosassa river. The navigation to this point is perfectly plain and smooth, free from rocks, and in about two fathoms of water. The straight course from Cedar Keys to St. Martin's Reef is S. E., and the distance about thirty miles. The character of the bottom suddenly changes here from a soft sand, covered with turtle grass, to a hard rock covered with an inch or two of sand. The Keys themselves are simply low islets, a wash at high tide, with a dense growth of mangrove upon them. Some of them are resorted to by birds in large numbers, as a roost and breeding station.

As "Al Fresco" has described the attractions to be met with in the rivers along here, I will devote my time to the outside work, simply saying that he doesn't overstate these various and never failing charms, not the least of which is Jones' on the Homosassa, for if anyone can make a traveler feel at home it is Mrs. Jones. I regret that the wind was so fair that we couldn't stop either way, but shall be passing that way again some day.

After getting well clear of the extensive sand flats, which lie to the eastward of Depot Key, I laid our course S. E. by E. $\frac{1}{2}$ E., intending to strike the reef off the mouth of Crystal river, but the tide was setting up into Waccasassa bay so strong, that at daylight the saw mill at the mouth of the Withlacoochee was off our port bow. I could make out many residences along the coast which had been put up since I last passed by here, and the country all along here is reported to be filling up rapidly. I kept away a little, so as to keep along parallel with reefs, the course being about south. The wind held in the N. E. until we passed the mouth of Crystal river, when it came off calm. These calms happen every day during pleasant weather, when the land breeze dies away, and last from half to three-quarters of an hour, until the sea breeze sets in.

Although these calms usually fall about nine o'clock in the forenoon, they are the hottest part of the day, and it is only during this short time, that even in midsummer, one is ever uncomfortable on the water from the heat. The sea breeze always comes within a point or two of S. W., and often later in the day works around to the westward, and frequently as far as the N. W. The change from sea breeze to land breeze usually takes place just after dark, and it is not usual to have a calm at that time, the wind suddenly shifting to within a point or two of N. E. These land and sea breezes are an important item to be taken into consideration in cruising along this coast. I find that late in the winter they cannot be depended upon with quite so much certainty as at other seasons, but when "Northerners" or other preceeding southerly blows do not prevail, they are to be expected. I also find that west of St. Mark's they are not as certain as to the southward of that place, probably owing to the direction of the coast line being different. The best thing about them is, that when they are blowing, one can usually lay a straight course in either direction along the coast. When the sea breeze began with us—on the 16th—we slipped along through the water at a firm rate. The shoal water extends out so far, that even with a stiff breeze there is but little sea.

At the north end of St. Martin's Keys, about a mile and a half or two miles out, there are two reefs which are bare at low water, and are perhaps a mile apart. After passing them, I have never noticed rocks which come above water until nearly off the southerly end of St. Martin's Keys. From there until well past Bayport, keep a sharp look out for them. The south end of these Keys is about six miles from the main land, and the space between is well filled up with sharp jagged rocks and reefs. The water is often muddy, and consequently the navigation is dangerous. If you wish to keep within sight of the shore after leaving St. Martin's Keys steer S. E., until Bayport is sighted, then steer south again. When Bayport comes in view, we will make out three, or perhaps four large white buildings. If you wish to land there, do not steer directly for them, as the water straight ahead is full of bad rocks and reefs, but keep parallel with the mainland until you come to the channel stakes, then turn in. These stakes, I think, must extend nearly ten miles out to sea. I have never been able to discover any regular system by which to distinguish those which are upon the right of the channel from those which are upon the left, or from those which are mid-channel. Some have a palmetto leaf tied on, and some do not. Very many are on rocks or reefs, just to one side of the channel, but the safe way as I have found it is not to run nearer than fifty feet, and keep a good lookout. Strictly speaking, there is no real channel until close up to the land.

We held our course on by Bayport until dark, and finding that I had not passed all the rocks, came to anchor behind a bunch of them. Just before dark, I noticed a little schooner very close in shore, probably bound for Bayport. All through the day we had been meeting other small craft, or passing them as they were lying at anchor. These latter were probably spongers or turtles, as the favorite cruising ground for both, especially the former, is on St. Martin's Reef.

May 17th.—Got under way as usual at daybreak. Wind fair from N. E., and made good time until off the mouth of the Withlacoochee river. It is usually called the Coota for short. Here I decided to run in and spend the day. Some eight years ago, I was caught off here in a "Norther" in December, and ran into the mouth of the river for a harbor. Was bound for Cedar Keys. Was held here for three days, until the "Norther" broke, and during that time I wandered into the country a good deal. About two miles back from the beach or mouth of the river, there begins a rolling country, clear of saw palmetto and other under brush, and timbered with splendid pines, with an occasional knoll covered with black jack. At that time the country was just alive with game, deer and turkeys. One could stop on one of those knolls and overlook the country closely for at least a mile in any direction, and I never yet stopped for a survey of that kind, that there wasn't something in sight worth going for. For mid-day hunting, this section beats anything I had ever seen. For a location for a settlement or camp, there was one point in particular that I took away in my mind's eye, and have carried with me ever since. It was upon a black jack knoll, upon the side of a pretty round lake of crystal water of some five acres in extent. There was no visible outlet or inlet, yet the water was so clear and transparent that bottom could be seen anywhere, although nearly fifteen feet deep. A few water lilies (think of it in December) at one end, and four or five ducks, as it happened, near the center, only added to its charms. During my subsequent residence north, I often thought that if I could only have two or three months entirely to my own disposal, I knew of no other place where I would rather pitch my tent than on the margin of this little gem of a lake. For early morning or evening hunting, near the coast was the place. Here was a succession of dry sand flats, bordered by thick hammocks of rush patches, and here deer could always be found. Bear sign was also very plenty, but I never had the luck to meet one. Just in the edge of the hammocks was a series of brackish water ponds, which at that season were perfectly alive with ducks of all kinds. About half a mile south of the mouth of the river, I found a bayou where there were splendid oysters. Indeed, it was as near a hunter's paradise as I could ever hope to see. At that time it was five miles from the mouth of the river to the first settlement. A good trail led to it from the river, as during the mullet season parties came from back in the country to the river for the purpose of fishing.

Of course I had a great desire to revisit this place again. It was very near high water, yet I did not have many inches to spare in taking two and a half feet into the mouth. An extensive white sand flat extends well out from the mouth of the river, and the ends of some of the shoals have been staked by fishermen. Just inside the mouth, oyster bars and reefs of sharp jagged rocks begin, and to avoid getting mixed up among them, I came to anchor close in on the first landing, which is on the north bank. I first took a walk to the duck ponds, hoping that a few stragglers might be left, or perhaps some summer ducks. I saw none, but there were plenty of beach birds, and a shot from each barrel at a passing flock brought down as many as I wanted. After stowing my double barrel and bird basket in a safe corner beside the wood, we all started on the trail back into the interior, taking my rifle along in case deer were as plenty as in the old times. Instead of being five miles to the first house, judge of my

surprise at finding one only about three-fourths of a mile back, before we were well through the scrub region, and when we arrived at this one, two others were in sight ahead. This made a rather poor prospect for deer shooting, and after we had all had our fill of whortleberries, with which the bushes besides the trail were heavily laden, we went up to one of the houses to claim their hospitality and make a few inquiries about the country. I was influenced in making a selection of the house at which to call, by seeing a number of turkey buzzards perched upon the trees and fence posts near by. This may seem a strange thing to the uninitiated, but to my mind it meant that there was fresh meat of some kind in the proprietor's larder. Either he had been fortunate enough to kill a bear or deer, or else being down on his luck, had given game dinners up as being too high-toned just then, and had satisfied his longings for a "fresh mess" by killing a beef. This latter case proved to be the fact, and the surplus meat having been hung out on grape-vine lines to cure in the sun, was what had attracted the buzzards. It may be news to winter visitors of Florida, that this is the usual way in which beef is cured during the summer. The meat is cut from the bone in thick slices, or oftener chunks, salted slightly for an hour or so, but not enough to have it strike through, and then hung up on lines, or placed on a scaffold where the sun's rays are most direct. The action of the sun seems to almost scorch over the outside of the pieces, excluding the air completely from the interior, which is thus kept fresh and sweet for several weeks. The whole operation takes but two or three days if the weather is clear, but in case it comes up cloudy a "smoke" is started underneath it; but I think this is intended quite as much to keep the flies away, as to resist the curing process.

We found the women folks of the establishment all absent on a fishing frolic, with a party of neighbors to a large fresh water lake, some six or seven miles to the eastward, but our welcome was none the less cordial from the two young men left in charge. They were all new settlers here, and things were of course quite primitive, as it takes years and years often to get together all the little conveniences of a farmer's life, when one starts in upon a wild woods place with no other capital except a stout heart and a pair of sinewy arms. The dining-room was simply a brush and board shelter from the sun, put upon four posts, and the kitchen was a cob-house pile of small logs, a little over two feet high, filled up level with earth, upon which the fire was built. This was large enough to accommodate the few pots and kettles, and was protected from the weather in a similar manner to the dining-room. As we sat in the grateful shade by the table, it did not seem to embarrass our "men cooks" in the least, for they soon split open some of the beef I have described, and promptly had it broiling before us. The dinner was helped out with a huge pitcher of real cream, and some Florida syrup of their own making. This latter was extra nice, and was the first of the genuine article we had seen since our return to Florida. I have never been able to procure the real thing in the northern market, and I feel sure that such of my readers as have found it in their winter visits to this State, will bear me out in saying it is far ahead of any other "long sweetening," and has only to be introduced at the north to create as active a demand as for the Florida orange. There were many small hammocks in this vicinity, well suited for its culture, and many were still open to entry, and situated so that the owner could live quite near by upon pine lands.

After a little rest had settled our hearty dinner, I proposed to Mrs. "X" that we take a walk out to my little lake, of which she had heard so many times. I had made cautious inquiries of our hosts as to its situation, and learning that they knew the precise location, I put the all important query, "Has any one settled on the black-jack ridge alongside of it?" "Yes, a man settled there about two years ago"—(my heart sank, for I still had designs upon it)—"but his wife died about six months after, and then his house caught fire; that finished him, and he left these parts; reckon he was just kinder discouraged." The coast was clear certainly, and we started to decide if our future home was to be on the banks of the Coota. I was surprised at the change which had taken place. When here before, although there was no visible outlet, the water, like that of many other lakes in Florida, was deep and remarkably transparent. Now, to my surprise, it appeared quite shallow, and was covered all over with a dense growth of raw grass. I would not have known the place, had it not been for the black grass ridge, and the charred logs of the settlers house. I could only account for the change, upon the theory that the soil washing from the surrounding hills and ridges, had filled it up very much, and perhaps the want of rain for many weeks, might have assisted in making the water shallow. At all events, my enthusiasm for a home at this particular point, was rather cooled. I admit I am fond of water (for navigation or ornamentation), and such a bijou of a lake as this was, in one's front-door yard, would certainly give an extra fine opportunity for effect. There are plenty of just such little lakes scattered through the State, and I know that some of them don't fill up or run dry on small provocation.

After resting a bit upon a log, and talking over the vantage of the ground, I decided that I didn't care to carry my ride any farther on such a hot day, and we started back to our late hosts. They declined any remuneration, but as they had some fine water melons in the corn field, I gave them a good price for the largest to make things square in my own mind. But I wished that melon had been a whortleberry, long before I had lugged it back to the boat. Did you ever carry a thirty-pound water melon a mile, without any aid to your hands? If not, try it some warm day, and unless there is some strong reason for holding out, that melon will slip through your hands somehow—accidentally, of course—and falling upon the ground will burst; and have to be eaten right then and there. Another remarkable phase to this accident is, that it is sure to happen near a shady place, if there is one on the road.

We reached the boat at last, however, without accident to that precious melon, and after a bird supper, which used up the time until dark, went on board and attempted to put out. The tide had fallen too much, however, for although we got outside the mouth of the river, we hung up on one of the sand flats just outside, hard and fast. It was impossible to find the channel in the darkness, even if there was one, which is doubtful, and being pretty well fatigued with the day's exertions, we turned in for the night, I quietly assuring Mrs. "X" that there was no cause for her dreams to be troubled through nervousness this night, for there would be no motion to the water, and we were so hard and fast on the bottom, that she might

as well think herself on land and have done with it. But the night couldn't pass in perfect quietness, for when the tide had fallen so much that we careened on to the bilge, I was aroused to explain what it was that was tipping us over backwards, and how her feet had got so much higher than her head. Now, I don't know whether she really wanted that information as much as her alarm would have indicated, but her fears were soon sufficiently calmed to suggest that we try, and see if the watermelon was ripe while the children were asleep. It was ripe, of course, and such a hole was made in it, that when it was produced at breakfast the children thought *some one* had been on board during the night, and my youngest sailor thought that in future we had better anchor in deep water, so that visitors wouldn't find it so handy to come on board.

[To be continued.]

MEMORIES OF ALEXANDRIA BAY.

"**A**H, this is the kind of a 'cordial' for a human being to have," said my excursion friend, as he stood hatless and with expanded chest on the dustless balcony of the Thousand Island House, taking in plentiful draughts of pine-scented air between the vowels which compose this agreeable sentence! "This," continued he, stretching out his arms as though taking a fresh hold on life, "is more invigorating than the salt breezes of Houlgate or Etretat." My friend was an appreciative excursionist. He had dined, sometime during the early heat of summer, across the ocean, at the Champs Elysees, under a vine-covered arbor, and called it "tolerable," although he found that even well trained ivies failed not to send down their usual detachment of flies and spiders. Better still, he had dined in the beautiful gardens of the Bois de Bologne, within hearing of a soft-sounding waterfall and in sight of the Long Champs race course. He visited many charming resorts, both fashionable and unfashionable on the French coast. He had wandered by the sea for hours, and watched dreamily, while the ocean fanned him, the great black ships and the smaller boats with white sails glide in and out like the spirits of good and evil which contend for the mastery of the world.

As the chariot of the sun rolled down behind the heaving billows, the carriages of men, supplemented with high stepping Arabian steeds, rolled up to these lovely gardens. Expanded nostrils, flashing harness and scarlet ribbons were their accessories, and they in turn were the heralds of infinite witcheries to come, in the train of music, dancing and moonlight, and of brilliant women with silken dresses, fashioned, one would imagine, to resemble fairies with folded, trailing wings. And, "still betterer," as the growing grammarian would say, he had clambered the romantic cliffs of Etretat in canvas shoes and picturesque fisherman's cap. He had listened to the beating of the surf as well as to the praises of the artist Alphonse Karr, who "made the place"—that is, in the same sense that the man makes the pie, who praises it—and saw M. Jacques Offenbach, pacing up and down the beach so quietly, compared with his restless appearance when he saw him in Paris. He had sat in a grove of storm-bent oaks and peered out at the graceful women and children, tumbling in the surf like veritable water-fowls, and felt calm because he had noticed the *batteaux de surveillance*, with its gay streamers and bunches of flowers, hovering about them like guardian angels. All this had he seen in foreign lands, and more too, and yet, like a sensible and fond native American, he was ready to come back with the "excursion," and pronounced the breezes of the Thousand Islands the best of all cordials. To thus enchant the minds of traveled men this lovely spot must have a charm exclusively its own. Perhaps its chief attraction lies in its seclusion, for it is not like the suburbs of a great city—such as the Hudson or Etretat might be called—and therefore is not so intermixed and overflowed with city life as to lose its own wild native grace. It is not that string of pearls, one after the other looking just like its neighbor, but the blending of pearls and emeralds, which captivates the connoisseur's eye. The beautiful St. Lawrence might poetically be called the pearly chain which separates us from a foreign power, and the green islands a generous handful of emeralds thrown in. Truly, as Irving's "Oriental" says, everything is on a "big scale in America." Here is not one little "Emerald Isle," sitting alone in the sea like the Irishman's favorite island, but there 1,800 emerald isles, transforming the shining links of lake and river into a chain of unique beauty.

From the lofty tower of the Thousand Island House, which rises 140 feet above the river's level, with a good field glass you can see miles and miles away, and follow its liquid avenues until you are lost in a sense of almost bewildering beauty. "I could sit here for days," said my enthusiastic friend, "and look only upon this." But of course there are two classes who come here. The artistic, who are fond of views, and the piscatorial, who are fond of "fish." The decided fisherman will go for the waters, and the decided artist will go for the tower. Fortunately, however, there is not so vast a distance between physical and soul enjoyment but that it is possible to have the two harmoniously conjoined. The artistic soul will often enter into the sports of fishing with great zeal, and the fisher, who would not think of clambering up to the tower to catch a view, may be seen glancing shyly ("as a maiden on her lover") from under his slouching broadbrim to take note of some form of beauty which is perhaps revealed to him alone. Our friend of the tower entered into fishing enthusiastically, but we noticed one little peculiarity; he very seldom had a bite and never a catch. He leaned over the boat's edge and peered down into the bright green waters for what seemed to us anxious hours. Was he watching the trail of a mascalonge? We held our breath in silence. "Ah," exclaimed he, "this reminds me of the Russian malachites at the Centennial!" "Is malachites something good to eat?" inquired the Captain innocently. "No," said I, "we can't dine on malachites, and it is now 2½ o'clock. Two little black bass will but just stay the pangs of hunger for one. Perhaps those who feast on precious ores are beyond corporeal suffering." "No, by jove!" exclaimed the admirer of malachites, "nothing less than a monster can stay my appetite. Have it I must, or perish." For one short half hour all his faculties were bent fishward. Then the bait was stuck as though a rock had sat down upon it. The Captain went to the rescue, and sure enough, a mascalonge of fine dimensions was soon taken in. We landed for dinner then, but the royal fish

was too fine to be eaten. The Captain was dispatched to beg or buy from the "camp meeting" larder. A moderate allowance of pork and dough nuts was the result; but these dainties flanked with the little black bass and spiced with an Alexandrian appetite, made it a finer dinner than could be bought at the Fifth Avenue Hotel. Everybody knows that to catch a mascalonge is to put an end to all fishing for one day at least, so we wandered the nooks and knolls of the island for a while and then with our precious freight safely wrapped up in an army blanket we rowed back to the Bay. As we came near the landing and saw a group of young men and women and nut brown sailors, and a pair of pretty city girls in fishing hats with pink ribbons, which as yet had seen but slight service, I confess that I felt a pang of jealousy and imagined that my friend's silence was the silence of "awful pride." As we made the last stroke an uncommon burst of sunset splendor, flooded the wooded islands, the lovely river, and the tall tower, and new dyed the pink ribbons and bronze faces. My friend stepped on shore, but he forgot the big mascalonge in the army blanket and didn't seem to mind the bright eyes that glanced out from under the freshly trimmed hat. I took up the treasure as carefully as though it had been a girl baby and laid it down in the midst of an admiring crowd. When the owner was sought for he was found sitting in the sun-gilt tower, and had caught a "splendid view."

For Forest and Stream.

ANTELOPE HUNTING IN KANSAS.

A SHORT time ago I visited Kansas, and there enjoyed the free and noble sport of antelope hunting. I started with a party of three from the little town of Hutchinson, a rapidly growing and business-like place, situated on the Atchison, Topeka and Santa Fe Railroad. To get to the portion of country abounding in antelope we had to ride about fifty miles south of Hutchinson, that part of the country being rolling prairie, and covered with buffalo grass; good succulent food for the game we were in search of. We had a busy time getting our accoutrements together, the principal thing being a large wagon with a heavy team, in which we packed all our camping outfit, provisions, etc. Besides this, two of us had our own horses—myself and my friend Willis, who owned a magnificent Canadian full-blood, very spirited and fleet of foot. We all had our rifles (I a Winchester), and also a good fowling piece.

It was a bright, beautiful morning, when, mounted and fully equipped, we started. Our first camp was made at Castleton, a place consisting of only two or three houses and one school-house. We drove our wagon to a slight elevation on the prairie, which had now become rolling, and made our camp by the side of a beautifully clear and running stream, at which we watered our horses, and lariatting them a short distance off on the prairie, we began to prepare our supper. The fire was made of buffalo chips, a name given to dried buffalo dung, and our supper consisted of fried pork and gravy, with bread and butter. We were all immensely hungry, and the viands disappeared rapidly, all washed down with hot coffee. The bright twilight was slowly and surely followed by the increasing darkness of night, and by the full moon's silvery light, we rolled ourselves in our blankets and were all soon wrapped in deep slumber.

Early dawn found us again on our journey. The country we were passing over was beautiful in the extreme, gently undulating swells of bright green prairie, covered with wild flowers of many a varied hue, and the hills receding off to the far horizon, became of a deep violet color against the bright blue sky. The white and bleaching bones of buffaloes lay scattered here and there, and numerous night hawks would flutter up and fly on before; or the prairie chicken, frightened by the tramp of horses feet, spring upon wing, and be borne away by swift and steady pinions to some lone and sequestered spot. Having reached a little ridge of land, from which we had a view over the plains for miles, I noticed far over on an adjoining hill a spot against the sky; I asked Willis for the glass, and sure enough there was an antelope; "An antelope?" they all exclaimed. "Let us have a peep at him!" and so the glass was passed around until all were satisfied that he was too far off to pursue, so we again started on. I dismounted from my horse to give him rest, hitched him to the team and jumped into the wagon. Just as we rounded an adjoining knoll an antelope jumped up from the grass about 100 yards ahead of us, and made off to the right. "Hold up your horses," I said, "and I'll try a shot." I threw my rifle forward, rested it on one of the boy's shoulders and fired. The antelope gave a quick bound, fell forward on his fore knees, remained in that position for an instant, then rolled over on his side, dead. "Good shot!" the boys yelled. It was my first antelope, and I felt proud. It was a fine buck, and I preserved the horns.

That night we camped on a high bluff overlooking a sparkling stream, and then by the gleaming fire's light enjoyed the juicy and delightful flavor of the steaks of my first antelope. Toward night-fall the mosquitoes became so thick and troublesome that we had to build smudges to drive them off, then lying down on our blankets in the trail of the smoke, we were soon in a sound slumber. At daybreak, as Ed and I started to gather some chips, I noticed a couple of antelope feeding a short distance from camp, near the top of a high bank—a capital opportunity for a fine shot; marking the spot on the bank which I must reach, I started rifle in hand down the bluff into the valley, then crouching stealthily along I forced my way through the tall reeds of an adjoining watercourse until opposite the desired place, when falling flat I began cautiously to crawl up the bank, my heart beating like a drum all the while. Gaining the top I peered above the grass, and there were two of them within twenty yards of me; one with head erect and breast towards me was looking steadily in my direction, while the other was quietly feeding, presenting a splendid broadside; throwing my rifle gently forward, I took careful aim and fired; a loud report followed, and when the smoke cleared away I beheld my game prone upon the ground, rolling, kicking and bellowing at a great rate; the other, startled at the report, fled like the wind, I gave him a parting shot, but it was of no use; he ran some distance, then stopped, turned around, and watched my further proceedings. I soon quieted my beauty, for beauty he certainly was, by cutting his throat; then we skinned him and took the hindquarters into camp. It is needless to say that during our one week's camping out we all

thoroughly enjoyed ourselves, not only killing antelope, but ducks and geese of various kinds which fly from slough to slough o'er the beautiful and rolling prairies of Kansas.

Fish Culture.

FISH CULTURE AT THE AQUARIUM.

The apparatus in use in the Aquarium for fish culture, is of the latest and most approved pattern, and consists of a large wooden reservoir divided lengthwise by a partition, in which are placed frames covered with a woolen screen which filters the water before it passes over the eggs. The hatching troughs, five in number, are placed with their heads abutting the reservoir and are supplied by brass cocks. In the troughs are placed frames covered with wire cloth, which, with the wood work, and in fact every part that the water comes in contact with, is coated with coal tar, which not only keeps the wire from rusting, but also prevents the jelly-like sap that always appears in new pine wood when under water, from exuding, while it also is a barrier to any vegetable growth upon it.

The eggs are laid upon these wire screens, of which several layers can be used in each trough, thus increasing their capacity. Only two troughs are in use at present, and are filled with the ova of the California salmon, which were presented by Prof. S. F. Baird, the Commissioner on Fisheries for the United States. They were obtained from his salmon breeding ranch on the McCloud River, California, in charge of Mr. Stone, the Deputy Commissioner. This variety of salmon is called by Naturalists the *Salmo Quinnet*, and from its being capable of passing through water that in summer reaches a temperature of 80 degrees Fahrenheit on its annual migration from the sea to its fresh water breeding grounds above, and which would kill its congenor of the Atlantic coast, is more valuable than the latter for stocking all our rivers south of the Connecticut. Many millions of the eggs have been taken, hatched and distributed by Professor Baird in the past two years, but as it requires three years for this fish to reach maturity and return to the place where it was deposited, it is too soon to see the results yet, though many young have been caught during the first year that they remain in fresh water.

The eggs are obtained from the living fish by pressure of the hand upon the abdomen, and such is the delicacy of touch and knowledge of condition acquired by an expert that a fish is seldom killed by them, and Mr. Mather states that he has taken eggs from the same trout for five years in succession without injury to them. After the eggs are taken in a pan that has been merely wet, a male fish is manipulated in the same manner over the eggs, and in a few minutes after the addition of a little water, the fecundation is complete and the ova is placed in a trough, where it remains for three or four weeks, until the eyes can be distinctly seen and all the unimpregnated ones picked out, when they are packed in a box with a layer of fine, living moss, and a layer of eggs alternately until full—this box is then packed in a crate of hay or box of sawdust to keep it from changes of temperature and sent by express to any part of the world. The eggs of the California salmon are the largest now handled by fish culturists, measuring nearly one-third of an inch in diameter, and as the eggs of any fish average about one size for each species, they are measured to find the number of thousands taken.

It takes from forty to sixty days to hatch a salmon egg, according to the temperature; a high one, say 70 degrees, hatching very quickly but leaving the fish weak. The best temperature is that of the spring water in which they are laid, perhaps, from 45 to 50 degrees. After hatching, the yolk of the egg remains attached to the abdomen for about thirty days, and at first is so large that the little embryo cannot swim with it, but it is gradually absorbed, and when all taken up the salmon takes food for the first time. This rule is good for all the varieties of salmon and trout. Some fish, as the whitefish and shad, can swim as soon as hatched, although the sac is attached in the same manner.

Later in the season the other troughs will be occupied by the Land-locked salmon from Maine, a fresh water variety, the lake trout, the brook trout and the whitefish; these are all winter-spawning fish and hatch slowly on the trays. Shad eggs require an entirely different treatment, which will be explained in a future number of the journal. It is the intention of the Manager of the Aquarium to stock some of the rivers with the fish hatched here, thus making it a useful as well as instructive, and a valuable adjunct to the Fish Commission, and to this end he has engaged the services of the well-known fish culturist, Mr. Fred Mather, to superintend this Department, for which he is well qualified by his long experience as a breeder of trout for a long period at Honeoye Falls, N. Y., and his work of salmon and shad hatching for the past three years for the Virginia and United States Fish Commissions.

This is one of the most interesting features of the Aquarium, both to the Naturalist, the Embryologist, and the casual visitor. The newly-hatched fish is so transparent that the beating of the heart and circulation of the blood can be seen with the naked eye, and the development from the embryo to the perfect fish observed from day to day, and a wonderful transformation it is, for at first the little creature is as unlike the parent fish as a tad-pole is unlike a frog; the mouth which at first is only fitted to pass water to the gills is changed so as to take food, and the embryonic fin which, rising in the middle of the back, runs around the tail to the anal fin, is absorbed, leaving the true fins more and more distinct each day. A few years ago Professor Agassiz discovered that the salmon had a second heart situated in its tail which was most visible at the third day and disappeared about the tenth.—*Aquarium Journal*.

SEA WATER IN THE AQUARIUM.—The new Aquarium journal tells us how the tanks of the New York Aquarium are supplied with sea water. It says that a steamer is constantly and solely engaged in bringing in sea water from beyond Sandy Hook. This steamer is fitted out with special pumps, storage tanks, etc., and yet when obtained the water can only be brought on the steamer to the dock; from thence it is conveyed to the Aquarium reservoir in portable tanks. At this point it may be stated that in spite of all these precautions the sea water has yet to be filtered and aerated before it becomes perfectly clear. Lest an inexperienced visitor might murmur at the lack of per-

fect clearness in this water, we would state no less an authority than Mr. Lloyd, in his correspondence with Mr. Coup, has demonstrated that this lack of clearness at first is a necessary evil, which will soon be overcome by means of the system of aeration now actively going on.

When it is remembered that the whale tank alone requires a boat load of water a day, some idea can be formed of the expense and difficulties attending this single effort.

—A great deal of discouraging difficulty has attended the efforts to obtain specimens of tropical fish for the aquarium. Four expeditions have been dispatched and returned with absolutely nothing. In the first instance a storm encountered off Sandy Hook, killed all these fish, a second party lost their full cargo on crossing the Gulf Stream, and the third and fourth having landed safely at the New York dock, yet failed to bring their rare treasure to the Aquarium. Another expedition to Wood's Hole, Mass., started homeward after a month of hard labor with a rare and rich cargo, but again a storm deluged the vessel, and not one of all the lot reached its city home in safety. Again an expedition has for a long time been out on the Pacific Ocean, and it is hoped that their efforts will result in the capture of walruses and a sea elephant.

—A fisherman living at Sodus Point, Lake Ontario, caught a shad in the lake a few days ago weighing four pounds, and has forwarded it to Seth Green along with proper affidavits, which entitle him to a reward of \$25 offered by Mr. Green, for the first shad taken from the lake weighing not less than 2½ pounds.

GOOD RESULTS IN VIRGINIA.—A Lynchburg correspondent of the *Nashville Rural Sun* writes:—

After the war, the streams of Virginia were found to be almost barren of fine game fish, when her legislators conceived the idea of a "fish and game" protective law, and appointing reliable commissioners to re-supply all the larger streams and tributaries with a full stock of game and pan fish, which has been done with astonishing success.

No seining, no netting, no gigging with spikes, nothing but hook and line can be used under a heavy penalty; and the result is to-day one man can catch enough for a day's supply with hook and line in an hour. Bass (or trout as your name) have taken possession of the stream, and are now caught, weighing from one to six pounds. There are also a multitude of silver perch, which are as fine to eat but not quite so gamey; they are caught with minnows—the largest about eight to nine pounds.

Pike are also abundant, and the salmon trout (our jack) are beginning to be plenty.

The fish commissioners have established three hatching houses, Blacksburg, Lexington, and Nelson C. H., which can and do hatch five to seven millions annually, young bass, salmon, and pike, and distribute them every spring in the different streams, after they are sufficiently large enough to protect themselves. Thus, you see with a trifling expense to the State, and good protective laws, every citizen is benefited, and abundant supplies of the finest fish for table use in the world are at their command. Any boy can, with hook and line here, catch in an hour or so enough for a day's supply; and the market is full and very cheap.

TROUT CULTURE IN TENNESSEE.—John C. Ferris, of Davidson county, Tennessee, gives to the *Nashville Rural Sun* the results of his efforts in trout culture, which indicate that these fish can be raised as easily in portions of that State as elsewhere. He says:—

"I began my fish pool the 2d of October, 1875, and finished it in two weeks. I commenced by digging out the earth from my spring the distance of 175 feet in length, 20 feet wide, and from four to seven feet deep. The water is pure, coming as it does, from three springs that rise at the head of the pool. I then stocked the pool with trout, black and white perch. I did this on the 30th of last October, and afterwards put in a few large fish of the same varieties as I heretofore put in. I made a bed of sand and gravel for them to spawn in, and the result was wonderful. They hatched out thousands. These little ones I protect by shallow water, out of reach of the large fish. They are thriving finely. They are fed once or twice a week on bread and boiled liver, which is very good food for all sizes.

"The first I put in, a year ago, are now very near full grown. Some of them are fourteen inches long, and are plump and fine. I don't dictate to them in regard to the ways and means of hatching their young, for I think they know best what to do in the premises. All that I do is to protect the young fish from the depredations of the old ones. I find that plenty of sand and gravel and shallow waters are the things at last.

After I finished the pond and leveled off the embankment, I put out maple trees for shade, and some grass seed on the embankment, which is now very green and finely sodded.

The water is not confined in this pool by the embankment, but is held by the earth, dug below the surface. This prevents the rats and minks from burrowing into the bank and letting out the water.

I found that I had plenty of water for still a larger pool, and I have put up another one hundred feet long, twenty-eight feet wide, and four to ten feet deep, and stocked this with black bass, and our native trout, with a few perch. This last pond, so far, is doing well.

I hope to make this a profitable business, and will not allow depredators to impose on my property. Fish can be raised as easy as house-flies, and will accumulate as fast, if you will give them plenty of fresh water, and prepare for them to live in a clear, healthy stream or pool. I encourage everybody to have their own fish in the country. It only requires a labor. Both of my pools cost me \$210, all told.

—The *London News* says that the Gatling mitrailleuse, which, despite its murderous action, has never found much favor with the army, is, by direction of the Admiralty, now being fitted in many of the vessels that are preparing for sea. The Alexandria and Shannon are each of them to receive two of these weapons on board, to be especially employed against marksmen posted in the rigging, or hostile marines engaged in firing through the portholes, or in repelling any attempt at boarding. Again, it is also intended to arm our gunboats and sloops with the same destructive implements for coast and river fighting.

Natural History.

A WORD OR TWO ABOUT SOME OF OUR RAIL.

FEW of our birds are as little known to the unscientific as the species which are comprised in the family of the *Rallidae*. Migrating altogether by night, and passing their lives among the wet meadows and marshes, they are rarely disturbed, except by the ornithological collector, and for perhaps a month in the autumn by the sportsman.

Yet they are very interesting little birds, active, energetic, and above all inquisitive. At high water they may often be seen in considerable numbers running rapidly about over the floating sedge, the head well thrown back and the short, pointed tail erect and brought as far forward as possible. At such times, if the observer will but remain perfectly motionless the nimble little feeders will approach within a few feet of him, and he may note each detail of form and coloring. At the least movement, however, all the birds take the alarm and run back to the shelter of the standing grass or rushes whence they came. Their swiftness of foot is surprising, and they splash along over the floating reeds and grass in a most reckless and noisy race.

That they are not badly frightened, however, is shown by the fact that if all becomes quiet once more they will emerge from their hiding-places almost immediately to inspect the object which alarmed them, and after having satisfied their curiosity, will recommence feeding in their former jaunty and unconcerned manner. While thus engaged they do not confine themselves wholly to satisfying their appetites; they are not so eager for food that they cannot find time to stop for a little chatter and gossip with one another. Indeed they often indulge in quite protracted conversations, sometimes in the shrillest and most argumentative tones, and at others in low whispered chuckles that can hardly be heard at the distance of a few feet. Often the birds can be called from their grassy hiding-places by an imitation of their shrill cries, and we have sometimes drawn a dozen birds to the edge of the rushes, where they would stand and peer about until some slight movement drove them back to their cover.

Ordinarily they seem very much averse to using their wings, and prefer to trust for safety to their powers of running and hiding. If possible they will always run to the thick grass or "cat-tails," which the sportsman's boat cannot penetrate. When they have not time to reach such places of refuge they may usually be forced to fly, though they will sometimes hide in a bunch of grass, and permit the boat to be pushed directly over them. Wounded birds resort to every expedient of diving, swimming under water and hiding, and unless the situation is exceptionally favorable for the marker, they are more often lost than secured. We have known them to cling for several minutes to the grass at the bottom, and it is believed that they sometimes drown in this way, rather than expose themselves to the chance of being captured. One of their commonest modes of concealment is to sink in the water near a clump of grass, leaving only the bill exposed above water, and this small object partially concealed by the surrounding grass is easily overlooked.

By far the most abundant species in the Middle States, especially during the migrations, is the so-called sora rail (*Porzana carolina*); next in abundance come the salt water marsh hen (*Rallus longirostris*), and the Virginia rail or cornercrake (*R. virginianus*), the latter a bird most unwilling to use its wings, and ordinarily not to be started from the ground except by the aid of a dog. The coot (*Fulica americana*) is rather abundant in the middle districts, and from its size and habits is perhaps more generally known than the other members of the family. The Florida gallinule (*Gallinula galeata*) is rare hereabouts, but we have occasionally taken it. This family contains two or three species which are quite rare, and which are eagerly sought after by ornithological collectors. The yellow-breasted rail (*Porzana noveboracensis*) is one of these, and the black rail (*P. jamaicensis*) another, the latter being regarded as one of the rarest of North American birds. The European cornercrake (*Crex pratensis*) is only found on this continent as an accidental visitor.

We were fortunate enough a few weeks since to make some observations on the habits of *P. noveboracensis* which deserve to be briefly noticed. While working a young puppy on snipe over a wet meadow we were somewhat annoyed by the dog's often making what we supposed false points. We were unable to start any birds from before him, and several times called him away, supposing that he was standing on the scent of a bird that had recently been there. At length, however, the dog was seen, after standing for a moment, to reach down and grasp at something in the grass before him, and immediately afterwards a small rail rose and flew a short distance. Recognizing it as a rail and seeing that it was very different from anything which we are accustomed to see in this vicinity, we shot the specimen, and when it was retrieved were surprised and pleased to find that it was a yellow-breasted rail.

Subsequent examination of the meadows proved that the species was quite common, and we did no small injury to our dog's training by allowing him to hunt the birds after his own method. The little creatures were astonishingly tame, and would hide among the bogs on the meadow or creep into holes in the ground, from which the dog would draw them forth in his mouth. We caught one in our hands, and killed another with a dog whip. A third flew

against the legs of one of the party, and then dropped down into the grass again. In all about a dozen specimens (of which nine were preserved) were taken in an hour or two, and no doubt had more time been at our command this number might have been materially increased. It was apparent that the species was migrating in considerable numbers, and that its supposed rarity is in a great measure due to its retiring habits and to its propensity for hiding when it can instead of flying. It is evident that a collector familiar with these habits would have no difficulty in securing a goodly number of specimens.

The facts just related would seem to indicate that if collectors did but know where and at what time to look for them, some of the migrating birds now considered rare in certain localities might be found there in considerable numbers; and that as our knowledge of bird life and habits becomes more and more extended the so-called rare species will gradually be eliminated from our lists, until finally the time will come when we shall know just where and when to look for any given species.

RARE BIRDS FOR CANADA.—The *London (Ontario) Advertiser* says that Mr. George Jackson of that city, while on a shooting expedition recently, shot a splendid specimen of the pelican, and also a sandhill crane of fine plumage. Both of these are rare birds in this part of the country. They have been handed over to Mr. Mummery for mounting, one for Mr. Jackson's private collection, and the other for the museum at the Mechanics' Institute.

LOCAL NOMENCLATURE.

List of Gunner's Names for Birds and Wild Fowl obtained in Plymouth Bay, Mass.:

Fulix marila. Troop fowl.
Melanetta velutina. White-wing.
Pelecanus perspicillata. Surfer.
Oidemia americana. Coppernose.
Somateria mollissima. Sea duck.
Bucephala americana. Whistler.
Harelda glacialis. Quandle.
Bucephala albeola. Dipper or dopper.
Spizella monticola. Sprigtail, English duck.
Spatula clypeata. Spoonbill.
Mergus serrator. Sheldrake.
Colymbus torquatus. Adult, Pond loon; young, sheep loon.
C. arcticus. Grayback loon.
Centronotus. Peggingawl or pegmonk.
Podiceps. All varieties. Water-witch.
Graculus carbo. Shag.
Mergus alle. Pine knot.
Sterna. All varieties. Mackerel gulls.
Chroicocephalus philadelphia. Square-tail gull.
Lissa tridactylus. Square-tail, also bay.
Larus marinus. Daniel gull.
L. argentatus. Adult, white; young, gray gull.
Botaurus lentiginosus. Plunkett.
Charadrius virginicus. Squealer.
Squatarola helvetica. Bottle head.
Aegialitis melodus. Beach bird.
Hamatopus palliatus? Brant bird.
Limosa? Humility.
Streptopelia interpres. Chicoric.
Tyrus canutus. Adult, red-breast; young, gray-back.
T. alpina. Stile.
T. bonapartei. White-tailed stile.
T. maculata. Marsh plover.
Ereunetes petricatus. Oxeye.
Colaptes auratus. Skinner.
Gambetta melanoleuca. Large cucu.
G. flavipes. Small cucu.
Numenius longirostris. Sickie bill.
N. borealis. Doe bird.
Macrorhamphus griseus. Driver.

We print above an interesting "List of Gunner's Names," received from Mr. F. C. Browne, of Massachusetts. The list is valuable as showing, by comparison with others previously published, the different names given by gunners at the various localities along the coast, to the same bird. It is interesting to see how the mind in many cases seizes the striking point about the bird and names it from that salient feature. For example, who that has ever seen the full plumaged scoter (*Ordemia americana* in Mr. Browne's list) could fail to see the applicability of the name "coppernose"? The adult male of the so-called coot or white-wing (*Melanetta velutina*) is on the Connecticut coast called "snuff-taker," another striking name, given no doubt in allusion to the bright red of the bill near the nostril.

Mr. Browne informs us that this list "was made, and the birds identified, during a season's residence at Clark's Island, of Pilgrim fame, in the harbor of Plymouth, Mass., in 1852."

SINGULAR INCIDENT.—The following incident, related by a Brooklyn correspondent is worth mention:—

"In reading over one of the recent numbers of the above named paper I saw an article in which it spoke of a partridge flying against a car window and breaking it, and then being found on the floor of the car, stunned. A similar occurrence came to my notice about two months ago, when a partridge flew against a window of the Riverview Military Academy, at Poughkeepsie, breaking the window, then flying across a large room and breaking through a window on the opposite side, falling on the piazza outside of the window, where it was found somewhat stunned, but not dead. These window glasses were not so thick as those of a car window. W. STANTON.

A TRAP FOR SKUNKS.—A barrel balanced on the bilge over a pole, about seven inches high, with open end brought down to the ground, and bait put in bottom. The skunk will walk into the open end, and when he gets past the middle the barrel will right upon the bottom, leaving the skunk a prisoner. This has often been tried successfully.—*Canada Farmer*.

—It is proposed that Oregon take for its motto, *Possumus*, "We can," as it is the greatest State in the world for canned salmon.—*Ex*.

—Psychological Senior—"There is no such thing as motion. It is your inner consciousness, the mind, the soul, that weighs."

—A telescopic gun-sight has been introduced in English artillery practice.

The Kennel.

THE KENNEL REGISTER.—List of dogs whose pedigrees have been entered in the Kennel Register for the week ending Nov. 7th, 1876:—

SETTERS.
Storm, field trial, F. G. Simpson.
Blue Daisy, field trial, F. G. Simpson.
Ruth, field trial, F. G. Simpson.
Dick, Gordon, F. G. Simpson.
Chana, red, H. H. Gilmer.
Prim, red, H. H. Gilmer.
Tib, Gordon, Geo. H. Bigelow.
Rap 2d, Gordon, Chas. Keeler.
Pilot, orange and white, C. Keeler.
Beauty, red Irish, Miller Ketchum.
Floss, orange and white, M. D. Moore.
St. Elmo, black, white and tan, Dr. S. Fleet Speir.
Prairie Flower, bl. and tan, Dr. S. Fleet Speir.
Sable Cloud, bl. and tan, Dr. S. Fleet Speir.

Renova, bl. and tan, Dr. S. Fleet Speir.
Leo, bl. and tan, Dr. S. Fleet Speir.
Warwick, bl. and tan, H. Beam.
Victor, bl. and tan, Chas. Baker.
May Queen, bl. and tan, R. O. Gates.
Oberon, bl. and tan, E. S. Sanford, Jr.
Romeo, black and tan, P. A. Hege-man.
Lou, bl. and tan, W. M. Tileston.
Ben, bl. and tan, L. R. Cassard.
Flirt, orange and white, L. R. Cassard.
Trump, orange and white, F. H. Neirman.
Netty, black, H. Myers.
Pansy, bl. and tan, F. L. Gay.

COCKERS.
Doim, D. M. Sharpnack.
POINTERS.
Rose, Chas. Keller.
Jack, C. L. Austin.

REVERSION OF THE DOG TO THE FERAL STATE.

RY DR. ELLIOTT COUES, U. S. A.

THE relationship, by descent, of the numerous breeds of domestic dogs to their several wolfish ancestors, is a subject which has attracted my attention, and in an article contributed not long since to the *American Naturalist* I took occasion to point out the close resemblance in many essential features which subsists between some kinds of dogs and the coyote, or prairie wolf, *Canis latrans*. In the course of that essay I adduced, as collateral facts bearing upon the main point, the actual relations of consanguinity by direct crossing which maintain among the mongrel curs which infest Indian villages, some of these dogs being in fact indistinguishable from coyotes, and others showing the coyote cross in varying degree. But even the most wolf like of these animals are "domesticated" in the sense that they live with and acknowledge their masters. I am now prepared to bring forward additional evidence in favor of the views I support, derived from the fact that the domestic dog, in no immediate manner related to the prairie wolf, or other wild canine species, may occasionally revert to the wild state. The main fact is not novel, as I am well aware, yet it may present the interest of novelty for many lovers of the dog and gun, while the details of the case I shall narrate bear directly upon the coyote matter to which I have just alluded.

During a recent visit to Cheyenne, Wyoming, I was informed by my friend and genial host, Capt. James Gilliss, of the army, that there was a litter of "wild dogs" living in the prairie near by, and I lost no time in visiting the spot in his company. We rode a mile or so from the town and turned into a large inclosed but uncultivated piece of ground where the dogs were. There was a house not far off, but the person occupying it had previously assured Capt. Gilliss that the dogs were not his; that they were wild dogs owned, or at least claimed, by no one. Right on the open prairie in a burrow in the ground undistinguishable from any one of the thousands of wolves' or foxes' burrows which dot the plains of the west, I found this interesting family living. It consisted, at the time of my visit, of the mother and three pups—there had been five in the litter, but Capt. Gilliss had already secured one of them, and meanwhile some person had abstracted another. The mother was a dark brindled cur of no particular breed—a thorough cur about as large as an ordinary pointer. The pups were not in the least like her, being black, with white in bold patches; they might have been taken for Newfoundlanders some six weeks or two months old. The whole five were females. The father was not with them. As we approached, the dogs were all in view near their burrow, nor did they retreat into it as would have been expected. They showed, in fact, scarcely any fear, merely shying off a little as we came up, with the slight yelp or stifled bark usual with puppies when rather surprised than frightened. During the few minutes we spent examining their surroundings the mother quietly curled herself up near the entrance of the hole and went to sleep, or pretended to, while her progeny walked about and eyed us, or sat on their haunches, perfectly unconcerned, after the first slight commotion our approach excited. How this interesting family lived was a mystery both to my companion and myself. They looked plump and sleek, and evidently fared well; yet there was not the slightest trace of food about their establishment. The pups appeared too old to be still nursing.

Of the burrow itself there is little to be said, since, as already stated, it was indistinguishable from many others belonging to wild animals of the prairie. It had apparently been worked upon to meet the requirements of such a lusty family exactly as the deserted burrow of a badger or fox often is enlarged by the coyote.

Here, then, was a case pure and simple of reversion of the domestic dog to a feral or wild state. The mother was an ordinary cur, without the slightest trace of wolf lineage, and though the father was not seen, there was nothing whatever in the appearance of the pups to indicate immediate cross with a coyote. Obviously the mother, a domestic dog, become pregnant by another domestic dog, had forsaken human society, constructed, or at least refitted, a burrow in the ground of the prairie, and there reared her progeny, the whole family finding their subsistence as any other wild animals might do. They were "wild" in this sense;

yet their very fearlessness at the approach of man was additional evidence, however unnecessary, that they belonged to domestic stock. In a word here was a family of domestic dogs living exactly like a family of coyotes; the reversion, even if only temporary, was complete.

Cheyenne, Wyoming, Oct. 16th, 1876.

THE MEMPHIS FIELD TRIALS.—We hear that the prospect for large entries in the field trials is very flattering. In the puppy stakes there will be between 17 and 23; in the champion stakes from 12 to 11, and 9 or 11 in the brace stakes. As the entries do not close until the day before the trials, it is impossible to tell exactly how many will stake in each state. For Mr. Greenwood's handsome prize (gold plated water set) for imported Irish setters, the St. Louis Kennel Club will run Erin and Kate, and Arnold Burgess will run Rufus and Friend, and some others yet to hear from.

—Mr. F. B. Farnsworth, of Sycamore, Illinois, writes us that his imported field trial setter bitch "Rose," was visited on October 18th, by his imported Laverack dog "Carlowitz," and some rare good puppies are expected.

—Mr. William Vie, of St. Louis, Mo., reports that his bitch Rusa, whelped last week twelve pups, eight dogs and four gyms, all orange and white, by Mr. Asa L. Sherwood's France.

REARING PUPS BY HAND.—It may interest some of your readers, who have large litters of valuable pups, to know how to rear them if a foster-mother cannot be obtained. Get a common sixpenny infants' feeding bottle, with a glass tube extending into the body of the bottle; through the cork pass a second tube, such as a piece of tobacco pipe. Fill the bottle with new warm milk, goats' milk for choice, and, inserting the sucker into the mouth of a pup, blow through the tobacco pipe, thus forcing a small continuous stream of milk into its mouth; it then readily sucks and does well. I have generally failed to rear pups on cows' milk; and I think the outlay of a sovereign on a goat in milk, will enable many a valuable pup to be reared.

—Aberllynfi, in *London Fancier's Gazette*.

For Forest and Stream.

"SCHNAPPS."

Schnapps is a bull dog, a full blooded, brindled bull dog, about four hands high, orthodox breed, snub nose, broad chest, short legs, set in like the legs of a stool, tail good size and length. I am not learned in bull dogs, so do not know, but the correct tail should be short. Anyhow, Schnapps has the correct tail for him, with just the right upward curve of complete self-respect, without conceit—a tail curled never, save when he has unwittingly provoked his master's displeasure—always ready for a fight—this due to his blood. Never anxious for one—this due to his education. All minor accomplishments, such as sitting up on end, with cracker on nose to jerk off and catch it, rolling over, standing upon the backs of two chairs, fetching cap, or glove, or muffler, as directed, carrying packages to and fro between house and store. These are his A, B, C. But what interests me especially are his sporting proclivities, engrafted upon a pure fighting nature by careful training, leading me to believe what a sage friend admiringly remarked after beholding Schnapps perform, "that a man might track a dog all he knew, if he didn't know too much." A woodchuck or skunk, a weasel or a rabbit, a coon or a mink, he goes for them unsparingly, and their days are never long in the land if he once gets after them, unless they climb a tree. "Schnapps can't climb a tree," so his master says. Perhaps he can't; but, then, again, perhaps he can—human veracity always has a flaw somewhere. Bumble bees are his special delight; standing over a nest, he snaps up each individual member of the irate community as he issues forth. If too many come at once, they effect a lodgment upon the venerable small of his back, rolling them flat instantaneously, and quick back to position as door keeper. It is affirmed that he invariably grabs them by the nape of the neck; this I cannot vouch for, but I believe it. The report of a gun is music in his ears. Woodcock or snipe, quail or ruffed grouse, he takes the scent, working rapidly but cautiously, obedient to command, rarely flushing a bird unless urged on. Once tried to make a point on a bevy of quail, but couldn't manage his tail—never running in when birds rise, though taking all the lively interest in their destruction that a thoroughbred setter would. Best of all, returning dead or wounded birds without ruffling a feather. I respect you, Schnapps, but you have had opportunities. You will weigh forty pounds. You are eight years old. I trust you will live to be a hundred. Only one thing yet for you to do—should like to try you upon deer—with your five inch legs. I know you would pull down a full grown buck with any dog of your size. If a bull dog can be taught to do all this, there is certainly some chance for the regeneration of the human race.

ALIQUIS.

NO-TAILED DOGS.

BOSTON, Oct. 30th, 1876.

EDITOR FOREST AND STREAM:—

Noticing your answer to "Jaco," Turner Junction, Ill., in last issue, let me add that one case in my observation occurred where one male pup in a litter of five Scotch terriers, the result of breeding in-and-in two generations, had at birth tail and ears seemingly cut short after the manner of its ancestors—an incident of interest as bearing on the question of transmitted accidental qualities.

The mere amputation of any member while still in a foetal condition being a very common-place occurrence in human and other animal life as you very truly say.

SAWBONES.

—The fact that there are 2,000 or more deserted farms in New Hampshire has attracted the attention of the Board of Agriculture of that State, and it is proposed to make an effort to reclaim them by the appointment of a board of commissioners, who shall fix the price of the land to be paid by the purchaser after two or three years of occupation, without paying rent, but paying the taxes.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

Black Bass, *Micropterus salmoides*; Weakfish, *Cynoscion regalis*.
M. nigricans. Bluefish, *Pomatomus saltatrix*.
Mascalonge, *Esox nobilior*. Spanish Mackerel, *Cybbium maculatum*.
Pike or Pickerel, *Esox lucius*.
Yellow Perch, *Perca flavescens*. Cero, *Cybbium regale*.
Sea Bass, *Sciaenops ocellatus*. Bonito, *Sarda pelamys*.
Striped Bass, *Morone americana*. Kingfish, *Menticirrhus nebulosus*.
White Perch, *Morone americana*.

FISH IN MARKET.—Codfishing has commenced in the vicinity of Sandy Hook. Small boats are taking fair quantities off Fire Island, but the smack fleet has not yet got to work. Striped bass are very abundant. Our quotations vary but little from those of last week. Striped bass are worth 18 to 20 cents per pound; smelts, 25 cents; bluefish, 12½ cents; salmon, (frozen) 45 cents; mackerel, 15 to 25 cents each; white perch, 15 cents per pound; Spanish mackerel, 75 cents; green turtle, 15 cents; terrapin, \$12 per dozen; halibut, 18 cents per pound; haddock, 8 cents; kingfish, 25 cents; codfish, 10 cents; blackfish, 15 cents; flounders, 10 cents; sea bass, 20 cents; eels, 18 cents; lobsters, 10 cents; sheephead, 25 cents; scollops, \$1.50 per gallon; soft clams, 30 to 60 cents per hundred; whitefish, 18 cents per pound; pickerel, 18 cents; salmon trout, 20 cents; hard-shell crabs, \$3.00 per 100.

THE MONTMORENCI RIVER.—Scarcely one of the many thousands of persons who visit the famous Falls of the Montmorenci, eight miles below Quebec, have any knowledge of the remarkable river that furnishes the water supply. It is not only one of the most ruggedly picturesque streams in America, but also one of the finest streams for trout, which often attain great size. A mile and a half above the falls the river dashes through a rocky chasm in a tumultuous whirl of foam, and on the left side is a series of natural steps in the limestone rock, extending for half a mile, over which the high water of the spring floods, swelled by melting snows, flows with a torrent. The scenery for thirty miles up changes constantly, though always wild and rugged, and near the favorite fishing ground for the very few anglers who visit it, the river bed is in the bottom of a ravine that divides two mountains almost perpendicular. Through a lateral gorge tumbles the limpid waters of Snow river, the outflow of Snow Lake fifteen miles up; and where this ice cold tributary joins the Montmorenci is the place to fish for trout. On this stream last July we met Manasseh Smith, of Portland, Maine, whose invitation to join an excursion to headwaters we were obliged to decline. But he and two friends, Willie and George P. Halls, went up and camped for several days, and here is the result of a single day's fishing for three rods: 20 dozen fish of average size, weighing 150 pounds in the aggregate, and 19 big fish from two pounds upwards—the largest weighing 5½ pounds!

A CURIOUS LAKE.—Higgins Lake in Roscommon county, Michigan, is believed to be one of the chief breeding places for the whitefish that populate the Great Lakes. It is six or seven miles long by three in width, and in some places 400 feet deep. It occupies the highest ground on the whole Peninsula, and is some 800 feet above the Great Lakes, there being a water shed on all sides, away from it, with only one small stream coming into it, which originates in a spring at no great distance from the lake, and in the summer is often nearly dry. But the stream which flows from Higgins's to Houghton, and named the "Cut," is a large serpentine stream fifteen miles long and navigable for row boats both ways. Now, will some one tell where all this water comes from? The answer usually given is, there are springs in the bottom of the lake. This is undoubtedly so—the whole lake is one great fountain—flowing evenly and constantly through the ages. But this does not tell us where the water originates. There is no higher land to feed it within hundreds of miles. It has been suggested that it comes from the Rocky Mountains. But in this case it must flow all the way under the Mississippi and the Western States, and under Lake Michigan, all of which are much lower than this lake. The bottom of Lake Michigan must be some 1,800 feet lower than the surface of Higgins. It certainly is a curious arrangement, by which water finds its course all the way under the lower strata of the Mississippi Valley and Lake Michigan, and then appears here almost on the very top of the drift of Michigan. No wonder the Indians have superstitious traditions concerning it. They never pass across it in a boat. They say it is a bad lake—bad for Indians, and think there is somewhere in it a whirlpool, which will draw down any foolhardy Indian who should attempt to cross it. The whitefish that breed here pass through the "Cut," to Houghton Lake, and thence by way of the Muskegon river to Lake Michigan. The country adjacent abounds in deer, bear, ducks, and small game. There are some log houses on its borders built for the accommodation of those who come to fish and hunt. The lake is reached by the Jackson, Lansing & Saginaw railroad 80 miles from Bay City, and thence five miles by wagon.

THE BIG FISH OF ALASKA.—Salmon that weigh 100 pounds.—In 1874 a committee of Icelanders, who were deputed by the Icelanders of Wisconsin, went to Alaska, to examine the country with a view to settlement there. Their report was, on the whole, very favorable. "On October 15th," the narrative reads, "we went on shore at Fort Nicholas [near the head of Cook's Inlet], and were kindly received by the agent in charge of the Government buildings, who also gave us useful information, he being an old resident. Here salmon are plenty in the rivers and

lakes, and they are also very large. The agent told us that once he had in one hour caught 63 salmon, of which the biggest weighed 95 pounds, but the average weight was 52½ pounds. Others told us the same. One day we went to the Kakno river, which flows south of Fort Nicholas, to a spot where it had last summer overflowed its banks, and there had consequently been pools formed in the low places, and afterward the pools had dried up, and heaps of dead salmon lay there so that it was half up to our knees wading through them. Several of the ship's officers also saw this. * * * The salmon fishing at Kodiak is about as good as at Cook's Inlet, except that the salmon are smaller. In a little while the sailors from the Portsmouth caught over 60 in one of the rivers, and got these by catching them with their hands, or by striking them on the head with a stick, or by shooting them as they leaped out of the water. There is an abundance of cod-fish and halibut all the year round, and we caught any number of them without a bait fishing from the wharf."

For suitable tackle to capture striped bass, Genio C. Scott says, in the *Spirit of the Times*:—

"The rod should be about eight feet in length, made of two bamboo joints. The guides should be stationary on each side of the rod, so that when the rod gets set or bent by fishing one side up, it may be turned over, and the other side used. The guides should be a quarter of an inch in diameter, so as to cast a knot in the line through them if necessary. The edges of the guide should be so smoothly polished or burnished as to produce no friction upon the line. Bell metal is the best from which to make guides and tips; but some prefer settings of agate or other precious stones for the line to play through. The best line is a linen one of 12 strands, as small as the usual trout line, but 600 feet in length, made without taper like the salmon or trout lines. The reel is of German silver or brass. Some affect the combination with gum elastic or gutta percha. The reel should run on steel pivots, and multiply twice or thrice. The crank should be as far as convenient from the knuckles of the angler, and not so long or heavy as to produce a momentum difficult to check with the thumb. Of course, the wear of thumbstalls is necessary, or a slip of leather attached to the reel at a convenient place to turn on to the reel under the thumb is preferred by many; but there should be no drag or check to a bass reel, and it should be made of a size sufficient to carry 200 yards of line without being perfectly full. Van Hoeff is the best reel maker in the city. He caps the works, so as to protect them from salt water and consequent rust, while they run as regularly, and are as finely-balanced in their running works, as is a first-class Geneva watch."

"But for bass tackle, to fish the waters about the city of New York, a reel to carry 400 feet of fine linen bass line will answer, and be preferable, except for Hell Gate trolling, to the large reels used at Cuttyhunk, West Island, and Newport. And while menhaden is the best bait to angle with in the ocean surf, shedder crab is the best bait for still fishing from a boat on our bays and estuaries, and the live squid—cuttle-fish—is the best bait for trolling; and a rig for trolling includes a baiting needle and the shaped sinker, illustrated in the book on 'Fishing in American Waters.'"

—A Newfoundland correspondent estimates that 25 fishing vessels have been lost on the Labrador coast the past season. Loss on fish 12,000 quintals, or more.

LOBSTERS.—There is considerable inquiry at the eastern ports for lobsters, and the supply is not equal to the demand. A large order was received at Gloucester, on Wednesday last, direct from New York, but only half of the quantity ordered could be forwarded, as there is at present a scarcity of these fish. The quality, however, is better than it has been for years, thanks to the law which prohibits the catching of the smaller sizes.

VIRGINIA—*Leesburg, Nov. 1st.*—Bass fishing good; water clear; weather pleasant; quail shooting on cool days fine; 36 birds to a couple of guns in a few hours. T. W.

MOVEMENTS OF THE FISHING FLEET.—The Bank fishermen are returning from their fall trips, the number of arrivals the past week being 26, a larger number than for any week since July. The Georges fleet is small, the number of arrivals for the week being 5. There have also been 3 arrivals from the Bay St. Lawrence, making the whole number of fishing arrivals for the week 34. The receipts for the week have been about 800,000 pounds. Bank codfish, 60,000 pounds. Georges cod, 275,000 pounds of halibut, 300 barrels mackerel and 100,000 pounds off shore fish.—*Ann Advertiser, Nov. 3d.*

THE CENTENNIAL FLY-CASTING TOUR NAMENT.

Many gentlemen have inquired anxiously what came of the grand Fly-Casting Contest which was advertised to take place on the Centennial grounds this autumn. The subjoined letter will give the desired information:—

EDITOR FOREST AND STREAM:—

In compliance with your request I give the following facts in relation to the abortive attempt to get a grand trial of skill in the elegant art of fly-casting by the Centennial authorities. The project was originated by that thorough and accomplished sportsman, Mr. James Geddes, of Syracuse, N. Y., who has done more towards such contests in his official capacity as a member of the New York State Sportsman's Association, than most any other man. He suggested it to Mr. Landreth, Chief of Bureau of Agriculture, who did all in his power to bring about the desired end.

At that time I had the care of the minnows that constituted the fish show in an out-of-the-way corner, and was requested to superintend the proposed tournament. We immediately issued circulars to dealers in fishing tackle asking contributions from their stock in the way of rods and other appropriate articles, and obtained promise of some elegant prizes from John Krider, and A. B. Shipley & Son, Philadelphia; Conroy, Bissett & Malleson; Eaton & Holberton; Abbey & Imbrie, New York; C. F. Orvis, Manchester, Vermont; S. W. Goodridge, Grafton, Vermont, and FOREST AND STREAM. There were to be three contests, one with single handed trout rods, one with two-handed salmon rods, and (a new feature) throwing the squid or spoon for bass as practiced at Cuttyhunk.

We made an effort to obtain a cash prize of \$100 gold from the Centennial Commission, but failed from the fact that the old plodding heads

of that Commission took no interest in fish or fishing, nor in fact in anything connected with the Agricultural Department, in which we were unfortunately placed; and everything that was obtained for the aquarial display was fought for inch by inch. A proceeding distasteful to most men is to have to fight parties to do something entirely for their own interest, and for which, I am free to say, I have no stomach.

So thoroughly disgusted was every visitor who took an interest in fish— their capture or culture, at the neglect bestowed upon their fancy that I found that those who had offered prizes for the casting did it only out of compliment to Mr. Geddes, and such personal influence as we could bring to bear, and immediately revoked them upon my resignation. I regretted this, for some one else might have managed it, better, perhaps, than myself; and I now believe that with most of them it was more from their dislike at the way in which the whole matter was treated, and the apathy at headquarters regarding it than from any personal motive. I heard indirectly that an effort was afterward made to obtain the promised prizes and have the contest take place, but know nothing of it. Thus what might have been the finest contest in the most beautiful and delicate of all outdoor sports was allowed to fall through. In my opinion the fault lay entirely outside of any one connected with the Bureau of Agriculture, and if I did say "padding heads" I still think the epithet most suitable, if not elegant or in good taste.

FRED MATHER, New York Aquarium.

[No doubt the Commission or Bureau of Agriculture had plenty of other business on hand which they considered of more importance, though we doubt not that a contest of this character would have attracted considerable attention and paid for itself by putting money into the Centennial exchequer.—Ed.]

Yachting and Boating.

A NEW WORK FOR YACHTSMEN.—Mr. Dixon Kemp, a celebrated naval architect of England, has just issued a most elaborate work on "Yacht Designing." This work will be found of special interest and value to American yachtsmen on account of the drawings it contains of the most celebrated English yachts, and all these drawings are on what are called "working scales," and are accurate. At the present moment the Vol au-Vent and Kriemhilda are the fastest and more weatherly of the large English cutters, a class corresponding with our sloops, and the lines of both these famous craft are given. The work is illustrated with numerous drawings of celebrated yachts, some of them being nearly four feet in length. The lines of the most famous English schooners are also given, including the Sea Belle and Cambria, as also those of the Sappho, the latter being taken off with great care when that vessel was in dock at Cowes. The Sappho's qualities for speed and stability are compared with those of the Guinevere, the best large vessel ever built in the United Kingdom. Not only are these plates of great value to the designer, but the work contains a great amount of information upon the practical application of the results of modern investigations and experiences to yacht designing and building, together with most elaborate calculations to assist in determining the questions of buoyancy, stability, speed, etc., with regard to any particular model or scale. The book is issued from the Field office, but can be had of any English bookseller. Price £3 3s.

DORCHESTER YACHT CLUB.—For a long time there has been a system of rivalry between center-board and keel yachts of the above Club, the different owners claiming their boat to be the most powerful or the fastest in a fresh breeze and rough water. Frank Weston, Esq., of Boston, therefore started a subscription paper to raise the necessary prizes, and a regatta to settle the question was sailed October 14th, under the auspices of the Dorchester Yacht Club. Although it was demonstrated that in this particular race the center boards were decidedly the best, it did not settle their superiority over keel boats in rough water, a portion of this course being in smooth water. Two mistakes were made, therefore, in the beginning. First, the Committee determined that the keels were entitled to two feet extra allowance. Second, that the race must be started upon the flats in Dorchester Bay.

The course was from the judges yacht, moored off the new Squantum House down the Bay to buoy No. 7, east of Fort Independence, passing out the ship channel, leaving black buoys on starboard to Nix's Mate buoy, leaving it on starboard, through the Narrows, leaving Gallup Island and Fort Warren on starboard had, Point Allenton on starboard had, to Bell buoy off the Harding's, leaving on port hand; back, leaving Point Allenton and Toddy Rocks buoys on port, through Hull Gut to judge's boat, passing between her and flag-boat, each yacht to weigh anchor and carry boat, and be in cruising trim. Ten 10 o'clock a. m. was the hour set, but it was noon before the preparatory gun was fired. The wind was blowing in fitful puffs off shore, from the southwest, and there was strong indications of a fresh breeze. Many of the smaller yachts were glad to take in topsail, and some of the larger ones thought things were going to be lively. The center boards turned out in strong numbers. I am sorry to say the keels either were afraid or lacked energy. The owners might at least have taken part, out of respect to the hard work Mr. Weston put himself to for their pleasure. At 12:30 m. the gun to start was fired, and our little craft (keel sloop Sunbeam) was the first to draw out from the crowd. Anticipating a strong breeze, we set only jib and mainsail, booming out the former. We saw our mistake at once, but too late to remedy it. One after another passed us, with their topsails and balloon jibs set, and instead of first, we became the eighth or ninth at buoy 7, the boats ahead being the Effie May, Shadow, Gauntlet,

Kelpie, Triton, Saxon, Tebie and Leda, all center boards. The rest of the fleet were far in the rear.

Rounding No. 7 we had to flatten in the sheets, and then the weather qualities of our little boat began to tell on the light draft center boards around us. We picked them up one by one, until the four large yachts, Effie May, Shadow, Gauntlet and Kelpie only, stood between us and the prizes. Trying to set a topsail we lost much time, and again had to take back water from those already passed. After fussing away ten minutes we took it in, and then we made up lost ground. The distance to the goal was now too short to make on the larger yachts, but we struggled hard for position. Many had come too and reefed, but the little Sunbeam carried her 173 yards of ten ounce duck in gallant style, her dimensions being 24-6 feet water line, 26-7 feet over all, 10 feet beam, and 5-6 feet draft. The English cutter Saxon (40 feet or more in length), good enough of the little Yankee craft that day. To make long story short, the prize for No. 1 was awarded to Shadow, 38 feet; for No. 2 to the Effie May; Gauntlet, 38 feet, 3d; Kelpie, 4th, 35 feet, the Kelpie beating the Sunbeam 10 seconds in a twenty mile run. YACHTSMAN.

GREENWOOD LAKE—*Newark, November 1st.*—In addition to those printed last week, we have received the following letter commendatory of Greenwood Lake as a regatta course:

Your favor of October 17th is just at hand, asking my opinion as regards Greenwood Lake for a regatta course. In reply, I take pleasure in stating, that having visited almost all the prominent courses in this vicinity, I would unhesitatingly pronounce the one in question, decidedly the finest, combining, as it does in my opinion, all the principal requirements, viz.: still water, straightaway, unobstructed course, almost unlimited width, and a fine view for spectators the entire length, on either side of the lake. These points taken in connection with the superior facilities for moving and accommodating boats and crews, and the gentlemanly, generous and courteous management, will undoubtedly combine to make this course the favorite resort among boating men of America, if not the world.

A. B. HILL.

CAPT. VIKING, B. C.

HOME MADE FISHING BOATS.—The *Agriculturist* tells how to make a serviceable fishing boat or scow at a cost of five dollars or less:—

Procure five three-quarter or half-inch clear pine boards, 12 feet in length, and 8 inches wide; four boards 10 feet long, 1 inch thick, and 1 foot wide, and three strips 10 feet long, 1½-inch thick, and three inches wide. Plane all these smoothly on both sides, and have them all free from loose knots or shakes. Cut two of the 1-inch boards for side boards, sloping each end to a straight line for two feet, and then slightly rounding the middle of the boards. Cut two pieces of the 1½ inch strips into lengths 2 feet 10 inches, and nail them to the ends of the side boards. If strips of soft brown paper are dipped into tar and placed between the joints, they will be made closer and more water-tight. Cut the 8-inch boards into 3 feet lengths, and nail them across the bottom where the bevel ends, the two bottom boards must be beveled slightly upon one of their edges, so as to make a close joint. Then take two of the 1½ inch strips, and make cuts in each on one side with the saw, one inch deep, as follows: measuring from one end, mark with a pencil across the strip 3 feet 6 inches from the end; then mark again across the strip 1½ inch with an X. Then measure 3 inches and make another mark, and then an inch and a half and make still another mark, and score as before between these last two with an X. Then do precisely the same on the same side of the strip, measuring from the other end. Then on the edges of the board score with gauge or make a line with a pencil exactly one inch from the marked side. Then make the cuts on the pencil lines down to the score on the edge, just one inch deep, but no more. Cut away the wood in the places that were marked with X, leaving four slots 1½ inch wide, 1 inch deep, and with three inches between them upon each strip. Nail these strips with the cut side inwards, to the upper edge of the side-board, on the outside of the boat. The spaces left in the gunwale are for the rowlocks. The strips should be well nailed near the rowlocks, and if a quarter-inch flat headed counter-sunk carriage bolt were used on each side of them, it would be very much better than so many nails. A thin washer, or burr, should be used beneath the nut of each bolt. The row-lock pins should be made of hard maple or oak. They are one inch thick, one and a half inch wide at the lower part, which fits into the slot, with a shoulder of half an inch, and the top is beveled off neatly. The seats, of which there are two, are made 10 inches wide. The cleats for the seats, one inch thick, one and a half inch wide, and 10 inches long, are nailed 3 inches below the upper edge of the side board. The middle seat goes exactly in the center of the boat, with each edge 4 feet 7 inches from the end of the boat. The end seats are placed with the backs 2 feet from the ends of the boat, leaving 8 inches between each seat and the edge of the row-lock nearest to it. There are cleats for three seats, but only two seats are used at once. When one seat is used, the rower sits in the center, and he can use either of the rowlocks, the boat being double-bowed. When two seats are used, one person only rows at one time, but either can row without changing seats, and one always faces to the direction in which the boat moves. This arrangement of seats is very convenient. Eighteen inches of each end is closed in, and makes a locker for holding fish-lines, hooks, or the "painter," which is a light rope for tying up the boat when not in use. This may be fastened to a ring-bolt or a hole bored in one of the locker covers. The long bottom-board, 8 inches wide and half an inch thick, is nailed by wrought nails driven from the outside and clinched on the inside. The seat cleats are nailed in the same manner, as are also the side strips. Every nail is counter-sunk and the hole filled up with putty. The seams are puttied or filled with a strip of cotton sheeting pushed in with the blade of a dinner knife. If the joints are made as well as they may be, this is not needed, but two coats of paint will make all tight. The inside should be painted lead-color, made by mixing lamp-black with white paint to a proper shade. The outside may be painted white or a light-green, with the gunwale of a light blue. A few days will be required to harden the paint before using the boat. None but seasoned boards should be used.

Furs and Trapping.

—A few days ago a man who left San Francisco two years ago to visit the Centennial Exhibition arrived at Pittsburg, Pa., with a wagon load of pelts. He had hunted and trapped all along the way, making the journey in easy stages.

—The number of seal skins which annually pass through San Francisco for London is 150,000.

CANADA.—A party of trappers who came into Bracebridge, Ontario, on Sunday, 22d October, had caught seven beavers, besides other furs. They reported that beavers abounded from High Falls to Duck Shoot. They went back to have a clear country to themselves, but found that the further north they went the more trappers they met.

The latest enactments of the game laws of the Province of Quebec provide that "no otter shall be hunted, trapped or killed between the first day of May and the first day of October, in any year; no beaver between the thirtieth of April and the first of September; no muskrat between the first of June in any year, and the first of April following, for the districts of Quebec, Saguenay, Chicoutimi, Montmagny, Kamouraski, Kamouski and Gaspe, and between the first of May in each year, and the first day of April following, for the remainder of the Province."

MINNESOTA.—Trappers and sportsmen will undoubtedly be interested in the news that large numbers of wolves are reported on the Kettle river, a branch of the St. Croix.

FASHIONS IN FURS.—The black marten fur remains the most stylish of the low-priced furs. This is also known as Alaska sable, but is really made of the skin of the polecat. The buyer must be sure that it is thoroughly deodorized, otherwise it will give out a disagreeable smell on approaching the fire. The long round boa and muff cost from \$14 to \$24. Of all the curled black furs in fashion a few years ago under the general name of Astrakhan, the black Persian lamb is the only one that is still used; it is more handsomely waved than the others, and is very glossy. The black Persian muffs are \$10, and boas are the same price. Black Persian lamb sacques are liked by old ladies for their warmth, and by those wearing mourning; a good one costs \$40.

Fur-lined wraps are shown in a variety of shapes, and also of material both for the outside and lining. Until the present season almost the only fur lining used was the *petit gris*, or gray and white squirrel lock, made principally of the white belly of the animal. Now furriers use the whole animal, and commend it. Furriers charge for lining sacques with squirrel lock fur from \$45 to \$75, according to the shading of the fur. For lining long cloaks the cost is from \$70 to \$100.

Fur linings for silk wraps, however, are by no means confined to the modest squirrel. The luxurious chinchilla is used by those who can afford the outlay of \$400; and one imperial garment is shown with a lining of the beautiful silver-fox fur, such as the imperial family of Russia use. This is a circular of black silk with broad Russia collar of the blacker parts of the fur. The furriers were five years collecting enough of these rare skins to make the proper shading for this sybaritic lining. The price is \$1,200. Another circular at the same price has a lining of Hudson Bay sable tails, with border of the same. A cloak with lining and collar of blue fox is \$750. One with sable lining (without the tails), and widely bordered with the richest sea-otter, is \$1,000. A superb garments is an evening cloak of white Siciennae-lined with royal ermine, and showing a broad band of the same; price \$350.—*Harper's Bazar*.

New Publications.

BOOKS RECEIVED.

CHOKE-BORE GUNS, by W. W. Greener, Cassel, Petter & Galpin, London, Paris and New York.

Mr. Greener in his last work has supplied a want which has been apparent ever since the introduction of the system of choke boring guns, viz.: some tangible information as to the process itself and the results obtained. A large portion of his book is, to be sure, given up to a description of the *Field*, and other gun trials, in which his own guns were victorious and this reiteration of matter, with which all sportsmen have been made familiar, is probably the least interesting part. Nor can it be decided that the work as a whole is eulogistic and an advertisement of Mr. Greener's own manufactures. Still, we can pardon this for the sake of really valuable information which it contains. Diagrams are given showing the manner in which the "choke" is produced, and by which the system can be understood at a glance, and the different modes are fully described. Mr. Greener claims that the principles of choke-boring were known to some of the early Spanish gun-barrel makers, and he disposes of the pretensions of a rival English maker to have been the inventor by quoting from M. de Marrolles, author of *La Chasse au Fauil*, a work published a century ago, in which the manner of producing closer shooting guns by manipulating the interior of the barrel near the muzzle is described. Mr. Greener claims that guns properly bored can be made to shoot alike every time, or at most, with not more than 30 shots variation from the lowest to the highest pattern. He recommends the full chokes when very long shots are required, and the modified for short ranges and covert shooting, and claims that the latter will shoot better than the best guns bored on the old plan. An interesting chapter, from which we would quote at length did our space permit, is on the effect of choke-boring on the charge of shot, the deductions in which appear to have been arrived at by most careful experiments. Targets are given showing the patterns obtained by boring or "choking" to different degrees and under varying conditions. Mr. Greener is severe upon concentrators of all kinds, particularly those of American manufacturers, and gives directions how to load for long-range shooting. He considers laminated steel barrels as the most suitable for choke-bore guns, being harder and more tenacious than Damascus, and therefore better able to resist the strain of heavy charges, and less liable to lead.

We commend the book to our readers as a valuable addition to the sportsman's library, and as one from which much useful information can be derived. The price is \$3.50, and it can be had from the publishers or through this office.

HOW TO SING, or THE VOICE AND HOW TO USE IT. By W. H. Daniell. S. R. Wells & Co., 737 Broadway, New York.

This is a book that every one interested in the study of music could read with profit. It is explicit, logical, and many valuable hints are given. It shows that loud singing is not music, but noise, and that method is the natural law that governs the individual voice. The writer expresses our views of the tremolo when he says "it is the result of an overstrained voice, and we should depreciate it instead of copying some passe singer who could not render a song in a firm, clear style." The work is founded on common sense, and we wish it success.

MAGAZINES.

The November *Naturalist* contains as its leading article "A Remarkable Life History," by Dr. W. K. Brooks, detailing the curious growth of *Salpa* and its mode of successful generation through a series of different forms; it is the same subject which Dr. Brooks discussed more abstrusely in a "paper" some time ago which was reviewed in these columns, and which speaks very highly for the writer's accurate and close powers of observation. Concluding his discussion of the reasons why the prairies exist as such, and are never encroached upon by adjoining forests, Prof. J. D. Whitney, whose opinion has great weight in this matter, offers the explanation that the cause is to be found in the soil, which, on the prairies, is so fine that trees will not thrive; why, is not for him to decide, and says that the "islands" of forest in a prairie country are found where the soil is locally coarser, having become so owing to the draining away of the finest particles, or other causes which can generally be accounted for. It is an exceedingly interesting essay, and valuable to every one. Another article of popular interest and importance is Mr. George H. Perkins's "Hygiene of House Plants." He concludes that house plants are not injurious except as they increase the carbonic acid in the house, and are positively useful as they pour aqueous vapor into dry air, and as demanding plenty of light and air, they cause many a dark and damp room to be well lighted and a red. The writer insists also upon the constant moral benefit to be derived from the cultivation of beautiful flowers, the influence of which is towards gentleness and good. Dr. C. C. Abbott explains the use of one of the puzzling prehistoric relics of the Indians which he figures to be that of a sceptre of rank, and compares it with other Indian insignia. The editor gives an account of "The Great Salt Lake in Former Times," showing its former wider extent and its freshness. The "General Notes" on botany, zoology, geology, etc., are of unusual interest, and justify the magazine's promises for another year.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

H. J., New York.—Please let me know the price of the "Complete American Trapper," by William H. Gibson, and where to get it? Ans? \$1.75; can be sent from this office.

G. C. P., New York.—Will you have the goodness to inform me where I may find one of the best gun case makers in this city? Ans. Thomson & Sons, No. 301 Broadway, New York.

J. VAN A., Newburgh.—Can you tell me where I can procure a specimen copy of *La Chasse Illustrée* in this country. Ans. At Brentano's, 33 Union square, this city. We have mailed you a copy.

S. C. H., Washington.—In answer to your inquiry last week for cocker spaniels we would say that you can obtain them from M. P. McKoon of Franklin, Delaware county, N. Y., or Robert Walker, of the same place.

D. T. M., Hyde Park, Pa.—Where can I get a book treating upon the habits of game, etc., so that I can form an idea; also the price. Ans. Frank Forester's "American Game in Season." Orange Judd & Co., this city.

Jack, Salem, Mass.—Please inform me who are the best makers of breech-loading single barrel shot guns, and about the price. Ans.—The Phenix gun; price about \$15, is the best we know of. Messrs. Merwin, Hurlbert & Co., of this city are agents.

Joe.—There is excellent quail shooting in many parts of Maryland. Just now we happen to have a letter from Joseph K. Bramble of East New Market, Dorchester county, who promises excellent quail shooting in the vicinity, with board for sportsmen and their dogs, and livery if desired.

Hector, Philadelphia.—My setter dog is troubled with both the tape and round worms, and I have given him medicine which produces no improvement or cure. Will you kindly advise me as to some sure remedy and ever oblige. Ans. Have mailed to you some arca nut, which, if given as directed, will effect a cure.

A. B., Galveston.—Will you please let me know whether two guns of different weight and length, gauge being the same, will burn different quantities of powder? Ans. The longest barrel will burn the most powder, but not necessarily with better pattern and penetration.

J. M. D., Louisville, Ky.—Please let me know whether I can get good duck shooting between Louisville and Memphis, either on the Ohio or Mississippi river, and the best time to go? Ans. We do not know, but in Hardin county, in the southern and eastern portion of Tennessee, near Hamburg or Pittsburg Landing, you will find some good duck shooting in November.

E. H. N., Brooklyn.—1. Please inform me what gauge and weight gun to get for general shooting, but more especially for ducks, breech-loader? 2. What charge you would think best for a breech loader, 10 gauge, 10 pounds, 32½ inch barrel, for shooting ducks? Ans. 1. 10 gauge, weighing from 8½ to 9 pounds. 2. Try 5 drachms of powder and 1½ oz. shot.

J. W. G., Middletown, N. Y.—What is the reputation of Gurney & Son as breech-loading gunmakers, and where are their works located? A friend of mine has a gun marked Gurney & Son, and neither of us has ever yet heard of that firm or seen their advertisement in any paper. Ans. We have never heard of the makers you mention, and believe there is no such firm.

H. D. P., Brooklyn.—Will you please give me in your next issue an answer to the following questions: 1. What is considered to be the proper length of a setter's tail? 2. What is the length of head (Irish setter)? Ans. 1. The tail of a medium-sized setter should be about 13 inches long, or to reach to the second or hock joint of the hind leg. 2. The head of a setter varies from eight to nine inches in length.

Reader, Alexandria, Va.—1. Will you be kind enough to inform me whether there is any caller for wild turkeys manufactured that is better than the wing bone of the turkey, if so, where they can be purchased, and cost of same? 2. Where can Brunswick's "Coast and Pilot" be procured? Ans. 1. We know of none. 2. We presume you mean Blunt's Coast Pilot. It can be had of Messrs. D. Eggerts' Sons, No. 74 Wall street, or any dealer in charts and nautical instruments.

Inquirer, New York.—Will you please inform me, through the medium of your excellent paper, of some of the highest prices paid for hunting dogs. I have made a wager with a gentleman that over \$3,000 has been paid for an Irish setter, and wish to decide the bet in a reliable manner. Ans. We think you are wrong. While we have heard of sums approximating that you mention being offered or demanded, we have no authentic case in which over \$150, or say roughly \$1,000 currency, has been paid for a dog.

T. P. M., Harrisburg.—I have a young pointer bitch five months old; over a week ago she took sick and became costive. I gave it quinine and blue mass, but it don't seem to do any good. She is still costive, running at the nose, and small pimples around the mouth on the lower jaw full of matter, the same as she discharges from the nose. Ans. Have mailed to you a remedy which we think will cure your pup.

G. A. S., Toledo, Ohio.—1. What is the best preparation for cleaning brass shells? 2. What is the best charge for use in a 12-gauge single-barrel breech loader, 6½ pounds, length of barrel, 36 inches. I use the Diamond Grain powder. 3. Who is the maker of the single-barrel breech-loader called the Phoenix? 4. What is your opinion of those guns? 5. Who's powder is the best that you know of? Ans. 1. A weak solution of oxalic acid, but the wads will hold better if you do not clean the inside. 2. Use 2½ drs. powder and ¼ or 1 oz. shot. 3. Messrs. Merwin, Hurlbert & Co. are the agents. We believe they are good guns for the cost. 5. We cannot express an opinion; you must determine for yourself by experiment.

TEGEMSEE, Bavaria.—Adopting the views of a counsellor at our elbow in preference to our own judgment in our last issue we answered erroneously your query as to how a competitor in a jumping match should approach an obstacle. We should have stated that in jumping he could run at or clear the cord at any angle or in any position he pleased. Such has been the practice of the leading athletic associations on both sides the water.

HERBERT, Philadelphia.—What is the best and quickest route to Rangely Lakes, in Maine, how many hours are they from New York, how many miles of staging, and about what is the fare through from New York? Ans. By New Haven Railroad to Boston via Springfield or Fall River boats and Old Colony Railroad to Boston; thence Eastern Railroad to Portland, and Maine Central to Farmington; thence stage to Phillips and Greenville, head of Rangely or Oqossoc Lake. Leaving New York at 5 p. m. you reach Rangely second day at noon; 35 miles of staging; fare from Boston to Rangely (Greenville) and return is \$14.

W. E. A., Holyoke, Mass.—As a reader of your valuable paper, you will oblige me by answering the following: 1. I have a Mortimer double muzzle-loader 26 inch barrels, No. 11 gauge (Laminated barrels). Is the make reliable? 2. Is a pattern of 80 right and 95 left barrel a fair average, 1 oz. No. 6 shot, 2½ drs. powder 30 inch circle, 40 yards? 3. What would be the probable cost (approximate) of altering to B. L.? Ans. 1. Yes. 2. Modern guns are bored to make better pattern than your Mortimer. 3. From twenty dollars up to fifty. It depends upon the quality of the gun and the work required.

INQUIRER, Pittsburgh.—1. Is the hunting and fishing worth a visit to Parmachene Lake, Maine? 2. When is the best time to go, and the probable cost from this point? 3. What is the mixture put on gun barrels to give them the brown color? Ans. 1. The fishing was excellent a short time ago; also on the Megalloway river *en route*. Deer and grouse in the fall. 2. June and September are the best months, and the route via Rangely Lakes and up the Megalloway. For cost and route see answer to "Herbert" in this column. 3. Our issue of last week contains an article on and recipe for browning gun barrels.

S. J. P., Goshen.—I have a dog about seven years old, the size of a pointer, who has a scaly eruption on his back which causes him great suffering, as he keeps constantly scratching and biting, while his whole appearance indicates great suffering. He has had it for three summers, and is much worse now. Will you be kind enough to inform me what to do for him to make a permanent cure. Ans. Take bazilicon ointment 2 oz., flour sulphur ½ oz.; add enough spirits of turpentine to make an ointment of the proper consistency to be well rubbed into the skin, which apply after washing the parts affected occasionally with carbolic soap; also give your dog ten drops of Fowler's solution of arsenic twice a day for three days. Feed little or no meat, and give him all the exercise you can.

R. L. N., Salem, Mass.—I have a young spaniel and want to dock his tail. Can't you give me a point or two about performing the operation in good shape. Perhaps the "Squire" can suggest. You may say don't dock it at all, but I want a junk off and want it to look decent. If not too much trouble please advise. Ans. We are decidedly in favor of docking the tails of spaniels, as few of this variety have well proportioned tails. A short, compact dog with a long-crooked tail never looks well, consequently most spaniels are improved in appearance by docking. The tail should be taken off according to the size of the dog and the length of the tail. After fixing upon the point where it should be taken off, turn the hair back and lay the tail on a block, and with a chisel cut the tail between the joints, the hair will then fall over the end and hide the alteration.

L. A. B., New York.—Some discussion having arisen as to comparative merits of new guns and old, I have tried my old Lecheveux pinfire, one of the first brought to this country, a 12 gauge, with the following results, of which please give opinion: Target, 30-inch circle, with centre of shape and size of pigeon; 40 yards, No. 6 shot, 1½ oz., 3 dr. powder, right barrel 96 in target, 6 in bird; left, 106 in target 10 in bird; 40 yards, No. 8 shot, 1½ oz.; right barrel, 243 in circle 9 in bird; left, 191 in circle 10 in bird; 60 yards, No. 6 shot, 1½ oz. 3 dr. powder; right barrel 19 in circle none in bird; left, 49 in circle 2 in bird. Ans. The pattern of your gun is excellent, and could only be excelled by a choke-bore of the present day.

H. B., New York.—1. Where are the shooting grounds known as the "Big Piece" and "Little Piece"? 2. Is the color of ordinary rubber boots objectionable in duck shooting? 3. A bets B \$10 that he can name 15 States that will go for Hayes, and \$5 each on all the other States. Has this bet ever been decided to be, and is it a snap or catch bet, and if so, why? Ans. 1. Are in Morris county, N. J., eight miles from Montclair. 2. Those with tan-colored legs would be better than the black ones. 3. It is a snap bet. For instance: A names fifteen certain Tilden States and loses his \$10. He then has undoubtedly a large majority of Hayes States left upon which he wins \$5 each. For example: say there are 38 States, and they are equally divided, 19 for Tilden and 19 for Hayes. A names 15 Tilden States and loses \$10; he then wins on 19 Hayes States and loses on 4 Tilden, or wins \$75.

FLORIDA, New York.—Will you please tell me where in Florida at a reasonable expense I could camp out and find a good quantity of game, both animals and birds, and a locality where I could change camping ground several times in fifteen or twenty miles? Would have a boat, and would like to be near good streams for ducks, etc. Can everything except guns and boats and cooking apparatus be bought there as well as here? I should like to make the acquaintance of two or three persons that would like to camp out in a reasonably economical manner during the winter; start about December 1st, and get back about April 1st. What would be the best manner of hearing of such a party? Ans. Go to Bronson or Rosewood on the Ferdinandina and Cedar Keys Railroad. Ford keeps a very nice cottage for sportsmen at Rosewood. You will be near sea and inland fishing, ducks and game animals of all sorts and sizes. You can get provisions at Bronson, and tents at Cedar Keys, and possibly at Gainesville. We suppose that a card inserted in this paper, signifying your desire to form a party, would elicit replies.

"SUCH A HORSE!" was the universal exclamation of the lookers on at a scene which occurred on Grafton street last evening. An old "rack of bones," hauling a dilapidated old cart, fell down near Prince street, and remained down despite the efforts of its owner to make it stand. There was the usual amount of perspiration and profanity and punishment indulged in, but that horse would not get up. A large crowd collected, composed principally of men-of-war sailors. Some of the Jacks took a hand in at the work of raising the incumbent and recalcitrant Rosinante. They straightened out his legs, and raised him up bodily, but he fell down again without moving a joint. This operation was repeated several times, the poor beast meanwhile bleeding profusely from the mouth. At last the sailors surrounded the animal. Two took hold of his head; others supported his hind quarters; others his fore quarters and sides; and they raised him up, very valuable assistance being rendered by the Jack who had elected himself to the office of tail bearer. Thus they kept the animal on its feet, and in the meantime a surprise party in the shape of oatmeal and water was organized. The party was considered by the horse a decided success, and he devoured the whole of it. Then the sailors rubbed him down, after which he appeared to be a new animal altogether, and nimbly headed northward for the home of his owner, one George Drysdale, *Halifax (N. S.) Herald*.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOOR RECREATION OF MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[Post Office Box 2832.]

Terms, Four Dollars a Year, Strictly in Advance.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 20 cents per line; outside page, 30 cents. Special rates for three, six, and twelve months. Notices in editorial columns, 40 cents per line.

NEW YORK, THURSDAY, NOVEMBER 9, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published without objection being made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

Trade supplied by American News Company.

CHARLES HALLOCK,

Editor and Business Manager.

—It is quite probable that Mr. Fred A. Ober ("Fred Beverly," of Florida fame) will spend the winter in a scientific investigation of the Tropics, under the especial sanction of Prof. Baird of the Smithsonian Institution, and the directions of Mr. N. H. Bishop, the canoe voyager, who has devoted much time to researches there and in South America. Mr. Ober will employ himself in studying and collecting objects of natural history, and will pursue his investigations two or three years if necessary. The field is a wide one and comparatively new to the Naturalist, and one that Prof. Baird has long had in view. There is no one we know of more competent to do this field in a general way than Mr. Ober. Besides being well informed on fauna, he is an intelligent sportsman, a photographer, and a critical observer. Of course FOREST AND STREAM will profit by his labors. He intends to start on his mission as soon as his engagement ends at the Hunter's Camp, Centennial Exhibition grounds. There are few men so modest and unassuming as our friend, and few of more pretensions who possess as much common sense to employ to advantage their natural gifts. We are confident that his endeavors will eventually bring abundant reward.

OBITUARY.—Benj. Smith, Esq., a prominent lawyer of Kentville, Nova Scotia, and known far and wide to the fraternity of sportsmen, not only as a hunter and angler, but a keen dog fancier, especially in the breeds of cocker and clumber spaniels, died recently. He was an esteemed contributor to FOREST AND STREAM, having written several valuable articles relative to the game and fish of Nova Scotia, especially as to moose and caribou hunting.

—The St. Augustine (Florida) Press of October 28th says that the hotel of Messrs. Johnson and Botsford, at Moultrie, is now well under way. Its size is 80x38, and to be three stories, with wing, and will accommodate about fifty persons comfortably. It will be a most attractive resort for yachtsmen and gentlemen who derive pleasure from hunting and fishing.

—The snow is a foot deep in portions of the Adirondacks and the smaller lakes and ponds are frozen over.

—The Irish oarsmen who lately visited Philadelphia give quite a different report of their reception and treatment from that promulgated through the English papers. It is satisfactory to know that the sweeping and insulting denunciations of this country, and everything pertaining to it, by the Field correspondent, are being accepted for what they are worth.

THE NEW ROUTE TO CHINA.

THE voyage of the Swedish Professor Vordenskiöld to China via the Arctic Ocean and the Yenisei river, while in itself a great achievement for a solitary traveler, is utterly unlikely to produce those stupendous results and changes in the currents of commerce which some of the daily papers have predicted. It will be remembered that a few days since intelligence was received that Professor Vordenskiöld, in a small steamer followed the line of the Gulf Stream as it penetrates the Arctic regions via Nova Zembla, and reached the mouth of the Yenisei river, in Northern Siberia. Thence he ascended the course of the river, penetrating to the center of the Asiatic continent and almost as far as the frontiers of China. The Yenisei river has its sources in Outer Mongolia and south of the Altai Mountains, which separate the Chinese territories from Russian Siberia. It flows through Lake Baikal or the Holy Sea, in Thibet, and crosses the Siberian region to the Arctic Ocean. Its head waters are distant from the sources of the Amoor river, which empties into the Gulf of Tartary and the Japan Sea, only about 150 miles. Indeed, it is much less if we measure the distance from source to source. Practically, therefore, a direct route has been discovered between China and Europe, which is at all times navigable for light draught steamers, and many thousands of miles shorter than any now followed.

Following the above was a statement that the advantages to arise from this discovery are so great that we must look forward to a complete change in the currents of the China and Japan trades. If any merchant would be bold or foolish enough to ship his goods over the route traveled by the Swedish Professor, in preference to the direct sea route via the Suez canal, we question whether the experience, particularly if he accompanied them, would not be sufficient to deter him from repeating the venture. And as for the Japan trade which is now distant from this country some 25 days, being diverted through the inhospitable regions of the Arctic circle, it will happen about the same time as we receive our first consignment of green cheese from the inhabitants of the moon.

It seems a matter of fate almost that any new discovery with regard to a route to the East, or the "opening up" of any portion of Asia is to be accompanied, not only by the most rose-colored prophecies, but in many instances by costly experiment. How golden were the anticipations regarding the opening of the Yang Tze Kiang to trade which followed the treaty of Tein Tsin in 1861. How apt is the simile of the sky-rocket and the stick to the result. The rows of deserted "hongs" which mark the bunds at Kiu Kiang and Hankow are monuments of disappointed commercial expectations, and the trade, large to be sure, is as firmly in the hands of the natives as it was when Cathay was a sealed book and the Taepings had no existence. And so with the "great expectations" formed of the results to follow the re-opening of the Russian (Siberian and Kamschatkan) ports which had been closed to foreign trade since the war. The Amoor was to be the great highway of trade through northern Asia; it was to pass through a great farming country, and the enthusiastic Perry McDonough Collins wrote a book about it and laid out the line of a telegraph. We visited the river in 1860 and were four days in going from De Castries Bay at the mouth to Nickolaefsk, a little more than a hundred miles above. The difficulties to navigation at the mouth of the Amoor are almost insurmountable, and will always be a bar to commerce, no matter how productive the interior may become. But it never will be. No country with eight months of winter can ever be as thickly populated as would be necessary to make either its importations or exportations of consequence; nor could it ever become a great highway for trade. It is claimed that the tea trade of Europe will be diverted over the newly discovered route via the Yenisei river, or else through the Amoor and the Yenisei. If there is one production which requires careful and infrequent handling more than another it is tea. It is true that a certain amount of tea is now transported from China across Mongolia to Mia-ma-tchin, whence it crosses the Siberian frontier at Kiachta and thence via Lake Baikal and Irkutsk across western Siberia into Russia, and this being the case, why should it follow the whole length of Yenisei river and across the Arctic Ocean, to be transhipped and handled until but little of the original package would be left. The route we have indicated, via Mia-ma-tchin and Kiachta is a broad highway. It is not uncommon for foreigners returning from China to travel it. The late Mr. Burlingame once made the trip, and the Russian system of posting is so perfect, and the railroad being pushed so steadily eastward that it is not now so very much of an undertaking. If it was desirous to transport a much larger quantity of tea by this route than is now done, it would be much more practicable than by the Yenisei, unless, indeed, that river is very different in its conformation from the Amoor. The fact is, however, that the trade of China must and always will find an outlet by the sea. She is a country of too many internal commotions to make a route across her frontiers either practicable or desirable, and the nature of her exports is such as to render it a matter of vital importance that they should reach their destination with but little disturbance.

With regard to the political aspect of the discovery and the bearing it will have on the power of Russian Asia, we apprehend that when that reaches a point to threaten British dominion in India, the British Government would not be long, were it necessary in finding a short cut via the headwaters of the Yang Tsze and Thibet.

CAUSE OF STERILITY AND SHORT LIVED OFFSPRING.

HIPPOCRATES divided the human temperaments into sanguine, bilious, lymphatic and melancholic, but modern physiologists have dropped the last named for the reason that it is not regarded as a temperament, but a condition. There are divisions and subdivisions of the three first named temperaments considered at the present day. The vital temperament is necessarily recognized in all animal life, and by a correct knowledge of the principle we are enabled to judge correctly the character of mankind. These conditions are influenced much by civilization, for the accumulation of wealth produces relaxation from cares and anxieties, which not only enervates the system and predisposes it rather to indulgence than energy which is so essential in keeping up a healthful circulation and digestion. Savages do not possess the lymphatic temperament; in some instances they may acquire obesity, but this peculiar condition of the nervous system is not exhibited. Race, climate, and general living may have an influence not only on temperaments, but on longevity, as seen in the Esquimaux, who consume large quantities of fat to maintain heat and combustion. A similar condition is found among our own people in this climate. We refer to beer drinking among certain classes of inhabitants. Obesity is obtained, and the tendency to the lymphatic temperament, but at the expense of certain organs which are sure to impair the vital strength of the constitution and to induce premature decay and death. We find fatty degeneration of the muscle, heart, and liver, as a consequence of this mode of living. In some instances it is so marked as to be visible to the most unpracticed eye. A case in point is where a certain man used stimulants to excess to prolong life and to escape an impending lung disease, who actually died from another—the general inability of the muscular coat of the heart to impel the blood through the system.

Mental activity, study and responsibility are certainly due to civilization, and so all sedentary habits which have a direct bearing on the development and condition of the brain. The commingling of temperaments as manifested in the development of the sanguine and bilious are observed in all of the learned professions and business relations of life, and such temperaments are changing by habit and education. Temperaments have resulted by civilization and are indispensable to the high advancement and development of the people in civil society.

The consideration of temperaments is important in connection with married relations, for it has been estimated that five-sevenths of marriages are found to be more or less incompatible and productive of mischievous consequences. Hence the alarming increase of imbecility, and destructive forms of disease which are now plainly perceived even by those not accustomed to observe closely. Then instead of referring the diseases which suffering humanity is heir to, to ancestral inheritance, we may safely and surely trace them to incompatibility of temperaments in matrimony. The following are physiological axioms:—

I. Sterility may be expected when the temperaments of husband and wife are precisely alike. Generals Washington, Jackson, and Napoleon Bonaparte afford examples. Josephine was productive by a former marriage, but not by Napoleon.

II. When constitutional temperaments are very nearly alike in married persons. They may have issue but the offspring will develop constitutional defects or imbecility. Henry Clay affords an example; two of his children became insane, and two died in infancy from scrofula or phthisis.

III. When both temperaments are entirely dissimilar and both parents inheriting longevity and a sound constitution, from such parents the greatest number of children are born which live to maturity.

Physicians bear testimony that children from physiologically incompatible parents do not yield to treatments when sick, as others, and die in spite of the best skill in the medical profession. It is not enough for both parents to be physically stout and healthy, and to inherit longevity, to produce healthy offspring. Their temperaments must be unlike also. These suggestions will appeal to the good sense of every thinking person, and examples will be found to be numerous, confirming these suggestions.

An attentive consideration of these ideas by reflective persons, may assist them in elucidating this important problem of life.

JUST THE KIND OF PIGEONS FOR TRAP SHOOTING.—A writer in the *Pacific Life* describes the California pigeon as a bird remarkable for its beauty of form, which is oval, with a pointed tail.

It is thus admirably constructed by nature for flight as well as for rapid changes of position in flight. It passes through a forest almost with the rapidity of the lightning's flash. The flight of our common dove is very slow in comparison. The sportsman or the mountain hunter regards this bird as a sort of trophy of his skill, or as a welcome addition to his larder; for his flesh is, though dark, particularly rich and juicy when it is in good order and fat. The breast and throat of the California male bird varies from a reddish brown to purple. The rest of the body is chiefly blue, or of a bluish shade, with back and sides of the neck of a splendid variety of brilliant colors—gold, green and crimson—more vivid than the eastern bird. They live on berries and the edible pine nuts, and have a peculiar fondness for the red berries of the madrona, a variety of the strawberry tree, common in some parts of Europe, which abound in these pine and redwood or cedar forests. They breed in the tallest trees, where sometimes a community of a hundred families may be found. They are migratory and gregarious, but the largest

flocks in this country seldom exceed hundreds, whereas those of the eastern regions of the United States are found, as is well known, in thousands, darkening the atmosphere as they pass the field of vision.

GAME PROTECTION.

WEST JERSEY GAME PROTECTIVE SOCIETY.—We have frequently had occasion to refer to the excellent police duty performed by the West Jersey Game Protective Society in securing the enforcement of the game laws and the punishment of offenders. We have an abundance of associations in our own State, through whom equally good work could be performed. What is wanting is more energy on the part of the individuals composing them. We trust that these repeated instances of watchfulness which we publish will arouse a spirit of emulation that will show itself in some tangible shape. At the east end of Long Island, and also within a few miles of the South Side Club House snared partridges are being sold openly and in quantities. If there is one place in the vicinity of New York which should be protected it is the one we have just named.

On Saturday, Oct. 28th, the West Jersey Game Protective Society arrested a man at Egg Harbor City for violating the game law. He was taken before a Justice of the Peace and fined \$15. One bird only being found in his possession. On Monday of last week another party was arrested by the society for violating the game law at Franklinville, and he gave bail for trial, which comes off this week. On Sunday six boys were arrested at Winslow by the Society, but were discharged as no game birds were found in their possession, and a promise was given not to violate the law in future. The Society has a regular police force and all the six lower counties of New Jersey are now well looked after. According to the charter of the Society all non-residents are required to purchase certificates of membership or make themselves liable to arrest and a fine of \$50, and the Society are determined to see the law enforced.

The Society has distributed 2,100 black bass during the past week, and will be ready in a few weeks to distribute a quantity of salmon, having 50,000 eggs nearly hatched out. With regard to compelling non-residents to pay for a license, as it were, before they are permitted to shoot, it is a question, the constitutionality of which has been argued at length in our columns. It has this feature, however, that the fund so collected is applied to stocking the counties under the Society's jurisdiction with game birds and fish, and the fee is so small that it should be grudged by no one in view of the object.

VERMONT.—The Vermont Association for the Protection of Game and Fish, met at the State House, Montpelier, on the 1st inst. The following officers were elected: President, M. Goldsmith; Vice Presidents, G. F. Edmunds, J. W. Newton, G. F. Gale, Dr. Wm. H. Lord; Recording Secretary, Henry A. Harmon; Corresponding Secretary, M. C. Edmunds; Treasurer, B. B. Smalley; Directors, W. Y. W. Ripley, M. S. Colburn, Le Grande B. Cannon, F. S. Stranahan, Royal D. Hedden, Henry Fairbanks, M. D. Gilman; Counsel, E. J. Phelps. And they were elected. It was suggested by Senator Edmunds, that as black bass are now rapidly multiplying along the shore of Lake Champlain, owing to the fact that the law had compelled people to leave them alone during the spawning season, that the close season should extend from the middle of May to middle of July, instead of the first of August. It was also recommended that exhausted streams should be restocked with trout, and Dr. Goldsmith mentioned several instances where by slight effort and at private expense, brooks recently quite depopulated were now yielding a large supply. An earnest appeal was made to all the members to be constantly observant of the workings of the fish and game laws of the State and of everything pertaining to the interests of the society, and make, from time to time, whatever suggestions they may deem important to the officers.

PENNSYLVANIA.—We can sympathize with the Uniontown Standard in its remark that "if the act of Assembly in relation to the legal time when game can be killed, and the time when a penalty is prescribed for killing the same, were to be published every other day, there are plenty of people who would still affect to remain in ignorance of the law." We therefore, in response to numerous inquiries re-print the open seasons for the State of Pennsylvania, and in such form that it can be cut out, and as the Standard suggests, pasted in the hat for ready reference:—

Ruffed grouse, October 1st to January 1st.
Quail, October 15th to December 15th.
Woodcock, July 4th to January 1st.
Wild turkeys, October 1st to January 1st.
Wood duck, October 1st to January 1st.
Other ducks, any time.
Rabbits, October 15th to December 15th.
Squirrels, July 1st to January 1st.
Snipe, any time.
Plover, August 15th to January 1st.
Deer, October 1st to January 1st.
Trout, April 1st to August 15th.
Black bass, July 1st to March 1st.

Very apropos to the above came the following letter:—

—In Nova Scotia they are devising an improved law to regulate the killing of moose, and we find in the Halifax Citizen a letter from a correspondent who outlines the draft of a law which strikes us as sensible and proper, not only as applied to moose alone, but in its general principles to the common deer. The main points in controversy among sportsmen are well covered, as will be seen. We omit

printing the draft of the law proposed, as the reference to its several sections in the remarks appended, makes it sufficiently intelligible. The writer says:—

"It will be seen that section 1 limits the close season from 15th February to 10th September, under a penalty of \$50.

"I think the close season should commence in February, first, because the cow moose is not fit to be eaten later, and, secondly, because after the middle of February the crust hardens on the snow and the moose has little or no chance of escape from dogs.

"I propose a heavy penalty for violation of this section because the open season is pretty long, and in it every person has a chance to gratify their sporting propensity or to supply their larder, to a certain extent.

"In section 2 I fix the number two as the number to be killed in any one season by any person, or party of hunters.

"It is childish for full-grown men to go 'tearing' through the woods and having a 'crack' at every living thing they see, as is too often the case. Such sportsmen should be frowned down, and I think \$30 not too heavy a penalty for one to pay whose greed has to be controlled by statute.

"Section 3 should pass without discussion, as no person 'calls' before September 10th, and bucks (and they are the only ones hunted in this way) are not fit to kill after the 30th, so I move that section 3 do pass.

"With section 4 comes the 'tug of war,' and yet I think it just as necessary as any other. Moose have been 'dogged' ever since the country has been inhabited by white men, and will be, I believe, so long as there are moose in the country—law or no law to the contrary notwithstanding. The poorer classes have an idea that the game laws are only intended to protect the moose for the benefit of sporting men. My object is to make them feel that they are interested in protecting as well as in killing the moose.

"Now, suppose we make it illegal to hunt moose with dogs, what will be the result? In a free country like ours we cannot prevent people from keeping dogs. Well, A B and C reside in a neighborhood, and each owns a dog or dogs. A would be satisfied with one moose, B would like two, but C must hunt continually. A kills a moose with dogs, B, ditto, and C is aware of it, and knowing that A and B dare not prosecute or tell on him kills as many as he pleases. But let it be legal for A B and C to kill one or two each and the case is altogether different, for then A and B will kill what their necessities require, so may C, but when he goes, or attempts to go beyond that, then A and B are in a position to stop him, and would at once do so. Another objection that may be urged against hunting with dogs may be the cruelty. The ones most likely to urge this plea will be those who 'go in' for calling only, principally men of wealth. Were such a plea to be urged in the 'Old Country' how would it be received? Why the person making such a proposal would be laughed to scorn. Dogging I think is the most sportsmanlike way of hunting. The moose has a fair chance for his life and can run away if he chooses, as he very often does, as it is but seldom that a young moose is killed by dogs, as they prefer to run, but the old ones make fight, and not unfrequently come off second best.

COCA AN A NERVINE.—The peculiar properties of the coca plant, which has been used for centuries in South America as a stimulant to the nervous system, and to prevent prostration from fatigue, are just now engaging the attention of medical men everywhere. It is said that an Indian, with a supply of his favorite coca leaf, will travel two or three days without food and without showing any desire for sleep. Among recent contributions to the history and effects of this plant, we may allude to a paper read before the April meeting of the Edinburgh Botanical Society, from which it appears that without doubt the leaves of the coca, when rightly prepared and used discreetly, possess the effects ascribed to them by all travelers in Peru since Pöppig was there in 1827, but that their effects are not always precisely the same on different individuals. From experiments conducted by Sir R. Christison, the author of the paper above cited, and those of fourteen other gentlemen who undertook to try the plant at his request, the following conclusions have been arrived at: (1) That, taken in quantities of two drachms by healthy persons, it has no injurious, unpleasant, or suspicious effect whatever; (2) that in a very few cases this dose, of an inferior sample, had no effect at all; (3) that in by much the greater number of instances, and with a fine sample in every case, extreme fatigue was removed and prevented from returning, and that no doubt can exist that, in such persons, its restorative and preventive powers will render protracted exercise easy, without any subsequent harm, so far as the restorative is concerned; (4) that it does not in the end impair the appetite or digestion, although hunger, even after long fasting, is taken away for an hour or two; (5) that the use of it probably does not agree with more than a very moderate use of alcoholic stimulants. Similar conclusions have also been arrived at by Prof. Bouchardat, of Paris, who considers that its services in therapeutics have been most valuable, almost equal to those of cinchona, and that as a nervous and muscular stimulant it ranks with tea and coffee. On the other hand, evidence is not wanting to show that its effects (like those of tobacco, opium, hemp, resin, gunjah or bhang, alcohol, and other vegetable stimulants) are certainly highly injurious when used habitually or in excess. A confirmed *conquero*, as an habitual chewer is termed, is said to be invariably known by his haggard look, gloomy and solitary habit, listless inability, and disinclination for any active employment. Its use is regarded by Europeans as befitting only the Indians; nevertheless, many whites are addicted to it. Dr. Weddell, who inquired very carefully into its effects on the constitution, states, as the result of his observation, the opinion that its habitual use acts on Europeans more prejudicially than on the Indians accustomed to it from early years; and in some cases is attributed to its abuse a peculiar aberration of intellect, characterized by hallucinations. Dr. Mantegazza, says the English *Garden*, describes its ef-

fects, stating the result of intemperance in its use to be frequently confirmed idiocy.

The leaves of this plant are used to make an infusion, as few as four or five leaves making drink enough for six persons. The coca is not to be confounded with the *cacao*, of the genus *theobroma*, which furnishes the nuts from which cocoa, chocolate, and the shells used for infusion are made.

INSECT POWDERS.—There are many specifics sold under various names, for the destruction of fleas, bugs, and insects, which are more or less efficacious. The best of them are powders, pure or adulterated, prepared from varieties of the *pyrethrum*, of which we find especial mention in a report of the Agricultural Department of Washington, made some years ago. We quote:—

"For a long period a preparation was used throughout the Russian Caucasus for the destruction of injurious insects, and was regarded as a secret to the rest of the world, until its properties became known to Mr. Juntikoff, an Armenian merchant, while traveling through that country some forty or fifty years ago. He communicated his discovery to his son, who manufactured the article in 1828. This powder, or the plant from which it was obtained, was soon after introduced into Alexandropol, and subsequently into Germany, where its popularity is rapidly increasing.

"There are several plants similar in character, called by botanists *Pyrethrum carneum*, *Pyrethrum* and *Pyrothrum purpureum* (Persian cammomile, flea-grass, or flea-killer), from which this powder is produced.

"The parts of the plants from which the powder is made are the dried flower-heads, gathered when ripe. When perfectly dried they are first comminuted with the hand, and then reduced to powder in a small mill.

"A quantity of these plants grown upon eighteen square rods is estimated to furnish 100 pounds of powder, which is best preserved in sealed vessels of glass. The application is made either as a powder or as an infusion, though in the latter form it is more beneficial, especially when intended for the destruction of insects on plants. The dried leaves only should be used for an infusion, as the green ones are ineffectual. The powder may be applied directly to the insects themselves, or in the places which they frequent. They are attracted by its smell, become stupefied, and immediately die. This substance may be employed with injury to the larger animals or man. It is estimated that the amount of this powder consumed, per annum, in Russia alone, is nearly 1,000,000 pounds.

"At present there are more than twenty villages in the district of Alexandropol engaged in cultivating the plant and collecting its flowers and leaves.

THE FLORIDA NEW YORKER.—This is the name of a journal recently established in this city for the purpose of truthfully presenting the claims of Florida as a home for northern settlers. We welcome it as a valuable co-laborer in a field where FOREST AND STREAM has done a good deal of effective pioneering. It is conducted by Mr. J. B. Oliver, an experienced journalist, and a gentleman personally acquainted with all portions of Florida, and who has devoted much attention to the question of immigration. Each number of the paper contains letters from various portions of the State, written by well-known citizens, and containing just such practical hints as intending settlers will find useful. The office of the *Florida New Yorker* is 34 Park Row. Price \$2 a year.

THE COLORADO SURVEY—A Misstatement.—In our reference, last week, to the returns of Dr. Coues's party from the Colorado Expedition, we were quite in error in the statement that Dr. Coues was "operating for the Smithsonian Institution." The facts in the case are that the expedition to which Dr. Coues was attached was the United States Geological and Geographical Survey of the Territories, in charge of Dr. F. V. Hayden, U. S. Geologist, whose name should not be omitted in anything relating to this important and valuable service.

—The Greenwood Lake Sportsman's Club have purchased the New Jersey State Building now in the Centennial Exhibition grounds at Philadelphia, to use as a club house, for which purpose it is well adapted.

PAINTS.—To the country gentleman, or those who have an occasional piece of painting to do, a pot of ready mixed paint which does away with all mixing and musing with oil, turpentine and driers, is a boon to be appreciated. The Patrons Paint Company, whose advertisement appears in another column, are putting up paint in this manner with brushes ready for immediate use.

—A bighorn (*Ovis montana*) said to have been the first taken in that vicinity for eighteen years, was recently killed in the mountains near Santa Barbara, Cal., by Mr. Israel Miller, of that town.

—"It was a popular notion of the ancients" said a showman, "that this 'ere animal, as we call a leopard, can't change his spots; but it's now known that he sleeps in one spot one night and in another spot another night, and is continually a-changin' his spots."

—We find the "Imperial" blotting paper made by Messrs. Bulkley, Dunton & Co., paper manufacturers, of 74 John street, the best absorbent we have ever used for drying ink from manuscripts.

—Prof. G. Brown Goode sails to-day for Bermuda to spend the winter in recruiting his health and studying the marine zoology of that region. FOREST AND STREAM is promised an occasional note, for which its readers will feel indebted.

—Maine has [such an abundance of apples, chestnuts, squirrels, and quails, as has not been known of late years.

Game Bag and Gun.

GAME NOW IN SEASON.

Moose, *Alces malchis*. Pinnated grouse or prairie chicken, *Cupidonia cupido*.
Caribou, *Tarandus rangifer*. Ruffed grouse or pheasant, *Bonasa umbellus*.
Elk or wapiti, *Cervus canadensis*. Quail or partridge, *Oryzopsis virginiana*.
Red or Virginia deer, *C. virginianus*. Hares, brown and gray.
Squirrels, red, black and gray. Wild turkey, *Meleagris gallopavo*. Woodcock, *Philohela minor*.

"Bay-birds" generally, including various species of plover, sand-pipers, snipe, curlews, oyster-catchers, surf-birds, phalaropes, avocets, etc., coming under the group *Limicola* or Shore Birds.

—Our Boston correspondent narrates a series of singular incidents which occurred while he was on a shooting excursion with a party of friends at Prince Edwards Island, in the Gulf of St. Lawrence. He writes:—

"Fish Island, in the town of Malpeque, on the north coast of Prince Edwards Island is the champion place for bay-bird shooting, in August. In the summer of 1875 a party of us went to the island, staying with the lighthouse keeper, who, with a pet hog, are the sole occupants. Of the hog, which was the hero of the camp, I will give you a few incidents. Coming, as this does, from Fish Island, it may be considered a fishy story, but four living witnesses can vouch for its truth. This hog was always around, and although his ears were pierced and his tail cut short one curl from the straight effect of a 'Mr. Remington,' he was very happy when eating mallards which had been left in the box during our temporary absence. We thought their disappearance due to hawks, or some four-footed animal until he was detected in the act. But of all things he liked best was the winter yellowlegs. One day two of these alighted among the decoys of one of the party, who shot one dead; the other flew about one hundred yards, and then he too fell dead. He started for the distant one first, knowing the first one shot to be dead where he was. When near the bird, a fish hawk swooped down and carried him off in spite of two barrels of No. 8 sent after him. On returning to the stand, a strange sight met his eyes. Mr. Hog, who had been concealed in the bushes, was very quietly devouring the first bird, and ran off with the legs hanging from his mouth! You can imagine the laugh that went around, as the whole affair was watched by the rest of the party."

We think our friend had very hard luck, and would advise any who may hereafter shoot over this ground, to muzzle the hog before they go out. "S. K." wishes to correct an error in his article on alligators in our issue of October 17th, page 164, which reads, as printed, "the eggs are four inches long and very tender," whereas it should have said, "the young, when hatched." The statement, however, was not far out of the way, as one egg now before us, of the average size, measures $3\frac{1}{2}$ inches in length.

QUALITIES REQUIRED FOR SUCCESSFUL DEER-STALKING.
—An eminent Scotch writer and hunter, whose kindred excel in deer-stalking, designates the qualities requisite for success in this method of hunting, as follows:

"It may readily be supposed, that for the pursuit of deer-stalking a hardy frame and plenty of pluck are required. These qualities are indispensably necessary; but in the other points he may vary as much as the average of men are seen to do. The model deer-stalker, however, should be of good proportions, moderately tall, narrow-hipped to give speed, and with powerful loins and well-developed chest for giving endurance and wind. No amount of fat should be allowed; indeed, the deer-stalker ought to be in as good training as the race-horse and greyhound. The foot should be sure, and the eye keen and long-seeing, as the telescope cannot always be applied to that important organ. He should be practiced in running and stooping, in crawling on his belly, or on his back, by means of his elbows or his heels; and should care neither for business, cold, nor wet. The nerves should be good, for the excitement produced by this sport is such as to render unsteady the hand of all but those who are of the phlegmatic temperament. 'Dutch courage' is not desirable, but 'Dutch phlegm' will here serve in good stead. The bodily powers are not the only ones which should be well-developed, for the brain should be active and energetic as the body itself. Great control over the feelings is absolutely essential; for the giving way to exultation and hope, or depression produced by the fear of losing a shot, will generally cause that which is most to be feared. Above all, temperance must be practiced—no shaking hand or flinching eye will serve the purpose of the still-hunter; nor will the parched throat or the perspiring skin avail him when rushing up the hillside or through the winding valley. In fact, strict training, in all its details, is required; and the more it is carried out, the more complete will be the success of the practiser of its disagreeable duties. The dress of the deer-stalker should be light and elastic, yet tolerably warm. The head should be covered with a close-fitting cap or soft hat, and, above all, the shoes should be fitted with strong nails, to enable the foot to take secure hold of the slippery places found in the mountains and among the hills and woods. The color of all should be sober and natural; gray or a mixture of black and white, or brown being as good as any, since it accords well with the rocks and ground which are so common in the haunts of the deer."

CANADA—The Belleville *Intelligencer* says that sportsmen report that they never saw so many of the large jacksnipe in that vicinity as at present. In the bogs along the bay shore the snipes are so plentiful that a good marksman may bag from twenty to fifty in half a day. Plover are now scarce, and though ducks are quite numerous they are exceedingly wary, the weather being as yet too fine. Partridges are reported as fairly numerous in the woods, and we hear occasionally of red foxes being caught.

Danville, P. Q., Oct. 31st.—I have much pleasure in enclosing you \$4, account renewal of my subscription to your paper, believing it to be the very best paper of its kind. I was painfully interested in that chapter of gunning accidents contained in a late number of the paper, and think your words of caution with regard to handling of guns and loading of shells are most timely. I have always been exceedingly careful about handling a gun, but confess to some carelessness about ramming powder in

loading shells; but shall be very careful in future. My biggest bag this season has been 115 snipe in four half days' shooting—two guns. Wishing you much prosperity, I remain,

MASSACHUSETTS—*Fall River, November 1st.*—Yesterday a party of five shot 26 grouse, 19 quail and one woodcock. Owing to the dry season the grouse are found along the edge of the ponds, and afford good shooting. Quail are giving fine sport, as they are very abundant. Have heard of one bag of 162 quail, 9 grouse and 1 woodcock, by three men in three days. Broadbills are shot in the Westport ponds and give fine sport.

Salem, Nov. 6th.—I am told that there are many sea fowl in the bay by fishermen who see them; woodcock are scarce and will be more so; other game show up fairly. Shooting at the cape—that is, at North Chatham—as reported by friends lately has been quiet; at Ipswich it has been fair, with good prospect of picking up some scattering grass birds yet. Owls very common—in fact, rapacious birds, judging from local observations, have been uncommonly numerous this autumn.

Boston, November 6th.—There is fun to be had on old Cape Cod. Quail and wild fowl shooting and picking cranberries is not all. A party of eight of us had another deer hunt last Tuesday. Ran seven deer and got two of them, but can't do that every time.

VIRGINIA—*Alexandria, Oct. 31th.*—We are making endeavors to borrow a gun, some powder and shot, a dog ("sooner" or later), and a hunting coat and pants, when we will wend our way to the backwoods in pursuit of the noble *Or. virg.* and the frisky *Sciurus carolinensis*. We expect that the latter animal will give our dog all he wants in getting at him as I am told he frequents the most out-of-the-way places. The plural pronoun is used in the above lines because "Chiney" is to be my partner on the occasion; but how in the world he is to get a shot (being so near-sighted) at *S. carolinensis* without a telescope is more than I can tell you. However, if you can be prevailed on to print the result of our sport (at the rate of two schooners a page) I will endeavor to send *FOREST AND STREAM* an account.

We would recommend to our correspondent a 10-gauge shooting stick when he goes for *sciurus*. We wish his success, a "fat take," and narrow measure.

INDIANA—*Fort Wayne, Oct. 30th.*—Quail are very plenty here. A bag I made last Tuesday, sixteen brace and one rabbit, and other bags reported larger than this along the Wabash Valley Road between Fort Wayne and Lafayette.

CALIFORNIA—*San Francisco, Oct. 28th.*—A party of four went out last week to Simmons Lake, on the Marysville road, near Sacramento, who report excellent duck shooting in that quarter. They killed 1,200, and say that the ducks came in such numbers that the hunters could not load their guns fast enough to shoot them, and finally had to desist from their work of slaughter by reason of sheer physical exhaustion.

NEVADA—The regular quarterly meeting of the Virginia Shooting Club was held on the 21st October. The weather was fine and birds unusually good. Seventeen of the members of the club contested at 12 birds each, 21 yards rise, 80 yards boundary. Col. Osbiston was the referee, and Messrs. Schonemann and Hully, judges. Mr. Diamond won the medal by a clean score, and Mr. Taylor sustained his reputation and continues to hold the leather medal. The members generally are improving in trap shooting, as will be seen by the following score:—

Name.	Total.	Name.	Total.
Taylor.....	2	E. A. Schulz.....	11
P. Bishop.....	9	G. Daly.....	10
Buckingham.....	8	Diamond.....	12
Robinson.....	10	Maestretti.....	4

ARE THE ADIRONDACKS PLAYED OUT?

October 25th.

EDITOR FOREST AND STREAM:—

A short article in a late issue of *FOREST AND STREAM* met my eye. It was entitled "The Be-Murray-ed Adirondacks." Its drift was to emphasize the assertion that the Adirondacks as a hunting and fishing ground are exhausted; that they have been so overrun by eager and unscrupulous sportsmen that it has no longer reward for the lovers of the rod and gun. To a great extent this is the melancholy fact. If we were wholly selfish in our passion for these sports, we should hail every such paragraph; we should secretly connive at the dissemination of such intelligence. We should say, "Let the little types carry that conviction everywhere. Blazon it abroad, *FOREST AND STREAM*, *Turf, Field and Farm*! Let the north wind tell it to the pines, and the wild ducks to the seal. Empty the Great Woods of 'Murray's fools' and all pot-hunters, adventurers, men barren of true sylvan instincts as the average speech in Congress is of interest! Let the great wilderness have a rest to recover its waning strength and lost prestige!"

But we claim a kind of brotherhood with every true lover of Waltonian sports. We envy no one his "luck" or enjoyment. Therefore we come to champion still the Adirondack. Have we not the right to speak, having returned this summer from our twentieth annual trip to that paradise of tired ministers and hackneyed habits of the mart? The Saranac, Raquette river, Chateaugay, Lake Pleasant and Union Chain regions are, if you please, "played out;" at least the trout are in that condition. Magnificent still in scenery, they are at the minimum in sport. But there are portions of the Great North Woods which the feet of Murray have never trodden; which have never given echo to his endlessly repeating rifle; where no loon is so crazy as to be shot at sixty times in a thunder storm.

Do you ask where? Well, we will not tell all the world through the *FOREST AND STREAM*. We will tell you, dear Editor, or any other scrupulous sportsman who wants a month of old-fashioned, honest, first-class fishing and hunting. We will whisper of a region where the guides are intelligent, capable, self-denying, industrious men, furnishing themselves, the tents, the camp equipments (including everything but provisions), and the finest clinker-built boats for \$3 per day, satisfied with that, and expecting no bonus.

We will tell you of our party of five men with three guides, who camped on the larch-fringed banks of a lake which had not rippled to a paddle this year until our's sent us gliding toward the doomed deer. We

will tell of twenty-five red-coated fellows seen by day and by night, of which we might easily have killed twenty, but of which number we did kill only six, precisely enough for the supply of our table, and no more.

We might tell Bro. Murray of lakes and streams where he would have unjointed that fly rod as quickly as a black fly gets behind your ear, and where, without any professional study of professors, cinnamon, gray drake, ibis, or other fancy lures, but with plain brown and black hackle, he could have made the deep pools boil like a pot with leaping trout that would have bent that tip beyond the hand, and made him "advance the butt" to his wrist's content.

But we can also tell him that it isn't Broadway or Washington street (though that is crooked enough, heaven knows,) to reach those localities. It will take all the nap off from fancy velvet jackets, and give him food for a new description of a real "carry," or by substituting a black bear for his famous midnight buck he may be dragged through the thicket by a tail that will hold. We did all but the tail, for on one occasion but for bruin, who had just passed, we should hardly have made head through the entangled and strangling alders. In a word we write over against this summer bivouac in the Adirondacks, in scarlet letters, "Centennial success."

The writer has had every possible experience in that vast expanse of mountain, forest, river and lake, sometimes highly satisfactory, sometimes disheartening; but he had never had a vacation in those solitudes more fruitful of game of every species, more pleasing as to guide service, or richer in the incidents which lend such luscious flavor to sylvan life. If any true brother of the angle and rifle having sufficient self-mastery to limit his achievements with both to the actual needs of himself and party desires to learn more of the localities and guides herein hinted, it will give the undersigned great pleasure to increase his insight.

J. CLEMENT FRENCH.

POT HUNTING IN PENNSYLVANIA.

MILFORD, Pike county, Pa., Nov. 2d.

EDITOR FOREST AND STREAM:—

This is an extraordinary place, surrounded by natural attractions. Every physical and natural phenomenon for twenty miles around is industriously telegraphed to the New York dailies, and every now and then an effort is made to induce sportsmen (God save the mark!) to pay the place a visit. I have a word to say to such visitors.

Ruffed grouse shooting began here on July 4th. The season had been an exceptionally good one birds were plenty and poultry hardly able to fly found a ready market at a fashionable hotel at 20 cents apiece. The inducement to make money was too great for several market hunters to withstand, and by August 15th the young birds were as wary as crows, and the protestations of several readers of *FOREST AND STREAM* resulted in an armistice of twenty days. Since the 15th of September shooting at pheasants (ruffed grouse) has been steady, and now storn birds may be picked up if the hunter has a gun that will off a bird when it rises at a minimum distance of 60 yards; now and then a cripple comes to bag, but it requires men provided with "wire cartridges" to bring in a load that a five-year old could not carry.

Seriously, Mr. Editor, it is a clear case of swindling to induce or advise anyone who loves sport to come here. Every bird within a radius of ten miles has been shot at for at least two months, snaring is rampant, and Milford is only good for men who wish a pleasant, retired headquarters from whence to emerge when going to a rendezvous twenty or thirty miles distant. Back at Shohola and Lackawaxen, down to Bushkill, away in New Jersey, up the Neversink valley, and on the banks of the Susquehanna may the sportsman hope to find spots where birds do not get up as wild as hawks, but not here. On the Shohola and around the Blooming Grove Park grounds, and towards The Knob, deer are plenty, but even here there are snares on every log, and a pheasant cannot "drum" without bulling the wire market. Will not some sportsman wipe out this scandal on the laws of Pennsylvania, by making the statutes a little clearer in regard to shooting game out of season, and the possession of snares and snared birds?

AMATEUR.

PACKING DEER.

LOS ANGELES, Cal., Oct. 24th.

EDITOR FOREST AND STREAM:—

"Triangle," in your issue of Oct. 12th, goes gently after our style of packing meat into camp. From what he says I think your deer must dress much heavier than our blacktails. Bucks weighing over 200 lbs. net are not often killed here outside of the newspapers, and a buck weighing 200 lbs. is a rarity. The heaviest deer I ever killed in the Sierra did not go over 225, although I have heard of fat bucks pulling down 250. I never weighed a deer of my own killing in my life, and my weights are all guess work, but I think fair estimates. Our camp outfits are generally as light as we can make them, and I never saw a pair of scales in the mountains. Of course the weights I have given are "net;" if you think it worth while I will give my "experience" in this matter more in detail. I don't disagree with "Triangle" in the main, but know that my own propositions are facts.

Suppose you send me "Triangle's" address. I should like to invite him to a hunt on the North Fork if he ever comes to California.

EL CAZADOR.

NEWFOUNDLAND ITEMS.

HARBOR GRACE, Oct. 21st.

EDITOR FOREST AND STREAM:—

The weather here has been very stormy for some time, strong north-west gales almost. The potato crop is turning out generally well, which is a great thing for the poor. I am not a sportsman, but feel sure that the late stormy weather must have militated largely against our eager devotees of the gun. My friend old Mr. S., who formerly lived here but is now deceased, was a great shot, and was blamed for killing nearly all the partridge in the district. Why, sir, in other districts, mainly that of Catalina, I have seen them walking before me like chickens; that's because they knew I could not fire the gun, I suppose, and I recollect we once killed a partridge with a stone long after the 15th of September, the legal time. Any man who shoots or butts against the law is unworthy of the name of a sportsman, and runs the risk of all the solemn consequences. Our partridge here are getting very scarce. Some have thought that it is because the wild rabbits have sucked or destroyed the eggs. I am sure I don't know. My own opinion is that the rabbits are more useful to the poor than the partridge. The Newfoundlanders, with the help of friends, are going ahead in energizing mineral and agricultural resources, besides the fisheries, and the times most solemnly warn us that we must do so. I am strongly inclined to believe from my geological observation that nickel will be found yet in great abundance, but hope gold never will. I suppose that there are not less than 2,000 persons supported out of Telt Cone and Belts Cone copper mines, and undoubtedly there are great deposits of mineral.

TIME LIMIT IN TRAP SHOOTING.

NEW BRIGHTON, Pa., Oct. 28.

EDITOR FOREST AND STREAM:—

Being somewhat interested in trap shooting, and seeing that a number of clubs propose to abolish the 80 and 100 yards boundary rule, I would put my plea against such a course, for two reasons. The first is, we can seldom obtain grounds properly inclosed without buildings or trees, and very often having woods adjacent. How many shooters are there that go to the trap, call pull, fire, and miss, but still wait to see the bird fall. The bird alights on some object, say within 200 yards of the score. "Time!" I'll try and gather the bird. The judges are compelled to accompany the shooter to let him gather his bird inside of the three minutes. Now, with a squad of poor shots who average five out of ten, you would shoot at the remarkable number of 80 birds per hour, or 200

per day. My other reason is, that at all open ground matches a host of bushwhackers are congregated, and very often a bird hard hit flies 200 or 300 yards. A bushwhacker sees him coming levels his fusilleer and kills the bird. The shooter claims it (such is the case eight times out of ten). Would not this cause dissatisfaction and wrangling. Hoping you will give this a place in your paper, I am respectfully yours,

JOS. J. SNELLENBURG.

"Bushwhackers" could be kept away from all properly conducted matches, and in case of a bird being gathered from a fence, the shot marks would determine whether he had been hit. So it appears to us. This is a question, however, which is open for discussion through our columns.—Ed.

LOADING SHELLS.

WEST TROY, Nov. 2d.

EDITOR FOREST AND STREAM:—

Noticing in your paper the unfortunate accident to Dr. Thebaud while loading paper shells, I thought perhaps it would not be amiss to give your many readers a plan to load which I have used, and in it can see no possibility of a shell exploding while in the act of loading, although the shell be capped. I use a piece of hard, firm wood about four inches in diameter, with a recess bored in the center about $\frac{1}{4}$ or $\frac{1}{2}$ in. deep exactly the size of end of shell; then in center of that recess a smaller one of same depth a trifle larger than the cap, thus preventing the cap touching the wood. By making the larger recess to fit the shell exactly, there is no possibility of the cap resting on the wood. I use as a rammer a piece of hard wood to fit the shell, and to fasten the wad a pair of nippers making a rough hole inside on top of wad, then run a brush with maulage on it around wad. I have never yet had a wad work loose. I find these simple tools answer as good purpose as a kit costing \$15 or \$20, and I can load as fast with them.

J. H. FICHET.

POUGHKEEPSIE, N. Y., Nov. 6th.

EDITOR FOREST AND STREAM:—

In your issue of October 26th a correspondent who signs himself "P. P. P." recommends the capping of central fire breech-loading shells after they have been loaded. I do hope, Messrs. Editors, for the sake of many of your readers who are just beginning to use breech-loading guns you will warn them against the danger and folly of adopting the insane and murderous recommendations of your correspondent "P. P. P."

W. S. J.

Rifle.

COULIN'S GALLERY.—The fourth competition for the marksmen's badges, took place at Coulin's Shooting Gallery, 930 Broadway, October 31st. The members of the teams from Journey & Burnham, Arnold & Constable, and Lord & Taylor's, were also in the contest. The scores were good and the contest was very close. The following are the names of the winners with their scores:—

Name.	Total.	Name.	Total.
1. Chas. E. Blydenburgh.....	44.5	Chas. A. Cheever.....	41
2. J. B. Blydenburgh.....	44.6	Leon Backer.....	41
3. L. V. Sone.....	43.7	Fredk. Kessler.....	41
4. M. B. Engal.....	42.5	J. R. Wood.....	41

A competition for the badges takes place every Tuesday, commencing at 4 p. m., and will continue till the gallery is closed for the night. At the 60 foot, and also on the 75 foot ranges, neat prizes were offered for the best target made on each. The following were the winners:—60 feet, H. D. Blydenburgh, 50; 75 feet, L. V. Sone, 47.

CREEDMOOR.—Notwithstanding the almost perfect weather of Saturday but ten marksmen appeared at Creedmoor to contest for the *Spirit of the Times* badge. One reason perhaps was because the range at which this match is shot, 300 yards, is rather a trying one for off-hand shooting. The winner was Capt. Price of the 7th Regiment, a gentleman who is making fine reputation as a short range shot. The following are the scores, each competitor being allowed ten shots:—

Name.	Total.	Name.	Total.
J. L. Pierce.....	35	Geo. Waterman.....	25
J. Le. Boutillier.....	34	L. Cass.....	22
H. Fisher.....	31	E. W. Pierce.....	21
N. D. Ward.....	30	J. B. Holland.....	20
S. Sargent.....	29	C. E. Truslow.....	15
C. H. Eagle.....	27	W. Hayes.....	Retired.

MORSEMER.—The regular off hand match of the Yonkers Rifle Association was shot on Tuesday last, resulting in a very exciting contest. The conditions were 15 shots each, and four gentlemen tied on 60 points each. In shooting off, in accordance with the rules, three of the contestants made four, and Mr. Quinn three. In the second round Messrs. Wolcott and Hayes each made four, but Mr. Morse scored a bullseye, which gives him the badge for the second time, Messrs. Hayes and Quinn having each taken it once. Mr. Jocelyn was close behind with 58, and only fell off on the last two shots. The best four scores are as follows:—

G. L. Morse.....	54	45	52	43	44	34	44	45	—60
W. Hayes.....	44	44	44	44	44	44	44	44	—60
H. G. Wolcott.....	44	44	44	45	34	44	44	44	—60
H. J. Quinn.....	44	45	44	34	44	34	44	44	—60

The match at 500 yards for the N. R. A. medal was commenced but owing to the darkness was not completed in a satisfactory manner. Mr. Hayes was, however, declared the winner. In future these two matches will be shot on alternate Tuesdays, and sighting shots will be allowed.

ILLINOIS.—The shooting tournament held at Fuller's gallery, Chicago, and terminating on the 28th ulto., resulted as below. The conditions were ten shots each at Creedmoor 200 yards target reduced to 60 feet. The scores were as follows:—

Name.	Total.	Name.	Total.
H. G. Purinton.....	46	M. W. Lyman.....	45
E. R. Hall.....	46	Mr. Bird.....	44
Col. J. A. Shader.....	46	C. H. Hall.....	42
Dr. K. B. Hunter.....	45	J. B. Knight.....	43
R. J. O. Hunter.....	45	Mr. Paxton.....	42
Capt. John Archer.....	45	C. P. Johnson.....	40
E. T. McFarland.....	45	Mr. Buck.....	39

In shooting off the ties, Mr. Purinton won by a score of 47 points.

COOKED FOOD FOR ANIMALS.—Trials made on the Governmental Farm at Ontario, Canada, in the feeding raw and cooked food to swine go to prove that cooking does not improve the value of grain for feeding young and healthy animals; and that on the whole it would seem to be advisable for feeders to "go slow" who are thinking of investing in costly apparatus to cook and steam food. Similar experiments in feeding cattle have shown like results.

National Pastimes.

BASE BALL—THE PROFESSIONAL ARENA OF 1876.

The past season has been marked by some remarkable fielding games in the professional arena, and the statistics of the season shows very conclusively that fielding skill has given the lead to those who excelled in it. Two games were played in the League arena in which nine full innings were played without a run being scored on either side, the Cincinnati Club nine having the credit of bringing about this result, their ten innings game with the Boston ending with a score of 4 to 0, in the latter's favor being one of these, and their ten innings contest with Mutuals ending with 1 to 0 in the latter's favor. But the record of games won in one inning's play—one where the score of one inning's play on the winning side exceeded the total score of the losing side—shows which club excelled in fielding:—

CLUBS.	Chicago.	St. Louis.	Hartford.	Louisville.	Mutual.	Boston.	Athletic.	Cincinnati.	Games won.
Chicago.....	5	3	2	2	6	2	4	8	36
St. Louis.....	2	1	4	5	4	2	4	8	32
Hartford.....	2	1	2	7	2	5	3	6	26
Louisville.....	0	2	2	2	3	3	3	4	17
Mutual.....	0	1	3	2	1	1	1	4	12
Boston.....	0	0	1	3	4	1	1	0	9
Athletic.....	0	0	0	2	1	1	1	2	6
Cincinnati.....	0	1	1	1	0	0	1	1	4
Game lost.....	7	8	13	27	20	18	17	32	142

The pitchers and catchers of the League for 1876 included the following players:—

CATCHERS.	PITCHERS.	CLUBS.
White.	Spalding.	Chicago.
Anson.	McVey.	"
Clapp.	Bradley.	St. Louis.
Allison.	Blong.	"
Harbidge.	Bond.	Hartford.
Higham.	Cummings.	"
McGinley.	Cassidy.	"
Morrill.	Borden.	Boston.
Brown.	Manning.	"
Coons.	McBride.	"
Malone.	Bradley.	"
Hicks.	Knight.	Athletic.
Craver.	Zettler.	"
Pearson.	Mathews.	Mutual.
Booth.	Fisher.	Cincinnati.
Snyder.	Dean.	"
Hastings.	Devlin.	Louisville.
	Clinton.	"

—The number of players who have taken part in the games of the different clubs is as follows:—

Name.	Total.	Name.	Total.
St. Louis.....	10	Louisville.....	15
Chicago.....	11	Boston.....	17
Hartford.....	14	Athletic.....	21
Cincinnati.....	14	Mutuals.....	22

Or a total of 122.

It will be seen that the Athletic, Boston, and Mutuals, went into the experimental business to a larger extent than any other of the eight clubs; the St. Louis playing with but ten men only.

—The average of runs scored each month of the season is as follows:—

AVERAGES OF EACH MONTH.

Average for April, winning 7—5; losing 2—9.
Average for May, winning 3—51; losing 2—34.
Average for June, winning 8—21; losing 3—23.
Average for July, winning 9—17; losing 3—8.
Average for Aug., winning 8—20; losing 3—15.
Average for Sept., winning 8—37; losing 3—35.
Average for Oct., winning 8—40; losing 3—23.

That for May exceeds any previous month's play on record. The poorest play was done in July.

—The nine best batting averages for 1876 are as follows:—

1—Barnes, Chicago.....	.66	400
2—Hall, Athletic.....	.60	855
3—Peterson, Chicago.....	.60	349
4—McVey, Chicago.....	.63	345
5—Anson, Chicago.....	.65	512
6—Andrus, Chicago.....	.65	342
7—Clinton, Louisville.....	.16	338
8—Meyerle, Athletic.....	.55	335
9—White, Chicago.....	.66	334
10—Hines, Chicago.....	.63	325

THE INTERNATIONAL FOOT-BALL MATCHES.—The Harvard University team left Boston Friday, October 27th, arriving in Montreal Saturday at 10. The headquarters of the team during their stay were at the St. Lawrence House, and here they were met by delegates of the Canada Foot-Ball Association and the Magill Club, and decided to play that day instead of Monday morning, as per previous understanding. Through courtesy to the Magill men the team consented to play them on Monday, by this means saving them the trouble and expense of coming to Cambridge.

The All Canada and Harvard fifteens met on the Montreal cricket grounds at 2:45 p. m., and Harvard having the kick-off, work begun. The play was close. Canada excelled in long drop kicks, while Harvard showed the advantage of playing together by their dodging and passing the ball. After fourteen minutes of scrimmaging, Whitney of Harvard secured the first goal. Before the first three-quarters of an hour were up, Rollins and Kings had both secured touchdowns and Seamans by a fine drop-kick had won another goal; Harvard had now two touchdowns and two goals; All Canada nothing.

After ten minutes' rest the game was renewed, the Canadians having the kick-off. The latter part of the game was characterized by the brilliant playing of the Canadians, who were, however, unable to score, as the Harvard were playing a remarkably good block game. When time was called at the end of an hour and a half Herrick, of Harvards, had secured by a beautiful diagonal run another touchdown, which was too far to the right of the goal to be of use. The Canadians had won nothing, so Harvard was victorious by two goals, it being agreed beforehand that touchdowns should not count.

In the evening the visitors were handsomely entertained at the Carlton, and the utmost good feeling prevailed. During their stay in Montreal the team and their friends were made temporary members of the Metropolitan and St. James Clubs, which act of courtesy was highly appreciated. The teams were made up as follows:—

Canada—Perram, Captain; Geddes, Lampill, Eardley, Wilmot, Jarvis, Robertson, Lurly, Taylor, Seriser, Abbott, Gough, Molson, Irvine and Blacklock.

Harvard—Whiting, Captain; Fancon, Seamans, Curtis, Herrick, H. W. Cushing, Keys, Tower, Rollins, Wetherbee, Lombard, Austin, Houston, L. Cushing, Jordan.

On Monday at 11 the game with Magill University was called. Herrick was disabled, and his place was taken by Russell. Twenty minutes after play begun Whiting, while attempting a brilliant play, fell with three men on him and broke the smaller bone in his right leg above the ankle. He was immediately carried off the ground and properly cared for, and the game went on, Harvard with 14 men and one of these a substitute. In the first half of the game neither side had gained anything. In the second half Seamans won the only goal for Harvard by a very long kick. The game was hot and exciting, and was a decided victory for the wearers of the crimson. After a hearty lunch furnished by the Magill men, the Harvard team bade good-by to their generous friends in Montreal.

ATHLETICS.

—The Brooklyn Amateur Athletic Association had their first meeting on Friday last. The following is a list of the winners:—

Half-Mile Run, four entries.—B. E. Adams of Boston.
One-Mile Walk, six entries.—E. H. Snyder, Columbia College.
One Hundred Yards Dash, five entries.—M. Keene, New York.
Quarter-mile Run, seven entries.—H. Lovatt, Brooklyn.
One hundred and twenty Yards Hurdle Race, five entries.—F. C. James, Chicago.

Three Mile Walk, nine entries.—J. L. Foster, New York.
In this race Mr. Snyder, who had competed in two of the previous races, fainted on the track, but quickly recovered. The prizes, handsome medals, were presented at the club rooms after the races.

—The Athletic Association of Tuft's College held its semi-annual meeting on the 1st inst. The events and winners were as follows:—

One Hundred Yards Dash.—Cambell, '73, 11 $\frac{1}{2}$ s.
One Mile Walk.—Maxfield, '79, 7m. 28s.
Quarter Mile Run.—Harrington, '77, 1m. 14s.
Standing Long Jump.—Perry, '79, 9ft. 10in.
Throwing Heavy Hammer.—Perry, '79, 60ft.
Mr. Norton Taylor of Woodstock, Vt., for a purse ran five miles in 28 minutes, a very capital performance, was postponed. The judges were H. L. Whithed, '77; Feltier, '73, and St. Clair Whittemore, '78.

—The fall meeting of the Athletic Association of Columbia College was held on Saturday on the grounds of the N. Y. Athletic Club at Mott Haven. The weather was delightful and the ladies out in force. The following is a record of the events and winners:—

One Mile Walk.—C. Eldridge, '77—time, 8m. 24s.
Pole Vaulting.—F. B. Weeks, '77—8ft. 3ins.
220-Yards Run.—W. Waller, '73—time, 25 $\frac{1}{2}$ s.
440-Yards Run.—R. K. Colgate, '80—time, 55s.
One-Mile Run.—R. K. Colgate, '80—time 5m. 12 $\frac{1}{2}$ s.
One Hundred Yards Race.—W. Waller, '78—time, 10 $\frac{1}{2}$ s.
Three-Mile Walk.—C. Eldridge, '79—time, 25m. 48s.
Tossing the Hammer.—C. S. Boyd, S. M.—68ft. 3in.
Hurdle Race, 120 Yards.—W. H. Deforest, '78—time, 23 $\frac{1}{2}$ s.
Half-Mile Run.—G. M. Hammond, S. M.—time, 2m. 25s.
Consolation Race, 440 Yards.—W. A. Brettet, '80—time, 1m. 9s.
Strangers Race, One-Half Mile.—C. Vought—time, 2m. 12s.

Mr. Jas. O'Neil was referee, and Mr. Casper Griswold and Professor Amringe judges.

BICYCLING.—David Stanton, the great English bicyclist, recently succeeded in accomplishing the remarkable feat of riding one hundred miles in 6 hours 44 minutes and 10 seconds, being the best time on record.

CRICKET.

The Staten Island Club closed play for the season on October 26th, when they played a one-innings game English vs. American. The English team was a strong one, but only seven of the Americans were on hand, the latter being defeated by 66 to 34.

—Recently, in Baltimore, John Seigel, who has his right leg amputated at the thigh, succeeded in walking, or hobbling with a crutch, a distance of four miles in 58 $\frac{1}{2}$ minutes.

"How is it, my friend, that, while you say that no one is so dead a shot as yourself, you never bag anything?" "Simply because when I go out shooting I never pull the trigger." "Ah! And why?" "Why, it would be sheer butchery."—*French paper.*

—A visitor at Philadelphia being asked whether he preferred pictures to statuary, said he preferred the latter "as you can go all round the statoots, but you can't see only one side of the picters."

Tiffany & Co., Silversmiths, Jewelers, and

Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their timing watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. Tiffany & Co., are also the agents in America for Messrs. Patek, Philippe & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Bronzes and Artistic Pottery is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Union Square, New York.

A SAGACIOUS DOG.—A gentleman from St. Hilaire, in the city to-day, states that on Saturday, the 26th, during the regatta at the Iroquois House, St. Hilaire, an old woman, a native of the place, witnessed the races, when suddenly she disappeared. No attention was paid to her absence until about 8 p. m.; when her friends got alarmed, and soon the mountain was beaten by over sixty people in search of her. They did the same all Sunday and Monday, but to no purpose, when the proprietor of the hotel volunteered to lend his retriever, and accompanied by about fifty men they proceeded to the lake. Having made the dog take scent from some of the missing woman's clothing, he ran about six miles when he discovered a shawl which was the old woman's. The dog then turned back and went to the lake and was called away several times, in order to make him search the bush, but of no avail. He persisted in running to the beach—to the same spot. The dog then howled and rushed back into the bush, but it was thought he was out of his reckoning, and they all returned home. On Wednesday they searched again, and at 1 p. m. the woman was discovered sitting on a log about half a mile from where the dog had tracked her to the lake, and where he had afterwards wished to go. The old woman was quite well and hearty, and said she had been three times to the lake shore at the spot where the dog had been to get a drink. She is about 70, and had been without food from Saturday at 7 a. m. until Tuesday at 5 p. m., three days eleven hours.—*Toronto Globe.*

—We recently heard of a good joke perpetrated by a Chemung county farmer, a member of the Elmira Farmer's Club. He had been greatly bothered by hunters from the city who had entered his woods with a perfect abandon and slaughtered the squirrels in great numbers. One day he procured two or three squirrels, took them to a taxidermist and had them stuffed. He then took them to his woods and nailed them fast to the limbs of as many trees, in such a way that they could be easily seen by the hunters. How much powder and lead has been wasted on those squirrels it is impossible to tell, but many a good marksman has wondered why he could not bag the game. The old farmer has doubtless many a hearty laugh at the discomfiture of the hunters. We are not sure that we ought to have let the secret out, but the joke is a little too good to keep.—*Havana Journal.*

—The worthy father presents his son, as a reward of merit for his progress at school, with a handsome gun, and allows the boy to make one of the hunting party. The ingenious youth spies a hare, fires at it, but, horror of horrors! his father, who has stooped to pick up a bird, rifles at the very moment right in the line of fire, and is peppered. The boy casts down his fowling-piece and bursts into an agony of tears. They console him by representing that the author of his being fortunately wore buckskin breeches and escaped absolutely unharmed. "It is not that," sobs the heart-broken child: "If he had not been there I'd have killed the hare!"—*Paris Figaro.*

HURST'S

Stereoscopic Studies

OF

Natural History

FOR OBJECT TEACHING IN SCHOOLS

And

PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign specimens, and various animals and birds in grotesque attitudes, never, however, violating their natural instincts.

We offer these views, not as pictures only, but as studies from nature. One of the great moving elements in our modern system of education is object teaching. The unerring fidelity of the stereoscope transfers the animals and birds from their natural habitat to the rooms of the student and the fireside of our homes, where they cannot fail to have a lasting impression of the form, color, habits, and locality of each specimen.

An experience of more than twenty-five years as Taxidermist of the New York State Cabinet of Natural History, and in gathering his large collection of native and foreign specimens, enables Mr. Hurst to combine in every view the locality of the specimen, with its appropriate rocks, woods, or water, and coloring from the originals.

CORNELL UNIVERSITY,
ITHACA, March 14th, 1870.

I must congratulate you upon your great success in this new educational enterprise. If we can arrange our amusements so as to make them impart instruction to the mind, it will be a step in advance in education.

EZRA CORNELL.

Prices: By the Dozen, \$3 00
By the Set of 5 Dozen, in Elegant Case, 16 00

These Stereoscopes are sold wholesale and retail by

Forest and Stream Publishing Comp'y,

17 Chatham st., (City Hall sq.) P. O. box 2832.

The Kennel.

Fleas, Fleas! Worms, Worms!

STEADMAN'S FLEA POWDER FOR DOGS.

A Bane to Fleas--A Boon to Dogs.

This Powder is guaranteed to kill fleas on dogs or any other animals, or money returned. It is put up in patent boxes with sliding pepper box top, which greatly facilitates its use. Simple and efficacious.

Price 50 cents by mail, postpaid.

ARECA NUT for Worms in DOGS.

A certain remedy. Put up in boxes containing a dozen powders, with full directions for use. Price 50 cents per box by mail. Both the above are recommended by *Rod and Gun* and *FOREST AND STREAM*.

HOLBERTON & BEEMER,

oct 12

102 Nassau St., New York.

CELEBRATED

American Dogs.

Fine Engravings on card boards, ready for framing, the following celebrated dogs:—

Pure Laverack Setter Fairy.
Pure Laverack Setter Pride of the Border.
Imported Red Irish Setter Dick.
Imported Red Irish Setters Dash and Bess.
Celebrated Dogs Peg, Don, and George, after painting by Bispham.

Black and White Pointer Whisky.
Liver and White Pointer Ranger.
Black Pointer Pete.

Price 25 cents each, postage paid. Address

FOREST AND STREAM PUB. CO.,

17 CHATHAM STREET, N. Y.

Spratt's Patent

Meat Fibrine Dog Cakes.

They contain meat and that anti-scorbutic fruit, the date (the only substitute for fresh vegetables), and the exclusive use of which in the manufacture of dog food is secured to us by patent; they will keep dogs in perfect condition without other food, and obviate worms. Every cake is stamped "Spratt's Patent." Be sure to observe this. For sale by F. O. de LUZE, 18 South William St., N. Y., in cases of 1 cwt. Aug 10 3m.

DOGS WANTED!—TWO OR THREE
as boarders during the close season, at \$4 per month. Well fed and exercised. Also one or two pups to bring up and house and yard, break them to all commands or terms used in hunting. For further particulars address Lock Drawer 410, Bridgeport, Conn. Nov 9 2t

FOR SALE CHEAP.—A HANDSOME
setter, No. 1 on quail. Fast and staunch. Excellent retriever. J. H. Steele, Ellington, Conn. Nov 9 1t

FOR SALE!—I NOW OFFER FOR
breeding purposes, the thoroughbred liver and white pointer bitch, better known as Crosby's Fan. Price \$75. Fan is great grand-dam to Mr. Strong's black pointer dog Pete, and grand-dam to Mr. Warberton's Mack. Pete took first prize at Springfield Bench Show the past two years, and Centennial champion prize at Philadelphia. Mack was prize winner at Springfield, also at the Centennial Bench Show, Philadelphia. Address POINTER, Lock drawer 410, Bridgeport Conn. Nov 9 2t

FOR SALE.—BLACK AND TAN GOR-
DON setter dog Don, sire Edward Howe's famous Gordon Fritz. (sire of Seitzinger's Clyde.) dam Packer's thoroughbred bitch, the grand dam of Clyde. Don is three years old, pure glossy black and tan, no white, is strong, very handsome and a first class field dog. For further information address DON, P. O. Box 933, N. Y. Nov 2 2t

FOR SALE.—ONE TAN FOX HOUND
4 years old, 2 black-tan fox hounds 2 years old, 4 black-tan fox hound pups 3 months old, all from imported English stock. For full particulars address WM. H. WHITE, Jr., Stoughton, Mass. P. O. box 30. oct 5 1t

TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMP'Y

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROT-
TING PARKS and RACE COURSES in the Middle
States. These lines being CONTINUOUS FROM ALL
IMPORTANT POINTS, avoid the difficulties and dan-
gers of reshipment, while the excellent cars run over
the smooth steel tracks enable STOCK TO BE TRANS-
PORTED without failure or injury.

The lines of
The Pennsylvania Railroad Company
also reach the best localities for

GUNNING AND FISHING

In Pennsylvania and New Jersey. EXCURSION
TICKETS are sold at the offices of the Company in
all the principal cities to KANE, RENOVIA, BED
FORD, CRESSON, RALSTON, MINNEQUA, and
other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to
TUCKERTON, BEECH HAVEN, CAPE MAY,
SQUAN, and points on the NEW JERSEY COAST
renowned for ALT WATER SPORT AFTER FIN
AND FEATHER.

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over
two thousand miles of road, radiating from Chicago.
Like the fingers in a man's hand, its lines reach in all
directions, and cover about all the country north,
northwest, and west of Chicago. With one branch it
reaches Racine, Kenosha, Milwaukee, and the coun-
try north thereof; with another line it pushes through
Janesville, Watertown, Oshkosh, Fond du Lac, Green
Bay, Escanaba, to Nagaunee and Marquette; with an-
other line it passes through Madison, Elroy, and for
St. Paul and Minneapolis; branching westward from
Elroy, it runs to and through Winona, Owatonna, St.
Peter, Mankato, New Ulm, and stops not until Lake
Kameska, Dakota, is reached; another line starts from
Chicago and runs through Elgin and Rockford to Free-
port, and, via the Illinois Central, reaches Warren,
Galena and Dubuque, and the country beyond. Still
another line runs almost due westward, and passes
through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar
Rapids, Marshalltown, Grand Junction, to Council
Bluffs and Omaha. This last named is the "GREAT
TRANS-CONTINENTAL ROUTE," and the pioneer
overland line for Nebraska, Colorado, Utah, Idaho,
Montana, Nevada, California, and the Pacific Coast.
It runs through the Garden of Illinois and Iowa, and
is the safest, shortest, and best route to Omaha, Lin-
coln, and other points in Nebraska, and for Cheyenne,
Denver, Salt Lake City, Virginia City, Carson, Sacra-
mento, San Francisco, and all other points west of
the Missouri River.

TO SPORTSMEN:
THIS LINE PRESENTS PECULIAR ADVAN-
TAGES—FOR PRAIRIE CHICKEN, DUCK,
GEESE, AND BRANT SHOOTING, THE
IOWA LINE TO-DAY OFFERS MORE
FAVORABLE POINTS

than any other road in the country, while for Deer and
Bear Hunting, and for Brook Trout, Lake Salmon,
Pike, Pickerel, and Bass Fishing a hundred points on
the Northern and Northwestern lines of this company
will be found unsurpassed by any in the West.

"THE BOSTON SHOOTING SUIT.—One of the most
successful manufacturers of Waterproof Shooting
Suits is the firm of G. W. Simmons & Son, Oak Hall,
Boston. We had one of their suits on duty at Hun-
ter's Camp at Philadelphia Centennial Exhibition.
It has grown gray in service, but is good
for use yet. This suit is known as the 'Boston
Shooting Suit,' in contradistinction no doubt, from
the garments which are manufactured out west and at
Washington, each of which has a local demand of its
own. It is said that the western prairie fowl can
distinguish any sportsman who visits their domain
by his clothes. They can tell him 'by the cut of his
jib,' and the old educated birds (which no one cares to
eat, by the way,) know exactly what distances to
keep from the rail-shooters, the brant men, and the
chicken-killers respectively, to be safe. They have
'got them all down fine.' This used not to be so be-
fore the waterproof shooting suits were invented.
Bostonians, Hoosiers and Buckeyes all stood the same
chance then. But now it is—with a sarill pipe to leav-
ward by the old-weather cock—'here comes a Sim-
mons; cheese it!' or, 'Ere's a 'Enning—lie low!' or,
'Look out for Holabird! Scatter! you beggars, scat-
ter!'—FOREST AND STREAM.]

The 'Boston Shooting Suit.'

MANUFACTURED ONLY BY

G. W. SIMMONS & SON,

Boston, Mass.

SOLD everywhere in the U. S. by all first-class
dealers in

SPORTSMEN'S GOODS.

EACH GARMENT DISTINCTLY MARKED

"BOSTON SHOOTING SUIT,"
made by
G. W. Simmons & Son.

This new design of WATERPROOF SHOOTING SUIT,
made from extra quality duck, has attained such
popularity as to be called for from all parts of the
country, and even from England.

"Shipping clothing to England strikes us very much
like sending 'Coals to Newcastle,' but the merits
of the 'BOSTON SHOOTING SUITS' have been
heard of in the Old Country, and that land of sports
men has sent an order to Messrs. Simmons & Son,
which will doubtless be followed by many others."—
Boston Paper.

The design embraces the best points of the English
and French Suits, combined with the necessary re-
quirements for American service. Particular atten-
tion has been paid to color.

Each suit is water-proofed by a new patent process.
The seams and pocket corners are securely fastened,
and nothing neglected to render the suit perfect in
every respect.

THE PRICE HAS BEEN FIXED AT \$13, TO IN-
CLUDE HAT OR DOUBLE VISOURED CAP. DE-
TACHABLE HAVELLOCK, COAT, VEST, AND
PANTALOONS.

One hundred suits will be kept ready in stock, so
that we can furnish to order any size required, at a
moment's notice.

In the *Golden Rule* (Rev. W. H. H. Murray's paper)
the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof
suit, specially adapted for sportsmen, designed and
made up by Simmons & Son, of Boston, and to which
we call the attention of all brethren of the out-door
and shore-shooting fraternity, because it meets the
demand of personal comfort and convenience beyond
anything of home manufacture seen by us before.
As a sportsman, we give it our unqualified endorse-
ment, as combining the best points of the English
suits, and in addition skilfully adapted to the neces-
sities of the American service. It is a most admirable
and satisfactory contrivance in color, style, water-
proof quality and capacity. The coat is a marvel
in this latter respect."

PERSONS ORDERING FROM A DISTANCE NEED
SEND ONLY THE FOLLOWING TO BE SURE OF
A PERFECT FIT: BREAST MEASURE, WAIST
MEASURE, INSIDE SEAM COAT SLEEVE, IN-
SIDE SEAM PANTALOONS; MENTION HEIGHT
AND WEIGHT.

G. W. SIMMONS & SON,

"OAK HALL," BOSTON, MASS.

WILD GOOSE

—AND—

BRANT SHOOTING

Begin this month. The Shooting Outfit which is
now recognized as the best in the country, is that
known as the "Boston Shooting Suit," waterproofed
and made only by G. W. SIMMONS & SON, Oak
Hall, Boston. Sold by dealers in Sportsmen's
Goods generally throughout the country. Price com-
plete \$13.

Our new Patent Decoy is light and compact (one
dozen occupying but little space), so that a sportsman
can conveniently carry a case of large-sized birds in
his carpet-bag.

WIND-PROOF

Leather Vest and Jackets,
Flannel-Lined.

(Made and sold only by Messrs. G. W. SIMMONS &
Co., OAK HALL, BOSTON.) are considered the most
sensible protectors ever devised for winter wear. They
are especially adapted to the requirements of sporting
men, whose rapid walking is likely to be followed by
frequent halts in the cold wind. Price, Vest \$7;
Jacket \$9. Measurements required are Waist, Breast
and Inside Seam of Sleeve. Mention Height and
Weight.

LADIES LEATHER VESTS AND JACKETS
made to order. Indispensable to all who are in any
way exposed to the weather.

H. L. DUNCKLEE'S

PATENT

CAMPING and MINING

STOVE.

PATENTED JUNE 22, 1875.

Outside dimensions, packed, 12x12x20 inches.

Weighing only 35 pounds, very durable, will cook
for ten persons, and is especially adapted for camping
purposes. The ware consists of 8 qt. kettle, 6 qt. tea
kettle, 2 qt. coffee pot, fry pan, round tin pan, 2
square pans, dipper, gridiron, tent collar, 8 ft. funnel,
and an oven that will roast 15 pounds beef.

The ware is so constructed that it nests and packs
in the oven, and the oven and funnel pack inside the
stove, as represented in cut 2, leaving room for pack-
ing half a dozen plates, knives, forks, spoons, and
drinking cups. Price complete, \$15.

McBride Flies,

The Standard Flies for American Waters

These flies are imitations of American insects, or combination of colors, that an experience of forty years has proved most successful. Parties supplied with casting lines and artificial flies for Pennsylvania trout streams, Adirondacks, the Maine Woods, Lake Superior, Thousand Islands, Canadian, and other waters. Anglers not acquainted with the nomenclature of these flies, by mentioning the locality where they intend fishing, will have the varieties best suited to those waters sent to them. Flies copied from any natural insect or pattern desired. SARA J. McRIDE (Successor to John McBride) Mumford, Monroe county, N. Y.

Gunpowder.

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 3 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFFG, FFG, and "Sea Shooting" FG, in kegs of 25 1/2, and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER. GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office

Feb 10-1y

70 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6 1/2 lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.g. FFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 lb.

All of the above give high velocities and less residuum than any other brands made. BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS. SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER Co.,

26 Murray St., N. Y.

Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

CHALLENGE.

The undersigned is prepared to prove all the superior qualities he claims for his powder.

Safety, Cleanliness, Strength, Little Recoil, Little Smoke, Small Report, Less Heating of the Barrel in Rapid Firing, and its Regularity in Shooting.

He challenges all riflemen to shoot against him with black powder, 200 rounds, without wiping; 100 rounds off-hand, at 200, 500 and 1,000 yards respectively, and 100 rounds in any position at same distances; the 200 rounds equally divided at the three ranges; sighting shots extra.

Will shoot for money if desired.

The powder is also well adapted for shot guns. Inquire for the "Dittmar Powder" of your dealer address the

DITTMAR POWDER MAN'G CO., NEWPORT, MASS.

Publications.

THE American Naturalist;

A POPULAR ILLUSTRATED MONTHLY MAGAZINE OF NATURAL HISTORY AND TRAVEL.

Announcement for 1877.

This journal of popular Natural Science will continue to be published by Messrs. H. O. Houghton & Co., Riverside Press, Cambridge, Mass., under the editorial management of Dr. A. S. PACKARD, Jr., with the assistance of eminent men of science.

Since January, 1876, the amount of matter given in each number has been increased over former volumes. The typographical dress and illustrations which have heretofore given character to this magazine have been improved, and it is of a thoroughly popular nature, so as to interest the general reader as well as well as the young naturalist. It will continue to be a journal of science-education and for the use of science-teachers.

Its Features for 1877.

In 1876 the latter half of the magazine was entirely remodeled, and a department of GEOGRAPHY AND TRAVEL added. The department of BOTANY will be edited as formerly by Prof. G. L. Goodale, of Harvard University. That of MICROSCOPY will be edited as heretofore by Dr. R. H. Ward, Troy, N. Y. Arrangements have been made to report the PROCEEDINGS OF SCIENTIFIC SOCIETIES with great promptness. A digest of the CONTENTS OF FOREIGN SCIENTIFIC JOURNALS AND TRANSACTIONS will also be given each month, together with the LATEST HOME AND FOREIGN SCIENTIFIC NEWS.

The attention of publishers and teachers is called to critical notices of scientific books, to which especial attention will be given.

Articles for Vol. xi., 1877.

By Professors Asa Gray, J. D. Whitney, N. S. Shaler, W. G. Farlow, G. L. Goodale, of Harvard University; Professors O. C. Marsh, A. E. Verrill, of Yale College; Mr. A. Agassiz, Hon. Lewis H. Morgan, Col. Theodore Lyman, Mr. L. F. Pourtales, Mr. S. H. Scudder; Professors E. D. Cope, F. V. Hayden, A. Hyatt; Drs. Elliott Coues, W. H. Dall, C. C. Abbott, Rev. S. Lockwood, J. A. Allen, H. Gillman, C. C. Parry, R. E. C. Stearns, O. T. Mason, and other leading naturalists, are either in hand or promised. Notes from abroad will occasionally be contributed by Mr. Alfred W. Bennett, the distinguished English botanist.

TERMS: 35 cents a number; \$4.00 a year, postage free. Bound volumes, \$5 00; vols. I-X, \$40.00; unbound \$30.00. Back numbers supplied.

Remittances by mail should be sent by money-order, draft on New York or Boston, or registered letter, to H. O. HOUGHTON & Co., Riverside Press, Cambridge, Mass.

H. O. HOUGHTON & CO., cor. Beacon and Somerset Sts., Boston.

Paper and Metallic Shells

FOR

Breech Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers. dec 23 tf

ORIENTAL POWDER MILLS,
MANUFACTURERS OF SUPERIOR TARGET AND SPORTING
GUNPOWDER.

PAINTING.—THE PATRONS' PAINT COMPANY are manufacturing the INGERSOLL READY-MIXED PAINTS, and BRUSHES, and selling them at full trade discounts, delivering them freight paid, and no money required until the goods are received—making them cheaper than even the material can be bought elsewhere. They are an absolutely pure article, possessing great endurance and brilliancy, and are giving great satisfaction all over the country. We have a Patron friend who saved enough alone on Paint purchased to pay his Grange expenses for a life-time. They also sell ROOF PAINT 30 per cent. cheaper than any one else. It is to the interest of all about painting to write and have sent free their book, "Every One His Own Painter." It will save much money, whether you buy their Paint or not. Address, 259 FRONT STREET, NEW YORK.—(From "The Farmers' Friend.") Nov 2-1y.

ATTENTION, WATCH SPECULATORS!

We have the best Imitation Gold Watch in the Market for Trading Purposes.

The metal is a composition of other metals, so closely resembling gold that the best judges find it difficult to detect the difference, except by a chemical test, and it has the virtues requisite to make it the best substitute for gold known. GENUINE SWISS OR AMERICAN MOVEMENT. SUNK DIAL. CHRONOMETER BALANCE. BEAUTIFULLY ENGRAVED OR ENGINE TURNED HUNTING CASES, and equal in appearance to a GOLD WATCH THAT COSTS FROM \$150 TO \$200. It sells and trades readily, for from \$60 to \$100, and if you wish a watch for your own use or to make money on, try this. Owing to our large sales, we are enabled to reduce the price of them to \$12 EACH WITH AN ELEGANT CHAIN ATTACHED.

They are used on Railroads, Steamers, and in Manufactories, and other places where accurate time is required, and gives general satisfaction. We send them by Mail or Express, on receipt of \$12, to any part of the Country, or it will be sent C. O. D. when the customer desires and remits \$3 on account. These Elegant CHAINS weigh about fifty pennyweights, and the same pattern in pure gold would cost \$100. We sell these

Chains at \$3 each. But we sell the Watch and Chain for \$12, sent by Mail in a Registered Package, post-paid, to any Post-Office in the United States.

WE SELL THE WATCH WITHOUT THE CHAIN FOR TEN DOLLARS.

RUSHTON'S

HUNTING & PLEASURE BOATS.

Combine BEAUTY, STRENGTH and STEADINESS. The LIGHTEST sporting boat in the world. Weight, 25 pounds and upward. Will carry two to four persons and baggage. Cedar siding, oak keel, stems, etc. (do not fold up). Also CANOES, weight 35 pound. J. H. RUSHTON, Manufacturer, Canton, St. Lawrence County, N. Y. Sep 9 6n

Fenner's Portable Boat.

FOR SPORTSMEN, TOURISTS, AND Surveyors. For fishing, fall shooting and for winter sport in the South. Light, strong, steady and noiseless. Compact to carry, easily and quickly set up. Shown at D. 4, 31, Machinery Hall, Philadelphia. Send for circular and prices to C. A. FENNER, Myrtle River, Ct. Can be seen at Holberton & Beemer's, 102 Nassau street, New York. aug 24 3m

MILITARY, SPORTING, HUNTING AND TARGET

BREECH-LOADING RIFLES.

DON'T BE DECEIVED BY THE "AVERAGE TRICK" OF 1 TO 7. In the first International match (1874), three Remington and three other rifles were used; in the second (1875) they stood four Remingtons to two others; the third, seven Remingtons to one other; the fourth and last, all Remingtons. Highest score for Remington in the Centennial matches, 462; the other, 394. Aggregate in all the International matches (not confined to Remington rifles): Remington, 742; the other, 720. Remington still ahead 22 points (not counting the last match with Ireland, when none but Remingtons were used). See official record in "American Rifles and Riflemen." Price, 12 cents. Illustrated Catalogue free. Address

INDIAN KENTUCK.

For Forest and Stream.

HOW sweet to the senses this region so grand!
The bold undulating and smooth valley land
Arrayed in Spring's mantle, bedecked with its bloom,
Enriching the air with delicious perfume,
The bells of the herds and the hum of the bees,
The songs of the birds in the meadows and trees,
The wide-spreading elms, the huge sycamores
The bright winding stream and the pebble-white shores--
All these, and the chances of trying one's luck,
Are the winning attractions of Indian Kentucky.

The lovers of Nature, the lovers of sport,
May find in this valley a charming resort,
Where cares are forgotten, and linger behind
While beauty engages and pleases the mind.
Hard times and ill-feeling and things that annoy
Give way to a spirit as light as the buoy,
Which dances and dips like a gay colored duck
On the zephyr-made ripples of Indian Kentucky.

And when it goes down in the crystalline flood,
Proclaiming the minnow the coveted food
Of voracious bass, or of swift-darting pike,
The moment arrives for the angler to strike,
Then comes a wild struggle--the game being hooked,
The line is extended, the slender pole crooked
And set in a quiver by act of the reel
Which hums the long note of an old pinning wheel,
Till the fish has exhausted his strength and his pluck
And comes from the waters of Indian Kentucky.

Here romantic lovers, in quiet serene,
May leisurely stroll o'er a carpet of green,
Or dreamily sit on the banks of the brook
And, heeding the nibbles, fling out of the tide
The sun-fish of gold or the bright silver side.
Thus courtship is able to richly supply
The parental table with many a fry,
And love's never blighted by "fishermen's luck"
(Although it may happen) on Indian Kentucky.

O, care-weary mortals who dwell in the town
Where dust ever rises and soot settles down,
Do ye never wish for a change--a respite;
A charming transition from gloom into light;
A day's relaxation from tumult and care,
To bask in the sun-light and breathe the free air?
If so, leave your labors, as tho' you had struck
And hie to the beautiful Indian Kentucky!

LON HODING.

[Indian Kentucky is a fine stream for the lovers of piscatorial sport. It empties into the Ohio river seven miles above Madison, Ind.]

For Forest and Stream.

The West Coast of Florida.

NUMBER 4.

Being Notes of a Family Cruise of Five Hundred Miles and Return, in a Sloop-Yacht twenty three feet long, by Major Sarasota and his Family.

MAY 18th--The sloop was just barely afloat at daylight, when I called all hands and got under way. My first officer seemed none the worse for the melon which was disposed of the night before after 12 o'clock, but in her case it could never have been done outside of Florida, as in New England she is troubled with dyspepsia badly, and must be very particular as to time of eating, as well as to what is eaten. But in this country, especially when on the water, often the great problem is how to procure enough, and when that can be done, how to eat enough at any one meal to last until the next one. My whole crew, self included, were afflicted in the same way, which only goes to show what a country this is.

Our course after getting well off the shoals was laid about S. S. W., although at ordinary half tide there are five or six feet of water anywhere until the channel of Anclote river is reached. Anclote Keys are in plain sight from the mouth of the Coota bearing S. W. by W. The channel of the northern entrance to Clearwater harbor, or to Anclote river, is quite close on their eastern side, and the course I laid was intended to strike it about where the river channel enters. Stakes have been set on the lumps on either side of the river channel, which is tolerably straight, until just before you get into the jaws of the mouth; then it becomes very crooked, and there are some rocks and oyster reefs. There is a fine spring of water on a mound among the scrub on the north bank, just back a little from the beach, say twenty feet, and just before you come to the first little bayou or cove on that side. I forgot to mention that I know of no good water at the mouth of the Coota, until you go back to the pine woods. I

think the fishermen who camp there haul their water. But at the Anclote good sweet water is plenty; indeed, if springs or wells are not readily found, one can reach fresh water along this shore by digging a few inches just back of high water mark, and this is a characteristic of many portions of the Gulf coast.

There were several houses to be seen as we passed the mouth of the river, and I presume there is a store here, as several years ago I bought quite an extensive stock of goods here for a merchant. We had no occasion to call this time, but as Clearwater harbor opened we headed for the north end of Big Clearwater Island, about ten or twelve miles away. The main channel runs straight from the south end of Anclote Keys to the north end of Clearwater Key, where it bears off to the main land nearly S. E. I find it not always possible to give the exact course steered in a small boat, especially when there is a sea on. When a S. E. course has taken you within 300 yards of the main land keep along at this distance from the shore for half a mile, where Big Clearwater Pass should open on the S. W. The channel to it is broad and plain, both inside and out. The main channel runs straight out to sea for a half mile or more, and then bears off to the S. W. The "swash" channel on the north side I have never tried, but the "swash" on the south side is practicable for vessels not drawing over five feet. Keep close to the shore, and follow the bend of the beach around. When I say "close to the shore" I mean just what I say. You can run within twenty or thirty feet of it. I mention this here because I have been told to "run close in" on a certain place, and when I came to investigate, and after my escape compare notes, I discovered that my instructions "close in" meant over a mile away. If he had been a "square-rigged sailor," instead of a plain fisherman and coaster like myself, I should have thought he was affecting "deep water" talk. In the jaws of Big Clearwater Pass on the north side is a large bayou, in which, during the low tide of a "norther," I once caught a large quantity of the finest and sweetest stone crabs I ever saw. Just inside the jaws of the Pass the channel is divided by a shoal and mangrove island, so that one branch leads off N. E., and the other about S. E. towards the principal settlement of Clearwater Harbor. The whole bay for some twenty miles is closely settled up on the shore, and back in the country for several miles, where the pine lands are better and more rolling, it is rapidly filling up. The southerly half of the bay is most thickly settled, as here the high lands come quite to the shore, and on some parts of it there is excellent hammock land, and also many orange groves of a bearing age. The people through here have turned their attention to orange culture quite extensively within the last ten years; but as there are several good-sized groves which have been bearing more than twenty-five years, it is not an experiment by any means.

We spent the day wandering about looking at the different orchards and examining the country. All the good land, and perhaps all the lands on the shore, have been taken up, but they are not held at very high figures as yet. I have never yet seen a stranger, and more especially a northern man, who was not more than favorably impressed with Clearwater Harbor. The high bluff immediately at the beach, from which bubbles many fine springs of water, is very attractive, and I would advise any settler who is looking at the Gulf coast not to locate permanently until he has given it a call. Don't let the difficulty of reaching the place deter you. It is promised that a steamer shall run through here the coming winter; but that has been promised so long I place little faith in it. When I put one on myself I shall know it is there. Would advise a party to charter a small sloop or schooner at Cedar Keys for the round trip. It would probably be a cheaper way of seeing more country than a trip by steamer could offer. I will not recommend any particular orchard, lest it be surmised I have an interest in the success of the settlement and the sale of the lands. I am deeply interested, but in a general way only, as my own possessions lie farther south at Sarasota; yet at the same time I frankly admit that in some respects Clearwater Harbor is to be preferred. In our wanderings about through the woods we called at several houses, and were always very cordially received. The bulk of the oranges were of course gone, yet a few of the third crop were still on the trees. I have often heard it disputed that ripe, and green fruit with blossoms, are even met with at the same time on one tree, but here were many just such cases, and had been for over two months. It seemed as though these third crop oranges were the sweetest I ever ate, and it is possible that remaining on the

tree so long, or from being ripened by a warmer sun, that they were really superior in flavor.

We met some children of nature in our calls, and, Mr. Editor, if you think the relation of this little episode which I now propose to give is a breach of hospitality, just run your pen through it; but knowing all the circumstances, as I do, it is almost too good to lose by not going on record. We have had many hearty laughs over it.

You understand, of course, that on a small craft like mine, there is little protection from the rays of the sun. Ladies' complexions have to catch it hot. We had been exposed the previous day, and the morning of this more than usual, and as a consequence Mrs. X. was burned an *even high toned red*, from top of forehead to dress collar. One of the ladies where we called, after complimenting her very highly upon her youthful looks, and doubting the possibility of the children being her's, by asking if I have not been a widower when she married me, could restrain her admiration no longer, but burst out with: "Wall, yere mighty fair looking, if you beant painted!" I nearly broke down under it myself, and I think Mrs. X. would have blushed, only she would have to either turn pale or bleach out first, for she could certainly get no redder. The climax was reached, however, when they (for some neighbors had dropped in) began to institute a comparison between the teeth of the northern and southern people, much to the credit of the former, and at the same time to cast admiring glances at a set which I bought and paid for. It was too much for me, and to save appearances I made a hasty dive around the corner to look at the "crap" in the next field. But really it is refreshing in this age of false *everything* to meet such unsophisticated innocence. I didn't wait to hear what they had to say about fine heads of hair, but perhaps Mrs. X. might give me some light on that subject. What would they say to see one of the belles who get themselves up in style, perfectly regardless, for a trip to Florida? For Mrs. X., being an old campaigner, (I beg her pardon for the adjective) was got up in the plainest of calicos, with no extras whatever, as they would be sadly out of place in our little cabin.

After looking about the settlement and filling our water jugs (I prefer five-gallon demijohns to casks) we ran across the bay to the New Inlet, as it is called. It is impossible to run through inside from Clearwater Harbor to the next bay south, called Boca Segua Bay, with boats drawing two feet; but the channel for even that depth is very intricate and hard to find, and I would advise no one to try it unless it is too stormy to run the twelve miles outside to John's Pass. Even if not favorable for an outside trip, I would prefer to wait for a day or so at the Pass for a change of weather, rather than attempt to go through inside, unless it could be done on one tide. The inside passage is too narrow to beat through, as it is often only twenty-five or thirty feet wide. I attempted it once when it was rougher outside than I cared to risk, and when about a third of the way through got aground. The tide fell so suddenly that there was nothing but the bare mud around me in half an hour, and worse still, not a tide came for six days that was high enough to float me off. As a matter of course, during the time I was hung up, and could not avail myself of it, there was plenty of fair weather and favorable winds. I have let that be a warning to me, not to try the inside Indian Pass, except under the most pressing and favorable circumstances.

To come back to the New Inlet. In running across from the main land steer well to the south of the opening, as an extensive shoal prevents a direct approach. This inlet was opened not very many years ago by a gale, and it has not had time to wash out a direct channel on the inside. Now we approach it from the south, running parallel with the island for quite a half mile. There is a very good harbor in a little cove just before reaching the end of the point, almost completely land-locked. We ran into it and came to anchor. A schooner of fifteen or twenty tons which had been hauled out on some ways in this little cove had just been launched. We arrived too late for the merry making, which had evidently been going on. I understand that these ways, and the windlass for hauling a vessel out on them, are permanently located here, and this may be worth remembering in case of accident, or of wishing to scrape and paint a boat's bottom. Observing some killdeer plover on the beach, I went ashore with the gun and soon had four of them--a Spanish curlew and a ringneck. This would do very well for supper, and as I did not care to run out that night, we devoted our whole attention to getting up a bird stew. It is my practice to skin all beach birds, for I

find the strong flavor which many of them have in this climate is either in the skin, or in the fat just under it. If time serves, give them a soak in salt water for an hour or two.

May 19th—The wind was so light at daybreak that I did not start, but taking the skiff pulled across the channel to the North Island, where I soon picked up seven more birds. I tried fishing for redfish, but with no success. They used to be plenty here later in the season, but Clearwater Harbor is not a great place for fish, when compared with other localities.

On returning to the sloop we got under way; wind from the N. E., but so light that we hardly made headway against the strong tide coming in. An occasional puff would lift us a few feet; and we stood still for a minute or so. It took a good hour and a half to run the quarter of a mile required to take us outside of all shoals. The main channel on the outside runs straight out to sea, with seven feet at low water; have never tried the north "swash," but it looks practicable. The south "swash," I think, has nearly as much water as the main channel; follow the beach close until past the Coast Survey tripod. There is a triangular-shaped shoal between the south "swash" and the main channel, which is bare at low tide, and for this reason I keep close in on the beach.

Soon after we were outside it came off calm, and then light from the southward, but before we had made many stretches out and back it hauled around to the westward far enough to admit of our sailing a straight course along close by the beach. About seven miles from the New Inlet of Clearwater is another very small inlet communicating with the inside passage called India Pass. It is so very small that one can sail within 300 yards of the beach and not see it, unless attention is attracted by the breakers on its bar. There are only about three feet of water on the bar at high tide. I have been in and out of this pass several times, and have never found the deepest water on the bar at the same place, but the channel was almost north and south until the bar is reached, when it usually turns sharp out to sea, yet sometimes keeps on almost parallel with the beach. As we passed here made out the breakers on the bar, but could see no deep streak at all; still, as the wind was fair we did not mind, as five miles farther on is John's Pass, where we proposed to run into Boca Segua Bay. The entrance to this pass is very plain. When coming from the northward I always run in the north "swash," and have never found less than seven feet. Keep close to the beach, as there is a bad shoal between the "swash" and main channel. The latter runs straight out to sea. The south "swash" is not to be depended upon, as I once got aground there when drawing but thirty inches. Fortunately there was no sea running, and I kedged off as the tide raised. At a previous time I came through it, sounding with a pole, never finding less than six feet. All of these sandy channels are liable to changes, some of them very sudden and extensive. I came in at the north "swash" one time when it was blowing so heavy from the west that it broke all the way across the main channel, yet the "swash" was tolerably smooth. This time, as soon as we were in, I ran up to the south shore and landed with my fishing tackle intent on redfish. One of those white sand crabs, which are usually seen at a distance stealing so ghost-like to their holes, was speedily unearthed and on my hooks. There is no better bait, if it were not so easily washed off the hook; and I made but few casts before a fine, fresh run five-pounder was flapping on the beach. This was all we needed for dinner, so I wound up my line and got under way again. The channel inside seemed to be perfectly alive with tarpum from six to ten feet long. Not only were they jumping and breaking water all around, but on looking into the clear depths over the sides, from fifty to a hundred could be seen swimming around and under us. I have often had fine sport striking them with the grains about a month later, when they come out upon the shoals, and are easily approached. The flesh is not esteemed, and the oil is of but little value; but when an "iron" is thrown into one about ten feet long, you can be sure of an exciting chase. They often throw themselves double their length into the air in their endeavors to get rid of the load; but when they settle down to work they make a heavy skiff just fly through the water. I have never known them to take bait.

There are three channels from John's Pass into Boca Segua Bay, which are available for any craft that can enter the Pass. The northern one follows along some little distance from the shore towards the settlements in the vicinity of Indian Pass, and through it to Clearwater. Another runs almost due east, straight for the main land, where some houses can be seen. If the voyager is short of provisions he will probably be able to stock up with potatoes, syrup, etc., at a Mr. Murphy's, who lives here, and who always has those things, when anyone in the country does. I stopped here on our return and laid in a year's supply of the choicest syrup I ever saw. Mr. Murphy's youngest son is a good guide and competent boatman, perfectly trustworthy in every respect; has been in the employ of a French naturalist during most of the present season. The third channel is separated from the east one by a large mangrove island. Its course is nearly S. E., and takes you out into the middle of the bay, which you should keep until Old Boca Segua Pass opens to the S. W. Be sure that you make this out for a certainty, for when about three miles from John's Pass there is a low place which looks like an inlet, but is not. It is all of six miles between the two passes.

The channels in Boca Segua Bay are often hard to follow,

as the water is usually clouded and they never seem to be where they ought to be. Indeed, the whole bay is quite shoal, and I can scarcely recall a time that I have been through it that I did not get aground more or less, and this time proved no exception to the rule. When Boca Segua Pass bore about S. W. I stood for it. The old channel used to run well up into the pass and then cross over into a channel on the south side, a long shoal dividing the two. On this shoal we hung up for about an hour, as the water was so muddy I could not see its depth until we were on it hard and fast. The shoal has filled up much since I was here last, and I learn I should have kept further on, into the jaws of the pass before attempting to cross over. Boca Segua Pass itself is rapidly closing. I never passed through it but once, and then there seemed to be one channel—a south "swash." As we were to keep on inside the bay after we got afloat we kept close alongside the island. This channel is plain and deep, almost as well marked as a canal and not much wider. The island upon the right is a favorite range for deer, but does not bear the best of reputation for the harmlessness of its rattlesnakes, still I never had any luck with either here. Speaking of snakes reminds me that all Northern people, and especially ladies, when they first arrive in Florida have a great terror of them; many to such an extent as to almost keep them within doors, and if they do venture out but for a short distance their eyes are scarcely lifted from the ground. As a diligent search of a few months in this manner is seldom rewarded by a glimpse of one their terror wears off, and towards the last of their visit they begin to enjoy rambles which should have been from the very first delightful. Now the facts as I understand them are something like these: I think the number of snakes to the square mile is actually greater in any country New England locality than in the ordinary lands of Florida. I account for this by the fact that every spring the whole face of the pine woods is burned over with much of the dryer swamps and hammocks. These fires destroy many grown snakes, and almost annihilate the eggs. The hogs which range free here all over the country assist in this destruction materially, so that it is only in very wet swamps where no one thinks of traveling that snakes are numerous. I admit that there are more poisonous snakes here than in New England, yet it is seldom you can hear of a person being bitten. I have resided now some ten years in different parts of Florida, yet but one instance of snake bite has come to my knowledge. A certain Parson G—, at Manatee Village, took a walk in his "cane patch" on Sunday afternoon and was struck with a large rattlesnake in the calf of the leg. Whiskey was handy and three pints, rapidly administered, saved him. He was about as sick for two days as a man ought to be after such a "heap big drink" as that. I would "print a moral:" Never let the jug of snake mixture get lower than three pints per man. I asked a resident physician recently if any cases of snake bites had come to his notice. He had never had any in his own practice; could recall no recent cases in the vicinity. His father, who was an old practitioner in this State, had but two. Now, with these facts as to bites, and also knowing that under all circumstances where it is possible for a snake to get out of the way he will do so, why waste time in looking for them? A few months ago there were a number of letters in "Our Paper" relative to the length of the black snake. We have several varieties here, among them one called the gopher snake, noted both for its length and size. I shot one on Big Sarasota Key several years ago which I measured off on my rifle barrel. It was five times its length, and as near as may be a half over; this would make 12 feet 10 inches. I once saw one which I think was longer. It was tied up to the top of the rear bow of an army wagon and trailed some four or five feet on the ground. Our black snake called the "racer," is very long and slim, but they have been too lively for me to lay one under the measure. I have twice seen a black snake killing a poisonous snake; one a rattle and the other a "thunder and lightning." The latter is a very pretty snake, that is, if one can see beauty in them, as I do. Its stripes of deep black and bright red show off to great advantage, but it is said (I know not with how much truth), that there is no antidote for its bite. I never kill an ordinary black snake now-a-days near my premises, as poisonous snakes will not come where they are; but those gophers, which can take every egg out from under a sitting hen without disturbing the hen or breaking the egg and then go off in such a state that every egg can be counted from the outside (a fact), are not "handy to have in the house." But "to come back to our own mutton," we ran along with the island close aboard on the right until you come to a sharp bend of the shore to the left. Now the channel passes between a mangrove island of the deepest green on the left, and the main island which we have been sailing beside, and you again steer about S. E. for the middle of the bay. This mangrove island just passed is a noted bird key, being resorted to by nearly all the varieties of cranes, curlew, cormorants, pelicans, herons, etc. As we passed it was literally alive with the pink curlew. We ran well out into the middle of the bay until we reached one or two stakes, which I think were put there to show the corner where the course is to change down the middle of the bay; but it seemed to me they were further out than there was any need of. The channel keeps near the middle, but gradually draws back towards the island. Keep on until the light known to coasters and local pilots as Pass Aguille (I am not quite sure of the spelling), opens at about S. W. by S., and the lighthouse upon Egmont Key, at the main entrance of Tampa Bay shows up plain right in the centre of the opening of the pass; then steer for it. As

you get up to the jaws of the inside of the pass you find yourself in a broad, deep river with usually a very strong tide. A channel runs from here in an easterly direction past Point Pinellus (Point of Pines), leaving the bird keys off it on either hand into Tampa Bay, and so on up to Tampa, or, if the weather is rough, one had better cross here if going to Manatee, and so avoid the dangers of the pass, which are not few. As we wished to go to the light we kept on through the river as I call it, first making a call at a bar—oyster—which is up a small bayon on the south side. It is almost at the extreme end, and the best were in the little channels at each end of the main bar. They are a small, deep-cupped oyster, but fat and of good flavor; a little salt just now. Something seemed to have killed off the large oysters a year or two before, as there were plenty of large shells. This is a common occurrence.

As we began to run outside the sun was only a few minutes high, and had I known that such great changes had taken place in the channels I would not have attempted it at that late hour. Pass Aguille comes out principally through the broad river-like passage I have spoken of, but within a distance of some three miles; one or two other small channels debauch from Boca Segua Bay out into the same bay as the river. This causes a very confused state of channels, currents, shoals and sand bars which are constantly changing, and which extend nearly if not quite three miles out to sea. Its proximity to the north or main channel of Egmont adds to the confusion and danger. The worst of it is you never can be quite sure that you are beyond the last shoal; they keep popping up, and you have to keep standing out again, until you finally find yourself, if all right, in the main ship channel. If not all right I won't undertake to say where you will find yourself. There is one exception to this—you can come in from the north by the north "swash" channel without trouble, or go out the same way. Keep close to the beach, and I mean just that, as usual. I have never known the "swash" to change. Yet perhaps others may have done so since I was last there, for all the other channels have been altered so that I did not know them at all. There used to be a kind of inside "swash" channel which crooked around much, yet took you from one outward running channel to another without at any time going out among the breakers, clear across everything to the channel which ran along by the northwest corner of Mullet Key. When there, if high tide, slip out through the "swash" with usually about five feet water, and the dangerous and difficult job is done. I started to run for this "cross swash," but just as I was getting well into it I saw before it was too late that things were not as they used to be. Islands of several acres in extent were gone. A "turtle crawl" which used to be a very important landmark in the trip was missing, and where deep water used to be now was an angry mass of roaring and foaming breakers. There was nothing to do but put out to sea in the main channel of the river, and this I did. We passed two or three small sand islands which were just black with cormorants and sea gulls. The latter used to lay their eggs here in immense numbers, but as these eggs are of nearly as good flavor as those of hens they have been robbed so persistently that it has nearly broken them up, and now it is difficult to secure any, for when the gulls discover a boat approaching they rise screaming in a perfect cloud, while many dash back and break the eggs with their beaks. I have no recollection of seeing this fact noted in natural history, yet I will vouch for it as a fact and produce any amount of testimony. After passing these bird islands the channel was plainly marked by breakers on each side. It was quite dark, yet I could see them flash as they broke; so we held on with confidence until it looked as though the channel closed ahead. The breakers ran clear across. There was nothing to do but keep on as the tide was running out like a mill race, and the wind was light. I had decided to run there if necessary, but just as that seemed to be the only alternative I discovered smooth water to the left. The channel made a sharp turn to the left, and I kept away to follow it, hoping that now we were past all of them, as the water was soon clear as far as I could see. Every time, however, that I headed for the light I soon found myself cut off by a line of breakers and would have to luff up again for a while. I kept feeling along this line of breakers until I found the end at last. I think now that there was plenty of water for me to have run them almost anywhere, but with my crew I had nothing to do but keep on the safe side whenever there was a choice. At last I found myself swinging up the main ship channel, with strong head tide and a good fair wind which made a lively chop sea.

There is a wharf at the north end of Egmont quite near the lighthouse. A schooner lying there hailed as we passed clear alongside, but as the wharf is usually a very rough landing place for small craft I ran around for half a mile on the east side of the island where the water is shoaler, and with the westerly wind then blowing was a smooth landing place.

In former years I had been well acquainted with the lightkeeper and his family, yet during my absence from south Florida waters, I had been unable to hear a word about my old friends, and feared that perhaps in this age of reform he might have been reformed out of office. I went ashore in the skiff alone to reconnoitre, and to my delight met Mr. Coons taking an evening walk on the beach. His surprise and pleasure at meeting me were apparently equal, and my crew were soon landed and turned over to the hospitable care of Mrs. Coons.

Perhaps I may be pardoned for saying a few words of this family, as I am sorry to say they are rather exceptional

For Forest and Stream.

BY-WAYS OF THE ADIRONDACKS.

THE rich treasures and pleasures of the Adirondacks are not to be enjoyed at once, or explored till after numerous successive visits. I have received, during the past fortnight, new impressions, and derived fresh experiences of the vastness and grandeur of a wide field of nature, in which I have roved delighted for twenty years. My destination on this last occasion was to the group of ponds and lakes, north and northwest of Bloomingdale. Up along Lake Champlain, through rocks rent asunder to make a highway for recreation and enjoyment, up the sandy hillsides of Port Kent to Keeseville for the night; then onward by the side of the Ausable river through Franklin Falls, I journeyed to the Rainbow House, on Rainbow lake. As we came near the Ausable chasm, I heard a story which was extraordinary surely, yet verified by several of the passengers. Even in Revolutionary days there was a bridge across the chasm, which was once broken down to prevent the passage of the enemy. On a very dark night soon after, a mounted traveler went across, and to the surprise of those whom he visited appeared on the western side. They inquired how he ever got there, and he answered calmly, "By the bridge." In the morning all repaired thither, and there, on a solitary beam overhanging a fearful chasm appeared the print of the horse's hoofs. At the Rainbow House, having been furnished with a comfortable room, I settled down, well pleased, and prepared for future action. Among the guests there was a lady who was a skillful and enthusiastic hunter. A few days before she had brought down a buck with her own hands, and soon after shot a hawk. This lady was always among the foremost for the chase, first to be ready, and last to yield, keeping up with the very guides while on the route. I never met before a Diana such as she.

The lakes I visited in this vicinity, and which now being the number which I have seen throughout the State up to eighty, are Rainbow, Clear, Round, Jones and Osgood. They are all attractive, though little lakes, of which Round is the most beautiful for form and scenery. It was in this lake that the famous largest lake trout was captured, which weighed 52 pounds. (See Wallace's Guide). There is still another lake, named Lily Pad, and on the maps, through which I passed, but being very small, and densely covered over with lily pads which made rowing doubly difficult, and without any redeeming quality, it scarcely deserves distinctive notice. I admire water-lilies, but there were scarcely any visible, being cropped, it may be by the deer. Clear Pond is separated from Rainbow only by an extensive ridge or backbone, as it were, from which both are visible. And yet they are entirely distinct. The waters of Clear lake are higher naturally than those of Rainbow, purer and colder. It is without inlet or outlet, and must be fed by springs. A channel has been cut between, for intercommunication, but otherwise the two are separate. The best fishing here is five miles from the house, on what is called the North Branch stream. And as the best time is sunset, we never found ourselves returning homeward till darkness reigned. What gorgeous fiery sunsets I there beheld—never sublimer—and how the red light was reflected from mountain sides! Still, unless overclouded, we had the light of a full moon on our liquid paths, and on one occasion we were favored with flashes of vivid lightning. Once on Rainbow lake, the way was open for three miles, and there, with double pairs of oars, we made the waters fly, or rather flew ourselves. I caught in the North Branch, with a fly, a trout which weighed one and a half pounds, being the largest taken from it, this year. Another weighed a pound, and smaller ones were numerous.

Mr. Wardner, the hotel proprietor, is continually improving his grounds, and even now is availing himself of their natural advantages, to have a trout pond within a few rods of his dwelling. Two years ago, while absent from home, his former house was destroyed by fire. Mrs. Wardner, with heroic exertions and by such aid as she could command, saved the furniture. For several months the family lived in an adjoining workshop or barn. With commendable enterprise, the present commodious, well-built mansion was speedily erected. The hunting season is now at hand, and it gives me pleasure to recommend their house, to those who would find in the midst of forests, streams and lakes, and at moderate rates a pleasant house.

I desire to call the attention of your readers to the southeastern route from Martin's to Westport, wishing that my attention had been called to it in a similar manner long ago. There is no comparison between the northern and the southeastern, which is not favorable to the latter, whether with respect to distance, expense, or scenery. We are creatures of habit, and many like myself have gone to Martin's or Pol Smith's by the way of Port Kent, simply because they have taken that route before. Sixteen years ago I took that route, and so eight years ago I took it again. And recently at Schenectady, I checked my trunk for Port Kent. But fortunately, I returned via North Elba and Keene; and now I should like to take that route again, for its own sake, and return by it next day. Look at it. From Martin's to Port Kent is 51 miles; from Martin's to West Port 43. So that not only the time and expense of 80 miles stage travel is saved by the southeastern route, but also all the travel and expense between Westport and Port Kent. Some, I have heard, go all the way to Plattsburgh in order to take the railroad there to Point of Rocks, thus traveling 35 miles, though Point of

in the position which they occupy, and if more of the keepers of lighthouses on our coast were like him and his estimable wife (who is also assistant keeper), they would be greater credits to the Government which appoints them as well as to themselves, and there would be much less need for the constant cry of civil service reform. May he never be reformed, for he doesn't need it. Mr. C. was originally a college professor, and the liberal education he received has been by no means allowed to go to waste in the ten or more years he has spent upon this island by the sea. He is still deeply interested in scientific pursuits, and as he subscribes for numerous journals is always quite up with the times. I would advise any tourist who passes Egmont to stop and have a chat with him by all means if it is possible to effect a landing. This is often not the case, and it is a rough place for boats as there are no harbors, and being so far from mainland or shelter one should keep his eyes peeled and be ready to run for it. The island itself is some two and half miles long by a little over one wide. Not an animal larger than a rat on the whole island, and Mrs. C., who, by the way, is the best housekeeper on the whole coast and a worthy mate for her husband in every way, has taken advantage of this fact by going into the poultry business quite extensively; for besides hens and ducks innumerable there are between three and four hundred turkeys which have the range of the whole island, and do well with the least bit of care. It was quite a sight worth seeing to go out with her into the palmetto woods when she called them up to be fed. Mrs. C. is well posted as a conchologist, as indeed are all the younger members of the family, and recently possessed a valuable collection which was sold to the principal of one of the Northern universities. I hope he will be made to pay what he agreed to for it, for a lady earns her money who picks up shells on a white beach under the glare of a Florida sun. (This is for your private eye, Mr. Editor, but I can't help saying what I feel sometimes.) Their son Eugene is the best pilot and boatman I know of, knowing the coast of West and South Florida by the inch from one end of it to the other, and has visited nearly every port of any size in the Gulf of Mexico as far as Honduras and Central America. He is the most skillful person in handling a boat that I ever saw, and if parties wish a pilot and guide to the best fishing or shooting on the coast he can take them there. He is well acquainted with the waters of Charlotte's Harbor, and of the Caloosahatchie river which runs into it, and it is down there that wild turkeys are so thick that you can knock them over with a pine knot. I don't exaggerate, nor is it an isolated incident.

I sat up with Mr. Coons until after midnight talking over old times and various matters of interest. It was time for the lamp to be trimmed, and as the long walk to the top of the tower was more than I cared to undertake after a long day's work I bade him good night, but I would advise the visitor to make the ascent by all means by night as well as by day. Ladies need not fear of soiling their dresses, for there is not a particle of oil spilled about. Everything is a pattern of neatness and good order. From the lantern you look right down upon every part of the island, and can get a perfect idea not only of its shape and conformation but of the surrounding islands, bays, channels, anchorages, etc. It quite surprised me the first time I ascended to note the transparency of the water from this height, it is much greater than when one is quite close to the surface. May not this account in a measure for the success with which the fish hawks and other birds dive for their prey?

[To be continued.]

For Forest and Stream.

MANNERS AND CUSTOMS OF THE MOHAVE INDIANS OF ARIZONA.

IR-RE-TA-BA (who died in October, 1874), was for many years head chief of the Mohave tribe of Indians, who inhabited the valley of the Colorado river in Arizona, roaming from Fort Mohave to the mouth of the river, a distance of some 300 miles. This was prior to their being placed upon the present Colorado river Reservation in 1865. Ir-re-ta-ba was an Indian of sterling worth, and after entering into a treaty of peace with the whites, faithfully kept his compact until his death, prior to which he enjoined his tribe to live in harmony with the whites forever. He had an immense influence with the Yumas, Cocopas, Chimechevas, Coahuillas and other tribes, until a few years before his death. The cause of this loss of confidence was occasioned by a visit of Ir-re-ta-ba to Washington, who, upon his return, told the Indians of what he had seen in his travels; how he had ridden in a large wagon that run upon iron, and was drawn by an iron horse, and traveled farther in one day than any Mohave could travel on horseback in a week; how great were the numbers of the white men, comparing them with the Indians as a pebble to a handful of sand; but when he told them of the telegraph, how a man could sit in his house, distant eight or ten days travel, and talk with his friends freely, then their faith began to waver, and as he continued to tell of all he had seen and done, their confidence in him was entirely destroyed, and he was openly denounced as a liar, and from that time his power over them was gone.

At last death claimed him, and for five days prior to it the whole tribe assembled round his house and kept up their accustomed rites of crying, singing, shouting, etc., and when he died his body was burned, (as is their custom,) then his clothing, horses, grain, and everything of which he was possessed was cast upon the fire. Sacrifices were

made by all the tribe, each one donating to the fiery element some article, as beads, calico, clothing. Beans, corn and flour, all articles of subsistence burned, were for Ir-re-ta-ba's support in his happy hunting ground.

In a few days Ho-ko-row was chosen as his successor, and all began to feel sorry that they had disbelieved Ir-re-ta-ba, while some believed that his spirit would return and haunt them for their bad faith.

A few weeks since, a Medicine man of the tribe told them that Ir-re-ta-ba's spirit would come back to them and destroy their crops and houses, if they did not offer up greater sacrifices. Committees were appointed to invite the Yumas, Pimas, Maricopas, and other tribes, to a feast, to come off October 4th. In due course of time the visitors arrived, and it was determined to re-burn Ir-re-ta-ba, and perform anew their religious ceremonies. A dummy was manufactured of baked mud, clothed from head to foot, looking very natural to me (reminding me of hundreds of the same appearance that I had seen in cornfields in the States), and a guard placed over the sacred remains. A house was erected upon the river bank, sufficiently large to accommodate the whole tribe, and upon the appointed day all assembled, and the worship commenced by the head chief haranguing the crowd for about half an hour, and then all hands joined in a general cry. Now, this crying was no sham; it was genuine, down-hearted, honest crying. Great tears would course down their cheeks—the squaws being the most violent—and such a noise I have never before heard—at a funeral. It seemed to me that they would never stop, but after about an hour, Ho-ko-row said something that seemed to be very satisfactory to all, and after a reasonable length of time I found that it was decided to continue the crying by detail. First one captain would start in, followed by all his band. They would keep up for about twenty minutes, and then another captain and band would come to their relief. Now this was a good operation, for the balance of the tribe not occupied in crying would talk and smoke; in fact, would enjoy themselves first-rate (considering it was a funeral).

After eight or ten hours continuous crying, it was decided to bring forward the corpse, which, in the meantime, had been deposited in the brush a hundred or more rods away, but carefully guarded. Some sixty young bucks were selected as escort or mourners (I could not tell which), and falling into line marched by file, preceded by the war chief, who in turn was preceded by two old squaws gorgeously arrayed, each carrying a small sack of corn, which they scattered in front of the procession, uttering at the same time yells, such as only a squaw can give forth. This tribe has three chiefs, viz.: Ho-ko-row, head chief; Set-fu-ma, son of Ir-re-ta-ba, who is called hereditary chief, but at the time of his father's death he was most skilled in ward politics, and Ho-ko-row secured the nomination. Then they have a war chief. The line being formed proceeded to the sacred spot, and the dummy was brought forth and escorted towards the grand house, stopping at intervals (to give the corpse a rest). After stopping four times they had reached within about thirty feet of the house when the corpse about faced, and counter-marched to the rear, some eighty yards. Then all the captains (28 in all) walked toward the dummy, preceded by the two old squaws, who scattered corn in their path. During this proceeding the balance of the tribe was doing the crying within the house. It was finally decided that the corpse might enter, which was done, the whole tribe marching round and round it, throwing at the same time some offering upon it, such as corn, muslin, calico, beads, sandals and feathers, all the while keeping up their very monotonous cry. Then the captains marched by, each one shaking hands with the corpse, wishing it a happy time in his new hunting grounds. All now adjourned crying, to eat melons, and in less time than I can write it, not a cry could be heard, and all seemed happy. I think, as cryers, they are a success, having a perfect command over the tear bag. As soon as they had each one eaten three or four water melons apiece, they marched out to witness races between the horses that were doomed to be killed and eaten before daylight, and here was another peculiar mode of giving out premiums one that might be followed by the premium givers at agricultural fairs in the States with good results. The winning horse was to be the first one slaughtered and eaten, and so on, as they were placed in the come out, and I can assure you the programme was faithfully carried out, for at three o'clock next morning these same horses were occupying a space in front of each Indian's back of the tribe. Now twelve high-toned and highly dressed Indians were selected to destroy all by fire that represented Ir-re-ta-ba. All the Indians were removed from between the house and the river, as the barn burners, I mean the house burners, as soon as the torch is applied, rush to the river bank, and jumping in commence a vigorous washing, which they keep up until the last spark of the fire dies out. All this was done, and by daylight nothing was left of house, grain, clothing, beads, or even the dummy, and all the Indians seemed happy to each other, saying: "Now, I think Ir-re-ta-ba's spirit is satisfied, and won't come back to do us any harm," and to tell you the truth, I don't believe it will myself. You will see by the above, that cremation is no new thing, neither is spiritualism, for these Indians have from time immemorial practiced the one, and believe in the other.

Yosemite.

Arizona, Oct. 1876.

—While the blackbird shooting was going on at San Antonio (Texas) Fair the other day a lady deprecated very much the cruelty of shooting the birds on the wing. Said she: "Why don't they shoot little birds on the ground, so they won't fall and hurt themselves?"

Rocks is only 14 miles from Port Kent. And then the scenery. A large proportion of the travel is directly through the woods, surrounded by primeval trees which are a refreshment and delight to citizens who gaze on brick and stone through all the year. On our way, we saw one eagle and a hawk, partridges and squirrels, all within easy shooting range, and ducks in the distance, but there was no "son of a gun" among the passengers. In the clearings, at Scott's and Keene's for example, the mountains loom up ineffably sublime. Tahawus and his princely neighbors are all clearly visible at the former station, and as the mountains are round about Jerusalem or Rome, so do they cluster, or more numerous and majestically around Keene. And then that ride for miles through the wild gorge of Pitch Off and Long Pond Mountains, close by the side all the way of a narrow lake, while waterfalls descend, and caves open wide, far up the heights of rocky slants! I must go there again. And farther on is Breakneck, Owl's Head, Raven Hill, etc. A daily stage passed through all this rich landscape during the last season, as it will again, if sufficiently encouraged,—if tourists will only not prefer distance, expense, and dull monotony, to a direct and fascinating route.

AMATEUR.

Utica, Sept. 21st, 1876.

For Forest and Stream.

A DAY ON THE RIFTS.

ONE day to be marked with a red letter in the life of a man who loves the sound of the musical reels, and delights in seeing a great trout struggle to escape from the toils.

A bright June morning, light clouds scattered here and there, and the soft breeze laden with the scent of balsam, pine and spruce, I stood upon the bank of a beautiful stream in the northwoods, preparing for a day upon the rifts. What man is there who has ever shared with me the angler's joy, who does not understand my feelings as I looked at that shining stream, dimpling down over the pebbles, swelling over boulders which blocked its channel, and literally laughing as it ran?

I am an old fisher. Since the day when I first "bobbed" for eels in the mill-race of my native town, it has been my one solace, when the cares of business or domestic life palled upon me, to take shelter from my fellow man in such a scene as this. I have a theory, a queer one, perhaps, that a man who can take delight in such a scene as this cannot be very bad at heart. Through such natural pictures we look "through nature up to nature's God," and feel our hearts grow tender and our thoughts more innocent than when we are in great cities, where the rich grind the faces of the poor, and the poor nurse in their hearts a hatred of men they regard as more fortunate than themselves.

But this is not trout fishing. Imagine me in the coarsest suit of slops which ever came out of Chatham street, crowned with a shocking bad hat, and wearing a pair of boots which the most shiftless tramp infesting our happy land would have hurled from him in disgust. I uncoiled my leader, giving over each inch of it with the care of the practiced fisherman, for I knew that nothing so offends the soul as to have your leader part when the best fish is struck. Three flies are looped on with careful hand, two brown hackles for "droppers," and the small salmon for a "stretcher." These are the flies I love; find better, ye who can. All is ready now, and I stepped down into the stream, the first contact of the cold water sending a shiver through my frame, and then comes a sense of delicious coolness; and after that I am happy. Close at my heels comes a man who is taking his first lesson in the art piscatorial, a student from Union, who has been seduced by my wild arguments to join me in a month on the fishing ground. He has watched my preparations, and under my directions is ready for work himself. An apt student in most things, he has much to learn here, and the first step brings misfortune.

"Ha!"

I do not think that is what he said, but the word is better than the one he really used; and there he sits upon the bottom of the creek, the water sweeping along up to his breast, and his face expressing the utmost abhorrence of any such proceedings.

"Get up, Harry," I said. "It is all in a lifetime, but look out for the slippery stones."

"Slippery!" he answered. "No name for it; the blamed thing was greased."

At last we got to our places and my cast came flying back, curved in a graceful loop, and then came sailing over and lighted softly upon the bright water. As they came sweeping down, nerved by the current, there was a flash of golden bodies, and the elastic tip came down almost to the water.

Hurrah!

You, who have lived our life, think over your old joys and sympathize with me. Two noble trout at once had seized, the one the gaudy salmon, and the other the first brown hackle. I struck, hard and sure, and they were hooked. Now for sport. Harry paused, letting his line trail useless on the water, and watched me while I fought the battle out. It was a royal one, for they were game fish, and wildly excited by pain and fear. Perhaps you have noticed that a raw hand is generally lavish with advice to a man who plays a fish instead of landing him at once, and if a short-hand writer could have taken down Harry's words as he watched me, it would have given us both a merry time when we made our camp at noon. All

the fools, blockheads, and miserable blunderers upon earth were Solomon's compared to me, simply because I would not hurl five pounds of lively trout over my head with a ten-ounce rod.

Here they come, dashing out of the water by one impulse, and hurling the spray into my face as they shook themselves in the vain effort to break loose. I gave them the point, and as they fell upon the slack the strain was on them again, and there was no escape. At last, with a whoop which made the forest ring, I scooped them in, and my basket no longer lacked a tenant. As I again prepared my cast I heard a wild shout, and turning, saw that Harry, by a dispensation which only green fishers can hope for, had hooked one of the best fish in the stream. The first fatal impulse, the impulse which it takes so long to conquer, prompted him to throw that fish over his head. It is needless to say that he did not succeed, for there came a sharp snap, and Harry's rod was high in the air, and but six inches of his leader remained to tell the tale.

"Fair and aisy [goes] far in a day, my boy," I said. "When you hook a fish you have two things to think of; keep the strain on him all the time, and give him line when he fights hard. And never, under any circumstances, try to sling him out as you would a bullhead; it won't work."

Once more we took to the stream, after Harry had bent on another leader. We had glorious work, and before the sun had reached meridian the baskets were growing heavy, and Harry was doing yeoman's service, and no longer snapped his flies like a coach whip. At last we neared a place which I knew well, where an eddy had worked out a deep pool, and as I made my first cast upon its dark surface, I knew that the king of all the trout lurked there. Once more, lengthening the cast, the flies struck just beside a lily leaf, and instantly the leader sank and the tip went down as a four-pounder took in the salmon. I have seen much joy, but in all my fisher life I can find no experience like to this up and down the stream, now in deep water, now in the shallows, fighting like a hero for his life, went the noble fish. Again and again he leaped into the air, but I met him with the point, and his strength was spent in vain. At last, seeming to despair, he charged straight at me, and I gave him the but, while Harry, howling like a Dervish, swore by all the heathen saints that he would kill me if I lost that trout. I had little hope, when I thrust out the but to such a fish as that, that the tackle would hold. The tip came down until it crossed my knuckles, but yet I held him, expecting every second to hear the second joint give way. But the hard battle which he had fought before he made his last gallant charge had spent his strength, and the strain of the elastic wood brought him up, gasping and nearly helpless, and I took him in, a fitting finale to a day of noble sport.

We landed, and in the the shadow of some grand old trees I cooked our dinner, and when we could hold no more we lighted our pipes, and lying on our backs beneath the bending boughs, we fought our battles over. This was not the end, and some other day you may hear of other deeds we did with rod, reel and rifle, in the grand park of the Empire State.

C. D. CLARK.

Fish Culture.

PIKING IN THE PINES.

GREENVILLE, Mercer Co., Pa.

EDITOR FOREST AND STREAM:—

You chaps who are in the habit of fishing in big streams and broad lakes, and catch only little fish, may be surprised to learn that we, away out here in the woods, in what the natives vernacularly call "cricks," are catching almost daily now—and with hook and line, you must remember—pike weighing from six to twenty-six pounds, and black bass from one to five pounds. But, such is none the less the case. The creeks in question, however—the Big and Little Shenango's, which form a junction at this point—happen here to be divided into several slack waters, each several miles in length, and of a uniform depth of from five to ten feet, which, you will perceive, constitute excellent stamping ground for these sovereigns of the fresh water fry. And the one thing which grieves us followers of the gentle Izaak, is the fact that the supply is giving out, though the new game law for the past two years has had the effect of stopping the barbarism of netting—not, however, until one persistent piscator was forced to serve his twenty-five days in the county jail for catching a twenty-five pound pike in a set net. [The gentleman who prosecuted in this case (Mr. N. C. Packard), has since very properly been appointed Fish Warden for this locality, so that we take new hope for a better enforcement of the law.]

I don't write this as an advertisement, to induce "tourists" to visit our secluded waters on piscatorial pleasures bent. Oh, no! we have none of these gamey fellows to spare out of our limited store. I simply write to ascertain how we ought to proceed to keep the supply up. "Stock your waters, of course," you will say, because it has never yet been stocked. The present inhabitants got into our stream pretty much as Topsy came into existence—they "just grewed there." But, about the stock. The State, we understand, appropriated last winter some \$16,000 for the protection and propagation of fish within her borders, but that seems to be the end of it. Pike spawn don't seem to be furnished from any quarter—at least not as bass spawn are furnished. Why is this? Because they are scarcer, or because there is not so great a demand for them. For our part, we would rather fish a whole day and catch one eight-pound pike, than fish an hour and catch eight one-pound bass, notwithstanding the declaration made in the National Convention of culturists, that pike made a miserable table dish. There is something more in fishing than the fish. Your true angler is always tempted to put his game back in the water when once he has them landed, just to have the pleasure of capturing them again.

Only yesterday, we succeeded in landing a ten-pounder, and—well, it was fun.

Would you, Mr. Editor, give us a few words on the pike question, and oblige, besides many others.

AMATEUR ANGLER.

We know of no person or persons in any section of the country who raise pike or pickerel spawn, for the reason that these fish have been widely, if not generally regarded as "vermin" to be exterminated, rather than desirable fish to be propagated and multiplied. The pike proper, *Esox lucius*, is an excellent table fish, and often affords fine sport, though his game qualities are exhibited only at the outset, and are not maintained, to the finish. His weight and strength add to his game qualities. Pike, like other fish, vary very much in flavor and color, according to the waters they inhabit. We have seen some pike in Pike County, Pennsylvania (appropriately named), which when first taken from the water were absolutely resplendent with green and gold; the sheen almost dazzled.

The bad name that has attached itself to the *Esox* family, arises from the universal prevalence of the little pound pickerel, (*Esox reticulatus*), and the ignorance which confounds him with the pike. Comparatively few people ever saw a pike, and how few there are who have ever gazed upon *Esox nobilior*, the (mascalonge), which attains a weight of 50 pounds, and, when caught, hauls a boat after him like a Triton, for hours, and is at last dispatched only with harpoon, rifle ball, or axe! It would be comparatively easy to procure spawners of either the pike or pickerel for stocking purposes, without attempting to collect ova or cultivate them.

TREATMENT OF GOLDFISH.—Rice paper is the best food for goldfish, with a crumb of raw meat now and then, minced as small as meal seeds. A piece of the rice paper the size of a fourpenny bit for every fish, cut small, once a day in summer, and every other day in winter; fresh water every second day in summer, and thrice a week in winter. In frost, the water should be drawn from the cistern and allowed to stand a while in a room where there is a fire in it before placing the fish in it; this takes the chill off the water, which might kill the fish. If the fish becomes mouldy, the mould may be taken taken off by a gentle touch of a bit of sponge or soft muslin cloth. The globe should never stand in the sun. For each quart of water only one fish, as goldfish cannot thrive if crowded. Do not change the source of water, whether from well or hydrant. In summer renew it daily; in winter, only every second or third day. Shallow glass dishes should not be used. They should be deep, and kept in the shade, strong light and a heated room being detrimental to the fish. The bottom of the globe should be covered with smooth gravel to absorb the excrements and keep the water clean. In changing the water for cleaning the globe, take out the fish with a fine net, but never with the hand. Do not feed them with bread or cake, or any food containing tannin, but give them wafers and eggs, flies, yolk of eggs, water-cress, etc., but only once in three or four days, and then sparingly. In the months of November, December, January and February, the fish should not be fed at all, as this is their hibernating season, and food in this season is unnatural. In March, April and May, they should be fed little.

So says the *Western Rural*. We assent, except as regards the matter of changing the water. We believe that the water should never be changed. Certain plants, such as the *Myriophyllum* and *Valisneria spiralis*, plants which can be purchased of any dealer in aquaria goods, possess the faculty of throwing off the oxygen necessary for the support of animal life, while they themselves breathe carbon. With the requisite amount of one or the other of these plants, so that the proper balance may be kept up, gold fish may be kept in globes for an indefinite time. For an interesting and valuable article on aquariums, see our issue of July 6th, Vol. 6.

ANGLO AMERICAN BROOK TROUT.—The Yarmouth (Eng.) Aquarium contains several fine specimens of American brook trout which were reared by Mr. C. L. Buxton in his private ponds near Aylsham, England.

—W. H. Crowell, of Ludlow, McKean county, Pa., informs us that he has already secured from his fish hatching operations 700,000 ova of brook trout, most of which have been disposed of through orders secured by advertisement in FOREST AND STREAM.

FISH FOR FARMERS.

EDITOR FOREST AND STREAM:—

I have frequently read in agricultural and other papers, what I considered very crude answers to would-be fish culturists, and now I have in FOREST AND STREAM, of October 19th, with its apparent approval, an article taken from the *New England Farmer*. There the question is asked, if fish can be raised with profit in a pond 15 by 60 feet?

Now, the man was ignorant of the business, as acknowledged by his question, and the fish breeder, instead of telling him with a sigh, "raise pickerel," should have asked him what his flow of water was, and what his show of making other ponds below or above it. Certainly the pond was of convenient size, and for all that appears in the article, he may have had sufficient supply of water to keep a dozen of such ponds fresh and sweet.

It should not be taken for granted, that every one who asks questions about fish culture intends to support his family from it, or build up a fortune off it, but many farmer's in the northern and middle States have water that they would like to utilize by raising fish—it may be for their own family, or a few to sell, as they do chickens and turkeys, when they can spare them. I speak from the experience of twelve years as a fish breeder, and much longer as a farmer, when I say that fish under favorable circumstances can be produced cheaper than any other meat food. Whilst we thank many scientists, as well as many liberal spirited gentlemen, for what they have done to introduce and encourage fish culture, yet, when made a

success, it was to be done by the hardworking and painstaking man, who is satisfied with small gains. I don't think there are many locations in the United States where a sudden fortune can be made by raising fish; but there are thousands of farms on which fish culture can be introduced with profit. Feed has never been a great object with me. I do not stock so heavily; but my ponds are stocked with insects. I give almost as much attention to raising insects, and innocent fish for trout food, as I do trout for the market, and consequently have a much better fish for the market than those who feed large amounts of curds and butcher's offal.

A. PALMER.

Boscobel, Wisconsin.

THE SALMON-BREEDING ESTABLISHMENT ON THE NORTH-WEST MIRAMICHI.—A large quantity of salmon-ova has been successfully laid down at the Dominion Government hatching establishment on the Northwest Miramichi River. Last year the reception and feeding dams were both injured, and after they were examined by Inspector Venning, the work of making repairs was entrusted to Mr. Elson Tozer who, under the Inspector's personal direction, has made a satisfactory job, both dams being now staunch and tight and full of water.

On the 1st of September Overseer Hogan was instructed to employ men and obtain a lot of parent fish, but owing to the low water prevailing prior to the Autumn rains, the fish were prevented from ascending the river, and efforts to procure them were, therefore, unsuccessful. At the first freshet the river rose four feet in twenty-four hours, and as the water submerged the shore the dried leaves and parched debris deposited by the spring freshet floated down against the nets, which were thus converted into dams and swept away from their positions on the bar below the Big Hole.

The sweeping net was next resorted to, and after all possible exertions were made, by night and day, 141 fish were obtained—76 males and 65 females. The preponderance of male fish in the whole take of the season was a discouraging feature in the operations and, added to it, was the capture of 20 spent fish which, of course, were immediately liberated. An encouraging and significant feature of the operations, however, was the fact that the fish taken this season are larger than those previously taken, two of them weighing about forty pounds each.

At the present time, the season for obtaining ova having closed, there are now laid down in the hatching house from 600,000 to 700,000 healthy eggs which have been successfully impregnated and are in prime condition. The house and all connected with it is in first class order and there is a fine head of good water. If no unforeseen accident takes place, therefore, we may count on about 600,000 young salmon being hatched out for the next season's distribution. The establishment is under the care of Mr. Isaac Shaesgreen, who has been connected with it since it was first opened and whose losses on the ova laid down last Autumn did not reach 3 per cent.—*Chatham (N. B.) Advance, Nov. 9th.*

DIFFICULTY IN RAISING BROOK TROUT.

WORCESTER, Pa., Nov. 3d.

EDITOR FOREST AND STREAM:—

I have tried the experiment of hatching and rearing brook trout, but with very limited success. I have no trouble in hatching the eggs, but the young are sure to die before reaching the age of six months; after that age they do very well, but very few reach it. I have come to the conclusion that the water I have is not adapted to this fish, and think probably I had better try some other variety. My questions are these: First—Do you think salmon trout would be likely to do better? Second—Where can I obtain eggs to try the experiment? Third—Can the eggs be sent by express, and what would be the probable cost? I have all the appliances for hatching, trays, etc. By answering the above you will place me under many obligations.

Geo. M. WEBER.

Ans. The experience of our correspondent does not differ from that of many other fish breeders, as respects brook trout. There seems no method of keeping some waters stocked except by continually replenishing them with ova, of which a very small percentage will eventually make mature fish. As Mr. Weber is a practical workman and careful observer, it is possible that his decision to substitute salmon trout is wise. The ova and fry can be obtained, we suppose, from fish Commissioner Reeder, of Harrisburg, Pa. Also address Alexander Kent, 219 East Baltimore street, Baltimore. Price of eggs \$3 to \$5 per thousand delivered; fry, \$8 to \$10 per thousand.

Natural History.

ADDRESS OF A. R. WALLACE BEFORE THE BRITISH ASSOCIATION

INTRODUCTION.

THE range of subjects comprehended within this section is so wide, and my own acquaintance with them so imperfect and fragmentary, that it is not in my power to lay before you any general outline of the recent progress of the biological sciences. Neither do I feel competent to give you a summary of the present status of any one of the great divisions of our science; but there are, fortunately, several outlying and more or less neglected subjects to which I have for some time had my attention directed, and which I hope will furnish matter for a few observations of some interest to biologists, and at the same time not unintelligible to the less scientific members of the association who may honor us with their presence.

The subjects I first propose to consider have no general name, and are not easily grouped under a single descriptive title; but they may be compared with that recent development of a sister science, which has been termed Surface-geology, or Earth-sculpture. In the older geological works we learned much about strata and rocks and fossils, their superposition, contortions, chemical constitution and affinities, with some general notions of how they are formed in the remote past; but we often come to the end of the volume no whit the wiser as to how and why the surface of

the earth came to be so wonderfully and beautifully diversified; we were not told why some mountains are rounded and others precipitous; why some valleys are wide and open, others narrow and rocky; why rivers so often pierce through mountain chains; why mountain lakes are often so enormously deep; whence came the gravel and drift and erratic blocks so strangely spread over wide areas, while totally absent from other areas equally extensive. So long as these questions were almost ignored, geology could hardly claim to be a complete science, because while professing to explain how the crust of the earth came to be what it is, it gave no intelligible account of the varied phenomena presented by its surface. But of late years these surface phenomena have been assiduously studied; the marvelous effects of denudation and glacial action in giving the final touches to the actual contour of the earth's surface, and their relation to climatic changes and the antiquity of man, have been clearly traced, thus investing geology with a new and popular interest, and at the same time elucidating many of the phenomena presented in the olden formations.

Now, just as a Surface-geology was required to complete that science, so a surface-biology was wanted to make the science of living things more complete and more generally interesting by applying the results arrived at by special workers to the interpretation of those external and prominent features whose endless variety and beauty constitute the charm which attracts us to the contemplation or to the study of nature. We have the descriptive zoologist, for example, who gives us the external characters of animals; the anatomist studies their internal structure; the histologist makes known the nature of their component tissues; the embryologist patiently watches the progress of their development; the systematist groups them into classes and orders, families, genera and species; while the field naturalist studies for us their food habits and general economy. But till quite recently none of these earnest students, nor all of them combined, could answer satisfactorily, or ever attempted to answer, many of the simplest questions concerning the external characters and general relations of animals and plants. Why are flowers so wonderfully varied in form and color? What causes the Arctic fox and ptarmigan to turn white in winter? Why are there no elephants in America, and no deer in Australia? Why are closely allied species rarely found together? Why are male animals so frequently bright colored? Why are extinct animals so often larger than those which are now living? What has led to the production of the gorgeous train of the peacock, and of the two kinds of flowers in the primrose? The solution of these and a hundred other problems of like nature, was rarely approached by the old method of study, or if approached, was only the subject of vague speculation. It is to the illustrious author of the "Origin of Species," that we are indebted for teaching us how to study nature as one great, compact, and beautifully adjusted system. Under the touch of his magic wand, the countless isolated facts of internal and external structure of living things—their habits, their colors, their development, their distribution, their geological history—all fell into their approximate places; and although from the intricacy of the subject and our very imperfect knowledge of the facts themselves, much still remains uncertain; yet we can no longer doubt that even the minutest and most superficial peculiarities of animals and plants either on the one hand, are or have been useful to them, or on the other hand, have been developed under the influence of general laws which we may one day understand to a much greater extent than we do at present. So great is the alteration effected in our comprehension of nature by the study of variation, inheritance, cross-breeding, competition, distribution, protection and selection—showing, as they often do, the meaning of the most obscure phenomena, and the mutual dependence of the most widely separated organizations, that it can only be fitly compared with the analogous alteration produced in our conception of the universe by Newton's grand discovery of the law of gravitation.

I know it will be said (and is said), that Darwin is too highly rated; that some of his theories are wholly and others partially erroneous, and that he often builds a vast superstructure on a very uncertain basis of doubtfully interpreted facts. Now, even admitting his criticism to be well founded—and I myself believe that to a limited extent it is so—I nevertheless maintain that Darwin is not and cannot be too highly rated. For his greatness does not at all depend upon his being infallible, but on his having developed, with rare patience and judgment, a new system of observation and study, guided by certain general principles, which are almost as simple as gravitation and as wide-reaching in their effects. And if other principles should hereafter be discovered, or if it be proved that some of his subsidiary theories are wholly or partially erroneous, this very discovery can only be made by following in Darwin's steps, by adopting the method of research which he has taught us, and, by largely using the rich stores of material which he has collected. The "Origin of Species," and the grand series of works which have succeeded it, have revolutionized the study of biology. They have given us new ideas and fertile principles. They have infused life and vigor into our science, and have opened up hitherto unthought of lines of research on which hundreds of eager students are now laboring. Whatever modifications some of his theories may require, Darwin must none the less be looked up to as the founder of philosophical biology.

As a small contribution to this great subject, I propose now to call your attention to some curious relations of or-

ganisms to their environment, which seem to me worthy of more systematic study than has hitherto been given them. The points I shall more especially deal with, are the influence of locality, or of some unknown local causes in determining the colors of insects and to a less extent of birds; and the way in which certain peculiarities in the distribution of plants may have been brought about by their dependence on insects. The latter part of my address will deal with the present state of our knowledge as to the antiquity and early history of mankind.

To be continued.

EXTINCT AMERICAN MAMMALS.

IN view of the widespread interest excited by Prof. Huxley's recent lectures, the following remarks from the *Scientific American* have a peculiar pertinency just at present:—

"When the theory of evolution began to displace the old theory of specific creation, its opponents were wont to ask triumphantly for missing links. If species are the result of gradual development by progressive variation, they said, we ought to find an abundance of intermediate forms: where are they? The advocates of evolution could only reply: They will appear when sought for. Darwin even ventured the prophecy that in course of time links would be found connecting the extremely specialized one-toed horse with the normal four and five toed mammals. The readers of the *Scientific American* know how completely the prophecy has been fulfilled in the numerous and increasingly specialized horse-like creatures which roamed over our Western plains during the tertiary period of geology. At the beginning of the period the four-toed *orohippus* was most like the horse that was to be, though it exhibited many unhorse-like characteristics. From that time down to the present the chain of development is complete, the precursors of the horse steadily growing more and more horse-like in head, and foot, and general structure of body and limb. In the middle tertiary, the *mesohippus* had but three toes, a slender splint of bone being the only vestige of the lost toe; and in the *miotippus* the splint had vanished. Later the three nearly equal toes of the *minohippus* had become three very unequal toes of the *hipparion*, the large middle toe being the main if not the entire support of the animal. At the close of the period, the prevailing form was a true horse, in which the dwindled and useless side toes of the *hipparion* had ceased to exist as toes, appearing only as slender splints under the skin."

In fact this true horse did not differ appreciably from the horse of the modern times.

A most interesting discovery which has just been announced by Prof. Marsh, of New Haven, (*American Journal Science*, Vol. XII, No. 71, Nov. 1876) carries the horse pedigree one step farther back to an animal which was probably the ancestor of *orohippus*. The latter, as it was well known, had four well developed toes in front and three behind, while the new form *echippus* had a rudiment of a fourth toe behind and may have had a similar remnant of a first digit in the forefoot. There are also other striking differences, mainly in the teeth.

The article from which we have quoted discusses at some length the tapiroid forms of the eocene, and the suillines and rhinoceroses of Miocene time. Then passing on to the oreodons it says:

"A remarkable family was the *Dreodontidae*, which began in the later eocene, extended through the miocene, when they swarmed enormously, dying out in the early pliocene. In nearly all points of structure, they were intermediate between ruminants and swine, furnishing a complete line of transition between those now widely separated groups. Their remains are found in great abundance, both in species and individuals; and a gradual modification, corresponding with the chronological position, can be traced from the earlier, more generalized forms to the latest and most specialized: thus affording one of the most complete chains of evidence yet found in favor of a progressive alteration of form, not only of specific but of generic importance, through advancing ages.

"Exceedingly suggestive, too, is the history of *Camelidae* as exhibited in our tertiary strata. Here was apparently the original home of this singular group, now represented only by the llamas of South America, and the two camels of the old world. During the middle and later tertiary ages, transitional forms from the more generalized ruminants—animals increasingly camel-like and llama-like in character—were abundant in North America, whence they probably migrated during the glacial epoch to the present homes of the existing members of the family, along with the horses, tapirs, and peccaries, which disappeared from this country about that time.

"Not less interesting is the story told by the remains of those unique eocene monsters to which the names *Uintatherium*, *dicoceras*, *lozophodon*, and *eobasilus*, have been given; huge creatures intermediate between the orders represented by the rhinoceros and the elephant. Professor Flower compares them to broken piers of the bridge by which the gulf, that now so completely divides the orders of the perissodactyle ungulates and the proboscidea, may have been passed over. They were all elephant-like in bulk and general appearance, yet presented a combination of characters which made them unlike anything elsewhere known. Their feet were five-toed, their legs straight and massive; their necks longer than the elephant's, and their small-brained, narrow heads much more like the rhinoceros's than the elephant's. But their distinguished peculiarity was their frontal armament of three pairs of horns, which, with their enormous size and strength, must have made them formidable indeed. Their end is yet a mystery. It has been suggested that at the close of the eocene period they may have migrated to Asia to lay the foundation of that family which first appears in the old world under the more familiar forms of the typical proboscideans—the elephant, mastodons, and mammoths. None of these appear in America earlier than the pleiocene period, a long time after they had become abundant in the old world.

"Among the carnivora which preyed upon the abundant herbivorous fauna of the great plains, forests, and lake regions of the tertiary ages, not a few furnish extremely cogent evidence of specific evolution. There were among them fierce creatures, larger than wolves, which presented

such a combination of characters that it is impossible to rank them with either of the existing families of the order to which they belong. In some respects they were like dogs, in others they were bear-like; in still others they were more generalized than any existing members of the order. Then there were several species of hyænodon, some larger than any of the European forms, and others no larger than a fox; 'the last survivors of a group notably differing from any now known.' In the character of their skulls they stand intermediate between wolves and opossums. In the earlier periods, still more generalized types abounded, some of them combining the generic characteristics of half a dozen of our specialized modern carnivora.

"Perhaps the most remarkable of these comprehensive types was the tilodontia, which seems to have combined the characteristics of several distinct groups, the carnivores, the hoofed animals, and the rodents. Some of them were as large as the tapir. Their molar teeth were of the ungulate type, their canines small, their incisors rodent-like. Their heads were bear-like, their general structure like that of the ungulates, their feet plantigrade. Two distinct forms abounded: one in which the incisors grew from persistent pulps, like the beaver's, the other having all the teeth rootless.

"The dominant types of tertiary flesh eaters, however, were various modifications of felidæ, fierce cats, some of them surpassing our modern lions and tigers in size and strength. Chief among them in the miocene age were the saber-toothed tigers, which seem to have overrun the whole world about that time, and to have lingered in some parts until the human period. It is one of the puzzles of palæontology to account for the extinction of this highly specialized type, apparently the fittest of all the cat family to win in the struggle for existence. Happily for man they did not survive in force, to contest his progress toward the mastery of the earth."

A SPIDER FISHERMAN.—In the *American Naturalist* for November, Mr. T. M. Peters relates the following remarkable incident: "Just before the late war, I was at Col. Oakley Bynum's spring in Lawrence county, Ala., near the town of Courtland, where I saw a school of minnows playing in the sunshine near the edge of the water. All at once a spider as large as the end of my finger, dropped down from a tree overhanging the spring. The spider seized one of the minnows near the head. The fish thus seized was about three inches long. As soon as it was seized by its captor it swam round swiftly in the water, and frequently dived to the bottom, yet the spider held on to it. Finally it came to the top, turned upon its back and died. It seemed to have been bitten or wounded on the back of the neck, near where the head joins. When the fish was dead, the spider moved off with it to the shore. The limb of the tree from which the spider must have fallen, was between ten and fifteen feet above the water. Its success showed that it had the judgment of a practical engineer."

—Prof. Huxley has returned to England and has resumed his professional duties, but the interest which his visit excited, not only in the scientific but in the clerical world as well, has not yet altogether subsided. We still hear of anti-Huxley sermons preached by eminent divines, and the newspaper columns still produce letters *pro* and *con* on the evolution question. But aside from all questions controversial in their character it is interesting and gratifying to hear an opinion from Prof. H. in regard to science and scientific men in the country. In the *Cincinnati Commercial* Mr. M. D. Conway speaks as follows:—

"As for American Science, Prof. Huxley thinks that the same movement and tendency of thought are going on there as in England, though America is some years behind yet. He found the American men of science generally full of kindness. Prof. Spencer F. Baird of the Smithsonian made the best of guides for his appreciation of the marvelous exhibition in Philadelphia. I need not say that he spoke with the utmost enthusiasm of Prof. Marsh, of Yale, for his lectures at New York sufficiently attest his opinion concerning Marsh and his achievement. But Prof. Huxley manifested some misgiving whether the Americans really knew what a man they have in Marsh, or recognized that he is one of the best drilled and thoroughly informed men of science now living. 'Indeed,' said Prof. Huxley, 'I much fear that the Americans do not recognize some of their greatest men. There are Prof. Dana, for instance, and Leidy, of Philadelphia, who, with us over here, have long been in the front rank; but I read an article in *The North American Review*—a Centennial article on American Science—in which those men were hardly more than mentioned.'"

A FIGHT WITH A HERON.—Believing that the following account will be interesting to many of your readers, I send it as an instance of pluck all round, in man, dog, and quarry alike, *i. e.*, in all except the writer, who took but an insignificant part in the tragedy. I should state that heavy and continued rain had greatly swollen the river Wye prior to September 7th, and past Erwood Hall, Breconshire, the residence of Mr. H. T. Gwynne-Vaughan, J. P., it came down at a tremendous pace. While shooting rabbits in a little cove on the farm, which slopes down to the river, the dogs flushed a heron. As soon as it cleared from under the cover of the trees, I fired as it made for the other side of the stream, and broke the left wing. The heron fell into the river, but we could see his head and neck above the water as the stream carried him rapidly down. In a moment, Sam, a retriever dog, took to the river; but, though as large as a Newfoundland, and a powerful swimmer, the rush of the water was too strong for him, and Mr. Gwynne-Vaughan, who was with me, called him back, and we ran down the river side keeping the heron in view. Again the dog was bid to "seek dead," and once more took to the river, for the heron was being borne rapidly towards the Gro'man Falls, where he would have been dashed to pieces. Again the current carried the dog down, and to save him from drowning, he had to be recalled. At this moment an eddy of the stream carried the heron under some trees on the opposite side, close to the spot where the Craigpwildu brook falls into the Wye. Here was a chance to find him, as he was only wounded; but how to get at him? To swim the river was impossible, and the ferry at Cafntwmbach was better than a mile up the river. It was our only means of

crossing; so off we set, and were soon across the ferry and on to the estate of Mr. Vaughan, of the Screen, an uncle of my companion. A path under some noble trees brought us opposite the spot where the heron was shot, and within ten yards of the spot where he was marked down. I spied him in a large pool some yards from the river bank; seemingly, as he rested on the water, he was unhurt. As I shouted out "There he is, Sam!" the retriever plunged into the eddying pool and swam to seize his prey. Now the fight began. Without swerving an inch, the heron, with his crest erect and with a scream, darted his formidable beak straight at the dog's eyes; Sam was puzzled. In a moment however, he was at him again, but the terrible beak of the heron, as the attack was again renewed, held him fairly at bay. Sam now changed his plan; he tried to circumvent his formidable enemy by swimming round to his back, but the heron presented a bold front at all points, and once more Sam rushed in. The fight was getting fast and furious, but Sam, though considerably punished, stuck to his post, and, though repeatedly recalled, would not return without his bird. There was nothing left to do but to kill the heron, to prevent his blinding the dog, if he had not already done so. Accordingly I raised my gun, when my companion shouted out, "Don't shoot; don't spoil the bird; I'll save the dog." In an instant he leaped from the bank into the pool, and, swimming, made for the heron. The bird now left the dog and turned on his new assailant; rushing at him with a scream, in an instant the heron darted his formidable beak at Mr. Gwynne-Vaughan's eyes; but as he swam he managed to cover his face, and his hand only was wounded. Again and again the heron attacked him, but never succeeded in wounding his face. At last he grabbed the heron by the legs, drew it under the water, and struck out for the shore; grasping the bird by the beak, he was soon on land, none the worse for his courageous exploit than a wounded hand and a wet skin. Sam, the retriever, was bleeding from at least five honorable wounds, all within a quarter of an inch of either eye. It was a courageous fight all round, and was such a five minutes of exciting sport, of its kind, as one is not likely to see again. Next morning the bird was on its way to London, where Mr. Cole, of Great Portland street, is preserving it in his best style.—W. HENRY FISK (*University College, London.*)

The foregoing very interesting account is copied from the *London Field*. We remember to have witnessed an exciting combat in northern Minnesota, in July, 1857, between a heron and a man armed with a knife, during which it seemed doubtful for a while on whom the laurels would rest. The man came off victor, with several serious hurts. To strike the body in a vital part, while the lance-like bill and neck, flexible and lithe as a snake, thrust and parried with the rapidity of a rapier, required a dexterity possessed only by a professional swordsman. It was only by interposing the brute strength of the left arm, with the certainty of receiving damage to it that the heron was vanquished. It was a most comical tilt—the stilt-like legs of the tall bird playing their awkward part, and his basilisk eye unflinchingly regarding the flushed face and nervous embarrassment of his antagonist.

A QUEER COLORADO FISH.—It has the head of a catfish, the body of an eel, the legs of a lizard, while the gills are long, feathery plumes. In the fall of 1850 the writer carried back to the States four of these strange fish, preserved in alcohol. They were procured in Gold Lake, Boulder county, a beautiful body of water, in which they were as thick as tadpoles in a puddle. One of them was forwarded to Professor Agassiz, who said the fish was first discovered by Humboldt, in the mountain lakes of Mexico. He did not know it was found north of that country until he received the specimens we sent him. It is not really a fish, but belongs to the batrachian family.—*Georgetown Miner.*

[From the description here given it would seem that this so-called fish was one of the genus *siredon*, now known to be merely the larvæ form of a western salamander (*amblystoma*). For a detailed account of the metamorphosis of the former into the latter, see "American Journal of Science," vol. XLVI, Nov. 1868.—Ed.]

BIRDS OF CENTRAL NEW YORK.

BY H. G. FOWLER.

[Continued from page 84.]

Macrohamphus griseus. Red-breasted snipe; a few taken during the migrations.
Ereunetes pusillus. Semipalmated sandpiper. Common during the migrations.
Tringa maculata. Pectoral sandpiper. Not very common. Occurs only during the migrations.
Calidris arenaria. Ruddy plover. Found with the preceding. Not common.
Totanus semipalmatus. Willet. Not very common. Found only during the migrations.
Rallus virginianus. Virginia rail. Common summer resident; arrives the last week in April. Breeds.
Porzana carolina. Carolina rail. Common summer resident. Breeds.
Cygnus americanus. Whistling swan. Rare. One was taken on Cayuga Lake in the spring of 1875, which may be seen in the club room of the Seneca Falls Sportsmen's Association.
Spatula clypeata. Shoveller. Not common. Occurs only during the migrations.
Fuligula collaris. Ring-necked duck. Not common, but sometimes taken during the migrations.
Sterna fuliginosa. Sooty tern. Rare. One was taken on Owasco Lake, September 20th, 1876.
Colymbus septentrionalis. Red-throated diver. Rare. Only found late in autumn.
Podiceps cornutus. Horned grebe. Not rare during the migrations.

THE ARCTIC OWL.

New York, Nov. 12th.

EDITOR FOREST AND STREAM:—

I noticed in your last issue a communication from Salem, Mass., in which it speaks of owls being very common. In the latter part of Oc-

tober I spent a few days at Branch Rock, Marshfield Beach, Mass., cooing. On the morning of October 28th a large white Arctic owl was shot on the Rock. In the afternoon I shot a mate to it further down the beach—a splendid bird, which I am having mounted. The following Monday two others of the same kind were shot, and another one seen. One of them was shot by the proprietor of the hotel. It was wounded, and he had him alive on the billiard table. He would stretch his wings across the table. The old settlers say that the appearance of these birds is an indication of a very severe winter.

J. B. S.

It is said that the presence of *Strix bubo* indicates approaching cold weather. Some thirty years ago there was an immense incursion of these owls upon Sable Island, off the coast of Nova Scotia; but the birds were no doubt attracted more by the large colonies of rabbits, than driven there by stress of severe Arctic weather.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS NOV. 9TH.—One quail (*Ortyx virginianus*), presented by Mrs. M. R. Sweeney, Philadelphia; three raccoons (*Procyon lotor*); two great horned owls (*Bubo virginianus*), presented by J. D. Towner, Blount Spring, Ala.; one red-tailed hawk (*Buteo borealis*), presented by James P. Massey, Philadelphia; two ravens (*Corvus corax*), presented by John W. Le Maistre, Philadelphia; one Malayan tapir (*Tapirus malayanus*), two young elephants (*Elephas indicus*), one black leopard (*Felis pardus*), one chachina baboon (*Cynocephalus pscarius*), and two elder ducks (*Somateria mollissima*), purchased; two Fournier's capromys (*Capromys pilorides*), born in the garden; one snowy owl (*Nyctea nyctea*), presented by Josiah Fitzgerald, Philadelphia.

ARTHUR E. BROWN, General Superintendent

Woodland, Farm and Garden.

CALIFORNIA RAISINS.

I ant to record the growth of any practical domestic industry which promises to result in not only a saving to consumers, but in turning to the profit of the producer what promises to be a surplus and unsalable stock. We have before called attention in our columns to the fact that raisin making in California might be prosecuted so extensively as to rank with her wheat and wool growing and wine making interests. In fact, the very causes which act to retard the growth of the latter industry are in favor of raisin making. It is a general complaint that the wines of California are too "heady;" that nothing is produced which compares with the light table wines of Europe. A contrast of the soils which produces the grape in each country gives the key to the mystery. The grapes which are made into those light and agreeable wines of the old country, wines that can be drunk almost as water, and which in any degree of moderation "cheer but do not inebriate," are grown in the most sterile soil. In fact it might be said that the lighter the soil the lighter the wine. In California, on the contrary, the soil is remarkable for its richness; its depth and quality is a constant surprise to the agriculturist, and even were he so disposed, it is almost impossible for him to plant his vineyard in any but the richest soil, and at the same time have the supply of water accessible for the irrigation which is necessary for the nourishment of his young vines. Hence the land, as far as regards wine making, has too much of what is technically termed "fat" in it, and produces a grape which is unusually rich in saccharine matter. The presence of this richness induces a tendency to frequent fermentation, under which processes the wine would spoil were it not prevented by the mixture of a large amount of spirits. In some wines the amount of native brandy, usually made at the same time and largely of the must or bruised grapes after the pressing, mixed with the wine, amounts to as much as twenty gallons in every cask, or nearly twenty per cent. Here we have the secret of the "heady" qualities of California wines, particularly when drunk within the State.

The presence of this unusual amount of saccharian matter in the grape, however, is what makes it so admirably suited for raisin making. The very substance the presence of which tends to destroy the wine, act as a natural "preserver" of the raisin. The common "Mission" grapes of California can be turned into excellent raisins for home consumption by simply hanging them in clusters to the ceiling, and it is most common to see the huge bunches remaining on the vines long after the leaves have fallen, shrivelled, but perfectly preserved. The foregoing particulars are called to mind through the following paragraph which we find in an exchange:—

"California raisins to the amount of 60,000 boxes will be placed on the eastern market this year. The grapes can be raised profitably for 1½ cents a pound. Three pounds of grapes make a pound of raisins, which can be cured and boxed for 1½ cents per pound. Allowing 1 cent for freight and commission, the raisins can be sold in San Francisco at 7 cents per pound. At present one million and a half boxes are imported annually, consequently there can be no lack of market. The curious feature about the business is that the viniculturists of California refused to try to make raisins till they had lost money several years in trying to find a market for table grapes and wines."

To Mr. Thomas Dalton of the Azara Rancho, situated in the beautiful San Gabriel valley, some ten miles from Los Angeles, is due the credit of making the first raisins, cured artificially, in California. We visited Mr. Dalton's place some eight years since and witnessed the entire operation, commenced then on a small scale, but which we predicted would ere long expand to an industry of great importance. At that time grapes were selling for wine and brandy making purposes at seventy-five cents per one hundred pounds. This was for the Missouri variety, as but few other varieties were grown, and these in small quantities, although we have seen wagon loads of beautiful black Hamburgs emptied into the presses, and all sold for the remarkable price of three-fourths of a cent per pound. Mr. Dalton, in addition to other varieties, had a small vineyard of the White Muscat of Alexandria, and

these grapes he was converting into raisins of as fine quality as ever were imported. "Malaga raisins are very good raisins, but the raisins of Smyrna are better," says the old play, and California will yet excel even Smyrna. The process of curing the raisins was very simple. The grapes were picked rather more carefully than for other purposes, and all imperfect berries clipped off with scissors; the bunches were then dipped into a mild lye, and afterwards spread upon tressels in the sun, care being taken to carry them in doors out of the dew at night. In three or four days the grapes were thoroughly cured and forced with a gentle pressure into the boxes.

The viniculturists of California are to be congratulated upon having at last taken hold of an industry which is at once a pleasant and a profitable occupation, one in which a large share of the labor can be performed by women and children, and one which partakes less of the uncertainties of agricultural life than any other we can call to mind.

THE BEST BREEDS OF COWS.—We find in the New York *Journal of Commerce* the following very intelligent and important information in reply to the queries whether there is any breed of cows that eats more than others, and what proportion of milk they give; also what is the highest price ever obtained for fancy stock cattle:—

"The Durham, or short horn, either thoroughbred or grades, are concededly the largest eaters, as they are the largest in size. When bred with special reference to milk-producing rather than beef-producing, the cows yield the largest measure of milk, and of fair quality. The Herefords are also good feeders and bountiful milk producers, but except a few herds, such as may be seen on the farms of Mr. Hurst and of Mr. Corning in Albany county, have not been brought to perfection in this country. The spotted Dutch or Holstein cows are becoming popular among the dairymen of Orange county, and it is claimed that for the amount of food consumed they give especially satisfactory returns. For private use, where cream and butter of the finest quality are the main points, the Alderney cow is unquestionably the best. She is but a moderate eater, makes no superfluous flesh, and gives continuously a fair amount of rich milk. She is gentle and generally hardy, and may be kept in small pastures or in clean stables with profit.

For quantity of milk we may rate the several popular breeds of cows as follows:—

First—The Durham, or Short Horn.
Second—The Herefords and the Ayrshires.
Third—The Devon (especially adapted to the soil and climate of New England).
Fourth—The Alderney.

The Dutch or Holstein cows as said to equal the Durhams in milking qualities. For quality of milk for producing cream and butter the foregoing list may be reversed with the exception of the Holstein cows, the milk of which is said to be richer than that of the short horns, and equal to that of the Hereford and Ayrshire cows.

The highest figure ever received for a fancy cow was \$40,000. This large sum was paid for a 'Dutchess' at the great sale of the Walcott & Campbell herd a couple of years ago. As high as \$10,000 has been frequently paid for cows both in this country and in England. At a number of recent sales of short horns in Kentucky the averages for the females, including heifers and yearlings, were generally over \$400. But these sales were of thoroughbred stock, and bred mainly with reference to beef-producing qualities."

WHAT DYES THE AUTUMN LEAVES.

What is the cause of these beautiful and endlessly diversified colorings of the leaves in autumn? The immediate cause is the lessened activity of their pores, or breathing organs, owing to the feeble illuminating power of the sun, which is nearer the horizon at mid-day, shines upon it more obliquely, and sets sooner. It has been observed that plants bend from the red or calorific rays of the sun's spectrum, instead of toward them, as they are found to do in regard to every other ray. From this curious circumstance the inference has been drawn that the effect of these rays is to check the vegetative processes, and favor the formation and growth of the blossoms and fruit in which the activity of every plant terminates. Light is only a secondary cause of activity in blossoms, while it is the principal cause of activity in leaves. If the deficiency of light is compensated by an increase of heat, blossoms may be made active even in total darkness, while the leaves will present only a very imperfect vitality. Thus we see that heat favors the production of the blossom, while it has little or no effect upon the leaves. And in accordance with this, it has been further observed that the heat rays are more powerful in Autumn than at any other season; while the actinic rays which stimulate germination, and the luminous rays which are required for the formation of the tissues and their products, are proportionately diminished. The rise of the sap in spring is quickened by the actinism which is then most abundant in the solar beams; the secretion of carbon in summer is due to the greater predominance of light; and the reversion of the sap, the ripening of the fruit, and the discoloration of the leaf in autumn, may be traced to the increased power of the parathermic influence, from which the plant is found to bend, and which appears to be a modified form of heat. The distribution of plants over the surface of the earth, as well as their periodic changes, are dependent upon these causes—the greater or less amount of actinism, light or heat in the climates, and the seasons in which they grow. Given the proportion of these different principles of the sunshine of different countries and seasons, and it will be easy to predict the character of their vegetation and the nature of their vegetable products.

Bearing these curious influences in mind, it is easy to understand why, with the diminished light of the shorter days of Autumn, the natural stimulant of vegetation should be correspondingly withdrawn, and the circulation of the sap through the lamina, or blade of the leaf, cease. Carbon cannot be formed from the atmosphere, except under the influence of light; and when this stimulant is weakened, the vital powers of the leaves are proportionately diminished, and the affinity which they have for oxygen acts with little opposition. The great natural life-process of deoxidation not only stops but is reversed. Oxygen is absorbed, and carbon, the product of combustion is given off; and the

chlorophyl, or that carbonaceous product which gives the green, healthy color to leaves, is slowly oxidized, and rusts away into the various tints of autumn. The hues of the foliage become brighter as the process of oxidation goes on; those of early autumn being dull and dark greens, passing later in the season into the bright yellows and reds, which make our woods full of sunshine, and their depths more brilliant than the open fields, or the mountain tops. The coloring of leaves and fruits undoubtedly proceeds from the same cause, viz.: a cessation of the deoxidating process in the contents of the superficial cells. The leaves ripen in the same way that the fruit does; and the chemical change which the chlorophyl in both undergoes indicates that nutrition has ceased and growth has culminated. The erythopyl, or peculiar red substance which the young unfolding leaves contain in early spring, before the chlorophyl has had time to develop itself, and which gives them their peculiar autumnal tint, passes away as the season advances, lingering only in the leaf-stalks, which usually continue from first to last of a reddish hue; but it reappears in autumn, when chlorophyl has vanished from the leaves; only it is then more oxidized, and becomes completely discolored by further oxidation, as in the fallen leaves that have lain long on the ground. We thus see a most interesting connection between the leaves of spring and those of autumn, and are deeply impressed by the wonderful co-relation between the tinting of the smallest and most obscure leaf of the forest, and the changing qualities of the sunshine. The leaf changes as the sunbeam itself changes; and as the light of heaven fades through all the hues of the spectrum, from the darker actinic to the brighter parathermic, so does the sympathetic leaf pass from the dark green colors of summer to those brilliant tints of autumn whose fine effect in the landscape we all admire.—*Dr. MacMillan, in the Western Rural.*

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

J. R., New York.—Please inform one of your subscribers to what class or family of birds the woodcock is allotted. Does same belong to the class called "snipes?" Ans. Yes; technically, family scolopacidae genus philohela.

A. K. S., Lancaster, Pa.—Can you give me the name and address of Sec. of the N. J. Game Protective Society? We intend making a similar association in this locality, and I desire to communicate with him on this subject. Ans. Address B. W. Richards, Esq., No. 104 South Thirteenth street, Philadelphia.

J. W. W. Waterbury.—I am informed that some party has invented a useful article of rubber for stamping or printing the number of the shot on the outer wad of a loaded shell. Can you inform me where it can be procured? Ans. From Messrs. Scott & Co., No. 291 Broadway, this city.

E. B. G., Montreal.—What is the proper dose of areca nut for a setter pup of eight or nine months old? Ans. 60 grains divided into three powders of 20 grains each, and given two hours apart; four hours after the last powder give one ounce castor oil.

W. A. D., Nashua, N. H.—Will you please inform me in your paper what to put on a gun barrel to imitate stub twist? Ans. We do not know; but you will find an article on browning gun barrels in our issue of 2d inst; have sent you some powdered areca nut, with directions for its use.

C. E. C., Franklin, Pa.—1. Please inform me where I can get a Remington breech-loading second-hand gun, \$45, \$60, or \$75 grade? 2. What is the price of the "Complete American Trapper," by W. H. Gibson? Ans. 1. We know of none just now. 2. \$1.75.

E. C. B., Beverly, Mass.—Can you tell me where I can obtain a copy of John Krider's "Sporting Anecdotes," and the price? Ans. Address John Krider, corner Second and Walnut streets, Philadelphia.

M. W., Wilmington, Del.—Please answer me the question whether a slut in the first or last stages of being in heat will likely throw the most dogpuppies? Ans. It is considered by many breeders best to have a bitch "lined" late in her season in order to have a preponderance of dog pups in the litter.

TEAL, Salem, Mass.—I have a fine Newfoundland dog which I want to exchange for a setter that is broken, if I can; would it be possible do you think? Ans. The difference in value between a broken setter and a Newfoundland would be so great as to be equivalent to buying the former. Still, your query may find a response from some of our readers.

RATS, Sandy Hill.—Some time since I observed in your paper an item recommending the use of some simple article for ridding premises of rats. Having forgotten it, and lost the paper, I wish you would repeat it. Ans. See Fur and Trapping Column this issue. We do not readily find the recipe you speak of.

W. L. W., Nashville, Tenn.—What substance could I put on the sights of my rifle to make them visible in the dark? The best time for deer stalking is about dark or very early in the morning, and at these times the sights of a rifle are very indistinct. Ans. Old backwoodsmen chalk the top of the barrel from breech to muzzle.

E. F. C., Eaglesmere, Sullivan Co., Pa.—There is a fish in the Susquehanna river near Williamsport which the fishermen call salmon; they weigh from 5 to 15 pounds. Are they the genuine salmon as caught in Maine and Canada? Ans. They do not belong to the *salmo* family, but to the *percidae*. They are the pike-perch (*Lucioperca*.)

AQUARIUM, Lynchburg, Va.—What are the names of a few of the best plants for a small aquarium? Can you give me the address of some dealer in such stock? Ans. We mail you to-day a copy of our paper of July 6th, 1876, which contains an illustrated article giving full instructions for making and keeping an aquarium. You can obtain the algae from Bagot & Co., 31 Fulton street, New York.

A. H. S., Boston.—How late in the season is it safe to stock a pond with large black bass? Ans. At any time. They are hardy. Will land-locked salmon thrive in a pond without any running water? Ans. No; they need running water to spawn in. Is it well to have both land-locked salmon and bass in the same pond? Ans. The bass will run out the salmon in a short time.

G. W. B., New Castle, N. Y.—I have a setter pup one year old that has for the past six weeks been apparently sick, showing no inclination to eat food of any kind, and preferring to lie out in the rain to lying in a kennel, making frequent attempts to urinate with little success, and most of the time sleepy and drowsy. If you can inform me of a remedy by which he can be cured I shall be much obliged. Ans. Try the condition powders we have mailed to you.

R. S. McC., York Sul Spring.—Can you tell me what ails my setter dog, and what I had better do for him? He slobbers a great deal, especially while hunting; his eyes are red, and discharge a white matter more in the morning than during the day; he has a good appetite and hunts well. Ans. Your setter may have defective teeth. Examine his mouth carefully; give him the condition powders sent to you by mail.

A. M. W., Catskill, N. Y.—Can you recommend me to some pleasant place in North Carolina to pass the winter where I can have good water fowl and some land shooting. It would also be requisite that the town be a desirable one for ladies, as I shall take my family with me. Ans. We would recommend Newberne, which is highly spoken of by Hon. G. E. West, a northern gentleman who has settled there, as affording excellent beach and upland shooting.

N. M. H., New York City.—Can you give me any information in regard to the duck and snipe shooting near Wilmington, N. C.? I understand the quail shooting is good near the city, but I particularly desire to find snipe. How early do the snipe reach Wilmington in the autumn? Ans. On the river below Wilmington and in the vicinity of Smithville you will find good duck and snipe shooting. The arrival of the snipe varies, generally in October and November they are abundant.

G. W. F., New Galilee.—Please publish in your next issue what dog in the Irish setter class took first premium at the bench show for dogs at Pittsburgh; also the color and by who and where owned. It has been left to you to decide on a bet. Ans. We have not a report of the Pittsburgh show at hand, but if you will write to James Johnson, Esq., Secretary Tradesman's Industrial Institute, Pittsburgh, Pa., you will get the information.

S., New York.—1. What is your opinion of rebounding locks? I am told they are liable to get out of order, and that they soon wear out. Would you have them? 2. Would you trust a single bolt, or would it be wisest in the end to take a gun with double bolts? 3. Would you advise having one barrel choke-bored? 4. Is Clabrough a first-class gun maker? Ans. 1. When on a gun by a first-class maker we prefer rebounding locks. 2. Take the double bolt by all means. 3. No, unless you are an expert or wish to use your gun in pigeon matches. 4. Yes.

W. H., Jr., New Orleans.—Having purchased a cocker spaniel pup of S. J. Bestor, Hartford, Conn., I am anxious to put her in good care and in training very soon, and write to you to ask where such a man can be found? My slut is three months old at date, and in a month will be capable of learning to some degree. My wish is to have her broken on woodcock? Ans. Cocker spaniels are seldom used in this section of the country and we do not know of any one who would properly break yours. Perhaps Mr. Bestor can recommend a breaker.

H. S., Golden's Bridge, N. Y.—Is there any duck shooting within about two hours' ride by railroad from New York? Ans. Some of our best duck shooters went this week to the Great South Bay, Long Island, which is excellent ground and the best we know of within two hours ride of New York. It is justly called, "Good Ground," and the proprietors of shooting boxes there have every appliance for the convenience of the sportsman. The season is unusually warm, and flights are backward; nevertheless we believe there is a good show for the gunner. The first cold northeaster will drive the wild fowl into the bay.

C. E. B., Brookline, Mass.—What are the game laws of Maine as regards sending birds, etc., out of the State for the market? Is it so that a person could or could not send partridges, etc., to Boston? Ans. The section of the revised game laws of Maine, approved February 18th, 1876, which applies to your query, reads as follows: "No person shall kill or expose for sale, or have in possession, except alive, at any time, any woodcock or ruffed grouse with the intention of sending or transporting, or of having the same sent or transported beyond the limits of the State, under a penalty of not less than \$5 or more than \$10," etc., etc.

T. F. M., New York.—Will you, through the medium of your paper, answer the following questions: A buys \$50 worth of pool tickets, and after having them a few days feels confident that the darty he bets on will be defeated. B thinks otherwise, and offers A \$25 for his tickets, A sells them to B. If it is considered a draw bet, is not B bound by all rules of betting, to return those tickets to A for same price paid for them? Ans. Decidedly not. A in selling his tickets for \$25 accepts a loss of a similar amount to be out of the transaction. B therefore is entitled to all chances, even to that of having the bet decided a draw and receiving the money from the pool box.

R. C. T., Baltimore, Md.—I took my dog to a friend's house for a week's shooting. I chained him with other dogs in a stable; he barked the ensuing night and for two nights afterward, though hunted hard both days. I tried him unchained with same effect. He is used to being chained at home and does not bark when there, but invariably barks all night when at a strange place. Can you assign a reason for so doing and suggest a remedy? Ans. The cause of dogs barking when left alone in a strange place, is his anxiety to get to his master or his home. One which continues this bad habit shows a want of proper management by his owner. We have never owned or seen one we could not silence, effectually with a three-foot raw-hide.

H. J. T., Morris, Ill.—1. I see your paper is published on Thursday. Could I by subscribing at the office and having it mailed obtain it by Saturday noon, our mail leaving Chicago 10:30 a. m. (I don't get it now till Monday noon). 2. In Capt. Bogardus's trip to England, page 140, he says he is about to write another book giving his views and experiences. Do you know anything of it; if so, when is it likely to be published and the price? 3. I would like to obtain some areca nut, with directions, but cannot do so here. Where can I do so, and the probable cost? Ans. 1. Our papers are mailed on Wednesday evening, which should place it in Chicago on Friday morning and consequently with you on Saturday. 2. We have heard nothing of the book. 3. The areca nut has been sent you.

A. B. D., New York.—I wish to go to Florida, and will stay probably three or four months. Shall take a Bond boat, 14 feet, tent, rides, shot gun, ammunition, etc., and some provisions from here. Where do you think would be the best place to start in, St. John's river above St. George's Lake, or at Bronson, where you told "Florida" this week? Ans. There is little difference in the game to be found at both places. Can a person find plenty of game on St. John's river and tributaries? Ans. Principal game on the St. Johns are raft ducks, limkins, water-turkeys, turtles and alligators. Would it be as healthy a place to camp so long as about Cedar Keys or Bronson? Ans. Bronson is the healthiest. Could I get good pork, etc., about Enterprise and above, in case I had to get a new supply? Ans. The woods are full of it. Can also buy it at Melonville, near Lake Monroe, opposite Enterprise. Using a small boat only to go from place to place, would I find the river rough enough to interfere with such means of travel? Ans. No, except on the main river and open lakes, where it is equally at times.

G. S. H., Providence.—I had a setter bitch 18 months old that had one litter of pups five months ago, and has always been in good health up to last Sunday, (November 5th), but did not have the distemper. In the afternoon, of Sunday, she commenced frothing at the mouth, looking up in my face and giving a howling bark. Monday, was much worse, could not eat nor drink, although she tried to. Tuesday growing worse and weaker, mouth half open, tongue dark colored and hanging out of her mouth all the time. Wednesday, worse, eyes sunken in head, tongue swollen and dark colored; jumping, snapping, and biting at everything in her reach. She was so dangerous that I had to kill her. Her nose was moist and cold, feet and body natural heat. As this is not the first dog that died on me with this disease I would like a little information? Ans. We have known instances of dogs having swallowed indigestible or poisonous substances, and showing such symptoms as you have described, but in all probability yours was affected with rabies, and in destroying her you did the best thing under the circumstances.

A. H. C., Glen's Falls.—1. Can Rosevelt's "Game Fish of the North," and "Superior Fishing," be procured, or are they out of print? 2. Allowing for the "classification being very bad," by what arrangement did Mr. Adams's Duke take prize as best dog pup in Laverack class and best dog in Gordon class at Springfield Show in 1875. Vide "American Kennel and Sporting Field." "Bad classification" will perhaps account for Dora taking first in English, Irish, and Native class, and being credited in "American Kennel and Sporting Field," with first in Gordon class, Springfield, 1875, but the same dog, if he is the same, taking prizes in two classes, in neither of which he belongs, I really do not understand? Ans. 1. The books are out of print but occasionally a stray copy can be picked up; write to Carleton & Co., publishers, under the 5th avenue hotel, this city. 2. Referring to the list of entries we find that Mr. Adams had a dog Duke entered in the Laverack class and a Duke in the Gordon setter class. The crediting Dora, in the "American Kennel and Sporting Field" with being first in the Gordon class at Springfield '75, is an error on the part of the author.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[POST OFFICE BOX 2832.]

Terms, Four Dollars a Year, Strictly in Advance.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 20 cents per line; outside page, 30 cents. Special rates for three, six, and twelve months. Notices in editorial columns, 40 cents per line.

NEW YORK, THURSDAY, NOVEMBER 16, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

Trade supplied by American News Company.

CHARLES HALLOCK,

Editor and Business Manager.

OUR NEW DRESS.

CIRCUMSTANCES have compelled the publishers of FOREST AND STREAM to make some changes in the material and personnel of the paper, which they trust will be regarded for the better. The full title page we are certain will be considered an embellishment to an already attractive sheet, while the addition of four pages enables us to give an increase to our reading space, which has been largely encroached upon by advertisements. The adoption of a tinted cover will remedy a palpable evil of which there has been constant complaint, namely: the soiling or mutilation of the sheet by improper wrapping or long carriage by mail. The illuminated title page, so characteristic of American Out Door Sport in its varied and most charming features, will make an attractive initial to each volume when bound. We think its execution reflects much credit upon the artist, Mr. Alfred Kappes, who has so faithfully reproduced and vitalized our own crude designs, as well as upon Mr. Max Lowenthal, the engraver, whose work is undeniably good. Of these improvements, as we hope they may be regarded by our readers, we need say but little, ourselves, except to express some satisfaction in presenting them as evidences of the prosperity of the paper, and an earnest to our patrons that we strive to merit their esteem and continued support. We have now, by recent changes, given them twenty per cent *more* FOREST AND STREAM for twenty per cent *less* money, having reduced our rates to Four Dollars and added Four pages to each weekly issue. In homely phrase, we intend that our readers shall always have their "money's worth"; and we are content to accept the published testimony of our esteemed contemporary, "*The Spirit of The Times*," that this liberal policy, from their own experience, will be immediately and abundantly remunerative.

It is not worth while to *promise* largely, but we wish it understood that it is our ambition to so constantly improve this paper, and add to its intrinsic value as a medium for cultured sportsmen and lovers of Nature pure and simple, that it will in time emulate and equal its noble trans-Atlantic models, the London "*Field*," and "*Land and Water*."

Some changes have also been necessitated in our editorial staff. Mr. Earnest Ingersoll, whose valued labors in the Natural History Department we reluctantly dispense with, has given place to George Bird Grinnell, Esq., who has become a stockholder. Mr. Grinnell is now associated with Prof. Marsh, at the Peabody Museum of Yale College; and as he has the advantage of constant communication with such eminent Naturalists as Dana, Verrill, and many

others, enjoying the entire range of the Scientific field, we feel confidence and pleasure in the acquisition of so useful a collaborator. In reviving the Agricultural Department, which has languished since the editorship of the veteran horticulturist, Mr. Wyman, ("Ollipod Quill,") now dead, we re-open a field to all the congenial topics that relate to the Forest, the Farm, and the Garden, and thereby additionally engage the interest of the general reader. To ensure its proper service, we have secured as editor Mr. W. J. Davidson, Secretary of the New York Horticultural Society, who is endorsed as possessing all the requirements for the work, being not only a concise and pains-taking writer, but possessing a most general knowledge of all departments of horticulture. We invite the especial attention of those interested to subsequent numbers. The rest of our old and efficient staff we retain.

It was our first intention to defer the enlargement of the paper until the beginning of the eighth volume next February; but we now conclude that no time is so befitting as the present, when Nature's own forests and streams, whose charms we reflect, assume the changes that make them gorgeous. Now the parti colored leaves are radiant; the dropping nuts are rattling in the stillness of the woods; the mink and sable don their glossy coats and the antlered buck is in the "blue." Every breath of the crisp keen air is vitalizing, and the rosy blood courses through the veins with a noble and manly pulse. Come out, ye maidens, into the rustling leaves, and weave an autumn garland to hang beside the mistletoe and holly when the Yule log brightly burns. Come, ye nutters, where the burrs are opening with the frost. Come, sportsmen all, to the hill-side cover. Hie on, good dog! and "show us now the mettle of your breeding." What is life without its Autumn and the ripeness of its full fruition? And what is Nature without its constant change? No "melancholy days" are ours. The winter winds may sough and whisper through the pines, but they bring no sense of sadness. Snows may mantle the forests and ice fetter the streams; shrouds there are for the "sere and yellow leaf," and Death for all things living; but when the Spring cometh, and the resurrection, the soul and the imprisoned streams shall burst forth again, with a ripple and ecstasy of joy. So mote it be!

COLLEGE VICE AND VIRTUE.

IT is amusing to watch the gusto with which individual religious papers seem to gloat over such little scraps of evidence as they may find afloat to support their theory as to the dreadful wickedness of students at the larger colleges. For instance, the custom which a few members of each graduating class at Yale are wont to indulge in, of collecting and printing in pamphlet form all the conceivable "statistics" relating to that class, gives the religious editor a rich treat, which they roll under their tongues with a relish. The Chicago *Advance* having quoted some of the "statistics of morality" concerning what the compilers of this year's pamphlet were pleased to term "Yale's smartest and wickedest class," (such statistics, for instance, as that there were but 43 total abstinence men in a class of 124), the *Interior* hastens to remark:—

"This is a record of prodigality and destructive vices. Of 124, 81 are dram drinkers. Of the billiard and card players only 23 are put down as gamblers, but there is no doubt that the remainder are gamblers more or less infatuated. Now we say it, and say it flatly, that the father who sends his son to such an institution is guilty of recklessly exposing his child to chances two to one of his destruction; and if his boy brings grief to his heart and dishonors his name, he is entitled to no sympathy."

A correspondent of the *Advance* of August 24th shows up the absurdity of this onslaught, but the Philadelphia *Lutheran Observer* of September 1st nevertheless reprints with great glee the *Interior's* words, and makes them the basis of a long editorial, of the good old valid sort, concerning "Morals in Colleges." Assuming that the prevalent interest in athletic sports is a thing of recent development (though such sports have been practiced at Harvard and Yale for more than a century, and have been practiced just about as vigorously for the last quarter century as for the last year), the *Observer* goes on to say that the truly damnable development of these "statistics" are simply the results of undue devotion to physical exercise. "The natural and inevitable products of athletic sports," says this truly good paper, "are dissipation and vice, and a general lowering of moral tone and intellectual refinement and culture. We would rather send a boy to seek his fortune in a strange city, where hundreds of gilded gateways of hell are open to allure him than to a college or university in which no moral supervision or discipline is exercised over the students, or in which the prevalent sentiment is in favor of sports, games and convivial." By a curious coincidence another editorial on the same page of the paper calls favorable attention to the "Pennsylvania College at Gettysburg, where the superintendent of the preparatory department resides in the building, and has constant charge of the students who board at the same table with himself. See advertisement."

We reserve the comments which are suggested by the above. To argue in favor of out-of-door exercise, or gymnasium athletics, to strengthen and invigorate body and brains, is worse than begging the question; it insults common sense.

—Average temperature at New Smyrna, Florida, for the month of October: At 7 a. m., 68½; 2 p. m., 74; 9 p. m., 69½.

THE EASTERN SHORE OF VIRGINIA.

THE eastern shore of Virginia, composed of the counties of Accomack and Northampton, is a peninsula lying between the Atlantic Ocean, on the one side, and the Chesapeake Bay on the other. It presents a very level surface, and has, perhaps, the best roads in the world, requiring but little attention to keep them in good condition. It is within easy access of Baltimore by a line of steamers, one of which leaves South street wharf, in that city, every day at 5 o'clock p. m., except Saturday. The upper portion of the peninsula can be reached daily by rail from Philadelphia, the terminus being Greenbackville, on the sea side opposite to Chincoteague Island, and distant from it about five miles. A steam ferry boat conveys passengers from the depot to the Island.

There is, perhaps, no portion of the country presenting greater attraction to the sportsman in quest of small game, such as quail and water-fowl, than this little strip of land. The former are abundant, and the peculiar geographical features of the country render the sport of hunting them both easy and delightful. The excellent character of the roads makes a ride of twenty or thirty miles but a trifle, thus enabling the hunter to go over a great deal of ground in a day, and the numberless creeks or small rivers indenting the coasts on sea and bay, form long glades fringed with yellow sedge, affording cover to the birds and protection from the hawks, while the absence of trees in such places insures to the hunter almost any number of shots "in the open." The period for shooting quail in these counties extends from the 20th day of October to the 1st day of February. Snipe and woodcock are also found, but in small numbers. On the sea side, and to a great, though less extent on the bay, waterfowl, such as wild geese, brant, black mallards, shufflers or black ducks, red heads and all other kinds of duck except the canvas back swarm in myriads, and are killed in great numbers every year; they are shot principally from blinds over decoys. On every part of the shore persons can be found who have large experience in this kind of sport, and whose services can be procured by visitors at reasonable rates. Perhaps the best point for this sort of shooting is Cobb's Island, in the county of Northampton, whose proprietors entertain each year, in winter, quite a number of sportsmen, and have all the appliances, such as boats and decoys, for their accommodation. The island itself is a noted resort during summer, and furnishes the best shooting among birds peculiar to that season that can be found on the eastern shore.

In summer, and, indeed, until November, fine fishing can be had in the waters of both sea and bay, the principal varieties caught being the drum, or sea bass, trout, mullet, spot and taylor. Millions of sea birds, such as curlews, willets, gray-backs, brown backs, and red breasted snipe feed in the marshes and on the beaches, which skirt the sea coast from Cape Charles to the Delaware line, and furnish inexhaustible sport to the gunner. Foxes are numerous, and the good old English sport of the fox hunt, with many of its primitive characteristics, still survives among the people of the eastern shore, who, indeed, have in an especial manner retained the peculiarities of their ancestors together with the purity of the old stock. They welcome gentlemen who come for enjoyment and recreation, and furnish them gladly every assistance in their power, but hold the pot hunter in detestation, and visit him, when caught, with the severest penalties of the law prohibiting hunting by non-residents.

The steamers from Baltimore land at different points in both counties, one touching twice at Onancock, within five miles of Accomack C. H., the county seat. Good hotels, with horses and buggies or light wagons for hire, can be found at Chincoteague Island, Accomack C. H., Horn Town, Onancock, Pungoteague and Belle Haven, in Accomack, and at Eastville in Northampton. Board in private families can also be obtained at fair rates.

QUAIL SHOOTING.

THANKS to the mild winter of last season, and perhaps in some localities to more attention being paid to the administration of the game laws, quails have not been so plentiful in many years past as at present. Our advices from every quarter corroborate this statement, and the average of bags made is largely in excess of what has been usual of late years. We have before us a letter from a correspondent in Uniontown, Pa., sojourning there temporarily, who writes that better quail shooting is not to be found in America than in the Southwestern section of Pennsylvania. His bag has averaged from forty to fifty birds a day for a week. Such bags were not uncommon at one time in the West, and we have equaled it in California, but with the exception of Florida, and possibly some portions of North Carolina and Virginia, we confess that we know of no place where such shooting can be found. In order to make a good bag at quail three requisites are demanded: the birds, a suitable dog, and the necessary skill on the part of the shooter. Occasionally we hear of a sportsman killing all the birds in a bevy, but we believe that such occurrences are exceedingly rare. The nature of the ground frequented by quail and the instinct of the birds are such that generally, when flushed in the open, they have close at hand an almost impenetrable swamp or thick wood where even the best dog will fail to find them all. We have shot in a thoroughly cleared up country where even the woods were free from underbrush, so that the birds in flying into them would pass through into another stubble field beyond. Under such conditions it is not impossible to exterminate a bevy, although the humane and

judicious sportsman would always leave a few birds for breeding purposes. A properly broken dog, and one with courage sufficient to face any cover, is a very important adjunct in quail shooting. And for this purpose we are inclined to the opinion that setters are better than pointers, particularly if the latter are very finely bred, for their thin, satin-like coats afford but little protection against briars and thorns, and although the dog's courage may carry him through, his lacerated sides and bleeding ears and tail, will, to a pitiful master at least, detract somewhat from the pleasure of his sport. Notwithstanding the amount of shooting done and the number of men who shoot, we do not believe that the quail will ever be exterminated by the gun. A few severe winters, however, or even one will work immense destruction, and it behooves all good sportsmen and game protective societies to make provision for the protection of such birds as may remain, and to restock. Quail can be purchased alive during the winter and spring in almost any quantity and at very low figures. North Carolina will furnish the bulk of the supply.

Of course we are writing of the *Oryz virginianus*, the bird commonly accepted in this country as a quail, although called a partridge at the South. Certainly the habits of the European quail, as well as its size, are so different from those of our bird as to raise a doubt in the minds of those who have seen and examined both as to whether they are entitled to a common name. At the present time the first named variety is making his autumnal migration across the Mediterranean from the southern shores of Europe to the North of Africa, where those who are not killed *en route* will go into winter quarters. In the spring they start North again and scatter themselves all over Europe reaching as far as Norway and Sweden. Their southern limit must be somewhere near the Equator, and their habitat extends also over Asia, as they are captured alive in large quantities near Canton. The European quail is essentially migratory, and that our bird is so also under certain conditions is generally conceded. Last spring we procured sixty birds from North Carolina and turned them out on a fine farm on the South Side of Long Island. It was rather late and the birds all had their skulls nearly bare from contact with the box during transportation, yet we never found but one dead, and they appeared to pair almost immediately. They were not much more than two-thirds the size of the birds in a bevy which had been on the farm since the previous season. During the summer and early fall we could at any time find half a dozen broods, but when the "first" arrived but one bevy of half-grown birds could be found. Miles away, however, in the woods, we flushed birds that we believe were bred on the farm.

From observations made in this connection we are inclined to believe that not only do our quails migrate, at least for certain distances, but that where a certain territory becomes overstocked they scatter to other localities, and from the fact of so few of our North Carolina birds having been seen since pairing it would not surprise us if a portion of them had returned to their native State.

We find an interesting article on the quail of Europe in *Land and Water*, although the writer is in error in saying that the Virginia quail or partridge is not found in our Northern States. Whether the migratory species could be acclimated here is a question, but one well worth the experiment. Both varieties are extremely pugnacious, the small variety being used for "pit" purposes in many parts of the world. Quail fighting was a favorite sport of the Athenians, and also of the old Romans. What myriads of quails there must have been in those days! Even now when they gather for the annual migration North and South immense numbers of them drop exhausted on Malta, Sicily and the islands of the Grecian Archipelago, where their coming is looked for as a welcome harvest by the inhabitants. Many sportsmen go from England for the Mediterranean quail shooting, and the inhabitants trap, net and decoy them in numbers. At Alexandria they are sometimes so abundant in the autumn that the people have a surfeit of them, and it is said that in olden times crews of vessels complained to their consuls of being fed on quails after the manner of Edinburgh apprentices and the salmon. Quail shooting in England has, however, become of late years almost a thing of the past, owing probably to the relentless pursuit of them, which is kept up before they reach that latitude. In 1833 they were so plentiful along the banks of the Thames that people came from great distances for the purpose of shooting them. Small bevs are occasionally met with now, but not in quantities sufficient to make shooting them an object. They are not as difficult to kill as our quail, although so much smaller, as their flight is so much slower and they generally go straightaway. We have heard of several projects for their introduction into this country. They would doubtless be a valuable bird and in their migrations would not only find every variety of climate, but this very peculiarity would prevent their extermination by either gun or cold.

The varieties of quail found in California differ quite as much in plumage from those found east of the Rocky Mountains as the latter do from the little fellow of Europe. In many other points they are dissimilar. For instance, the California quail roosts at night in a tree. We have often watched them at night flying one at a time into the almost impenetrable cover of the live oak trees which are scattered about almost everywhere, and have often flushed them from the tree and shot them before it became too dark to shoot. Col. Schofield of the U. S. A., in his last visit from Texas, mentioned to us the interesting fact that while he was stationed at Fort Stockton (we believe) he had frequently met a bevy of California and Virginia quail alter-

nately and but a short distance apart. That our quail would do well on the Pacific slope seems beyond a doubt; the absence of severe cold, the abundant grain fields and cover would all be favorable, particularly in the San Joaquin and Sacramento valleys where water would also be sufficient. How the quail subsists during the severe droughts to which the southern counties of California are subject has always appeared a mystery. Either they must have camel-like provisions or powers of long abstinence, or else they must travel immense distances. May the bright, cheerful little fellows, whether Californian or Virginian, be long spared to us.

SCIENTIFIC RESEARCH IN ENGLAND AND AMERICA.

THEY manage these things better in England. While scientific research in this country is, with a few notable exceptions, carried on wholly by private individuals, and the expenses attending it are borne by private purses, the educated classes in the northern country, who are far more keenly alive to the importance of the discoveries which are being made in science than we are here, step nobly to the front to lend their aid. In England this class, not only by means of subscriptions and donations bears a large part of the entailed expense, but the individuals of the class generously devote time and trouble to the assisting in the labors of the investigations.

Our attention was called to this fact in looking over a recent volume of the Reports of the British Association for the Advancement of Science. This is a heavy octavo volume, consisting of over 750 closely printed pages, and containing between its covers more or less new information in every department of science. A large part of the volume is taken up by reports of committees of learned men, appointed at the last meeting, or at some previous meeting, to investigate certain subjects and to report when the body next assembled through some member of the committee the result of their researches. The ground covered by these committees is very extensive, and includes among other subjects, Biology, Geology, Chemistry, and Physics. For example, we have in the volume in hand a Report on the Exploration of Kent's Cavern, another on Earthquakes in Scotland, one on Tides, another on the Progress of Chemistry, and so on through more than thirty reports, occupying 350 pages of the volume. Among the names on the committees we see those of the best known and most well informed English readers of scientific thought—Huxley, Sir Wm. Thomson, Sir John Lubbock, James Thomson, Woodward, Boyd Dawkins, and a host of others.

It is evident that as the men best fitted for the labors in the different departments of science are appointed on these committees, the work which is assigned them will be done in the best possible manner, and that by appointing such bodies and indicating the direction which their investigations shall take, work is sure to be taken in hand which might otherwise be neglected for an infinite period of time.

In this country, on the other hand, it is an unusual thing to hear of any great subject being investigated by a body of scientific men. The surveys of some of the older States are almost the only instances that can be mentioned where such a course has been pursued. The researches of the U. S. Fish Commission were, it is true, conducted somewhat after the English method; but here the subject was one so vast that no zoologist could hope alone to deal with it successfully. It may be said that the manner in which our explorations in the west are being carried is an approach to the method we advocate, and this is true; but it is only a step in the right direction. For the territory to be covered is so extensive that after all, unless the labor extends over years, each worker has far more to do than he can successfully accomplish, and the work must necessarily be more or less superficial in its character. What we must hope for is that in the investigation of subjects of magnitude this method should become the rule in this country and not the exception, as it now is; and the results in England show us with how much profit we may follow in the path that they have indicated.

How vast is the field in this country for just such work as these English committees are undertaking, and how well would the labor expended be repaid by the constant accessions to a knowledge of America at large, which would inevitably follow in a short time the researches which might be made! It is needless to attempt to give in detail the subjects which might and ought to be investigated. Biology in all its branches, Geology, all the Natural Sciences, stand waiting to yield to the student richer treasures of knowledge than they have ever yet revealed. How much more intelligently and successfully could the labors in any subject be carried on if undertaken by a number of trained men, each competent to do some part of the work with the utmost thoroughness, the entire results being finally combined to make one exhaustive treatise?

AN ICE VELOCIPED.—And now they have invented an ice velocipede. The Messrs. Arnao, of Brooklyn, have taken out a patent through the Scientific American Agency. The drive-wheel, instead of being smooth-shod, as in the road machine, is armed with iron points, and is arranged on a shaft that is journaled on two longitudinal springs, and fitted into a frame that rests on runners. The wheel can be lifted from the ground at any time, and the runners are enabled to pass over small obstructions on the ice.

—We print this week the first of a series of extracts from the recent address of Mr. Alfred Russell Wallace, delivered before the Biological Section of the British Association for the Advancement of Science. Few English biologists are more generally and favorably known than Mr. Wallace, whose investigations have included the life of many and widely separated lands. His publications on the fauna of the Maylayan Archipelago have been as extensively circulated on both sides of the water, and are perhaps as well known as anything that he has written. He was a co-worker with Darwin in promulgating the theory of Natural Selection, and in setting forth the evidence on which, to a great extent, that theory now rests; and among the earliest papers devoted exclusively to this subject were two read at the same time by these authors in 1858. Referring to the one by Mr. Wallace, Darwin says: "In this paper the theory of Natural Selection is promulgated with admirable force and clearness." All through his work on the "Origin of Species" the author refers to Mr. Wallace in the highest possible terms.

The address from which we quote was delivered at Glasgow during the past summer. It is somewhat extended, but deals with a class of facts of the utmost interest to all intelligent readers, while at the same time the language of the speaker is so little technical that it can readily be comprehended by all. The address is full of deep thought, and is very suggestive; and it is to be hoped that not a few of the hints with which it abounds will be taken advantage of by some of our American students, who, as a class, pay too much attention to the physical, and too little regard to the philosophical aspect of zoological science.

THE TIDE TOWARD FLORIDA is already setting strongly, and had it not been for the prevalence of yellow fever on the Georgia coast, the movement would doubtless be much greater than it is. Within the past two weeks personal applications at the office of FOREST AND STREAM for information about Florida have averaged three a day; not confined to sportsmen and tourists, but a considerable majority from intending settlers. Several were masons and carpenters. This argues well for the permanent future of Florida. We have not seen as strong indications since the war closed. Possibly, too, the number of sportsmen intending to go to Florida for the whole, or a part of the winter, is larger than last year. The drift seems decidedly toward the Gulf Coast. The despondent wail from disappointed landlords last year that "Florida was played out" does not therefore hold as testimony. We notice that active preparations are in progress at the leading watering places for the reception of visitors.

—The November number of *Scribner's Monthly* contains an article on "College Expenses," by Charles F. Thwing, who has collected the statistics of 24 principals colleges as to room rent, weekly board, charges for tuition and the total annual expenses of students, with the amount of aid at the service of indigent students. The Western students report their total expense usually at \$300 to \$350; those at the East spend close upon \$500, except in Amherst, where the amount is \$700, and at Yale, Harvard and Columbia, where \$1,000 is the reported amount. The Vassar girl reports \$600 average expenditure; city colleges report greater expenditures than those in the country, and it is added that "expenses at Oxford and Cambridge do not essentially differ from expenses at Harvard and Yale."

—Col. Albert Wagstaff, Jr., one of the Vice Presidents of the New York State Sportsmen's Association, and on the Committee on Game Laws, has been elected to the State Senate from this city. Now that we have a working member in that body there is almost a certainty that at the next session of the Legislature we shall have our game laws so amended and revised as to give general satisfaction. If a conference could be held the result of which would be some united action on the part of the States of New York, New Jersey and Pennsylvania looking to a system of uniform close seasons, the prospects for game protection would indeed be bright.

CENTENNIAL STEALING.—There may be more truth than poetry, after all, in at least one allegation of the Du Sommerard letter. Certain it is that Messrs. Conroy, Bissett & Malleson, the well known dealers in fishing goods, have been most shamefully robbed in Philadelphia. Their exhibit in the Agricultural Building has been "cleaned out" of valuable reels, split bamboo rods, and fishing implements generally. We trust that not only may the Centennial Commission be forced to pay for these goods, but that the thief, probably an employee, may yet suffer for his crime.

LOOK OUT FOR HIM.—A correspondent writes us from Portland, Maine, that one "Crowley," an agent who had been taking subscriptions for "Birds of North America," and subsequently took the numbers of the first volume for the purpose of having them bound for the subscribers, has "skipped away" with the books. As the publishers repudiate his acts, it looks as though the books were lost, and we would caution such others of our readers who may be called upon to surrender their loose numbers, to exercise caution in doing so.

—The St. Augustine (Fla.) *Press* says that out of 113 sheep crossed over to the South Beach by Mr. Bernard Masters a short time ago, there can now only be found 29 remaining, the balance having been devoured by bears, which infest that locality.

OUR FLORIDA LETTERS.—The letters of "Major Sarasota" which we are now publishing are rather long, and perhaps for that reason present a rather discouraging aspect to the hurried reader; but they will nevertheless bear careful examination, as they contain many facts regarding the west coast of Florida which are of especial interest to naturalists, sportsmen, and navigators. The choice kernels are well worth picking out.

CAT SHOWS.—The Cat Show which was recently held at the Crystal Palace at Sydenham, England, is spoken of as having been very successful. *Land and Water* says that "the points of merit in cats are now as eagerly discussed as are those of horses, cattle, or dogs; and at the late show we were highly amused at the warm discussions which we heard as to the relative perfections of different animals shown."

—Col. F. G. Skinner, for several years Field Editor of the *Turf, Field and Farm*, has become attached to the *Rod and Gun*.

Reported Exclusively for Forest and Stream.

SPECIES AND GENERA.—"There is a difficulty, my pupils," argued the learned Professor, twirling his gold-rimmed spectacles, "in properly determining species; that is, in assigning each to the proper class or genus to which it belongs. You are doubtless aware of this. Indeed, I need not tell you that mistakes—great mistakes, my friends, have been made by scientists of all kinds, and the Naturalists are not exempt by any means. There was Humboldt, for instance. When he accidentally exhumed some ancient hatchets near the equator, he falsely assumed to have discovered the axes of the earth. Hall, in his memorable Arctic explorations, fancied that he had discovered the veritable pole, whereas it was merely traces of *Kane* that he saw. In like manner many savans in Natural History have asserted that certain animals were omnivorous when they were strictly granivorous—grass-eaters. Other creatures, presumed to be herbivorous, were in reality almost wholly meat-eaters, or carnivorous. Take for instance the genus *Culex*, that familiar creature denominated the *musk etor*: every one knows that he never eats musk. On the contrary, he revels in blood, he is carnivorous. Blood is his principal food, his natural diet, so to speak—his"—Just then the tibia of a pterodactyl fell down upon his occiput from the shelf above, and the school was incontinently dismissed.—*From Prof. Pericord's "Spasms of Wisdom."*

Rifle.

CREEDMOOR.—Two matches were shot at Creedmoor on Saturday, and a large number of marksmen of both long and short range celebrity turned out on the occasion. The first match was for the \$250 gold prize offered by the Sharp's Rifle Company, to be shot for at 800, 900 and 1,000 yards, 15 shots at each distance. The conditions of this match, however, demand that the winner shall lead each competitor at all the ranges, a combination which is of such rare occurrence that the match is likely to be on the tapis for some time to come. The scores completed were as follows:—

Names.	800 Yards.	900 Yards.	1000 Yards.	Total.
H. S. Jewell.....	67	67	63	202
C. E. Blydenburgh.....	67	68	66	201
I. L. Allen.....	70	70	60	200
John Smith.....	72	69	59	200
H. A. Gildersleeve.....	65	68	64	197
William Hayes.....	71	55	67	193
E. H. Sanford.....	70	66	56	192
H. Fisher.....	62	69	52	183
E. L. Morse.....	64	59	61	184
J. R. Waters.....	50	63	59	172
E. H. Madison.....	60	54	54	168

The second match was the twelfth competition for the *Turf, Field and Farm* badge, the conditions of which were 10 shots each at 200 yards off-hand. The winner was Mr. Wm. Hayes, who was also the winner on the last occasion. The scores were as follows:—

Names.	Total.	Names.	Total.
William Hayes.....	42	G. L. Morse.....	38
D. F. Davids.....	42	H. Fisher.....	37
J. L. Price.....	42	H. W. Gourley.....	37
N. D. Ward.....	41	A. T. Decker.....	36
F. H. Holton.....	40	H. S. Jewell.....	36
S. G. Perry.....	40	W. H. Cochrane, Jr.....	35
C. F. Robbins.....	40	D. Channcey, Jr.....	35
H. Funke, Jr.....	40	H. A. Gildersleeve.....	34
W. H. Murphy.....	39	J. L. Killinger.....	32
J. L. Farley.....	39	G. F. Merchant.....	32
C. H. Eagle.....	39	George Waterman.....	28
J. W. Todd.....	38	J. B. Holland.....	26

Thanksgiving Day, the 30th inst., will be the wind up of the rifle season at Creedmoor. The programme of the N. R. A. up to that date includes the following events. Thursday, November 30th, Thanksgiving Day, at 2 p. m., Washington Grey Cavalry Club, third annual troop match; distances, 100, 200 and 300 yards. Saturday, 18th, fifth competition for the Schuyler Hartley and Graham trophy at 3 p. m.; distance, 200 yards, position standing, any rifle; competitors to fire as many shots as possible in half a minute. At 3:30 p. m., on the same day, the Winchester "running deer" match will be contested, and on the same day the "Diamond" badge will be shot for by the members of the Seventh Regiment Rifle Club, at 200 and 500 yards' distance. November 25th, marksman's badge; open to all comers, distances 200 and 500 yards.

AMATEUR RIFLE CLUB.—The N. R. A. having presented a bronze match medal to all affiliating clubs the Amateur Rifle Club at their last meeting adopted the following resolution:—

Resolved, That the competition for the bronze medal of the National Rifle Association take place at Creedmoor, Long Island, on Saturday, November 25th, at half past one p. m. Conditions—Open only to members of the Amateur Rifle Club; distance, 1,000 yards; rounds, 20; rifle, only within the rules; position any without artificial rest; entrance fee, \$1. The prize to become the personal property of the winner in this competition.

CONLIN'S GALLERY.—The fifth competition for the Marksmen's badges took place last Tuesday evening, November 7th, at Conlin's shooting gallery. The following are the names of the winners, with their scores, for the contest, 10 shots each:—

Name.	Total.	Name.	Total.
Charles A. Cheever.....	45	L. V. Sone.....	43
H. D. Blydenburgh.....	44	J. B. Blydenburgh.....	41
T. C. Banks.....	44	Leon Backer.....	40
M. P. Lennon.....	44	C. E. De Forest.....	40

The next competition for the badges will take place Tuesday, November 14th. Prizes were offered for the highest score made on each of the side galleries. On the "60 foot" range the conditions were 10 shots, lying down position, 500 yards, Wimbledon target reduced for the distance. The following were the best scores made on the range: C. E. De Forest, 49; B. S. Brown, 48; G. P. Work, 47. On the "75 foot" gallery the conditions were: rifles .22 calibre, off-hand, 200 yards, Wimbledon target reduced for the distance. The scores made are as follows: L. V. Sone, 48; J. B. Blydenburgh, 47; C. G. Zettler, 45.

The side matches proved very interesting, and they will be continued every "match" night.

Three teams, composed of gentlemen connected with Arnold, Constable & Co., and representing their respective floors, met and shot a match for the championship between them at the gallery last Saturday evening, November 11th. Each team consisted of six men, 10 shots apiece, rifle .22 calibre; off-hand; distance, 110 feet; Creedmoor target, reduced for the distance; Creedmoor rules to govern. The following are the names and totals of the teams:—

Name.	Total.	Name.	Total.
Brown.....	39	La Forge.....	27
Marshall.....	31	Edmunds.....	24
Fitzgerald.....	30		
March.....	30	Total.....	181

Name.	Total.	Name.	Total.
Bryant.....	36	Hall.....	23
Long.....	35	Jewitson.....	20
Magnie.....	31		
Bishop.....	30	Total.....	175

Name.	Total.	Name.	Total.
Banks.....	37	Carsery.....	26
Oates.....	35	Gantley.....	16
Nicholson.....	31		
Winters.....	21	Total.....	164

Mr. Gantley of the last team being absent another gentleman took his place, which may account for its being last.

MAINE.—Two rifle matches were shot at the Lane's Island range, Vinalhaven, Maine, on Saturday, 28th ult. The first match was, A. B. Vinal, M. G. Ayer, T. H. Ayer and Ivory Littlefield, against W. F. Pierce, W. V. Lane, E. Q. Carver and James S. Hall, at 200 yards off-hand, 10 shots each. The result was a tie; each scoring 151. They then agreed to shoot another round, which resulted in a tie—15 for each side. The best shot on each side was then chosen and their first shot was a tie, each one making 4. At the next shot, however, Ayer made a bull's eye and Hall made but 4, so the Vinal team were declared the winners. The best score (41 out of a possible 50) was made by Ayer and Hall. The average was 37 3/4.

The next match was an amateur team, C. H. Healy, Edward Carlin and B. T. Graffam, against O. Lyons, E. R. Roberts and Geo. Roberts. The score stood 91 to 59 in favor of the Lyons team. The best score (34) was made by Lyons. The average was 26 4/5.

RHODE ISLAND.—A rifle match was shot at Newport on the 13th inst., the prize being an elegant Maynard rifle. The conditions were five shots each at 200 yards off-hand, each competitor being allowed as many chances as he choose to pay for. The scores were as follows:—

Name.	Total.	Name.	Total.
Harry Bull, Jr.....	23	Edward Brightman.....	14
Harry Bull, Jr.....	21	William R. Landers.....	13
E. H. Totten.....	20	William G. Stevens.....	12
E. H. Totten.....	21	Henry Bryers.....	7
George S. Slocum.....	11		

ILLINOIS.—A shooting tournament closed on the 4th inst., at Fuller's Shooting Gallery, Chicago, "for cash prizes" on Creedmoor target, reduced to 60 feet range. The first was won by the remarkable score of forty-eight (48) out of a possible fifty (50); the second by the average of five scores, forty-six (46); the third by the general average of all scores forty-two. The following are the scores as they were made: First prize, E. T. McFarland, score, 5 5 4 4 5 5 5 5—48. H. G. Purington, score, 5 5 5 5 4 5 5 4—48. General average of five scores. H. G. Purington, 46; E. P. Hall, 46; Col. J. A. Shaffer, 46; E. T. McFarland, 45 1/2; G. Beuteurneuller, 44 1/2; J. B. Knight, 44; M. Grau, 42; C. P. Johnson, 42.

RIFLE ASSOCIATION OF MANITOBA.—The Canadian Province of Manitoba has a Rifle Association of between 200 and 300 members. We learn from Hamilton's interesting book, entitled "The Prairie Province," published by Bedford Bros., Toronto, that this Association was formed in 1872, the President being Major A. Irvine, of the Dominion forces in Manitoba. The position is held for the year 1876, by H. A. G. B. Bannatyne, M. P. The ranges of the Association are at St. Boniface, on the east side of the Red River, about one mile from Winnipeg. The annual matches are well attended, and are conducted after the manner of a miniature Wimbledon. The scores of the competitors show that Manitoba is worthy of a representation in the annual team sent by the Dominion to Wimbledon. At the matches for 1875, the amount given in prizes was \$1,075, of which \$400 were contributed by the Dominion government. Under a plan contrived by Capt. M. Brokovski, executive officer for the past three years, marksmen are enabled to shoot after the most recent rules and shape of bullseye adopted at Wimbledon, on the old iron-section target. The Association is now represented

in the Dominion Rifle Association by five Manitoba members, including three members of Parliament, the Mayor of Winnipeg, and the Collector of Customs.

A MARKSWOMAN.—Mrs. Frank G. Edwards, of San Francisco, can claim the honor of being the first lady in the United States who has ever fired a shot from a rifle at a one-thousand-yard target. For some time this lady had been practicing with a Winchester rifle at the two-hundred-yard target, and became an excellent shot. On the 10th inst. she was induced to fire a shot at the Bay View range, at the one thousand-yard target, with a Creedmoor rifle. She fired a *la* Creedmoor, struck the target and made an eighty-per-centum shot. The California Rifle Association for this shot voted the lady the gold medal of the Association.

Game Bag and Gun.

GAME NOW IN SEASON.

Moose, *Alces melchis*. Pinnated grouse or prairie chicken, *Cupidoni's cupido*. Caribou, *Tarandus rangifer*. Ruffed grouse or pheasant, *Bonasa umbellus*. Elk or wapiti, *Cervus canadensis*. Red or Virginia deer, *C. virginianus*. Squirrels, red, black and gray. Quail or partridge, *Ortyx virginianus*. Hares, brown and gray. Wild turkey, *Meleagris gallop*. Woodcock, *Philohela minor*.

"Bay-birds" generally, including various species of plover, sand-pipers, snipe, curlews, oyster-catchers, surf-birds, phalaropes, avocets, etc., coming under the group *Limicola* or Shore Birds.

—Woodcock are frequently flushed or shot within the city limits. Last week Messrs. John Avery and George S. Green, Jr., put up half a dozen fine birds from the cat-briar thicket on Tibbett's Brook. Two years ago Mr. Avery got a dozen from the same cover. These woodcock are flight birds. Tibbett's Brook empties into Spuyten Duyvel Creek.

—Ducks and geese are flying, and Currituck and other coast shooting grounds are filling up with gunners. The Old Dominion steamship route is the favorite for parties bound to the capes of Virginia and sounds of North Carolina.

—Four huntsmen in Grant county, Ky., killed in two days 113 partridges, 56 rabbits, 18 squirrels, 4 pheasants and 3 woodcocks.

OIL FOR GUNS.—Messrs. Holberton & Beamer report that "Eaton's Rust Preventor," for which they are agents, is gaining in popularity. The latest indorser is Mr. S. T. Holmes, of Bay City, Mich., who reports most favorably of it.

MAINE—Portland, November 13th.—Snipe have been more plenty than for several years. Ruffed grouse and woodcock not as much so as usual. A few squirrels about.

MASSACHUSETTS—Salem, November 13th.—The past week having been a wet and rainy one, has put sporting matters behind.

NEW YORK—Oswego, Nov. 10th.—I killed 45 duck, red-head, brant and blue-bills in two days' time, at Nelson Gilberts, Sandy Creek, Jefferson county, two weeks ago, and might have doubled that number the second afternoon if cartridges had not given out. I had to take up decoys at noon while the ducks were driving in anxious to light.

NEW JERSEY—Kinsey's Ashley House, Barnegat Inlet, Nov. 12th.—Wild fowl of all description plenty. Your correspondent killed 18 brant, 4 ducks, Saturday.

PENNSYLVANIA—Uniontown, Nov 8th.—Better quail and grouse shooting cannot be found in America than in this southwestern section of Pennsylvania. I have averaged 40 or 50 quail a day for the last week. There are several good dogs here and excellent guides. Good hotel accommodations at Frey's "McClelland House."

VIRGINIA—Norfolk, Nov. 11th.—Weather clear and cold; good many ducks coming in from Princess Anne and Currituck, but not many canvas-backs. Great many geese passed over the city last night. The Old Dominion and Boston steamers have brought quite a number of parties down bound for Currituck this week.

MICHIGAN—Ann Arbor, Nov. 13th.—Weather very warm; ducks scarce; quail and woodcock shooting good; partridge shooting fair. The plover have all gone south. Squirrels and rabbits abundant. A few geese flying north.

PIGEON MATCHES.

NEW YORK.—The regular monthly shoot of the Fountain Gun Club of Brooklyn for club badge was held at Brown's, Wednesday, November 8th, 1876. Conditions—Seven birds each, 21 yards rise. The following is the score:—

Name.	Total.	Name.	Total.
Crook.....	5	Miller.....	3
McLaughlin.....	5	Race.....	3
Goodwin.....	5	Cleaver.....	3
White.....	4	Kearney.....	2
Slane.....	4	McGinn.....	1
"Josephs".....	4		

Ties—Crook, 3; Goodwin, 1; McLaughlin, 2.

MARYLAND.—A pigeon shooting match for the champion badge of Maryland took place on the 9th inst, under the auspices of the Baltimore Gun Club. There were seven entries, best score out of 20 birds, at 26 and 31 yards, to win. The participants were as follows: Thos. Todd, John Todd, Dr. T. Clay Maddox, Henry Engle, B. F. Kenly, H. Gunther and T. Crisp. When John Todd and Dr. Maddox had fired at 20 birds they stood even, 16 to 16. Dr. Maddox then shot at two birds, hitting both but failing to kill either. John Todd then shot at his two birds, killing both, and continued, killing two more, winning the badge and killing 20 birds out of 24, Dr. Maddox's score remain-

ng as it was before the last two shots. The other scores were as follows, each shooting at 20 birds; Thomas Todd, 3; Henry Engle, 15; B. F. Kenly, 13; H. Gunther, 14; T. Crisp, 15. Considerable money changed hands on the result, as the contestants were closely matched. The shooting attracted a good attendance of sporting men. The badge was awarded on this occasion for the first time.

NEVADA.—There was some excellent shooting done November 5th between the Shooting Club team, composed of Diamond, Gibson and Daly, and Gill, Cocking and Howard, or \$150 a side, at twenty birds, twenty-one yards rise, club rules to govern. Col. F. F. Osbiston acted as referee and Harry Stephens and Ernest Harris as judged. The scores were as follows:—

VIRGINIA SHOOTING CLUB TEAM.		
Name.	Score.	Total.
Daly.....	111111111111111111	20
Diamond.....	111011111111111111	17
Gibson.....	011111111111111111	17
Total.....		54

VIRGINIA TEAM.		
Name.	Score.	Total.
Gill.....	111111111111111110	19
Howard.....	111100111111111111	17
Cocking.....	111111110011111110	16
Total.....		52

The club has decided to have a match at California quail instead of pigeons before the next breeding season, the object being to stock the country with the escaping birds.

GAME IN SONOMA AND ADJOINING COUNTIES.—The Russian River *Flay* says: "For the benefit of our readers abroad, from whom we occasionally receive inquiries as to the amount and kind of game in this region, we here state that there are found in this portion of the State, in more or less abundance, deer, bear, panthers, wildcats, foxes, rabbits, hares, quail, grouse, and ducks of all varieties. Of fur-bearing animals, there are beavers, pine martins, minks, coons and gray squirrels. Salmon, salmon trout and mountain trout are abundant in our rivers and small streams at the proper season. Sylvester Scott, who lives about twenty-five miles from Healdsburg, toward the coast, hunts bears principally, and has killed about twenty-three in the past two years. He has also killed many deer. But game is shy, and getting scarce in this county, because of the encroachment of settlements and being now so much hunted.

THE "FOX PATENT" GUN.

EDITOR OF FOREST AND STREAM:—

Observing by the advertisement which appeared in your columns some time since, that "The American Arms Company" were finally prepared to offer to the public the "Fox Gun," I have watched with some little interest to see what exception it met with from our sportsmen, among whom we number so many careful and scientific experiments. Had a new gun appeared in England, we should have seen, ere this, some dozen or more communications in the leading sporting journals, commendatory or otherwise, as the judgments of the writers might dictate. But here is a gun differing essentially from anything offered before—a really good one, too—deserving the attention of all sportsmen, and to my surprise, except a few casual notices in your paper and some of your contemporaries, we have scarcely any discussion of its merits or faults. Doubtless, like most things, it has both, and surely there can be no subject more legitimate for the columns of any paper devoted to field sports, and none more likely to interest its readers, than the well considered opinions of intelligent and disinterested sportsmen, on the qualities desirable and otherwise, of any new gun. Possibly most are deterred from any public expression of opinion by the spectre of suspicion which associates everything like commendation with a "share in the venture," and too often with good grounds. Now, as I have no pecuniary interest of any kind, name or nature in the "Fox Gun," I wish to record my judgment in its favor, and advise all my brother sportsmen who intend purchasing, to give it at least a thorough examination. They will find a simple and strong action, fitting equal to the best, every part being nicely let-in, an elegant appearance, and last but not least in these impecunious times, a very low price. The shooting qualities of those I have tried were first-class. Several of my friends—pretty constant and hard shooters—have had them in rough use now for some time, and like them exceedingly, finding they stand the wear and tear well. I believe in encouraging home productions when they deserve it. Our Schaefer's and Mulin's, our Parker's and Abbey's, turn out guns not a whit behind the best foreign make, and I feel very safe in the prediction that the "Fox Gun," when as well known as it deserves, will be in the first rank of American arms. If one does not fancy the action, that is merely a matter of taste. I can only say that, after using one two days in the field, I noticed no perceptible difference between its manipulation and that of my old favorite top levers. It is now before the public, and presumably, if it has weak points or serious faults in construction, its proprietors will feel under obligations to those sharp eyed-critics who shall point them out. For myself, failing to find any such objections, I cordially commend it. I am naturally conservative, and whether justly or not, have the reputation of being the last man in Massachusetts to abandon muzzle-loaders. I don't fancy new-fangled notions, but honestly do like the "Fox Gun."

UNDER GRIP.

CURIOUS FATALITY.—J. R. Jones, of this city, while duck shooting on the Calumet river on Saturday, was drowned. The recoil of his gun capped him out of his boat, when his dog got entangled with him and kept him under water, drowning him before he could be extricated. He was twenty-seven years of age and a married man.—*Chicago Field.*

HUNTING IN THE MAGNETEWAN COUNTY.

GOLDENS BRIDGE, N. Y., Nov. 8th, 1876.

EDITOR FOREST AND STREAM:—

We have returned from the Magnetewan not very rejoicing. The weather was dreadful. When we got to Pratt's Hotel, Lake Rosseau, we found that it had rained there for three weeks already. The roads were something awful. I have roughed it a good deal five years ago in

California and Mexico, but such traveling I have never seen yet and hope never to see again. The corduroy roads were covered with mud, sometimes eight inches deep, and to go from Captain Burke's to the Magnetewan, a distance of 17 miles, it took us from 7 a. m. to 4 p. m., nine hours. In August and September, when everything is dry, it must be quite nice, but I have seen much prettier places out West, places by far better adapted for hunting. Since last year a good many settlers have moved into that section around Magnetewan and Lake Shersheep and that has driven the deer away. We killed two deer and one wolf, besides a good many partridges. Our guide, George Ross, whom, by the way, I recommend to every one, he being the very best guide I have yet met in my hunting travels, told us that the only good place near our camp was the eighteen miles post between Magnetewan and Lake Nipissing. That was, on account of the terrible roads, too far for us to go, so we concluded to leave.

The nearest place for moose and caribou up there is, as George Ross and Seymour Commanda, a half-breed guide, told me, about forty or fifty miles northeast of the Magnetewan, the moose having been driven away by settlers from Lake Nipissing. On our return, as well as our start, we stopped several days with Pratt, and he is the jolliest fellow I have ever found this side of the Atlantic. We had the 5th of October four inches of snow, and everything in and around camp was frozen. The wolf, an old she wolf, I killed one morning at 9 a. m., about 100 paces from our camp on the road to Magnetewan, finding her tramping along very quietly. We returned tired out and satisfied that we would never settle up there.

H. STRUYE.

The Kennel.

LOU'S LITTER.—We are indebted to our friend Mr. Evers, of the *Turf, Field and Farm*, for the kindly notice in last week's issue of our valued contemporary of Lou's litter of dog puppies. The casual reader, however, would infer therefrom—through an error on the part of the compositor probably—that the entire litter had been sold to Mr. Harry Babcock of San Francisco, whereas it should have read that Monarch, the sire of the puppies, had been sold to Mr. Babcock. This valuable litter has been widely distributed, one dog going to the Squire, one to Mr. A. S. Phillips of Trenton, N. J., one to Mr. F. Rockefeller of Cleveland, Ohio, one to Mr. H. N. Munn, and one remains the property of Mr. Tileston, the breeder.

NORAH.

WE give an illustration this week of Mr. Andrew F. Copeland's imported Gordon setter bitch Norah, drawn by Mr. Alexander Pope, Jr., of Boston. Norah's reputation as one of the finest specimens of the Gordon breed ever imported extends throughout the United States. She was sired by Rev. T. Pearce's champion Kent, out of champion Duchess, by Sir Robert Carnac's Ned, out of Mr. Brailsford's Stella, by Lord Chesterfield's Regent, the last named a pure black and tan Gordon setter brought direct from Scotland from the kennels of the Duke of Gordon, who founded the breed. Norah has probably won more prizes at bench shows than any dog in this country. Her English winnings include "first" at Chester (twice) Birkenhead, Hanley and Drayton, together with the champion cup at Birmingham in 1870; "second" at Birkenhead in three successive years, Altringham, Bury, Glasgow, and Manchester; highly commended at Liverpool, Glasgow and Landback. Norah took first prize at the great Chicago show, scoring 97 points, the highest in the show. She is also the dam of many noted winners across the water.

A MAGNIFICENT DOG.—We have just had the pleasure of inspecting a magnificent pointer dog, shipped to Dr. W. S. Webb, for the Westminster Breeding Kennel by G. DeForest Grant, of this city. The dog arrived on Saturday last per steamer Anglia of the Anchor Line, from London. Sensation, as the importation is called, is a lemon and white pointer weighing about 60 pounds, bred by J. D. Humphries, Esq., out of his Nell by Mr. Lloyd Price's champion Jim. Jim was by Mr. Whitehouse's champion Bench Show and Field Trial winner Hamlet, out of Mr. Price's Judy. This stock is the most celebrated in England, and the Westminster Kennel is fortunate in having procured, although at a heavy expense, such a splendid specimen. We unhesitatingly pronounce Sensation to be the finest pointer imported to this country, at least that we have seen, and we imagine that our verdict will be indorsed by the judges at next year's bench shows. His prize winners are as follows: 1st at Shifnal, '75; 1st at Swansea, '75; 1st

at Carmarthen, '76; 2d at Oswestry, '75; 2d at Birmingham, '75; 2d at Danely, '75; 2d at Newport, '76. We shall shortly publish a portrait and pedigree of Sensation. He will be used for stud purposes and will remain in New York for two or three weeks before being sent to the kennels at Springfield. Information regarding his fee, etc., can be had at this office.

—Mr. W. E. Hudson, of North Manchester, Conn., writes us that his imported red Irish bitch Stella visited Plunkett on the 9th inst. Dr. Goldsmith says Stella is a very fine slut. Mr. Wadsworth, of Benington, Vt., who has kept Plunket, says Stella is the finest slut Plunket has ever served.

KENNEL PRODUCE.—Mr. Wm. Jarvis, of Claremont, N. H., informs us that his imported red Irish setter bitch Kathleen has seven splendid, all red, whelps by the celebrated field and Bench Show prize winner dog Plunket, imported by Dr. Goldsmith.

DOG TRAITS.

PERCE, P. Q., Canada, October 23d.

EDITOR FOREST AND STREAM:—

An intimate friend of mine, who resided a few years in the old aristocratic city of Bath, (England,) had quite a variety of dogs, his wife being a great dog-fancier. They lived in very good style, keeping their carriage, livery, servants, etc., and among Mrs. F.'s pets were a fine Newfoundland sailor, and a spotted coach-dog—Carlo. The latter was very sagacious, and a most valuable animal, never leaving the yard when the horses were in a strange stable; and woe to the man who attempted to approach them, or meddle with the harness, etc., in the absence of the coachman.

On one occasion Mr. and Mrs. T. left home for a summer excursion, making Cheltenham the first halting place. They put up at the Plough, one of the most celebrated hotels in England, remaining a few days to enjoy the beauties of the Spa.

The day after their arrival, a ferocious bull dog attacked

poor Carlo and nearly killed him. The coachman dressed the dog's wounds, and did all he could to alleviate the poor brutes sufferings. The third day after the mishap Carlo was missing, and could no where be found; a reward was offered for his recovery; that failing, the conclusion was that he had concealed himself in some secluded place to die in peace—no uncommon occurrence with his species. Several days elapsed without tidings of Carlo, when, to the great astonishment of his master and mistress, he returned accompanied by his friend Sailor, whom he had brought from Bath to avenge his wrongs. The two sallied forth, found the bull dog and nearly killed him. The latter was owned by the butcher, who supplied the Plough with meat, hence the whole affair being satisfactorily explained.

The two celebrated Spa's are about forty miles apart, consequently Carlo can have lost no time on the road. How did he obtain food during his journey? How did he induce Sailor to accompany him, he who never traveled any distance. This to me is the wonderful part of the story. Dogs must evidently have a language of their own.

Carlo lived to a great age, and when too old to accompany his master and mistress in their daily drives, he would follow James, the coachman, when he saw him, whip in hand, take his place under the carriage, follow a short distance, give a bark and return home. When the carriage returned to the front door, Carlo never failed to meet it, barked and yelped a welcome, saw the horses safe to the stable, then betook himself to his kennel in the kitchen yard, where his mistress kept him as her watch-dog, and to insure his being well fed.

Now ye readers of FOREST AND STREAM, mark the sagacity of this poor brute: When the horses were at home they did not need his watchfulness. But the moment they went abroad he slept with, and never lost sight of them during their absence.

Carlo's mistress had three beautiful Blenheim spaniels—regular ladies pets—her constant companions in her walks and drives. But on Sunday, strange to say, they never offered to accompany her. When the carriage came to take her to church the dogs laid under the sofa, and could not be induced to go to the door. I have often tried to coax them, but in vain.

Mrs. T. always spent some part of the summer at the seaside, and on one occasion having selected Bramsgate, the late Duchess of Kent, and her daughter, the present Queen of England, were among the visitors, consequently they often met on the sands, when the beautiful spaniels were generally noticed and caressed by the young Princess.

One of these spaniels had a narrow escape on one occasion. Mr. T. had a cottage in the forest of Dean, Gloucestershire, where they generally spent the autumn. The forest of Dean is a coal district, and the dog probably, when hunting a rabbit, fell into a coal pit, which fortunately was not deep. The whole country was scoured for the lost dog, but to no purpose. The pit was not regularly worked, but on the fifth day, some men having descended, found the poor animal nearly dead. Yet knowing to whom he belonged, he was carefully removed, and finally brought to life, when he was restored to his delighted mistress, who rewarded the miners handsomely for their trouble.

PHILIP VIBERT.

Perce, October 23d, 1876.

BALTIMORE BENCH SHOW.

OFFICES OF MARYLAND POULTRY AND
FANCIERS' ASSOCIATION,
No. 1 GAY STREET, BALTIMORE, Md.

EDITOR FOREST AND STREAM:—

Having been appointed Superintendent of this show I write to inform you how matters stand in this Monumental City in regard to the success of the show? Here it is, if in any place of the United States, that is neutral ground, to hold a bench show, where all can rest assured of fair play. Let the West and Canada come with their blue bloods to compete against their Eastern brethren, as I can tell them it will be worth their while. The prizes will be valuable and useful; the highest prize offered will be something very grand. At the present time of writing I do not know the value of it, but it will be open to all comers, blue blood and native alike. J. Addison Smith, Esq., offers a very valuable double breech-loader for the best native English setter, dog or bitch. Mr. Smith's heart is in the whole undertaking; he is a thorough, whole-souled sportsman, and assisted by Mr. Smythington, Mr. N. Turnbull, Mr. L. R. Cassard, and several other genuine sportsmen, the show cannot help but be a success.

The prizes offered by the Society amount to nearly \$1,500 in cash. The specials already donated amount to \$1,000. Mr. Smith says they will get another \$1,000 yet. The Society have given me full control to manage the show, and here I will not be fettered with any Centennial Commissioners. The entries will close on the 20th of December. The date for holding the show has been fixed for the 2d, 3d, 4th and 5th of January, 1877.

The Association have adopted the "single-handed" judge system. The catalogue, stall and tag numbers here will all correspond, and every one making an entry will receive a certificate by return of mail, which must be carefully preserved, as no dog will be allowed to be taken out without clearly identifying him with the certificate.

Baltimore has added a new impetus to dog shows by its liberality, and for which it confidently expects the support of all breeders and fanciers. Will send you a list of special prizes as they are given; also a full list of prizes given by the Society, as soon as out.

CHAS. F. LINCOLN.

VALUABLE SPECIAL PRIZES.

J. Addison Smith Esq., of Baltimore, offers a splendid double-barrelled breech-loader for the best native English setter, dog or bitch, of any age.

Messrs. Trimble & Kleibacker offer a handsome English leather gun case, with cartridge tray, and will also add a silver plate with name of winner on, suitably engraved, to be given to the best pointer dog for stud purposes, to be shown with not less than two of his get.

J. J. Turner, Jr., Esq., of Baltimore, offers \$25 for the best pointer puppy, dog or bitch, under six months old.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

Black Bass, *Micropterus salmoides*; Weakfish, *Cynoscion regalis*.
M. *nigricans*. Bluefish, *Pomatomus saltatrix*.
Mascalonge, *Esox nubilus*. Spanish Mackerel, *Cybinus maculatus*.
Pike or Pickerel, *Esox lucius*.
Yellow Perch, *Perca flavescens*. Cero, *Cybinus regale*.
Sea Bass, *Scaenops ocellatus*. Bonito, *Sarda pelamys*.
Striped Bass, *Morone lineatus*. Kingfish, *Menticirrhus nebulosus*.
White Perch, *Morone americana*.

FISH IN MARKET.—Fish of all varieties are somewhat scarce in our markets at present, but at the same time the demand is light. We quote: Striped bass 18 to 25 cents per pound; smelts, 25 cents; bluefish, 12½ cents; salmon, (frozen) 40 cents; mackerel, 15 to 25 cents each; weakfish, 18 cents per pound; white perch, 15 cents; Spanish mackerel, 75 cents; green turtle, 15 cents; terrapin, \$15 per dozen; halibut, 18 cents per pound; frost fish (tom cods), 8 cents; haddock, 8 cents; codfish, 10 cents; blackfish, 15 cents; flounders, 10 cents; sea bass, 20 cents; eels, 18 cents; lobsters, 10 cents; sheephead, 20 cents; scallops, \$1.50 per gallon; soft clams, 30 to 60 cents per hundred; whitefish, 15 cents per pound; pickerel, 20 cents; salmon trout, 15 cents; hardshell crabs, \$3.50 per 100.

—The St. Lawrence *Advance*, published at Chatham, Province of New Brunswick, Canada, by D. G. Smith, Esq., devotes special attention to Fish Protection and the fisheries of the New Dominion. We find in its columns more information relating to these subjects than in all of the other Canadian papers together. Americans wishing to keep themselves familiar with these matters on the other side of the boundary will find it to their advantage to subscribe for and read the *Advance*. Next week we shall publish an abstract of pleas and decisions affecting salmon river leases in Canada prepared by Mr. Smith—Charles Robertson vs Steadman et al. Steadman claimed lease of Canadian Rivers by Government of Canada *ultra vires*, and he therefore had a right to fish in any river he chose, provided he did not trespass on any man's land. Case decided in favor of lessee.

—The close season for salmon expired in California on the 1st November, a month or more after the Eastern close season begins. Grilse, or young salmon, are already plentiful in San Francisco Bay, averaging about three-fourths of a pound in weight. They are taken with fish cut up for bait. The *Pacific Life* says these fish have been found in the bay during all this year, having been continually taken in the fishermen's nets and on the smelt lines. We quote from the issue of the 4th instant:—

"The prospect for good salmon and grilse fishing is pretty good this season. From Pescadero and San Gregorio we learn that these noble denizens of the waters are coming in from the ocean; the mouths of San Gregorio, Butano and Pescadero creeks being now open to the sea. This is an event taking place rather early this year, but it happened

about the same time last season. The year before these the grilse did not bite much till January and February. It has been asserted that our Sacramento river salmon are inferior in flavor and texture to those of the Kennebec or Penobscot salmon in the East. This may possibly be so, but we doubt very much if any one has ever eaten better salmon than a Sacramento salmon, when in first-rate condition, especially the rather young ones. In the winter or early in the spring, they will be found not inferior to the Eastern salmon.

"It has been a most reprehensible custom, until within these two or three years past, to market them here at all seasons, and to eat them at all times. This has made them, not only very cheap but inferior; also, taken out of season has been much against their reputation. We all know how much superior their qualities are when in season. Besides, people become satiated with seeing and partaking of the same fish placed on their tables from day to day. This had the effect, perhaps, of making us suppose our salmon were inferior to the Eastern, which are only eaten for about two months in the year. The price of them was only five cents a pound. If it had been forty or fifty cents a pound no doubt they would have been more highly thought of.

—Salmon fishing is all the rage among the fair aristocrats of Great Britain this year. The Earl of March is an inveterate fisherman, but the Countess surpasses him in the art. Among the heavy fish which the river Spey has this season yielded to her ladyship's rod, is a salmon weighing 27 pounds, and grilse weighing from five pounds to nine pounds. Lady Florence Gordon Lennox has followed suit with a salmon of 14½ pounds and some fine grilse; Lady Caroline Gordon Lennox, grilse of eight pounds each; and Lady F. Montague, grilse up to eight pounds.

CHINESE EEL FISHING.—An ingenious device is practiced in Cochin, China, for the capture of eels, which consists in cutting pieces of bamboo as thick as the arm into sections of about three or four feet in length, the divisions of the interior being broken out, with the exception of the one at the end, which forms the bottom of the snare. At the entrance is placed a slight grating of bamboo, and some bait, either of fish or earth-worms, is introduced into the interior. The bamboo is then laid at a slight depth in the mud, and the eels enter the hollow tube, in which they can scarcely move, and cannot turn themselves, and are consequently taken captive. The bamboos are taken up every morning, and the eel, which holds on very firmly to the interior, is pulled out by means of a strong hook.

—The star fish is said to be making terrible havoc among the Long Island oyster beds. It is estimated that the loss is fifty thousand dollars. Acres of oysters, planted two years ago, are almost worthless. It is hard to make a fair day's wages.

—Newburyport had a Labrador fleet of 60 schooners, 1 brig and 4 sloops in 1817, and a mackerel fleet of 90 vessels in 1851. This year her fleet consists of 20 vessels; six baymen, six shore mackerelmen, six shore fishermen and two vessels in the Labrador business.

—Smith & Horton, of Eastham, Mass., had a large catch of mackerel in their weirs Friday. One hundred and twenty-five cartloads were taken out, leaving many more to be secured. The whole are estimated at 2,000 barrels, and are said to be large fish.

—France has 200 fishing stations on the "French Shore" of Newfoundland, where she claims exclusive fishing rights, by treaty with Great Britain. The French fishermen purchase their bait from the inhabitants of the "South Shore," where the former do not have the right to fish, at an average total cost of some \$100,000 a year.

—Pictou, N. S., is to have a fishing company with a fleet of six vessels and a capital of \$42,000.

—The Commissioners of the Fishery Board for Scotland report that a great success was met with for Scotland last year. Though not so abundant as in 1874, the herring fishery was larger in 1875 than in any other year that had preceded it. The cod and ling fishery yielded larger returns than in the previous year. The year was remarkable for the number of barrels of herring branded, which was larger than in any year since the system of brand fees was instituted in 1859, and the collection of fees was the highest on record, its amount (£8,729 16s. 6d.) being more than £100 in excess of that of 1874.

—The San Francisco papers state that some of the vessels sent to the Ochotsk Seas last spring to engage in codfishery have returned and report a very large catch. The fleet from the Choumagin Islands is also nearly all in, and from them the reports are equally as favorable. The nine vessels that have come into port bring, in the aggregate, 691,000 fish. The fleet of 1875 brought in 504,000.

—Detroit freezes half a million lake fish in a season for the southern market.

SALMON AND CHANGE OF WEATHER.—I wonder if it often occurs to old and constant salmon fishers to witness the play of an immense shoal of new-run salmon, revelling in the enjoyment of their first retaste of a fresh water river. To me it was a new and wonderful sight, which I thoroughly enjoyed one soft summer day, on the still wild scenery of Galway, a mile or two above Lough Corrib, on the Clare Galway river, which had just been freshened up with a mild Connemara shower (the fresh euphemism for a down-pour that takes about ten minutes to penetrate the crown of your hat and come out of the heels of your boots), and was smiling under the genial rays of a bright sun. The salmon evidently enjoyed the changing weather, and having indulged in a few playful and delusive rises, got more and more excited, till they seemed to have gone simply mad; and scarcely less mad were the two fishermen, whom they had been exciting, decoying, perplexing, and tantalizing for upwards of an hour. The whole reach of the river within view was literally alive with them, now rolling over porpoise-like, and showing the whole of their silvery proportions from head to tail, now dashing along

the surface with many a flying-leap, or springing upward straight into the air, to shake off the sea parasites which still cling about them. To say that for an hour or so we constantly threw our flies over many rising fish faintly describes the exciting but unprofitable sport; for our verms ached with the perpetual casts, and we were utterly exhausted by rushing from rise to rise, but never a fish would take the fly, or even come out of his play to look at it. My companion gave it up in despair like a wise man, but I could not tear myself away, and began at last a sheer wantonness to try and hook a leaping fish, by making casts at him or drawing my line rapidly across him, which to say the least of it, was a novel form of fishing. The play died out at the end of about two hours almost as suddenly as it began, and I have only to add (though I should do so rather with shame than with pride), that I did actually foul-hook a fine salmon, which threw himself across my line and got hooked in the back as he fell again in the water; and if ever a salmon could possibly beat aerman in open unobstructed water, that salmon nearly me. I tried the strength of the hold of the hook on the skin of the salmon after I had landed him, and though I gave a strong, steady pull with my whole weight, neither the fish's flesh nor my tackle would yield to the strain.

Correspondence of Land and Water.

[In Canada the Indians have often assured us that it was useless to cast for salmon when they were leaping and playing in the long reaches of still water, and the thorough test above mentioned seems to prove their correctness and settle the question conclusively.—Ed. F. & S.]

ANGLING IN NORWAY.—Norway is endowed with most excellent fish. Besides a large number of small rivers there are about a dozen large ones; the most beautiful is the Angermanelf, fifty miles north of Stockholm, whose wealth of water and beauty of scenery throw the Rhine into the shade. It is only in the interior, where endless bogs and countless lakes cover the ground, that travelers are often regaled with such fish as perch, whose insipid taste becomes wearisome to the tourist long before it is set before him on the fourteenth day for the twenty-eight time. In the rushing mountain streams and brooks the most various kinds of salmon abound—the common salmon, the salmon-trout, the mountain-trout, etc. Although at the time of spawning salmon are easily scared away by floating boards, they are found in all the great waters of Norway though these are covered the whole summer with rafters. Even the Angermanelf, navigable for six miles up to Nyland, and a further nine up to Sollefteå by steamer, contains salmon in plenty, as is evident from the weir basket set everywhere for their capture. But the fish in which Norway is richest is trout. It abounds in the mountain ranges of the south, in the Sireaa, the Imsaa, and other waters, rivers and lakes, east of Lorehamm and north of Hendeman. They are also found in Hardanger in the direction of Bergen. Any one who goes in search of trout northward into Stuedal from the well-known mountain town Roraas on the Swedish frontier, will find rich booty to the north of Dovrefjeld, and especially in the district of Aune, the fishing is very profitable. But why multiply names? Every little lake in the mountains swarms with trout, and in every brook and stream these graceful fish may be seen disporting themselves. On the highest station of Dovre in Hjerkin, at a height of 8,000 feet, I saw in the kitchen a heap of trout a foot high, which was destined for the mid-day meal of the numerous huntsmen and botanists who have their headquarters there, whence they explore the highlands. At Skaggestad, in Gudbrandsdalen, where I dined with a somewhat numerous company we had the most excellent trout set before us; and I found the same thing at many other places. It cannot surprise us that Norway, the Eldorado of trout fishers, is overrun by angling Britons. We find them near the little lakes in the highlands, at the foot of waterfalls, among rocks and bushes, but oftenest in regions where there are comfortable dwellings. They congregate in every Norwegian town, whence they can make excursions to the trout streams and rivers. One of their favorite haunts among the Norwegian valleys is Gudbrandsdalen, where they especially frequent the upper valley and the beautiful dale of the Ottaelf. Gudbrandsdalen is twenty-one miles long and is traversed by the River Logen. The tourist who descends from Fogstuen into the valley will observe nothing remarkable in it at first. But on the other side of the village Dovre the mountains close, and the river forces its way, foaming and dashing through the rocky passes and over cliffs and stones. Grotesque formations of rock and magnificent water falls lend a unique charm to this valley behind the ravine at Laurgaard it widens. The mountain which rise on each side have an average height of one or two thousand feet, while those beyond average from four to five thousand. Besides the rare beauties of the valley, the passion for fishing also attracts the children of Albion to Gudbrandsdalen in numbers. They seldom pursue the sport singly; generally a whole company may be found together. Their remarkable clothing, their boots, which are certainly fitted for fishing, and their whole equipment cause them to be immediately recognized in the capital. When they have found a place suitable for their labors, if there is no hindrance in the way, they set to work without delay, and indulge their passion with the greatest perseverance. They usually renounce the result of their fishing harvest; they give away their booty, and always find willing recipients.—*London Society*.

MOVEMENTS OF THE FISHING FLEET.—Our mackerel fleet are nearly all in, and a week or two more will wind up the business for the year. The Boston fleet have all hauled up, 27 vessels arriving last week, with a catch of 2,730 barrels. The Provincetown fleet, thirty vessels, are all in, and the Well-fleet, 40 sail, have hauled up. The season is virtually closed, and the stock remaining on the market is small, with a good prospect of an advance in prices.

Twenty vessels have arrived at this port the past fortnight from Maine, bringing cargoes of herring and hake, which have found a ready sale in this market for shipment. This branch of the fishing business promises to be of considerable importance, as Gloucester bids fair to become a large exporting headquarters for fish, which already requires more than her own catch to supply.

The fishing arrivals the past week have been 65, as follows: 27 from the Banks, 25 from Georges, 11 from Bay St. Lawrence, 1 from Bay of Islands and 1 from shore mackereling. The receipts have been 945,000 pounds. Bank codfish, 165,000 pounds, Bank halibut, 425,000 pounds, Georges codfish, 92,000 pounds, Georges halibut, 450 barrels Bay mackerel. The catch of shore fish has

as! One would call them two beams which a skilled painter unites at the summit of a building, in order that they shall resist the strength of the wind. Their backs remain under the frequent blows given by their sinewy arms, the perspiration rolls down upon their sides, and their shoulders rise swelling red with blood. Ulysses cannot repel Ajax, nor Ajax overthrow Ulysses. Fearing this indecisive struggle would make the Greeks impatient, Ajax cries, "Son of Laertes, lift me or let thyself be lifted by me, and let Jupiter decide the rest!" With these words he lifts Ulysses, who now having recourse to his extraordinary skill kicks Ajax on the hamstring, and makes him bend the knee. Ajax falls upon his back, dragging with him his adversary. Ulysses now rises to lift Ajax, but exhausts himself in vain attempts, and it is with difficulty he raises him from the earth. They fall for the second time, and roll from one side to the other covered with dust. They rise and are about to recommence for the third fall, when Achilles intervenes, and draws down their arms. "It is enough," he cries, "do not waste your strength in these dangerous combats. Both are worthy of victory, and he generously awards them equal prizes."

If the modern wrestling matches were carried on with the same sincerity, earnestness, and vigor as the one described, there would be but little fault-finding by the public, and probably a much greater gain to the fame, time and pockets of the contestants.

Lacrosse is having great success in England, since the Canadians made their visit, and clubs have been recently formed at London, Glasgow, Dublin, Croydon, and other places. It is now proposed to form a Lacrosse Association somewhat similar to the National Lacrosse Association of Canada; that it should be called Lacrosse Association of Great Britain and Ireland, having its headquarters in London or Glasgow, and holding annual convention in London, Glasgow and Dublin alternately; and that the laws and constitution of the Canadian Association, as far as practicable, should be adopted.

The annual championship match of the New York Tackett Club will be played this Thursday night at the Court, corner of Sixth avenue and Twenty-sixth street.

THE HERMIT OF GREENWOOD LAKE.—On the left shore as we steam up, there is pointed out to us the spot near which lives the Hermit of the Lake. From all that we can learn he is a kind of living tradition which no man can read. He may be either a modern St. Kevin or an unrepentant sinner. His hut is about the size of a kennel, and as less comfortable. Its architecture is, accordingly, easy of description. A rock forms one wall, and two poles resting upon it and connecting with posts driven into the ground are the chief timbers of its frame-work. There is no door. Its occupant crawls in and out. When at home he is in a very circumscribed apartment, in which he can neither stand up nor lie down at full length. The catalogue of furniture consists of one item—an old gunpowder keg. The fire burns on the ground, and the earthen floor serves the hermit for both bed and table. The possibility of a visitor has no place in his scheme of domestic economy, in fact, the very embodiment of the principle upon which some other men and many nations act—*laissez faire*. We have here not so much the hermit of romance as his less attractive, less studious, and less astrologically disposed brother of sober fact.—*Arctadian*.

INDIAN SUMMER.—This halcyon period of our autumn will always in some way be associated with the Indian. It is red and yellow and dusky like him. The smoke of his camp fire seems again in the air. The memory of him pervades the woods. His plumes and moccasins and blanket of skins form just the very costume the season demands. It was doubtless his chosen period. The gods smiled upon him then if ever. The time of the chase, the season of the buck and the doe, and of the ripening of all forest fruits; the time when all men are incipient hunters, when the first frosts have given pungency to the air, when to be abroad on the hills or in the woods is delight that both old and young feel; if the red aborigine ever had his summer of fullness and contentment, it must have been at this season, and it fitly bears his name.—*Scrubner*.

Tiffany & Co., Silversmiths, Jewelers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their timing watches are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. Tiffany & Co., are also the agents in America for Messrs. Patek, Philippe & Co., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Bronzes and Artistic Pottery is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. Union Square, New York.

Rational Pastimes.

CRICKET.

The English cricket season, owing to unusually fine weather from May to October, was a very successful one in respect to the number of clubs which took part in the season's play, and the large number of games played. But in regard to the general attendance at the prominent matches it was not so inasmuch as there was a notable falling off, except at such contests as those of Eton vs. Harrow and the University matches, Oxford vs. Cambridge. On "Grace days," that is, days when W. G. Grace was the cricket star, there was, of course, a crowd gathered to witness the champion's high scoring; but this came to be tedious work in view of his being in two or three days at the bat for scores of from one to four hundred! The large scores of the season, in fact, have shown pretty conclusively that the batting has overpowered the bowling, and some change in the rules of the game must be made to equalize the powers of attack and defence or otherwise cricket will lose its attraction, the heavy scoring done the past season having materially lessened the attraction, it having become tedious to witness matches in which the scores of the innings have run up to six hundred in a single inning's play. In the record of the total club scores of the season we find such figures as the following:—

Aug. 10, M. C. C. and Ground.....	144,557-701
Canterbury.....	473. —473
United South vs. Grimsby (one inning).....	689
Knole Park vs. Ince (one inning).....	641
Thornbury vs. Chesham (one inning).....	502
Middlesex vs. Oxford (one inning).....	812
Royal Artillery vs. Rifle Brigade (one inning).....	531
Gloucestershire vs. Yorkshire (one inning).....	528

And quite a number of matches have records of scores of 400 and upwards in one inning's play. Of individual scores in one inning's play the following stand out pretty conspicuously:—

W. G. Grace in United South vs. Grimsby.....	400
W. G. Grace in Kent vs. Merylebone.....	344
E. M. Grace in Thornbury vs. Chesham.....	327
W. G. Grace in Gloucester vs. Yorkshire.....	318
W. Jamison in Littlebourne vs. Canterbury.....	218
F. Townsend in Clifton vs. Thornbury.....	217
G. E. Grace in Knole Park vs. Ince.....	213
F. Townsend in Clifton vs. Wells.....	211
C. P. Lewis in Jesus College vs. Queen.....	206
W. Gilbert in Cambridge in England.....	205

In fact the number of scores of one hundred which have been recorded fill two columns of *Bell's Life*, it having been in this respect quite a "Centennial year" in cricket in England.

BASE BALL—BATTING VS. FIELDING.

It is only necessary to glance at the club statistics of the past season to see positive proof of the superiority of skill in fielding over that in batting in winning games. The record of the eight League clubs in batting shows the club names occupying the following relative positions:—

Clubs.	General average	
	Base hits.	Club average.
Chicago.....	13-32	1-48
Athletic.....	10-74	1-19
Hartford.....	10-40	1-16
St. Louis.....	10-25	1-14
Boston.....	10-18	1-13
Louisville.....	9-06	1-01
Mutual.....	8-51	0-93
Cincinnati.....	8-25	0-92

Clubs.	General average	
	of Errors.	Club average.
Chicago.....	5-56	0-62
St. Louis.....	6-05	0-67
Hartford.....	6-17	0-69
Louisville.....	6-58	0-73
Mutual.....	9-58	0-73
Boston.....	9-00	1-60
Cincinnati.....	9-18	1-02
Athletic.....	10-21	1-43

ATHLETICS.—The third annual games of the Athletic Association of the College of New York came off Saturday afternoon at the Athletic Club Grounds. Mr. John Wood acted as referee, Messrs. Van Wyck and Jas. Watson as timekeepers, and E. Plummer started the contestants. The events and results were as follows:—

One mile walk, open to all amateurs; W. M. Watson, 1. Time—8m. 55s.
One hundred yards.—First heat—C. Moritz, '77, 1. Time—12½s. Second heat—J. Knight, '76, 1. Time—12½s. The third and fourth heats were walks over for V. Falkenan, '79 and E. Dove, '71. Final heat—Dove, 1; Moritz, 2; Falkenan, 0; J. Knight, 0. Dove won by three yards from Moritz, who beat the other two by a yard. Time—11½s.
Half mile run.—A. Shunway, '78, 1. Time—2m. 28s.
One mile walk.—W. M. Watson, '79, 1. Time—7m. 45s.
Running high jump.—E. W. Knickerbocker, '79, cleared 4 feet 11 inches.
Four hundred and forty yards run.—S. W. Hoag, '77, 1. Time—50½s.
Three mile walk.—W. M. Watson, '79, 1. Time—One mile, 8m. 5s.; two miles, 16m. 46s.; three miles, 25m. 37s.
One mile run.—C. Wiggins, '79, 1. Time—6m. 9s.
Hurdle-race, 120 yards, ten flights.—E. W. Knickerbocker, '79, 1. Time—21½s.

FOOT BALL.—On the St. George's Ground at Hoboken, Saturday afternoon, the most exciting game of foot-ball that has occurred this season took place between the Stevens Institute and Columbia College teams. The Columbia team was considerably heavier than that of their opponents, but the activity of the Stevens boys amply compensated for their want of weight. At 2.45 p. m. the ball was kicked off and quickly carried down to the Stevens goal, but 23 minutes elapsed before the goal was captured by Brinkerhoff for Columbia. Stevens after this played up and scored the next three goals. Before the next goal was secured some fine play was shown—that by Denton and White for Columbia was noticeable, but the college boys worked well together, and by the aid of Train and Lynch scored the next two goals in 23 minutes and 34 minutes. The game, now a tie, was quickly decided by Stevens getting two more goals, Nichols and Shippen securing them in less than 15 minutes, but it led to a slight wrangle, as Mr. Price, Columbia's Captain, protested against Shippen as being a non-student, and the game is not virtually decided, although the Columbia's umpire allowed him to play. Stevens therefore won by five goals to three; umpires, Messrs. Weeks and Gorge; referee, E. Stevens, of Princeton.

THE EARLIEST WRESTLING MATCH.—The funeral of Patroclus says Homer was celebrated by many athletic games, the most prominent of which was the wrestling match between the wise and crafty Ulysses, the son of Laertes and Ajax, the son of Telamon. The perpendicular mode was then the only one recognized.

The heroes strip, they clasp each other by the back; they struggle, they press each other tightly in their nervous

been small on account of the dull weather, and in consequence cod and haddock are scarce. Sales at \$3.00 per hundred pounds for cod, and \$2 for haddock.—*Cape Ann Advertiser*, Nov. 10th.

FISH BAPTISTS.—Apropos of the Baptist camp meeting recently held at Martha's Vineyard, the Methodists tell a good story of some of the brethren who arrived early, and sought to while away the time by fishing. Several kinds of fish were caught, and on the return, one of the fishermen, with a laudable desire for information, inquired of the skipper the names of the different specimens. "This," said he, "is a blackfish, that is a bluefish, the next is a scup, and that is a Baptist." "A Baptist!" exclaimed the good brother; "why do you call those fish Baptists?" "Because they spoil so soon on being taken out of the water," was the satisfactory explanation.

Furs and Trapping.

AN EFFECTIVE TRAP FOR RATS.—In W. H. Gibson's "Complete American Trapper," recently published, we find the following simple method of catching rats, which we can vouch for as being very effective, and free from objections which usually attach to other methods, especially that of poisoning, which often leaves premises offensive:—

"The barrel trap device possesses great advantages in its capabilities for securing an almost unlimited number of the vermin in quick succession. It also takes care of itself, requiring no re-baiting or setting after once put in working order, and is sure death to its prisoners. A watertight barrel is the first thing required. Into this pour water to the depth of a foot. Next dampen a piece of very thick paper, and stretch it over the top of the barrel [like a drum-head], tying it securely below the upper hoops.

When the paper dries it will become thoroughly flat and tightened. Its surface should then be strewn with bits of cheese, etc., and the barrel so placed that the rats may jump upon it from neighboring surface. As soon as the bait is gone a fresh supply should be spread on the paper, and the same operation repeated for several days, until the rats get accustomed to visit the place for their regular rations, fearlessly and without suspicion. This is half the battle, and the capture of the greedy victims of misplaced confidence is now an easy matter. The bait should again be spread as before, and a few pieces of cheese should be attached to the paper with gum. It is a good plan to smear parts of the paper with gum Arabic, sprinkling the bait upon it. When dry, cut a cross in the middle of the paper, as seen in the illustration, and leave the barrel to take care of itself and the rats. The first one comes along, spies the tempting morsels, and with his accustomed confidence jumps upon the paper. He suddenly finds himself in the water at the bottom of the barrel, and the paper is closed and ready for the next comer. There is not long to wait. A second victim soon tumbles in to keep company with the first. A third and a fourth soon follow, and a dozen or more are sometimes thus entrapped in a very short space of time."

—Muffs are now made of the same material as the trimming of the dress. Instead of one costly muff, as of old, ladies now have several inexpensive muffs to match either the dress or mantle. Black silk muffs, edged with fur, will be greatly popular.

—A California trapper will give the next president a chair made of bear-skins with claws curling over the arms and around the feet, and a spring concealed in the back, on touching which the head of a grizzly, with fiercely glaring eyes and wide-open mouth, springs out from under the chair, and, after making several vicious snaps with his jaws, retires as suddenly as it came.

CATCHING HAWKS.—As the season is approaching when hawks are most destructive to young poultry, a method of catching and killing these marauders will be in order. It is a well-known fact that a hawk will always light on some conspicuous place close to the poultry yard, from which to swoop down on his victims. Taking advantage of this, erect a pole with a flat surface at the top just large enough to hold a strong steel trap. Fasten this trap by a chain to a staple in the pole, and await results. No bait will be needed, for the hawk will be quite certain to light on the trap and be caught. A gentleman who has tried this method has succeeded in killing all the hawks in his neighborhood, and now can raise poultry without loss except by accident.—*California Horticulturist*.

—A new solvent consists of a mixture of methylated ether and petroleum spirit—the common benzoline used for burning in sponge lamps. Make a very thick solution by dissolving sixty grains of India rubber in two ounces of benzoline and one ounce of sulphuric ether. If the India rubber be cut up fine, and the mixture shaken occasionally, the solution will be complete in two or three hours, when it may be diluted to any required strength with benzoline alone.

The Grand Pacific Hotel, Chicago.

One of the safest and most pleasant hotels in America. Having all the different safeguards against fire
makes it practically fireproof. Has recently undergone extensive improvements—a large amount of new fur-
niture added, making it one of the most elegantly furnished hotels in the country—and the entire building
redecorated in a style that for beauty of design surpasses anything of the kind in the world. The ventilation
of the hotel is perfect, having every improvement.Cost of Hotel.....\$1,500,000
Cost of Furniture.....400,000Occupies an entire square, having a frontage of 1,050 feet. Number of rooms, 600; suites of rooms, with
baths connecting, 289; size of parlors, 100x30 feet; size of grand dining-room, 130x63; size of ladies' promenade,
130x20; size of office, 175x70. Prices of rooms, with board, \$3.00, \$3.50, \$4.00, \$4.50 and \$5.00 per day, accord-
ing to location. The table and service unsurpassed, being the same to all.A Reduction will be made from the above Prices to
Parties remaining a Week or More:

Sportsmen's Routes.

TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMPANY

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROT-
TING PARKS and RACE COURSES in the Middle
States. These lines being CONTINUOUS FROM ALL
IMPORTANT POINTS, avoid the difficulties and dan-
gers of reshipment, while the excellent cars run over
the smooth steel tracks enable STOCK TO BE TRANS-
PORTED without failure or injury.The lines of
The Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION
TICKETS are sold at the offices of the Company in
all the principal cities to KANE, RENOVA, BRD
FORD, CRESSON, RALSTON, MINNEQUA, and
other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to
TUCKERTON, BEECH HAVEN, CAPE MAY,
SQUAN, and points on the NEW JERSEY COAST
renowned for SALT WATER SPORT AFTER FIN
AND FEATHER.

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over
two thousand miles of road, radiating from Chicago.
Like the fingers in a man's hand, its lines reach in all
directions, and cover about all the country north,
northwest, and west of Chicago. With one branch it
reaches Racine, Kenosha, Milwaukee, and the coun-
try north thereof; with another line it pushes through
Janesville, Watertown, Oshkosh, Fond du Lac, Green
Bay, Escanaba, to Nagaunee and Marquette; with an-
other line it passes through Madison, Elroy, and for
St. Paul and Minneapolis; branching westward from
Elroy, it runs to and through Winona, Owatonna, St.
Peter, Mankato, New Ulm, and stops not until Lake
Kameska, Dakota, is reached; another line starts from
Chicago and runs through Elgin and Rockford to Free-
port, and via the Illinois Central, reaches Warren,
Galena and Dubuque, and the country beyond. Still
another line runs almost due westward, and passes
through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar
Rapids, Marshalltown, Grand Junction, to Council
Bluffs and Omaha. This last named is the "GREAT
TRANS-CONTINENTAL ROUTE," and the pioneer
overland line for Nebraska, Colorado, Utah, Idaho,
Montana, Nevada, California, and the Pacific Coast.
It runs through the Garden of Illinois and Iowa, and
is the safest, shortest, and best route to Omaha, Lin-
coln, and other points in Nebraska, and for Cheyenne,
Denver, Salt Lake City, Virginia City, Carson, Sacra-
mento, San Francisco, and all other points west of the
Missouri River.

TO SPORTSMEN:

THIS LINE PRESENTS PECULIAR ADVAN-
TAGES—FOR PRAIRIE CHICKEN, DUCK,
GESE, AND BRANT SHOOTING, THE
IOWA LINE TO-DAY OFFERS MORE

FAVORABLE POINTS

than any other road in the country, while for Deer and
Bear Hunting, and for Brook Trout, Lake Salmon,
Pike, Pickerel, and Bass Fishing a hundred points on
the Northern and Northwestern lines of this company
will be found unsurpassed by any in the West.

Thomson's

Oil Finished Grain Leather Shoe- Pack or Moccasin.

With Sole, Price, \$7.50. Without Sole, \$5.50.

Made with heavy sole for land use; also without
sole for snow and canoe purposes. All hand sewed
and strongly made. Laced in front with hooks (over
English style of water-tight tongue), thereby securing
PERFECT FIT around ankle, thus preventing all
slipping at the heel. Made with broad soles and on
scientific principles.

Fills the want long felt by sportsmen for an easy
fitting and durable shoe.

In ordering, state size of boot worn. Sent by mail
on receipt of price, with 40 cents additional for post-
age, or by express C. O. D., everywhere. Manufact-
ured by THOMSON & SON, 301 Broadway, New
York. jn27-1f

WILD GOOSE

—AND—

BRANT SHOOTING

Begin this month. The Shooting Outfit which is
now recognized as the best in the country, is that
known as the "Boston Shooting Suit," waterproofed
and made only by G. W. SIMMONS & SON, Oak
Hall, Boston. Sold by dealers in Sportsmen's
Goods generally throughout the country. Price com-
plete \$13.

Our new Patent Decoy is light and compact (one
dozen occupying but little space), so that a sportsman
can conveniently carry a case of large-sized birds in
his carpet-bag.

The 'Boston Shooting Suit.'

MANUFACTURED ONLY BY

G. W. SIMMONS & SON,
Boston, Mass.

Sold everywhere in the U. S. by all first-class
dealers in

SPORTSMEN'S GOODS.

EACH GARMENT DISTINCTLY MARKED

"BOSTON SHOOTING SUIT,"
made by
G. W. Simmons & Son.

This new design of WATERPROOF SHOOTING SUIT,
made from extra quality duck, has attained such
popularity as to be called for from all parts of the
country, and even from England.

"Shipping clothing to England strikes us very much
like sending 'Coals to Newcastle,' but the merits
of the 'BOSTON SHOOTING SUITS' have been
heard of in the Old Country, and that land of sports-
men has sent an order to Messrs. Simmons & Son,
which will doubtless be followed by many others."—
Boston Paper.

The design embraces the best points of the English
and French Suits, combined with the necessary re-
quirements for American service. Particular atten-
tion has been paid to color.

Each suit is water-proofed by a new patent process.
The seams and pocket corners are securely fastened,
and nothing neglected to render the suit perfect in
every respect.

THE PRICE HAS BEEN FIXED AT \$13, TO IN-
CLUDE HAT OR DOUBLE VIORED CAP. DE-
TACHABLE HAVELOCK, COAT, VEST, AND
PANTALOONS.

One hundred suits will be kept ready in stock, so
that we can furnish to order any size required, at a
moment's notice.

In the *Golden Rule* (Rev. W. H. Murray's paper)
the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof
suit, specially adapted for sportsmen, designed and
made up by Simmons & Son, of Boston, and to which
we call the attention of all brethren of the out-door
and shore-shooting fraternity, because it meets the
demand of personal comfort and convenience beyond
anything of home manufacture seen by us before.
As a sportsman, we give it our unqualified endorse-
ment, as combining the best points of the English
suits, and in addition skilfully adapted to the neces-
sities of the American service. It is a most admirable
and satisfactory contrivance in color, style, water-
proof quality and capacity. The coat is a marvel
in this latter respect."

PERSONS ORDERING FROM A DISTANCE NEED
SEND ONLY THE FOLLOWING TO BE SURE OF
A PERFECT FIT: BREAST MEASURE, WAIST
MEASURE, INSIDE SEAM COAT SLEEVE,
INSIDE SEAM PANTALOONS; MENTION HEIGHT
AND WEIGHT.

G. W. SIMMONS & SON,

"OAK HALL," BOSTON, MASS.

"THE BOSTON SHOOTING SUIT.—One of the most
successful manufacturers of Waterproof Shooting
Suits is the firm of G. W. Simmons & Son, Oak Hall,
Boston. We had one of their suits on duty at Hun-
ter's Camp at Philadelphia Centennial Exhibition.
It has grown gray in service, but is good
for use yet. This suit is known as the 'Boston
Shooting Suit,' in contradistinction no doubt, from
the garments which are manufactured out west and at
Washington, each of which has a local demand of its
own. It is said that the western prairie fowl can
distinguish any sportsman who visits their domain
by his clothes. They can tell him 'by the cut of his
jib,' and the old educated birds (which no one cares to
eat, by the way,) know exactly what distance to
keep from the rail shooters, the brant men, and the
chicken-killers respectively, to be safe. They have
'got them all down fine.' This used not to be so be-
fore the waterproof shooting suits were invented.
Bostonians, Hoosiers and Buckeyes all stood the same
chance then. But now it is—with a sarill pipe to lee-
ward by the old-weather cock—'here comes a Sim-
mons; cheese it!' or, 'Erre's a 'Enning—lie low!' or,
'Look out for Holabird! Scatter! you beggars, scat-
ter!'—FOREST AND STREAM.]

WIND-PROOF

Leather Vest and Jackets, Flannel-Lined.

(Made and sold only by Messrs. G. W. SIMMONS &
Co., OAK HALL, BOSTON.) are considered the most
sensible protectors ever devised for winter wear. They
are especially adapted to the requirements of sporting
men, whose rapid walking is likely to be followed by
frequent halts in the cold wind. Price, Vest \$7;
Jacket \$9. Measurements required are Waist, Breast
and Inside Seam of Sleeve. Mention Height and
Weight.

LADIES LEATHER VESTS AND JACKETS
made to order. Indispensable to all who are in any
way exposed to the weather.

G. W. Simmons & Son,
32 to 38 North St., Oak Hall,
Boston, Mass.

PATENT

CAMPING and MINING

STOVE.

PATENTED JUNE 22, 1875.

Outside dimensions, packed, 22x12x20 inches.

Weighing only 35 pounds, very durable, will cook
for ten persons, and is especially adapted for camping
purposes. The ware consists of 8 qt. kettle, 6 qt. tea
kettle, 2 qt. coffee pot, fry pan, round tin pan, 2
square pans, dipper, gridiron, tent collar, 8 ft. fannel,
and an oven that will roast 15 pounds beef.

The ware is so constructed that it nests and packs
in the oven, and the oven and fannel pack inside the
stove, as represented in cut 2, leaving room for pack-
ing half a dozen plates, knives, forks, spoons, and
drinking cups. Price complete, \$15.

FISHING TACKLE

Of Every Description and Quality.

We particularly call attention to our extensive as-
sortment of fine goods for sportsmen, such as Salmon
Trout, and Black Bass Flies and Snell Hooks, on hand
and tied to order; Cuttyhunk and Pasque Islands
Bass Lines, Water-proof Braided Silk Lines, etc., etc.

Every genuine H. L. Leonard's Six-Spliced Bamboo
Salmon, Trout, and Bass Rod is marked "H. L. Leon-
ard, maker; Abbey & Imbrie, sole agents." Beware
of imitations.

Sole agents for the McCord Patent Celluloid Black
Bass Reel, and Aiken Black Bass Rod. Proprietors
of the celebrated Winchester Patent Braided Rods.

Sole importers of Joseph Warrin's Drill-Eyed and
Egg-Eyed Needles.

Parties fitted out with appropriate tackle for the
Rocky Mountains, Pacific Coast, Canada, Maine, Adi-
ronacks, etc., etc. Orders by mail will receive the
personal attention of the firm.

(CELLULOID PATENT.)

Trolling and Click Reels.

The finest Reels made light, durable and finely
finished. Ask your dealer for them.

McBride Flies,

The Standard Flies for American Waters

These flies are imitations of American insects, or
combination of colors, that an experience of forty
years has proved most successful. Parties sup-
plied with casting lines and artificial flies for
Pennsylvania trout streams, Adirondacks, the Maine
Woods, Lake Superior, Thousand Islands, Canadian,
and other waters. Anglers not acquainted with the
nomenclature of these flies, by mentioning the local-
ity where they intend fishing, will have the varieties
best suited to those waters sent to them. Flies copied
from any natural insect or pattern desired. SARA

HURST'S**Stereoscopic Studies**

OF

Natural History

FOR OBJECT TEACHING IN SCHOOLS

And

PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers of
the first series of

Animals and Birds of North America.

To these will be added a second series of foreign
specimens, and various animals and birds in grotesque
attitudes, never, however, violating their natural in-
stincts.

We offer these views, not as pictures only, but as
studies from nature. One of the great moving ele-
ments in our modern system of education is object
teaching. The unerring fidelity of the stereoscope
transfers the animals and birds from their natural
habitat to the rooms of the student and the fireside
of our homes, where they cannot fail to have a last-
ing impression of the form, color, habits, and local-
ity of each specimen.

An experience of more than twenty-five years as
Taxidermist of the New York State Cabinet of Natural
History, and in gathering his large collection of
native and foreign specimens, enables Mr. Hurst to
combine in every view the locality of the specimen,
with its appropriate rocks, woods, or water, and color-
ing from the originals.

CORNELL UNIVERSITY,
ITHACA, March 14th, 1870.

I must congratulate you upon your great success in
this new educational enterprise. If we can arrange
our amusements so as to make them impart instruc-
tion to the mind, it will be a step in advance in edu-
cation. EZRA CORNELL.

THE AMERICAN NEWS COMPANY, AGENTS.

THE

American Naturalist;

A POPULAR ILLUSTRATED MONTH-
LY MAGAZINE OF NATURAL
HISTORY AND TRAVEL.

Announcement for 1877.

This journal of popular Natural Science will con-
tinue to be published by Messrs. H. O. HOUGHTON &
Co., Riverside Press, Cambridge, Mass., under the
editorial management of Dr. A. S. PACKARD, Jr.,
with the assistance of eminent men of science.

Since January, 1876, the amount of matter given in
each number has been increased over former volumes.
The typographical dress and illustrations which have
heretofore given character to this magazine have been
improved, and it is of a thoroughly popular nature, so
as to interest the general reader as well as well as
the young naturalist. It will continue to be a journal
of science-education and for the use of science-teach-
ers.

Its Features for 1877.

In 1876 the latter half of the magazine was entirely
remodeled, and a department of GEOGRAPHY AND
TRAVEL added. The department of BOTANY will
be edited as formerly by Prof. G. L. Goodale, of
Harvard University. That of MICROSCOPY will be
edited as heretofore by Dr. R. H. Ward, Troy, N. Y.
Arrangements have been made to report the
PROCEEDINGS OF SCIENTIFIC SOCIETIES with
great promptness. A digest of the CONTENTS OF
FOREIGN SCIENTIFIC JOURNALS AND TRANS-
ACTIONS will also be given each month, together
with the LATEST HOME AND FOREIGN SCIENTIFIC
NEWS.

The attention of publishers and teachers is called
to critical notices of scientific books, to which especial
attention will be given.

Articles for Vol. xi., 1877.

By Professors Asa Gray, J. D. Whitney, N. S.
Shaler, W. G. Farlow, G. L. Goodale, of Harvard
University; Professors O. C. Marsh, A. E. Verrill, of
Yale College; Mr. A. Agassiz, Hon. Lewis H. Morgan,
Col. Theodore Lyman, Mr. L. F. Pourtales, Mr. S.
H. Scudder; Professors E. D. Cope, F. V. Hayden,
A. Hyatt; Drs. Elliott Coues, W. H. Dall, C. C. Ab-
bott, Rev. S. Lockwood, J. A. Allen, H. Gillman, C.
C. Parry, R. E. C. Stearns, O. T. Mason, and other
leading naturalists, are either in hand or promised.
Notes from abroad will occasionally be contributed
by Mr. Alfred W. Bennett, the distinguished English
botanist.

TERMS: 35 cents a number; \$4.00 a year, postage
free. Bound volumes, \$5.00; vols. I-X., \$40.00;
unbound \$30.00. Back numbers supplied.

Remittances by mail should be sent by money-
order, draft on New York or Boston, or registered
letter, to H. O. HOUGHTON & Co., Riverside Press,
Cambridge, Mass.

Gunpowder.**The Hazard Powder Co.,**

MANUFACTURERS OF

Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of
strength and cleanliness. Packed in square canis-
ters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 3 1/2 lb.
kegs. A fine grain, quick and clean, for upland and
prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters
and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very
clean, shooting remarkably close and with great
penetration. For field, forest and water shooting
it ranks any other brand, and it is equally servicea-
ble for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFFG, FFG, and "Sea Shooting" FG, in kegs of 25
12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also
packed in 1 and 1/2 lb. canisters. Burns strong and
moist. The FFG and FFG are favorite brands
for ordinary sporting, and the "Sea Shooting" FG
is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POW-
DER; ALSO SPECIAL GRADES FOR EXPORT
OF ANY REQUIRED GRAIN OR PROOF MAN-
UFACTURED TO ORDER.

The above can be had of dealers, or of the Compa-
ny's agents in every prominent city, or wholesale at
our office

88 Wall Street, New York.

GUNPOWDER.**Dupont's**

SPORTING, SHIPPING AND MINING

POWDER.**DUPONT'S GUNPOWDER MILLS**

(ESTABLISHED IN 1801),

Have maintained their great reputation for 75 years
Manufacture the Celebrated

EAGLE DUCKING, EAGLE RIFLE, AND DIA-
MOND GRAIN POWDER.

The most Popular Powder in Use. Also,

Sporting, Mining, Shipping and Blast-
ing Powder

Of all kinds and descriptions.

For sale in all parts of the country. Represented by

F. L. Kneeland,

Feb 10-1y

70 Wall Street, New York.

Orange Sporting Powder.**ORANGE LIGHTNING POWDER,**

The strongest and cleanest Powder made. Nos. 1
to 7, packed only in sealed 1 lb. canisters. The coarser
sizes (higher numbers) especially are recommended
to owners of fine breech-loading guns, giving great
penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to
5. Packed in metal kegs of 6 1/2 lbs. each, and in canis-
ters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes.
Sizes F.g, FF.g, FFG, the last being the finest.
Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs.,
and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 lb.

All of the above give high velocities and less residu-
um than any other brands made.

BLASTING, MINING, AND SHIPPING POW-
DER OF ALL GRADES AND SIZES PACKED IN
WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING

APPARATUS.

LAFLIN & RAND POWDER Co.,

26 Murray St., N. Y.

Sole proprietors and manufacturers of the celebra-
ted ORANGE brand of GUNPOWDER. Recom-
mended and used by Capt. A. H. BOGARDUS, the
"Champion Wing Shot of the World."

CHALLENGE.

The undersigned is prepared to prove all the supe-
rior qualities he claims for his powder.

Safety, Cleanliness, Strength, Little
Recoil, Little Smoke, Small Report,
Less Heating of the Barrel in Rapid
Firing, and its Regularity in Shooting.

He challenges all riflemen to shoot against him with
black powder, 200 rounds, without wiping; 100 rounds
off-hand, at 200, 500 and 1,000 yards respectively, and
100 rounds in any position at same distances; the 200
rounds equally divided at the three ranges; sighting
shots extra.

Will shoot for money if desired.
The powder is also well adapted for shot guns.
Inquire for the "Dittmar Powder" of your dealer
address the

DITTMAR POWDER MANFG CO.,

NATURE AND LIFE.

Selected.

THE sunset gleams from wood and hill,
The lark's sweet song comes from the plain;
It rings through field and woodland still,
And strikes my listening ear again.

Yet now alone I sit and think
With sadness mid the song and bloom,
That joy should ever cease to be,
That sorrow to the mind should come.

For why the evening's rest and calm,
The lights of day with promise rife,
If not to every sense a charm,
A boon to all the world of life?

I look around on earth and sky,
Now lighted by the parting day,
Which e'en more splendid to the eye
Doth seem, now that it fades away.

By morning light the earth was fair,
As after winter's frost and flood
Comes on the softly breathing air,
The song of birds from field and wood.

So much to nature am I bound
For all her gracious gifts to me,
But in my ear these words do sound,
That even in my thoughts do be.

The light, the life, the song, the bloom,
Dwell with thee only for a time;
The mind alone has power to hold
Thee in a never-changing clime.

So in a rapture thus I sing,
Oh! ye sweet days that yet shall be;
And such as memory oft doth bring,
Thy light alone shall live with me.

So shall a sweet content surround
Those varying moods, the ills of time,
Like ocean tides that rise and fall
Within a flowery, blitheesome clime.

So shall a joy my fancies crowd,
While round my life I build my home,
Above each passing, stranger cloud
Of sorrow to the mind to come!

For Forest and Stream.

The West Coast of Florida.

NUMBER 5.

Being Notes of a Family Cruise of Five Hundred Miles and Return, in a Sloop-Yacht twenty three feet long, by Major Sarasota and his Family.

MAY 20th: After a consultation with all hands it was decided to give my crew a day's liberty ashore. I think letting them sleep the night before on shore in Mrs. C.'s nice fresh beds must have had a demoralizing effect, for they wanted to have a spell of "cleaning up," and putting things to rights. As they had behaved so well, and had not slept in a real bed since Apalachicola I relaxed discipline a little. As Eugene was to visit Manatee village for the weekly mail, and various supplies, I decided to run over with him and get a few things for our use while down at Sarasota. We went over in the boat provided by the lighthouse establishment, as it was of so much lighter draft than mine that no skiff would be needed in case we wished to land where there was no wharf. This boat is kept hoisted up on davits at the wharf, as experience has demonstrated the necessity of taking all small craft out of water where the changes of weather are so sudden, and where there is no harbor whatever. It is quite a little job to hoist out this one even with the appliances provided, as she is twenty-three feet long, and sloop-rigged. She is of what is known as the Staten Island model, and were it not for the trouble of handling the jib-sheets would be as well adapted for work on this coast as the Newport style or cat-rig. Like all other work done by contract for the Government this boat when received was but a sham, not even looking like what she ought to, for Eugene said she had the queerest looking set of sails that ever he laid eyes upon; they were fearfully and wonderfully made. Of course a sailor or boatman taking the pride in his craft and business which every one of them ought to, couldn't stand it to have his boat the laughing stock of every crew who passed him, as pass they all did. No more could my friend Eugene stand it, and he went to work. He has a true mechanical eye, and saw at a glance that the model of the boat was all right, her lines were clean and true as need be; the fault

did not lie there. But it did in the position of her mast, and the cut and size of the sails. He completely rebuilt and refound the boat, and to-day she is the fastest small craft on the bay; her mainsail sets the flattest when close hauled that I ever saw. Eugene has the frame of a schooner, partly planked, on the stocks at Egmont which promises to be, when finished, a perfect beauty. It will measure a trifle over sixteen tons. The frame is of red cedar, natural crook throughout, all got out by himself from gale-killed timber, which has been seasoning for it is no knowing how many years. I looked it over carefully with him, and he explained to me how it was to be furnished. He has some very excellent ideas on the subject, which, if carried out, will make the vessel peculiarly well adapted for the use of Northern tourists or sportsmen. Ample provision will be made for the comfort of ladies on board, which will be a new thing upon the coasting craft on this coast, and I can conceive of no pleasanter way for a party of gentlemen and their wives to spend their winter in Florida, or at least a good part of it, than in cruising leisurely along from one harbor to the next, from Cedar Keys to Key West. With Eugene Coons at the helm of the "Halcyon," the time thus spent could surely be looked back upon as "halcyon days."

But really it did not take Eugene and myself half as long to get away from the island with the boat as it does for me to get away from the island and its inhabitants with my pen, although we waited for the sea breeze to set in with its fair wind. The mouth of the Manatee river lies nearly E. S. E. from the light; the distance is called nine miles. The village proper, where the stores and Post Office are, is seven miles from the mouth, but the whole distance, especially the south bank, is thickly settled.

As we left Egmont, we first steered for Passage Key, which is a low, sandy and grassy islet lying in the S. W. channel of Tampa bay entrance, between Egmont Key and the north end of Palma Sola Key. So named because a solitary royal palm formerly grew upon it. Passage Key used to be the great resort for sea gulls during the laying season. I once happened there, the first visitor after a storm, and loaded a small sloop with eggs, which sold for a good figure in Tampa. It was now the proper time for eggs, but as we drew near the island there were so few gulls to be seen that we deemed it not worth while to land. They have been robbed so persistently for the past few years that I don't wonder they have become somewhat discouraged, and the great wonder of all is that they have not been exterminated, as I doubt if a single sea gull has been reared on the island for the last six or seven years. The shear water, or grass gull, as they are sometimes called, have better success, as their nest is always concealed among the thick grass and briars, while the sea gulls proper lay their eggs on the most exposed sand beach they can find, not even going so far as to hollow out a place in the sand for a nest. I wonder if each gull returns to brood over its own eggs, or if they simply cover the first vacant nest they find, and in that way make a company affair of it. I certainly do not see how one nest is different in any manner from another, except in the number of eggs which may be in it, from one to three. It is true that no two eggs are spotted precisely alike, but no human eye can carry the difference so as to select it from half a dozen others, much less from several hundreds or thousands as the gulls must do; yet if they do recognize their own nest and eggs these minute marks must, to my mind, provide the key. I have observed that when they take to breaking eggs, at the approach of an intruder, one gull will break several eggs which may be several feet apart.

After deciding that it was not worth while to make a landing we bore away for the mouth of the Manatee. The first buoy is nearly two miles out in the bay is placed in mid-channel, painted black and white in perpendicular stripes. The next buoy is upon the point of a broad shoal which extends out from the mainland over a mile on the north side of the channel. The edge of this shoal is clearly marked and is often dry at low water. On the south side of the channel there is a line of irregular shoals which extend to the mouth of Palma Sola bay and across it. There is often five feet of water on these shoals and between them, and the mainland is a "swash" channel which leads out from the mouth of the river. The prominent landmark of the mouth of the river is a shell mound some forty or fifty feet high. At its base upon the point is a small building built of concrete. There is deep water close in on this point, and if you are seeking a harbor run right in behind it, and come to anchor in the cove which

forms just beyond the cattle wharf. This harbor is quite land-locked, and just at the head of the cove at the base of the hill, not over fifty feet from the water, is a fine spring bubbling up through the sand.

The main ship channel is on the north side of the entrance, close to land; a "middle ground" separates it from the south channel, with only two or three feet of water on it. The channel is buoyed for half the way up to the village, and oyster bars will not be apt to trouble you until after the last buoy is past. The channel is there staked, but so many stakes have been driven for other purposes that it is hard to tell which are to be steered by.

At Manatee are several stores where supplies can be obtained. That of Capt. Harles has the most extensive and varied stock of any in South Florida. This being Saturday, which is observed as a kind of market and holiday by the people of the South, the village is full of country people, some of whom had come as far as from Pease creek, a three-days' journey with their ox-teams, to barter off their hides, tallow, honey, etc., for flour and other luxuries. Necessaries such as tobacco and a little "spirits" are, of course, never forgotten. The whole family often take the long journey together, camping out for the night wherever it overtakes them, providing wood and water are handy, as is usually the case almost anywhere. What a wild look the women all have as they peer out from under the little wagon cover. This passes off, however, when they have swapped something for some store tobacco, and an expression of serene content takes its place when they have got the little old black pipe filled and lighted. Somehow they don't take kindly to the home raised article, although as fine tobacco is raised here as need be. One man had a load which would stir up the fires in any hunter's heart. I saw three hundred pounds of dried deer skins and sixty smoked venison hams weighed and counted out from his wagon, and the story the owner told would make it hard for a man without incumbrance or special engagements to possess his soul in patience within the confines of Manatee village. He came, he told us, from the borders of the Big Prairie, tract of country which I think lies to the southward Pease creek. That part of the country had suffered much from drought during the whole season, and the Big Cypress which lies just to the northward of the Everglades, had, as he expressed it, "gone plump dry." One of the results of this was to drive all the game and other animals which find a refuge there to other parts of the country, where water could be procured, and one of these favored sections was the Big Prairie. He was certain that if they would only hold still long enough he could go out on to the prairie at any hour of the day, and count three hundred deer or more. He could go out on to it before day, when it was calm so that the deer couldn't wind him, and after concealing himself in some tall grass or bunch of palmetto until daylight came, lie still and shoot to his heart's content. He had been obliged to stop for want of ammunition, which I think was a good thing, for it was taking almost as great an advantage of their distress as it is to drive them into a lake with hounds, and then after a guide has paddled you alongside the poor frightened animal, to blow his brains out with a breech-loader, with all the modern improvements of wind gauge, vernier sights, etc. Lest some of those who call that sport should get after that countryman or myself for killing deer in May or June, as being out of season, I will rise and explain that in South Florida the does drop their fawns during the spring and fall. The majority at the latter season, and so a close season cannot be well kept without closing the whole year, but beside that fact, is, that away down here, where game is still moderately plenty, it is a well observed rule among hunters to shoot nothing but bucks unless there is some very special reason to kill a doe; being entirely out of meat at home, for instance, and nothing but does to be found. All the hunting is what is known as "still hunting," so this choice can be readily made. Very few keep dogs for driving deer, and comparatively little fire hunting is done, and so as long as the female element is not disturbed it makes but little difference at what time the bucks are killed.

Manatee village is the headquarters of all land hunters who come to South Florida, but there is so little worth seeing in the immediate vicinity and the adjacent land, which is of any account, is held at such a high figure that many return disgusted. My advice is, if you are really in earnest to settle in this region, don't pay any great attention to the abundant advice which will be proffered so freely by every one with whom you come in contact, but hire a horse and strike out for yourself. It makes bu

little difference in what direction you travel, you are sure to find plenty of good little places. The day of large plantations has passed, so don't be over ambitious to possess much land. Much of it is of that quality that the more a man owns and pays taxes on the poorer he is. Strike out as I have said freely in any direction, and if you find a place with some improvements on it which suits, the chances are ten to one that you can buy the owner out for less money than it will cost to make the improvements. It is not in the nature of the American people to like staying too long on one place, and this roving spirit is particularly marked among those who live near the frontiers of civilization; and, besides, a few hundred dollars in ready money is a fortune to some of these men, and they will put it where it will do them an immense deal of good. They know of some other place in the vicinity which may now be wild woods, which they will soon make blossom like the rose, or they will move further south. Don't take much stock in the land speculators who reside on the river. They own a little good land on the south bank, and upon the north side there is a very superior hammock, twelve hundred acres of which was once under cultivation in sugar cane. I am told that it is held at a very high figure, and am quite positive that it would not be healthy living in the midst of this large tract of rich lands, although one cannot find a healthier locality than the immediate banks of the stream. There is but one class of people you will meet in your ride who will not give the emigrant from any section a cordial welcome, and that class is the large stock owner. He has a mistaken idea that if the land is settled up the range will be ruined. Now, as a matter of fact, the ten or twenty acres a man will clear and put under fence would not support a cow for six months, and most of the stock get their sustenance in low swampy places which will never be put under cultivation. The chances are also ten to one that the stock owner has no rights in the premises whatever. He may have cattle on a thousand hills (better say acres or swamps in this flat country), and yet not be the *bona fide* owner of a single acre of land himself. The probabilities are that when he married and settled in life, unless he too is an emigrant, as is most likely, he knew of some nice little pine ridge which he had discovered in riding through the woods while hunting his stock, and getting his neighbors together there put up a little pole house of one room. As time served he has cleared up a few acres, usually no faster than he could "cow-pen" it, say two acres a year for four, perhaps five years. This will give him an abundance of sweet potatoes, some corn, and is as much at all events as he cares to take care of. He seldom takes the trouble to enter or purchase the land; that would cost from five to fifty dollars, and although if provident he may often have that amount of money on hand he thinks it a better investment to put it into more stock rather than to own the land he lives on. He feels perfectly safe so far as being dispossessed is concerned; so many live in such a way that the sentiment of the community would warrant or justify a man in taking a sly crack with a rifle at the man who would enter land from under another. And again, for some cause, the range may become worn out—at least he may think so, for the chances are that he himself will burn the woods off too often, and he will wish to move somewhere else. His land don't hamper him in the least. If he can sell his improvements well and good; they often go for a song, as he knows that he can find another place just as good, perhaps better, fifty or a hundred miles away, further south probably, where the emigrant will cease from troubling (for a few years only), and the weary cow hunter can have a rest. Let us leave him there, and as the mail has been obtained from the Post Office we will help Eugene put the supplies on board, buy the biggest watermelon in town for our lunch, and get under way for a dead beat of sixteen miles home.

The tide was in our favor in the river, and the wind was a good whole-sail breeze. As we had the melon, and sundry sardines, crackers, cheese, etc., to dispose of we did not care to be bothered by attending to jib-sheets, and that sail was kept stowed for some time. I was surprised to see a little boat of her rig, with the mast stepped so far aft, make such good time, and hold up to the wind so close under the mainsail alone, but when the jib was hoisted she just flew through the water. The wind hauled so far to the north after we were well out into the bay that we could make a long leg and a short one, and were safely home by nine o'clock, and hoisted the boat up on the davits as quietly as though we had been taking a little sail instead of a journey of nearly thirty-five or forty miles. But didn't we slam that boat into the chop seas as we crossed the main channel? Water came on board by the barrel, and as the boat was very dry from being constantly out of water it would run through the upper works, and one of us was almost constantly at the pump.

May 21st, Sunday.—The morning was bright and quite warm. Some of us took a plunge in the surf and a walk around the island, when we discovered the first turtle nest of the season, but the general thing to do, seemed to be to dose in the shade. The sea breeze did not set in until afternoon, which made the morning quite sultry, I spent most of it in giving the younger, Miss Coons a few hints in taxidermy, in which she takes a great interest. There are peculiarly favorable opportunities for the study of ornithology at Egmont Light, more especially during the migrations for as most birds make these during the night, they are often dazzled by the bright light in the tower and flying against the outside of the lantern are killed or disabled so that they can be secured in the morning. Miss Coons in-

formed me that one morning last fall they picked up twenty-three different varieties, and during the fall and spring seldom a night passed that one or more were not killed in that way. It would be a fine place to make accurate observations as to the migrations, I think, and I hope to secure some valuable information from there.

Devil fish of great size are to be seen in the channel on any pleasant day, and this calm Sabbath morning two of them were disporting themselves quite close to the wharf. Occasionally one would throw himself bodily, ten or twelve feet up into the air, coming down with a tremendous splash. At other times they seemed to be turning summersaults just at the surface, and then would lie motionless for a minute or more, upon their backs, their white bellies glistening in the sun. They are certainly a very powerful fish, and parties properly equipped for striking them with a harpoon or lilly iron, might have as fine sport here, as I once read of in an article about their capture on the South Carolina coast. Several years ago, one was playing among the piling of the wharf, and one of the light keepers, I think it was, poured a load of buck shot into the back of his head from a position immediately over him. This stunned him so much, that after a small pair of grains were driven into him, he was towed on shore and secured. He measured a little less than sixteen feet across the wings, and so far as I can judge, this is about the usual size.

The wind was fair in the afternoon, and we reluctantly bade farewell to Egmont and its hospitable keepers, steering S. E. by S. for the entrance to Palma Sola Bay. This channel is rendered rather obscure by the shoals which make out from the south side of Manatee river, but it opens from Tampa Bay, about half way between Palma Sola Key and the main-land. When well into it, steer for an opening like a river's mouth in the mangroves on the main-land; when within half a mile of this keep away and run to the southward parallel with the main-land until nearly down to Hunter's Point, which is a shell mound on the left, and marks the entrance to a large arm of Palma Sola Bay, which is often known by that name. There are one or two seine reels on the Point. The whole of Palma Sola Bay is quite shoal, and when half or three-quarters of a mile from Hunter's Point, steer over to the island for a large green mound. This allows you to avoid a shoal which makes out from the main-land. As soon as you head it, and it usually shows up quite plain, steer for Hunter's Point. There are some nigger-head rocks on the shoal to the right of the channel, which here runs quite close along side the land in a southerly direction towards Longboat Inlet. It came on dark soon after we got well into Palma Sola Bay, but I got along very well until after passing Hunter's Point; here the wind died away so much that I did not have good steerage way, and although I headed to run the inside way into Sarasota Bay, the strong ebb tide drifted me bodily into the Longboat channel, and the first thing I knew, I was in the jaws of the channel on my way out to sea. It was the work of a moment to cast anchor, and quickly making every thing snug I joined my crew who were soundly sleeping below.

May 22d.—It held calm all night, and was so at daybreak. We were anchored only a few feet from shore, on the inside of the north point of land, and as there was no wind to sail with, although the tide was coming in and so favorable. I took my line, and landing, tried my luck at red-fish. This used to be a favorite stopping place of mine for that purpose, and I was not disappointed on this occasion. I have never had occasion to go out or come in at Longboat Inlet, and so can give no positive directions, but from the beach the outside looks bad, and I should think there was but one channel. This, so far as I can make out, trends to the S. W. and S. and is not as near shore as a swash channel usually is. There are two channels separated by a mangrove island inside. I had drifted in on the northern one, which also branches so as to go back of the mangrove island into Sarasota Bay. The southern channel is quite deep and where it washes up alongside this island, it has worn out a deep hole which is a favorite resort for black grouper. Few red grouper are taken there. As the breeze came up, we got underway for this south channel. The whole water was alive with tarpum, which were rolling up their silver sides in a manner to make any one wish they would take bait. We were barely clear of the shoal which divides the two channels at first, when the wind fell and left us at the mercy of the tide. This rapidly drifted us along, and through an opening in the mangroves, out upon a sand flat, where just as we got in sight of deep water, we grounded, I got over, and tried with my shoulders under the counter, to lift her over the fifty-feet between us and freedom. It was no go, but as the tide was rising fast we took it easy. I told the children to jump overboard and take a lesson in swimming. We were detained here perhaps an hour, during which time the children enjoyed themselves highly in the shoal water, with its hard bottom of white sand. I was in the water more or less, and picked up several fine specimens of live panamas. At low tide these shells can be found in great abundance just under the surface of the sand, on many of these inside flats near the inlets. They show a slight ridge on the surface as they slowly work their way along just an inch or so below.

Now that the end of our journey was within sight, only twelve or fifteen miles away, we did not mind the loss of an hour or so by getting aground, more especially as there was no wind, but we were afloat almost as soon as the daily sea breeze was ready to take us on our way. Both inside channels from Longboat, run well over towards the main-land side as they unite, and then it trends gradually back towards the island again. Look out for an extensive mud

flat on the island side; it is almost as dark colored as the channel itself, while the shoal on the main-land side is of lighter color. These shoals are finally ended by a long white sand bar making out from the main land, and extending for at least four-fifths of the way across the bay. This bar is about three miles to the southward of Longboat, is bare at low tide, and can be easily made out from either side, as its banks are quite bold. When once it is passed, Sarasota Bay is fairly open before you, with plenty of water anywhere except close in on the island side. We were much interested in examining the shore with the glass, by the number of houses to be seen. When we left here, about seven years ago, there was but one other frame house, and but two other settlers on the whole bay, beside myself, and none had joined our outpost of civilization for the three years we had lived and toiled here. Now it was quite different; houses were strung along the shore for the whole length of the bay, and afterwards we counted up some thirty families living immediately on the shore, to say nothing of those who had thronged into the woods for several miles back. We sailed along about half a mile out, and noted the improvements with much pleasure, mingled with many regrets that we (individually), had ever allowed ourselves to be coaxed away from this beautiful sheet of water. But, the fact is, Mrs. "X" is a power behind the throne, as well as a more than joint occupant of it, and she said, "Go back north," and back we went. I admit that it is hard for a northern lady to come out to Florida—entirely cut herself loose—not only from her life-long friends, but also to be obliged to give up very many little advantages in the way of social, church, and school privileges, which have come to be regarded as absolutely necessary to existence. We hope to improve this in time, but those who come first and do the improving take the hardest of it, and those who come after can hardly realize what their predecessors have been through. Mrs. "X" was home-sick, there is no denying it, and as fortunately there was a home or homes to go to, home she went.

As we passed Mr. Whitaker's place things began to look natural. He is the original settler on the bay, having come here previous to the Indian wars, and his orange grove of some 500 trees is the only bearing grove in the settlement. He pays comparatively little attention to it, however, beyond gathering the fruit, but devotes his time and energies to stock raising. He is estimated to own from four to seven thousand head, but it is doubtful if even he himself can tell, within a thousand, just how many are actually in his mark and brand, although he and his sons, with an additional hired man or two, are constantly in the saddle looking up the unmarked calves. I have often thought that if that grove and the adjoining uncleared land, equally well adapted to orange raising were mine, I would dispose of the stock of cattle to the first customer, and at once proceed to take mine ease under my own vine and orange tree, afraid of no one, and no one afraid of me, unless it were the game in the surrounding woods, or the fish in the bay in front of my door. I might be a terror to the capital oysters which abound in his bayou, which, by the way, is a very handy little landlocked harbor for small craft. I believe about three feet of water could be found at high tide on the shoalest part of the bar. This bar is so narrow from inner to outer side, that a few hours labor with a shovel at the low tide of a norther, would deepen it another foot, and it would pay to do this if one were living within a few miles, and kept a boat which was too heavy to haul out on the beach. Passing Whitaker's and its yellow bluff, where many fossils are to be found, as well as pieces of pre-historic pottery, we come to Cedar Point. Here the channel divides, or rather, a shoal divides the bay to a certain extent, for the main tidal channel runs from off the point straight out to Big Sarasota Pass. New Pass lies nearly due west from Whitaker's, and is of such a recent formation that the shoals have not yet been worn away so as to have a clear channel from the center of the bay to the inlet. The other channel at Cedar Point follows along by the land, and around in behind the point is an excellent harbor during northers, with deep water close in shore. A shoal extends some 200 yards out from the point, mainly to the S. W. There is a stake on the end of it.

In this little bay behind Cedar Point, a very promising settlement has been begun by Capt. Willard, an enterprising young man, recently of the firm of Willard & Roux, of Cedar Keys. He has already put up a wharf out to deep water, and the frame of a large building intended for a store, well towards completion, besides some dwelling houses. He owns a steam yacht, which it is intended shall ply between Cedar Keys and Sarasota the coming winter. If the intention is carried out, it will be a great help to tourists and sportsmen wishing to spy out the land. A hotel was once partially erected at this point, but the death of one of the partners, and some misunderstanding in settling up his estate with the other, caused the project to fall through. It is, however, a capital location for both a hotel and store, as not only would they be a great help to the residents if conducted on liberal principles, but could not fail to make money for the proprietors. Much of the trade of Pease Creek and the Myacka country could be drawn in here, as it would save from one to two days of the long journey. I had a package of papers handed me in Cedar Keys for Mrs. Willard, and accordingly ran in and came to anchor to land them. I had met Capt. W. once before, and as he knew I had a predilection towards Sarasota, he was anxious that I should stop and see how he was getting on; but I was obliged to decline

for the present, and promising to come around again in a day or so, I got under way again. Capt. Willard owns quite a tract of land here, I believe, and is offering it at very favorable terms to actual settlers. The location is all that can be asked, and the land is probably strong enough for fruit trees. It certainly is, if one will avail himself of the quantities of excellent manure that may be taken from the bay in the shape of grass, sea-weeds, fish, and oyster shells for lime. But that requires manual labor, both in the preparing and in the distribution, which the easy way of the country is to shut up a hundred head of cattle in a quarter-acre field for a week or two at night, and as the land becomes sufficiently "trod," as they express it, the cow-pen is moved along to another quarter-acre, and the process repeated on indefinitely through the season. As the country people put it, "The best way to enrich land is to put it under a cow's tail."

Leaving Captain W. on the wharf, we sailed a mile or more further on, and rounding another long point I was at last in front of my old home. There was the little hammock where I had grubbed and chopped, hoed and sweated for so many hours. There was the little frame house I had twice erected, for it was blown down, or rather up, by a gale, while in processes of erection the first time, and in which Mrs. "X" and my little girl had a most wonderful and narrow escape from death. I never saw the use of a Saratoga trunk before, but this one caught the rafters as they came down, and kept them from falling upon them, as she had the presence of mind to drop upon the floor beside it when she saw everything sailing around loose. The house was much smaller now, for it was shorn of both its verandahs, having been, I afterwards learned, lifted by another gale. I made a mistake in building too near the beach, and in a too-exposed location. I wanted plenty of air, and I got it. Then, close down by the beach, was the palmetto house of dear, kind-hearted, old Joe Woodruff. It looked rather weather beaten, but a little back of it, through the scrub, I could make out another newer and brighter looking structure of the same kind. And while I looked, I saw old Joe himself come down the path from it towards the beach to take a look at us. So there was, at least, one old friend left to welcome us back to Sarasota. I ran close in to the edge of the bank, cast anchor, and our voyage of over 500 miles was an accomplished fact, in spite of the ill-omened croakings of numberless officious advisers in Pensacola and elsewhere; and not only was the journey out completed, but I felt myself to be very nearly, if not quite a well man. To be this, when compared with what I was when I set out, was worth the trouble and danger, if there was any, of a voyage of double or ten times the distance. I just felt good. In love with the whole world, if they were willing, and if they were not, why, I didn't care. I was tolerably fat, and very ragged and saucy; could even up well on the whole three—fat, ragged and saucy. As I knew I must be unexpected, I took my time in furling sails and making everything snug, so as to let Mr. Woodruff look us over, and consult with his wife as to who we might be. I completed everything at last, and putting all hands into the skiff pulled to the landing. As I stepped out, it dawned upon him all at once who I was. "Great Heavens! if this isn't really Major S. Where did you come from?" and more, and more, of astonishment and greeting. After a little explanation we adjourned to the house, Mrs. "X" preceeding me, as he was sure his wife would know "the Major" at the first glimpse. But she knew Mrs. "X" almost as promptly, and the cordial greetings were soon over. After a lengthy comparison of notes as to what had befallen each other, and everybody else during the past seven years, we began planning the campaign against the game and fish for the next ten days. I was in a hurry to get back into my old haunts, even if only to see if both were as plenty as in the "good old times," and it was decided that I should go over to Big Sarasota Island before light the next morning and still hunt for deer, while Mr. Woodruff should take his canoe, and with my little boy for company, try his luck for red fish in the pass.

[To be continued.]

For Forest and Stream.

THE BLACK SPRITE.

SOME incident of yesterday or of to-day may bring out from the hidden recesses of one's memory a scene of bygone days, or a story of earliest childhood recollections, and when that scene or story has aught to do with things not of this earth, but of spirit realms, then does the reverie hold a double spell. There is a charm, a fascination, about the ancient legends of haunted castles, of spirit scenes, that seizes the attention of a child and follows him to manhood. How often did I, when a boy not ten years old, steal away of a winter's evening to the kitchen, to listen to the ghostly tales as told by the servants, of their native Irish lands? And as often did I, dreading the hour of bedtime, draw nearer to the lamps and fire, and look more furtively behind me into the dark corners of the room. The Emerald Isle, rich in its romantic history and mythical beliefs, imparts to its native born a strange, weird faith in spirits, and many is the story of ghost and goblin handed down from generation to generation. But while most of those stories have faded from my memory, there was one told by a frank young Irishman, who bore the name of the lordly Shannon, that will never sink from sight. It was told with a vividness and reality that not many years after came back to me with fearful force, increased ten-fold by the time and place, as with a friend I

was returning from a coon hunt one autumn night. The story that Shannon rehearsed to me I tell to you, believe it or not, as you may; but when you hear my own experience, which is as true as there is a sky above, you may perhaps pardon me if, on that autumn night, being but fifteen years of age, I thought my hour had come, as I stood a palsied witness to a combat of human strength with—I dared not name it then. That imp of darkness chose a fitting place close by a haunted bridge to wreak its vengeance on mankind. The time, too, was propitious—past midnight—and the moaning winds added a doleful dirge to that wordless, almost noiseless battle. It is more pleasing to recall a battle with a beast of mortal tangibility than with a spirit in beastly form, that no hand could touch, no weapon kill.

But before I recount the terrors of that hour let me first go back to the story that Shannon told, that you may better understand my own. All the old fireside stories, you know, used to commence with "once upon a time," and so did Shannon's, thus:—

"Once upon a time in the county where my father lived, and where his father lived before him, there was a haunted wood, and it was haunted by an evil spirit. It was a low, swampy piece of woods, and extended a long way, and strange lights and noises used to be coming from certain parts of it. A road ran through the woods, but it got to be so bad that hardly any one would dare to go on it after dark. Well, one night a great uncle of mine was returning home from taking some cattle to market; he was a drover and traveled a good deal about the country on foot. Well, as I said before, he was afoot, tired, and a long way from home, and it was late at night. He had nothing with him but the whip he drove his cattle with to defend himself, yet to save a long distance he made up his mind to take a short cut through the woods, hoping he would not meet the spirit. But if he should meet it, as he had always been a good man, he trusted it would not hurt him. He had got about half through the woods, when all at once a little black thing like a dog jumped out from the bushes. He did not think of the spirit at first, but only that it was a dog, and so spoke to it. Upon that the spirit—for it was an evil spirit—jumped against his legs and then against his chest. He kicked at it, but could not hit it; he could not touch it with his hands, yet all the time it kept springing against his chest and it felt like a bunch of down or feathers, and not like a body at all. He soon commenced to grow weak, to get faint; he could hardly breathe, the thing seemed to be all around him, to choke him; he could not cry out, he could not speak. He could feel something pressing him on every side, yet he could see only the black thing, so like a little spaniel, all the time. It would jump on to his chest and seem to rest there for a second; he would try to squeeze it with his arms, but could find nothing, yet he could see it there all the while. At last, and in a final struggle he threw up his arms, and in doing so cracked with a loud report the whip he held. At the noise the spirit sprung from off him and vanished in a ball of fire. My uncle, from weakness, did not find his way home till morning, and when he reached home he was like a corpse, white and thin, and he took to his bed and never left it for a long time."

Such was the story told to my young head that caused the cold streaks to run down my back, and made me fear the darkness for a week, as though filled with jumping, black-coated spirits and vanishing fire balls. Five years had cast a mantle over the story and caused it to be almost forgotten, or at least if not forgotten to be looked upon with unbelieving eyes until one night. Did I believe it then? Hear my story, and then ask yourself if, in my place and at my age, you, in that midnight hour, would not have changed your faith? It was a clear, cold night late in autumn, when the coons had deserted the ripened corn-fields, and were scouring the beech and oak groves for the nuts which the frosts had started from the trees and burrs, that two old coon hunters and I a young one, traveled Barbours Mountain with a brace of well trained coon dogs. We hunted many a beech nut grove, many a patch of oaks, passed many an open knoll where not unfrequently a *Mephitis chinga* fell a victim to our prowess with clubs and stones; and if I remember rightly the aforesaid *Mephitis* did not always waste its sweetness on the desert air. We skirted an ancient cemetery which lay half hidden in the woods. We heard the distant murmur of the Connecticut, the startling screech of the little mottled owl, the rough, deep hoot of the great-horned owl, and at times the clear, eager voices of our dogs when they had treed some prowling coon. And I recollect there came such voices from the vicinity of the Devil's Den that, had we not known that a drove of hogs were revelling in a grove of oaks, we might have thought theimps of his Satanic majesty were holding high carousal in that mountain cave. At last the hunt was over and we separated, L., with the dogs, returning to his own home not a long way off, while F. and myself struck out for our's, some two miles away. The moon, which till past midnight had cheered and lighted our way, now disappeared behind the gathering clouds, and we slowly picked our way through the pastures till we reached the road, when we proceeded at a faster pace. In almost every old New England town there is or was a haunted house, or path, or spot, and the region through which we were traveling was particularly pleasing and rich in ghostly residences, there being no less than two haunted houses, which we had to pass, and a haunted railroad bridge, under which we had to go. There is no need to take the time and space to tell the why and how each place was haunted; sufficient be it to know that a good reason

was assigned to each, and that spirits had been seen and heard, at least so rumor said. A brook ran parallel with and close by the road which passed beneath the bridge, where strange noises, groanings, the rattling of chains, and hustling of feet had been heard by the very person who told me of the haunted Irish woods. We neared the bridge of sighs and spirits, the stride of the man and the pattering footsteps of the boy sounding dead and hollow on the freezing earth, and seeming to invite the company of any spirit that dwelt near by; and though no invitation was intended or extended, yet one was accepted, for from out the darkness, almost from out the shadow of the bridge, there sprung a form blacker than the night, and as quiet as the realms of death. So near the haunted bridge the story of that Irish drover flashed upon me like lightning, and almost as blighting in its stroke, for that form looked in the darkness like that of a very small black dog, but it was no dog. My companion—but here in the moment between the appearing of that form and its attack, permit me to describe the man who fought it. Tall and muscular he was the very embodiment of human strength, while his life in California, whither he went during the gold excitement of '49, had accustomed him to danger, whether from the wily Indian, or the mountain lion, and many is the exciting tale I have listened to of those adventurous days. He there perfected himself in the use of the rifle, and was the best field shot in those regions. In a word he was the leading hunter of the camps. But skill or strength in man avails him little against an enemy he cannot hit, against a form that comes from darkness, and vanishes in darkness. One terrible moment of suspense to me, and the battle commenced. The moon peered for an instant through an opening in the clouds, and the scene it lighted up is before me now as clear and vivid as on that night. The man's face to me had a deathly whiteness, whiter, perhaps, from the contrast with the coal black beard and hair; his head was bare, the hat flying midway the road, having fallen in the struggle, and cold drops of perspiration stood out upon his forehead. At a wandering glance I took in all. I saw that black, soft form leap against his legs; saw him jump and kick in vain; it was at him in front, behind, and yet he could not check the onset. I saw more in that short moment of flickering moonlight; saw the bridge, its cold granite gleaming white with frost work, our tomb, I thought; I saw the tall trees and the little brook shimmering beneath them, and I thought I saw a black body with white crown and plume cross the road below us, and then I saw no more—a black cloud shut out the light. The wind came and went with a shriek that sounded like the wailing of a spirit, and it might have been, for a form darted past me and vanished with the gale. The contest ceased. I heard the quick, labored breathing of my companion, and soon his voice in broken accents, "its gone—" How long that trial lasted I know not, but it seemed hours to me, but whether hours or minutes, I never care to live over again that scene. There may not be evil spirits which haunt this world, but since that autumn night I have my own belief. Let unbelievers laugh, but put them in my place that night, with the story of the Irish spirit, and the haunted houses and the haunted bridge so near, and nearer yet that darting imp of blackness, and depend upon it nine out of ten would wish themselves at home. I knew not until that night that once before my companion had met with a like attack, and so knew with what he had to deal.

Towards morning we reached our home, and told our strange adventure which, though it was believed, was thought very mysterious. Now, the above is no fancy sketch, no dream that vanished with my sleeping hours, but a simple tale of actual facts which the passing of that bridge last night, the cold, whistling wind, and the season of the year recalled to mind. I do not write this to add to ghostly legends, but only to add a little chapter to the knowledge of our animal creation; and here, before an explanation comes, though it will be an explanation in itself, let me finish the sentence of my companion as his voice reached me in the darkness—"d-n that muskrat; I could not hit him, and I'm almost winded." The old tremor left me; that terrible thing was only a little, soft, brown-coated muskrat. I have never seen an account of a muskrat attacking human beings, but my companion assured me that once before he had been set upon by one, while of this last time I was a witness; and I must confess that I wish at the time I had known what it was—but better late than never. How can you account for this bold freak in an animal generally so innocent and timid?

MONT CLARE.

DISEASE IN THE LAUNDRESS BASKET.—The panic which has been created by the new outbreak of small-pox has led to attention being directed to what is termed "centers of infection," and there is a natural desire to root out these "centers," or at least reduce their number to the utmost extent possible. There is probably no more active engine for the dissemination of disease than the laundry. Indeed, under existing arrangements, there is reason to fear that cleanliness is often more deadly than dirt. When, as is the case in ninety-nine households out of a hundred, the washing is "put out," the owners of the articles sent to the laundry are, as a rule, utterly reckless as to the consequences of the general mingling of the linen belonging to several families, which takes place when the laundress is engaged in active business. Nor do they care to ascertain whether, as is often the case, there is infectious disease in the very house to which their garments and bed furniture are sent. It is not surprising under these circumstances that smallpox and fever often make their appearance mysteriously in households where they are as unexpected as unwelcome. The most perfect drainage arrangements, the most admirable system of ventilation, are of no avail to prevent the disease that is introduced into the house by means of the laundress basket.—*Pull Mall Gazette*.

THE HAMBURG AQUARIUM.

BY DR. H. DORNER.

[Continued from page 195.]

BESIDES the gigantic Salamander, the Aquarium harbored two other very interesting Amphibia, the Mexican Axolotl and the European Proteus. Much has been said and written about the former since 1865, when it was discovered by Prof. A. Dumeril, that this animal, known until then as belonging to the Perennibranchiata or Amphibia, with permanent gills, under certain conditions loses its gills, and turns out to be a genuine lung-breathing Salamander.

It will hardly be necessary to give a description of the Axolotl. Its most remarkable peculiarity, the external gills periodically swinging in the longitudinal direction of the body, may easily be studied in the numerous specimens of the Banded Proteus (*Menobrachius lateralis*), exhibited in the New York Aquarium. And it will not be long before we shall see the Axolotl's themselves in New York, though they may have become rarer since the time of Fernando Cortez, whose army is said to have subsisted for several months upon these animals.

The Axolotl's were introduced into Europe in 1864 by the Jardin d'Acclimatation, who exhibited five males and one female, and was fortunate enough to raise about 600 young ones from them. Seven months after the coming forth of the latter, when these had attained almost the full size of their parents, some highly remarkable changes took place in one of them. The large external gills disappeared almost entirely, the crest on the back and tail passed away, the head became narrower and more pointed, and some light spots appeared on the black body and limbs. Thus nearly the same changes took place in this animal which had been seen number of times in the common Tritons or Salamanders of Europe and America. Some weeks later a few more of the young ones underwent the same changes, until nine of them had assumed the ultimate form. In the next year (1866) five specimens out of a thousand exhibited the same extraordinary development, and a few more were observed in the next year.

Thus the supposition of some naturalists before the evidence given by Dumeril that the Axolotl was really the larval form of some unknown Salamander was established. Cuvier, long before 1865, made the following remark: "I am obliged to place the Axolotl among the genera with permanent gills, because a great many persons testify that it does not lose the same," and Baird, the well-known leading naturalist of this country, said that the appearance of the Axolotl was so very larval as to exclude any doubt of its real nature, it being no evidence against this assertion that the perfect animal had not yet been found.

The extraordinary facts in the natural history of this animal are not the taking place of the said changes, for the same or similar changes are regularly observed in a great many other salamanders, frogs and toads; but its taking place in such a limited number of instances, and, secondly, in the producing of young ones by the larval form. So these animals make an exception to the almost universal rule that only the last and highest form of animals perform the duty of reproduction.

In the year 1870 the Hamburg Aquarium exhibited five Axolotls, three males and two females. They were very lively, and took their food, consisting of earthworms and thin pieces of meat very readily. Sometimes they devoured small minnows (*Leuciscus phoxinus*), and like many other aquatic animals seemed to be fond of ants eggs. Their usual way of breathing was by means of their gills in water, but sometimes they came to the surface taking air, and then turning the head downwards with the same rapidity as our Tritons do. During daytime they used to crawl slowly along the bottom, but in the night they lay upon plants near the surface in order to breathe more easily from the atmosphere. The latter was sometimes done so vehemently, that one could distinctly hear the air rushing in.

In the first days of January, 1871, a great commotion was seen among the females, chasing the males almost continually for more than two days. At last the males, whose vent appeared to be swollen, like that of the Salamander under similar conditions, deposited numerous gelatinous triangular heaps, the summit of which contained the sperm. On the following day spermatozooids floated through the whole tank, and every drop of the water when brought under a microscope was seen to be crowded with these minute, constantly undulating beings. The same day the females began to deposit the eggs, attaching about 200 of them to the branches of some aquatic plants in the same tank. To avoid accidents, all full-grown animals were carefully taken out and placed in a neighboring tank, a precaution proving to be a very prudent one, as it was observed that the unnatural parents devoured all eggs which were produced afterward. The first laid eggs soon began to enlarge moderately, the yolk, which invariably had a black color, underwent the usual fissions, and already on the fifth and sixth day after the deposit the oblong larvae were clearly to be noticed in every transparent egg. On the ninth day the first movements were observed, and the animal had become so long as to be obliged to bend its whole body.

By discontinuing the constant stream in the tank the temperature was somewhat raised, and numerous infusoria, rotifers, and other minute aquatic animals fit to serve as first food made their appearance. On the twenty-fourth day after the deposit the soft egg shells began to burst, and the first young Axolotl's made their appearance, measuring about eight lines, and moving quickly after the manner of young tad-poles, which they nearly resembled but for their light color. The three gills on each side

had the form of small cylindrical appendages, and did not show any of the numerous branches which are seen in the full grown animals. Unfortunately the temperature could not be raised high enough, as was necessary to sustain the life of these tender creatures, and so further observations had soon to be discontinued, as all the young ones died in about two weeks. But as mentioned already, several private persons were happier in their attempts, and not only young ones have been obtained, but also the ultimate lung-breathing form has been produced several times. The latter result has chiefly been obtained by keeping the larger young ones in flat tanks, and forcing them to leave the water in order to get their food.

In conclusion, it may be mentioned that very likely the lung-breathing, higher developed form, has been the regular one in earlier centuries. This is made probable by Alexander von Humboldt, who maintained that Mexico, their native country, had a greater number of lakes, and a more moist air in former times than at present. If so, the Axolotl would furnish another proof to the hypothesis that it is the natural surroundings which affects the forms of animal life, not an innate endeavor or exertion to change to higher developed forms.

The relatives of the Axolotl, such as the Banded Proteus, further the different species of *Necturus*, the Sirens, and other Amphibia, to be found in lakes of North America, may undergo similar changes when kept under favorable conditions in well arranged Aquaria, and we may feel satisfied that the New York Aquarium will make every exertion to get possession of them. No other Aquarium in the world has the means of advancing science in regard to these very interesting animals, the natural history of which may become utterly important when sufficiently known.

One of the smaller tanks of the Hamburg Aquarium contained some specimens of the European Proteus (*Proteus anguineus*), an animal to be found only in subterranean lakes of Krain (Austria). When we got them their whole eel-like body was of a yellowish-roseate color, and as soon as they were brought into their tank they quickly endeavored to conceal themselves among the rocks, evidently avoiding the light. Nobody could see these animals without being thoroughly interested in their peculiarly graceful form. Their head is long and flat; their legs are very short and slender, the fore-feet ending in three, the hind-feet in two toes, without any nails or claws. Like the Axolotl's, they have external gills of a bright red color. Their eyes are extremely small, and entirely concealed beneath the skin, so that it is impossible for them to get distinct impressions of form by sight. Yet they are affected by the light, and very probably their whole skin is sensible for its delicate touch. This seems to follow, firstly, from their constant anxiety to get out of the light and remain in perfect darkness; and, secondly, from the fact of the light-colored skin changing to black when exposed to daylight. In about three months the change is completed; at first some dark spots make their appearance, and finally a blueish black color prevails all over the body, except on the belly and the under side of the compressed tail.
